PREFACE.

T has been our fortune, to trace our unhappy civil diffentions, down from their original causes and earliest appearance, nearly to the point of their ultimate conclusion, in the separation of Great-Britain and her colonies. In this course, which constantly required all the labour and attention we were capable of bestowing, we were, by degrees, unwittingly led into the execution of a work far beyond our ability and powers; and upon which we could scarcely have ventured, had we foreseen its extent and difficulty. We were led into the history of a war of fuch a magnitude, as would have afforded a full scope to the genius of the first writers. A war, by far the most dangerous in which the British nation was ever involved; of the first rank in point of action and event; but of still wider importance, when confidered with a view to its actual or probable consequences. It has already overturned those favourite ·fystems of policy and commerce, both in the old and in the new world, which the wisdom of ages, and the power of the greatest nations, had in vain endeavoured to render permanent; and it feems to have laid the feeds of still greater revolutions in the history and mutual relations of mankind.

Unequal

Unequal as we were to the task, and under all the obvious difficulties and disadvantages attending the writing and publication of history immediately on the heel of action, we have fortunately had no occasion to regret our temerity. The increasing favour we experience from the publicat home, and the diftinguished reception which our work meets with abroad, not only in those extensive parts of the world where the English language is vernacular, but wherever the general affairs of mankind are fo far known as to be interesting, and are admitted to become subjects of free discussion, have fully qualified all our apprehensions, and amply repaid our labours. In these circumstances, instead of repining at any expence of labour or time, it will ever be our pride that we happened to be the early and faithful recorders of events of fuch magnitude and celebrity, and that we have been at any period, capable of producing a work which has met with fuch general approbation.

The repeated complaints which have been made, relative to the delay of the present publication, has compelled us to the painful necessity, of running more into egotism, and bringing ourselves more forward, upon this occasion, than usual. As it may now be hoped, that the return of the public tranquillity will afford some considerable relaxation of our labour, (for we shall claim none with respect to care and assiduity) so, by degrees, a due punctuality as to the season of

c. : ::=

publication will be a necessary consequence.

E U R O P E.

C H A P. I.

Retrospective view of affairs in the East, which led to the late alarming and dangerous situation of the British empire in India. State of the native powers, with respect to each other, and to the East India Company. Greatness of the Maratta empire; and nature of its power, rejources, and government. Infant Ram-Rajah deposed, and a government of ministers, called the Paishwaship, substituted in his place. Ragonaus Row, being obliged to abandon Poonab and his country, for the affaffination of his nephew, the young Paightva flies for reflige to Bombay. Protection afforded to Ragonaut, lays the foundation of all the jubjequent wars with the Marattas. Treaty of friendship and alliance between the East India Company and Hyder Ally, concluded at Madras in the year 1769. Refusal to furnish Hyder with the succours stipulated by treaty, in his subsequent ruinous ovar with the Marattas, estranges that prince from the company, and occasions his embracing French connections. Treaty concluded at Bembay with Ragonaut Row. Wer entered into with the Marattas for his restoration to power. Island of Salfette, Barcach, and other places conquered. Treaty of Poonuh; by which Ragonast is to be given up, and the new conquests are confirmed to the company. New Vol. XXV. Systems.

fishems of policy adopted. Ragonant Row is still protected, and various entrigues entered into for a revolution in the Maratta government in his favour. New demands to be made upon the Court of Poonah, the rejection of which are to be deemed wiolations of the late treaty. Strong military force under Colonel Leflie, font acrefs the continent from Bengal. Proceedings of that detachment; Leflie dies, and is succeeded by Colonel Goddard. Preposals for a treaty with Meedajee Boosla, the Rajah of Berar, for placing him at the head of the Maratta empire. The Court of Poonah refuging to comply with the new demands, the British refident is withdrawn, and the Beribay army landed on the continent, in order to accompany Ragonaut Row to that capital. Army being furrounded, and all means of retreat cut off, a capitulation takes place. Moderate terms imposed by the Marattas in the treaty of Worgamm. Ragonaut Row is given uf, and the army conducted by a body of Maratta horse to the jea coast, where is embarks for Bombay.

THE fuccess which attended the British arms in the year 1778, by the taking of Pondicherry, and the entire reduction of all the French fettlements in that part of the world, feemed, along with the powerful armies in the hands of the East India Company, and the naval force deflined to their support under Sir Edward Hughes, fully sufficient, not only to fecure their present tranquillity, but to lay fuch a foundation of strength and prosperity, as could not eafily be shaken. They were now freed from their only European competitor, and from a most active and enterprizing neighbour, whose spirit of intrigue, as well as power, whether in war or in peace, would conflantly afford matter of jealoufy, if not of apprehension; and as wars and conquests had not originally been proposed as the end of that inflitution, and were rendered still less so, by the state of affairs in Europe, it was supposed, that it would require no great refinement in policy, or in conduct, to preferve fuch a balance between the native powers, as, without en-

gaging much in their particular quarrels, would enable the company to become the arbiter of India, and tend equally to the general tranquillity, and to the maintenance

of their own superiority.

It was accordingly hoped at home, and afforded no small confolation in the most alarming situation which we had ever yet experienced, that, however Great Britain might have been overborne, in that very unequal contest which fhe was doomed to fullain in every other quarter of the globe, yet, that her dominion and commerce in the East, being happily free from the contingencies of war, still remained whole and unimpaired; and might prove an unfailing resource of wealth and of strength in the worst

Such were the hopes of the public, and fuch perhaps the speculations of statesmen. But the affairs of nations, their advertity and fuccess, often depend upon unforefeen circumstances, which political fagacity cannot always provide against. The experience of ages has shewn, that it is exceedingly difficult to keep arms long unem-

ployed,

ployed, in the hands of those who have been accustomed to use them with great effect and advantage. Such a restraint requires a strong and immediate controul; 'and is not easily practicable under a remote government. The abundant means of war in the hands of the company's fervants naturally tended to its production; and it will not be doubted, that conquest and the overthrow of states, are attended with circumstances, which promife a full gratification to some of the strongest passions of the human mind.

The wantonness and injustice attributed to some wars undertaken in India, had (to the honour of the public feelings, whether the charges were ill or well founded) been for some time a matter of general execration in England. The censures passed in some instances by the company, if they did not fully confirm, at least afforded a general fanction to the charges. We have heretofore had occasion more than once to take notice of the causes, which tended to leffen the authority of the company over its fervants in India, and necessarily, their reverence for their employers, and obedience to their commands. But the company itself, in its ruling and governing powers at home, did not escape a large portion of public certure, derived from the imputed exorbitances of their fervants abroad. They were charged with a general indecision, a deficiency of foirit and vigour, and even fome apparent contradictions in their conduct and mea-That they did not fufficiently exercise the authority which they possessed. That they were

content to reprove where they should punish; and that they trusted to the future obedience of those who had already been guilty of the most glaring, pernicious, and even contemptuous acts of disobedience.

In full proportion to the fanguine hopes entertained, upon the prosperous appearance of things, at the time that the French power was annihilated in India, was the confidentation | and aftonishment which struck the nation, at that unexpected and unaccountable revolution which fo foon after took place in the affairs of the company; and which, shaking the Britith empire in the East to its center, threatened no less than the extinction of the English name in that quarter of the globe. The conduct of the company and of its fervants, became naturally subjects of public and private discussion. Parliamentary enquiries were inftituted, and have been long continued. Various reports from the committees have been laid before the House of Commons; but such is the complex nature and immenfity of the matter, the endless variety of the evidence, with the difficulties ariting from the remoteness of the scene of action, and the delays incident to parliamentary proceedings, that the enquiries have not vet drawn to a conclusion. The subject therefore still remains in obscurity.

In tracing those transactions and events upon the spot, which led to so unexpected and alarming a change in the British attairs, it will be necessary to take a retrospective as well as immediate view of affairs in India.

The Marattas and Hyder Ally [A] 2 were

were the only native powers in India, which could afford any cause of alarm to the British intereits. The one was the more powerful, and the other, from his great personal abilities and qualities, capable of being the more dangerous enemy. It feemed to be the political interest of the East India company, to foment the natural enmity which subfifted, and the accidental feuds which were continually arising, between those two neighbouring and rival states; observing, not to become any farther a party in their disputes, than might occasionally be necesfary for the preservation of such a balance between them, as would prevent either from growing too great by the ruin of the other. would feem that by fuch a policy the animofity of these two formidable powers, would in the end, by the exhausture of their strength and activity, prove the means of establishing the general tranquillity of India.

The warlike nation of the Marattas are the only people in India, who at all times refused the Mahomedan yoke. The immense power, and fuperiority of their enemy, laid them under a necessity of feeking refuge in the inaccessible fastnesses of that vast range of mountains, which cover so great a part of Hindostan. The long war, which, under the conduct of their illustrious leader, Sevagi, they fustained, against the immenfe power, and great abilities, as well as treachery of Aurengezebe, would, in other parts of the world, have afforded a splendid portion of history. The mountainous countries which they occupied for defence, would, in

any state of culture, have been unequal to their maintenance, and were totally incapable of affording the fur plies necessary for the profecution of the war; but the length, obstinacy, and various fortune of the contest, served to inspire the contempt, as well as neglect of agriculture. The rich furrounding lower regions, which had all submitted to the Mogul power, were of course compelled in their turn, as they happened to be more or less effectually guarded, to supply all the necessities of the Marattas, and to provide the means of war as well as of fuftenance. From these causes, and the inveterate habits incident to them, arose that marauding and predatory disposition, which, in the usual and natural course of things, still prevails, although the causes have ceased. The Marattas boast a high antiquity; and their language, which is a peculiar dialect of the Hindoo, and acknowledged to be among the most antient in India, sufficiently justifies that claim. Thus appears the error of confidering them as a lawless banditti, or a fortuitous affemblage of freebooters, united merely for the purposes of rapine.

The Maratta empire grew to be the greatest in India, through the decline and upon the fall of that of the Grand Mogul. Their dominions were vast, their resources great, and their armies brave and numerous. Their conjunctive revenues were estimated at not less than feventeen millions sterling, and their immense cavalry at three or four hundred thousand. But this great power was weakened and rendered inert, by being portioned out among a number of princes. They

all,

all, however, acknowledged a paramount fovereignty in the Ram-Rajah; (who is supposed to have been the immediate descendant of Sevagi) but the degrees of submission seem to have been meafured by time and circumstance. The connection and dependence resembled the feudal establish-Some of the ments in Europe. flates grew too powerful, to admit of any farther fervice than what fuited their immediate interests; and others were apt to follow the example, who were lefs able to abide the possible confequences of it.

A revolution in the court of the Ram-Rajah, tended much to weaken this connection, and to lessen the reverence, as well as the dependance of the other states. weakness of a minority, enabled Nana Row, the prime minister, a man of abilities, and a Bramin, to feize the reins of government; and the influence of that powerful body of which he was a member, ferved effectually to fecure and establish his authority. Such revolutions have at all times been so frequent in the eastern world, as to prevent their exciting any extraordinary degree of furprize. This revolution, contrary to the established practice of most ages and nations, was unstained by blood; but we are not to forget that it was conducted by Bramins. The usurper was fatisfied with the power, without assuming the titles or infignia of fovereignty. The infant Ram-Rajah was kept in a fort of splendid confinement, surrounded with the appendages of eastern grandeur, but debarred of all power, and kept totally ignorant of buliness. It is not impro-

bable that he might have confidered as the proper life of a monarch, that state of ease and infignificance, which fo many princes feem disposed voluntarily to adopt. The feat of government was transferred from the antient roval residence of Sitterah, to Poonah; and Nana Row, as well as his fuccessors, seem still to have acted under the supposed authority of the deposed prince, by their assuming no other title or character than that of Paishwa, or prime minister. From this change, the empire of the Ram-Rajah has been diffinguished only by the appellation of the Paishwaship, or otherwife the government of Poonah, from the name of its present capital.

This extraordinary government of ministers became hereditary, and was for a time fo ably conducted, that the empire seemed to lofe nothing of its former power and fplendour. But ambition having at length made its way into the family of the ministers, and in despite of the strict religious principles of their order, there producing its usual baleful effects, internal diffentions have fince been the means of impeding the active exertions, and of reducing the power of the state. Of all these evils, the opportunity which they afforded to the extraordinary aggrandizement of Hyder Ally, who from a foldier of fortune became the scourge or the terror of all that fide of India, may be confidered as far the greatest,

Nana Row was succeeded by his eldest fon Madai, who dying, without issue, towards the end of the year 1772, the government, as it was now settled, of course de-

[A] 3 volved

volved to his younger brother, Narrain Row. Their uncle, Ragonaut Row, otherwife known in this country by the name of Ragaboy, had for fome years lain close confinement, for peated plots to feize upon the government. Madai Row being aware of the youth and inexperience of his brother, and dreading the infidious craft and intrigues of Ragonaut, though in confinement, thought that gratitude might operate more powerfully in restraining the effect of that factious and turbulent spirit than the walls of a prison. He accordingly released Ragonaut, placed him in an honourable fituation in the government, and joining the hands of the uncle and nephew as he lay dying, adjured the former by every human and facred tie and authority, to aid the youth and inexperience of the latter, by his advice, assistance, and protection.

Ragonaut, in discharge of the trust reposed in him, procured, within less than a year, the affasfination of his nephew; hoping to fecure the Paishwaship in his own family, by the extinction of that brother's line whose abilities had rendered him its founder. The consequences were in some degree fuch as he merited. The acting powers of the state, in his hands, along with his personal influence, and the weight of a faction which he headed, were all incapable of refisting that general indignation, which to execrable a deed excited among the Marattas. He with difficulty escaped the public vengeance, by abandoning his country, and flying for refuge to Bomhay. The protection afforded to him, with the attempts

made, and the continued intrigues and plots carried on, for forcing him into the government of a great people, in direct contradiction to their own will and liking, laid the foundation for all those wars and troubles, which have fince taken place between the English and the Marattas.

Notwithstanding the losses suftained from without, through their intestine diffentions and domestic troubles, the Poonah Marattas are still a great and powerful people; their dominions, including those of the tributary and feudatory princes immediately depending on them, are of a wide extent; and they can bring numerous and powerful armies into the field. But these being composed almost entirely of cavalry, are necessarily fubject to the defects, to which that powerful arm of military force is liable when employed fingly; and being constituted on the same principles with the ancient feudal armies of Europe, they are likewife subject to all the disadvan-They rush tages of that fystem. eagerly into the field at the call of their respective chiefs, and sweep every thing before them like a tempest in their progress; but it is the univerfal practice of the Marattas, as foon as the expedition is ended, to return home with the spoil; some bodies only excepted, which are peculiarly destined to attend the perions of their princes. They may, however, be fummoned again in a few days, and will assemble with the same alacrity as before. It may be easily feen, what great advantages this conflitution of their armies, together with the want of infantry, must afford to the unceasing efforts of regular forces; while, on the other hand, the latter can scarcely hope to protect open countries from their ravages. The wars of the antient Parthians throw no small light on the opposite advantages and disadvantages in both cases. The present use of artillery, however, inclines the scale heavily on the side of a mixed and regular force.

The Rajah of Berar stands next to the Poonah Marattas, with respect to power and extent of dominions; and is in fact too great and independant, to owe any farther acknowledgment to that court, than what his immediate interests dictate, and the remains of anpossibly tient attachment might excite. He has besides claims to the fuccession of that sovereignty which tend strongly to disunion; he being lineally descended from the family of the Ram Rajah; and the deposed elder line, as is apprehended, now extinct.

Sindia and Holkar, who are supposed to be descended from Hindoo kings of the highest antiquity, also possess very considerable and valuable territories.-These princes have entered deeply int the late and present politics of the court of Poonah; and find it more flattering to their ambition, and more conducive to their fecurity and interests, to participate in the general greatness of the empire, and to prefide at the head of that aristocracy, which, fince the affassination of Narrain Row, guides all its councils, than by taking any advantage of its temporary weakness, to aim at a precarious independency, under the restrictions of a circumscribed power in their own dominions. We have already shewn, that the numerous other Maratta states are guided by circumstance and occasion, in their attachment to, or dependance on, the court of Poonah. Upon the whole, it does not appear that any general principle of union, excepting that of felf-defence, subfifts at present among the Maratta states; and it would therefore feem. that nothing less than some common danger reaching to the whole, could direct their united powers to any one point of action. Happy it is, to the European and Mahomedan interests in India, that the force of this vast and warlike empire is fo divided.

It will here be necessary to take fome notice of the fituation in which the company flood for fome years back, with respect to their other powerful and formidable ncighbour Hyder Ally. that bold and enterprizing prince brought the war, which had been commenced against him, to a fortunate issue in the year 1769; and when, in the height of fuccess, personally distated equitable terms of peace to the company at the gates of Madras, a treaty of friendship and alliance was then, in the firmest manner, concluded between the late contending par-By this treaty it was stipulated, that the contracting parties should mutually affist each other, against any enemy that should attack either; a clause evidently pointed against the Marattas, and undoubtedly fo underflood and verbally explained on both fides, although any particular specification of them in the written instrument was prudently omitted.

Hyder, with that fagacity and forefight which diffinguishes his

charaster, determined to make an early dicovery, of the degree of reliance and value, which was to be placed on the faith, and the friendthip of his new ally. accordingly, on the commencement of a war with the Marattas, which immediately after broke out, wrote a letter to the governor of Madras, requiring, that, confiftently with the friendship and regard fublishing between them, and for the good appearance thereof in the eyes of the world, he would, for fo m take, fend an officer with a battalion of f-a oys to his affift-A compliance with this ance. requifition was evaded, under the apprehention of a war with the Marattas, as another proposition made by Hyder at the fame time was, upon the ground of impropricty, in adopting a me fure of confequence without confulting the other prefidencies.

Before the war had continued quite a year, the Marattas having broken upon different fides into Hyder's dominions, and taken several of his forts, he wrote another letter to Madras in the beginning of March 1770, in which he stated, that in consideration of the union between them, his army and artillery were their own; that notwithdanding he had a right to confider theirs in the fame light, yet, if they would only fend a small force to join and act in concert with him, in order to maintain the appearance of connection, he would require no more. But, at the same time, the British agents in Hyder's camp informed the prefidency, that he was very earnest in his defire of a more effective aid than what he mentioned in his letter, and that he had commisfioned them to acquaint the governor and council, that as he should, on his part, punctually maintain between strict friendship them, he expected they would, in conformity thereto, supply him with a body of troops; and that he was even willing to pay a fpecified fum of money to defray the expence of their fervice, in order to obviate any failure of the performance on their fide, Thefe gentlemen, from themselves, remarked, that if this requisition was not complied with, they much feared, that Hyder's former indifposition to the company would again return.

These applications produced no more effect at Madras than the former. The Marattas, under the conduct of Madai Row, fo totally overpowered Hyder in this war, that his ruin was deemed inevitable. Unable to face them in the field, they were mafters of all the open country, and his strongest fortresses were barely capable of affording refuge and protection to his troops. Thus shut up, and all cultivation at an end in his dominions, it feemed evident, that however excellently his magazines were provided, famine must soon accomplish, what the want of infantry and a good artillery had hitherto prevented the Marattas from effecting.

In this state of necessity and danger, Hyder, of course, made repeated applications to his new allies for the performance of their engagements; stating the advantages to be derived from their alliance with him, and strongly urging the danger, if not ruin, to themselves and to the whole peninsula, which the success of the Marattas, in the accomplishment

of

of their ambitious views upon him, would inevitably produce. Various pretences for a noncompliance with these requisitions were fill found; and it appears upon the whole, that evalion and procrastination were the only principles of conduct adopted with respect to Hyder Aliy at Madras. It is not impossible, that the influence which the Nabob of Arcot possessed in that presidency, and the inveterate personal animosity which he bore to Hyder Ally, might have had no small effect with respect to this conduct. is certain, that the nabob at all times urged an alliance with the

Marattas against Hyder. The fortune of Hyder Ally at length triumphed over all his dangers and enemies. It feems probable, that the declining health of Madai Row contributed to fave him from destruction; and that the anxious folicitude of that chief to leave his young brother Narrain in a state of foreign, as well as domeflic, tranquillity, was what enabled Hyder to obtain a peace upon tolerable terms, and without the intervention of friend or ally, in the month of July 1772. The subsequent diffentions and troubles of the Marattas, together with the war in which they were unexpectedly involved with Bombay, afforded an opportunity to Hyder, not only to recover all the territories which he had given up by the peace, but greatly to increase his power and dominion by new conquests. It cannot be supposed, after that failure, if not breach of public engagement and faith, which Hyder had experi-enced in the hour of danger, that he could again look with friendship or cordiality to Madras. was, however, too good a statesman to declare his fentiments wantonly; and still preserved a civil, but cool intercourfe. this state of things he naturally fell in with France, by whom he was liberally supplied with artillery, arms, ammunition, and all thofe military necessaries, which enabled him in a very short time to renew the war with fo much fuccess and advantage against the Marattas. That politic nation faw the infinite advantage that might be derived from his friendship in their future designs upon the Carnatic. Their officers were permitted, if not encouraged, to enter into his service; to train his armies, and to form a powerful artillery upon the European These opportunities of model. advantage were not lost upon him, who was indefatigable in the process and completion of that military fystem, which was to render him the most formidable prince in India.

As the conduct at Madras had thus facrificed the friendillip and alliance of Hyder Ally, to Bombay was no less successful in establishing the enmity of the Marattas. A man of Ragonaut Row's character could not be supposed flack in making any concessions, however difficultiable or rulnous to his country, which could te.d. to the restoration of his power. Bombay was dazzled by the iplendid idea of naming a lovereign for the great nation of the Maractas: and nothing could be more flattering than the expectation of that fovereign's being their own immediate inftrument and varial. By the treaty with Ragonaut Row.

besides other great advantages, fuch an extent of territory was to be ceded to the company, as would at least have rendered the government of Bombay equal to the support of their own civil and military establishment, without being any longer a constant drain to Bengal. Under the fever excited by these prospects, Bombay entered hastily into a war with the Marattas, without waiting for the counsel or approbation of the superior presidency at Cal-

The Marattas were already fo much incensed at the asylum afforded to Ragonaut Row, and still more at the assumed interference in their private and family disputes, that they could not fail of an equal promptitude for the encounter. Sudden invafion, however, gave great advantages to Bombay; and the operatious of the war being in the beginning confined to the fea coasts, they derived no less from the prompt fervice of their marine and artillery. The fiege of Baroach was diffinguished by the fall of that brave and excellent officer, Col. Wedderburne; a loss so severely felt by the company, that it may well be questioned, whether the conquests made in the war were to be confidered in any degree as an equivalent. The excesses committed on the taking of that rich city, tarnished the glory which the valour displayed by the troops would otherwise have merited. island of Salsette, after a brave defence, was afterwards reduced, but with confiderable loss. The Bombay marine was highly distinguished on this occasion, and had a principal share in the success.

4

Other acquisitions were afterwards made on the continent; but the army, under the command of Col. Keating, extending its operations too far inland, was defeated by the Marattas.

Upon the new powers granted by parliament to the government of Bengal, and the arrival of the three gentlemen from England, in October 1774, who were to complete and give energy to the fupreme council, a confiderable change took place for fome time in the affairs of India. The newly arrived gentlemen totally reprobated the Maratta war, as well as fome others which had been lately conducted in other parts; and as totally condemned the conduct of Bombay, as well with respect to the nature of the measure, as to their adopting it without the participation or counfel of the presidency of Calcutta. treaty with Ragobah was not only condemned, but difavowed; and Col. Upton was fent across the continent of India to Poonah, in order to negociate an honourable peace, and a renewal of friendship with the Marattas.

Col. Upton was five months on his journey to Poonah, during which he traversed several of the interior countries of India, which had been hitherto untrodden by Europeans. We should have obferved, that the birth of a posthumous fon to Narrain Row, had frustrated the design of Ragonaut, in endeavouring to extinguish his brother's line. The infant was immediately declared Paishwa; and Saccarum Pundit, with Nana Furnese, were appointed afting minifiers and regents, to conduct the public business in his name. In the the mean time, the industry of the agents from Ragonaut and Bombay, operating upon the ambitious views, and personal jealousies or distains actions of the grandees, kept the government in a constant ferment, and rendered languid, or entirely bassled, the necessary exertions against their

foreign enemies.

Though the immediate refentments of the Marattas, at first raised difficulties in Upton's negociation; yet, torn to pieces as they were by factions at home, and oppressed on all sides by enemies abroad, he had the fortune to conclude a peace with them, on terms so honourable and advantageous to the company, as feems scarcely to be accounted for even thefe circumstances. treaty of Poonah, otherwise called the Poorunder, was ratified on the first of March, 1776. By this treaty, the island of Salsette, with the territory of Baroach, and some other districts in the Guzerat provinces, were not only ceded in perpetuity to the company, but the Marattas agreed to indemnify the authors of the war from its expences, by the payment of about 150,000l. at fixed terms; and for the fecurity of which, lands to a much greater value were affigued in mortgage. They farther agreed to assign a fixed provision, suitable to his rank, and even pretentions, but as a private member of the community, for the support of Ragonaut Row; who was in return immediately to quit Bombay, and to fix his future residence in a remote part of the Maratta dominions, where distance and situation would be some bar to his interfering in the affairs of government. On the other hand, it was contracted on the fide of the company, that no protection or affiftance whatever should in future be given, either to Ragonaut Row, or to any other subject or servant of the Maratta state, who should attempt to excite disturbance or rebellion in their dominions.

After concessions so exceedingly advantageous and flattering to the company, and which evidently proceeded from a desire of cementing friendship and good-will, rather than from any absolute weakness or distress, the Marattas seemed to have a right to expect peace, good faith, and good neighbour-

hood, at least, in return.

But the affairs of India were doomed foon to undergo another change, and to affume a new af-The three gentlemen who had arrived from England to fill up the superintending government of Bengal, and who, along with the governor general, and another old member of that prefidency, composed the supreme council of India, differed almost entirely with the two latter, in their opinions relative to public conduct, and their ideas of the policy to be purfued by the company. Peace with the country powers, along with an inviolable observation of public faith, and a strict attention to justice in all transactions with the natives, feemed to be the principles of their fiftem of govern-Great heats arole, and ment. frequent differences prevailed in the council, but the new members forming a majority, were for a time enabled to carry all queftions. The death of Co'. Monfon in 1776, and of Gen. Clavering in the following year, totally changed

changed this state of affairs. New measures and new systems of policy were adopted, and the old exploded or done away, with a contempt and eagerness suited to the heats and vexatious altercations which they had formerly excited.

The negociation with the Marattas, and the confequent treaty of Poonah, were entirely the work of the late majority in the supreme council; and had been conducted and carried into execution, contrary to the known, if not avowed fense of the then minority. The public condemnation of the war entered into by the prefidency of Bombay, the difavowing of their treaty with Ragaboy, and the marked contempt thewn in concluding a peace without their participation or counsel, could not but greatly irritate that body; and ferved to rivet them still faster in their attachment to that extraordinary fystem which they were purfuing with Ragonaut. accordingly contrived every possible obstacle to the performance of the conditions of the treaty; and the simple act of proclaiming the peace was so managed, as to throw an affront upon the Maratta government.

The subsequent revolution which took place in the politics of the government of Bengal, coincided perfectly with the resentments entertained by the presidency of Bombay. They accordingly took up, with fresh ardour, their late degraded system, of procuring a revolution in the Maratta state; and war, intrigue, and conquest, became the predominant principles of the Bombay government. Ragonaut Row either was, or

pretended to be, afraid to trust his person in the hands of the Marattas. He was accordingly still retained and protected at Bombay; whilst his emissaries and partizans, under the immediate eye of the British residents at the court of Poonah, were indefatigable in their endeavours to soment distention in the Maratta government.

In the course of the year 1777, Monf. St. Lubin endeavoured to negociate a treaty on the part of France with the court of Poonah; as a Mr. Boits did about the fame time on that of the Emperor of Germany. These circumstances, particularly the former, afforded a new ground, which was eagerly occupied, for the support of Ragaboy, and the accomplishment of the wished-for revolution in the Maratta government. Towards the close of the year, a discontented party at Poonah entered into fome negociation with the Bombay refidents at that court, for the advancement of Ragonaut to power. Their proposals were eagerly embraced at Bombay; the agents were ordered to accede to them, to affure the malcontents of fupport, and to bring the treaty with them to an immediate conclusion. At the same time, difpatches were immediately forwarded to the supreme council at Calcutta, acquainting them with what had been determined, and requiring their acquiescence and assistance. It appears from subsequent events, that the British agents were in feveral instances egregiously misled by the adherents of Ragonaut, or whatever other persons they communicated with at the court of Poonah; particularly ticularly with respect to the supposed French alliance, the state of parties, with the number and power of the malcontents; all of them matters of such a nature, as demanded the nicest enquiry and the most exact information. But their intelligence being such as was wished, it was willingly credited at Bombay.

The fupreme coun-Jan. 29th cil greatly approved of, and immediately ratified, the measures adopted Bombay. And to enable that prefidency effectually to carry the fcheme into execution, fent them an extraordinary supply of ten lacks of rupees; and resolved to assist them with a military force. But the governor-general, previous to this intelligence, had drawn up and laid before the council a new treaty of peace, which he proposed to be concluded with the Marattas; and was intended to supply the defects, which he attributed to the treaty of Poonah. By the conditions now proposed, and which were to be laid down as the only terms that could preserve peace to the Marattas, they were to give fuch fecurity for the personal sasety of Ragonaut Row, as he himself should require. -That they fhould pay a specific fum of money to reimburse the company those military charges which might be incurred by the interposition in his favour.-That they should cede the fortress and island of Bassein in perpetuity to the company.-That they should make other specified grants and exchanges of lands on the contineut.—And, that no European fettlement be allowed on any of the maritime coasts of the Maratta

dominions, without the confent of the supreme council previously obtained.

The arbitrary and imperious tone of these demands in general is sufficiently obvious; but the last. feems to be an extraordinary condition, to be proposed to a sovereign and powerful state. proposed plan of a treaty, as well as the measures adopted in supporting the defigns of Bombay, were warmly opposed in the council, and were carried through by the governor-general's casting voice only; which was for fome time the case, with respect to all the measures pursued for a renewal of the Maratta war. A resolution to the following purport was at first annexed to the conditions, but afterwards withdrawn: - That the proposals should be conveyed by letter to the Paishwa; that his anfiver be required, without condition or referve, to each article; and that this government shall take its final refolution, to abide by the treaty, as it shall stand confirmed by his answer, or to consider it as annulled and invalidated.

The supposed negociation with Ragonaut Row's party passed away; nor is it at all clear, that there was any fufficient ground for entertaining the idea. It was not a little curious, that the rage of war feemed to abate in Bombay, in proportion as it was amply endowed with the necessary means and authority. But if it flackened there, it appeared elfewhere in full vigour. Various schemes against the Marattas were agitated in the supreme council; but the grand object of policy, to which all the others were not only fubordinate, but in some instances intended

intended merely as blinds, was long referved, and not only kept back from the knowledge of the presidency of Bombay, but from that of the supreme council in general.

New instructions were sent to Bombay, containing peremptory demands to be made upon the Marattas; these were to supply the place of the conditions held out in the proposed plan for a new treaty; the refufal to comply with any one of them, was to be confidered and declared as a direct violation of the treaty of Poonah; and they were accompanied with menaces, which, among all equal states, would be regarded as tantamount to a declaration of war. In case of non-compliance on the fide of the court of Poonah, (which undoubtedly was expected) a wide discretionary power was given to the prefidency of Bombay, for entering into a new alliance with Ragonaut Row, and for engaging in fuch measures with him, as should appear most expedient for the retrieving of his affairs. They, however, received an intimation, that Ragonaut was to be regarded in a very fecondary point of view, with respect to some great objects of policy, which were not explained.

Nothing could more strongly shew the disposition of the court of Poonah, to adhere inviolably to the conditions of the late peace, and even to live upon terms of good neighbourhood and friendship with the company, than its submitting so far with respect to the injurious apprehensions of the public saith held out by Ragonaut, as to give up the point of his residing in the Maratta domi-

nions; and further offering, that if he would reside in Benares, under the English protection, and at that time the most delightful as well as the most learned city in India, but where from fituation and diffance he would be rendered incapable of mischief, they would in that case pay an annuity of five lacks of rupees, amounting to about 60,000 l. sterling a year, in ready money, for his maintenance and support during life. But this offer could operate nothing in restraining the ruling passion for war.

The supreme council formed the bold determination of fending a strong military force, with a confiderable train of artillery, by land to Bombay; being nearly from one extremity of India to the other. In this course, they were not only to traverse countries hitherto unexplored, and encounter difficulties of whose extent and nature no estimate could be formed, but the greater part, if not the whole of their way, lay through the Maratta countries, which they could not but expect to find hostile from such a violation of territory, independant of the jealousies already subsisting, and of the suspicious which must unavoidably be entertained, with refpect to the objects of fo extraordinary an undertaking.

This detachment fet out under the conduct of Colonel Lessie; and was strengthened, besides the artilery, by a regiment of cavalry under Colonel Goddard, and by 500 Candahar horse, which were supplied by the vizir, son and successor of Sujah Dowlah in that title, as well as in the Soubahship of Oude. The whole effective

force,

force, officers included, was fomething under 7000 men; but in the true stile of eastern armies, they were incumbered with such a multitude of sutlers, servants, and various retainers, that the camp, at the outset, contained above 38,000

persons.

This body began to move in the neighbourhood of Corah and Allahabad in the beginning of April, and arrived at the Jumna, which forms the Maratta boundary on that side, about the middle of May, 1778. They passed the river in boats, under the fire of their artillery, notwithstanding the opposition of the Maratta states in that quarter; and after a skirmish with the enemy's horse on the other side, which they obliged, without much loss, to disperse or retire, found the town and fort of Calpy totally abandoned, neither garrison nor a fingle inhabitant remaining.

They continued at Calpy to the beginning of June, and on the first day's march from thence, are faid to have lost between three and four hundred men of all forts, who died raving mad, under the pressure of the excessive heat, and the want of water. One of the best officers in the army lost his life on that day, and feveral others only recovered, after experiencing long illness and great danger. the Marattas could have forefeen the unaccountable conduct that brought on this misfortune, the whole army must have perished; but to their great furprize and infinite joy, they found the wells open, and the water plentiful and pure, at the place where they halted on the evening of this dreadful day.

They afterwards fpent about three months in the Diamond country of Bundelchund, where they entered deeply into fome difputes relative to the fuccession. which then prevailed in the family of the late Rajah. The nature and issue of these transactions are not, and probably never will be well understood. During this time, they furprized and facked, without any apparent warrantable cause, the city of Mow, which was under the protection of the Marat-The refistance was, however, fo confiderable, though the fortifications were out of all condition, and the attack made in the night, that public thanks were iffued to the troops for their good conduct and bravery. Upon Leslie's death, in the beginning of October, the command devolved upon Colonel Goddard; and whatever the nature of the service had been, there were no less than a thousand Sepoys at that time in the hospital.

We find by a letter from the Rajah of Berar to the governor general, that they were in a state of continual hostility with the Maratta chiefs and the officers of the Paishwa, through the whole course of their progress; and that they levied great fums of money in the countries through which they paffed. That prince accuses them, in the fame letter, of having loitered away their time in the Bundelchund countries, contrary to every principle of policy. It appears from other authorities, that they were attended by an agent of Ragonaut Row's, and that they levied contributions in the name of his mafter. This cannot but appear a little extraordinary, as every idea of intending to support Ra-

gonaut's

gonaut's pretentions in any manner, was repeatedly and formally disclaimed in Calcutta; and so far from avowing any hostile intentions with respect to the detachment, its object was held out to be merely the protestion of Bombay against the designs of the French; and to which place, it was declared, they would take the direct course, pay for every thing they wanted, and observe the strictest order and discipline in their march through the Maratta countries.

The detachment was fent out under the orders of the prefidency of Bombay, which they were inflructed to obey in all cares relative to their march, proceedings, and final destination. But the counfels there were fo various and fluctuating, and the instructions fo contradictory, that the commanders derived from that state of uncertainty, a latitude of acting as circumstances might invite, or opinion distate. On one day their march was countermanded, and the folid reasons assigned, of its difficulty, the inevitable dangers to which they would be exposed, and the prodigious expence with which its profecution must be attended. In a few days, again, they were directed to proceed, without any cause being assigned for this change of fentiment and instruction. The same uncertainty prevailed with respect to their courfe; Poonah, Bombay, and Surat, being at different times held out as the objects of their destina-

In the mean time the governor general brought forward that grand fystem of policy which had hitherto been referved, and which

undoubtedly was the main, if not the only motive, for the Bombay expedition. This was no lefs than a scheme for entering into a treaty offensive and defensive, and in all respects of the most comprehensive nature, with Moodajee Boofla, the Rajah of Berar; to engage that prince to enforce his claims to the throne of the Ram-Rajah, which was now faid to be entirely vacant, by the death of the confined prince without iffue; to apply the whole force of the company to his establishment in the Maratta empire; and farther to support him in his claims upon the Nizam of the Decan.

This bold and comprehensive scheme was, however, warmly contested, on various grounds, by the minority in the fupreme council. Of these were the following. -Its being directly contrary to the instructions sent from England, for fully confirming the treaty of Poonah, and for inviolably adhering to its conditions. militating against the repeated instructions of the company, to avoid being drawn, by any means, into the family squabbles or political contentions of the native powers. The immense waste of treasure with which the project must necesfarily be attended; and the critical nature of the feafon when this watte, to which no present estimate could aflign any other limits than the total exhausture of the refources, would take place; a feafon every where pregnant with danger; under the immediate preffure of a French war; and the affairs of Europe bearing fuch a general aspect, as fully indicated the propriety, if not necessity, of preserving the British force and refources

resources in India whole, unimpaired, and in condition to encounter any unforeseen dangers that might arise, or to profit of any favourable circumstances which might possibly occur. But they observed, that independent of these greater objects, the mere fituation of the company's private affairs at home, would at this time prescribe the strictest economy; their charter was now nearly expired, and it could not be doubted, as affairs stood in England, but that a large fum of money would be required for its renewal.

They further stated, that a project which, from its nature, was evidently capable of convulfing the whole continent of India to its utmost extremity, could not, in any state of things, or from whatever quarter it originated, but be exceedingly prejudicial in its progress, and highly dangerous in the issue, to the interests of the company. They strongly urged the breach of faith and injustice, as well as the diflike and evil repute which they must necessarily create, of our entering into fo unwarrantable a scheme of hostility, against our antient friend and ally the Nizam of the Decan. They reprefented, that besides being otherwife powerful, he was by far the richest prince in India; that by this measure, he must, in an instant, be converted from a friend to a most bitter and implacable enemy. That he abominated Ragonaut Row, had been long in variance with the Berar Rajah, was strongly attached to the Poonah government, and united in the strictest friendship with Hyder Ally. That his first measure undoubtedly would be, to cure the in-Vol. XXV.

veterate animofities which have for long subsisted between these two rival states; a measure dictated to themselves by its necessity. the inevitable consequence would be, a strict league and confederacy between those three formidable powers, for punishing the pride, and pulling down the dangerous power of the company. That if this great and formidable confederacy, should by any fortune prove totally unequal to its object; even in that case, highly improbable as it was, the fuccess of the company's arms would only ferve to precipitate affairs into a ftill more rainous and dangerous That a remote and doubtful danger would be readily hazarded, to efcape that which was certain and immediate. Aud, that however contrary to their present policy and disposition, jealous as they already are, and with reason, of that power and of all other Europeans, and however contrary to their interests in any other state of things, they would, notwithstanding, of necessity, call in France, upon such terms of advantage as fhe chose at present to require, to their assistance; and all the states of India, whether Hindoo or Mahomedan, would join with her in exterminating a nation, boundless ambition, and extravagant schemes of domination and conquest, went to the overthrow and destruction of all others.

These arguments and opinions were opposed and overruled, upon the idea of the infinite present and future benefits which would accrue to the company, from the placing Moodajee Boosla at the head of the Maratta empire; as well as the facility with which that business {B} might

might be accomplished. Instead of furthering, it would afford the fure means of totally defeating the views of France That reftless and ambitious nation were negociating, and had probably already concluded a treaty with the Ma-The present government of Poonah was entirely in their interests; and it was reported that the Port of Choul, and perhaps other fettlements of great advantage, would be granted to them. This was the time to counteract the views, and to prevent the effects of an alliance, which from its nature must prove fo fatal if firmly established. The Marattas were now divided at home; the minifters holding their power only at the will of a faction; the dependent states distaissied with their government, and confequently eager for any change or revolution; while their armies were engaged and overborne in the unequal contest with Hyder Ally. On the other hand, the Berar Rajah was great in power, and his force fresh and unimpaired; and as to Hyder Ally, no doubt could be entertained, but that instead of joining against us, he would to his utmost assist in placing Moodajee Boosla on the throne of the Ram-Rajah. As to recalling the troops, it would now be fcandalous; would degrade the company, and render its councils and military force contemptible in the eyes of all India. And, with respect to the Nizam of the Decan, it was infifted, that his views and conduct had for fome time borne an aspect unfavourable to the interests of the company, and which indicated much more a disposition to hostility, whenever a fair opportunity offered, than to friendship.

In pursuance of this project, which was carried by the casting voice, against the strenuous oppofition of two members July 18th, of the supreme coun-1778. cil, Mr. Elliot was appointed on an embassy to Naigpoor, the feat of the Berar Rajah, and furnished with the necessary powers and instructions to negociate and conclude the treaty with that prince; and in consequence of which, Ragonaut Row was to be entirely laid aside. At the fame time orders were fent to Leflie, that instead of pursuing the direct way through the great province of Malva, which feemed at first to have been intended, he should bend his course towards the dominions of Berar, with a view of supporting the negociation, and of carrying into execution the purposes of the treaty.

Whilst these measures were in agitation and pursuit at Calcutta, the Marattas having refused to comply with the conditions which were proposed from Bombay, that presidency declared the treaty of Poonah violated, and to be no longer binding on the company; and at the fame time passed resolutions, to accept the offers of those chiefs who were in the interest of Ragonaut Row, and accordingly to accompany the latter with an army to Poonah, in the beginning of the following month of September. At the same time, they directed Colonel Leslie to proceed in a direct course with the detachment to Poonah, instead of the route thro' the Guzerat, to Baroach or Surat, which feemed to have been predetermined.

These advices were received at Calcutta about the middle of August:

gust; and it seems a most singular circumstance, that those determinations at Bombay, which went fo directly to operate against the conditions and tendency of the new treaty proposed with Moodajee Boosla, were so far from being countermanded, that they met with full approbation. In the mean time, Colonel Leslie shewed no great disposition to attend to any orders which urged his departure from the Bundelchund country. His unaccountable delay in that country, as well as the unwarranted hostilities which he was charged with committing, had feveral times been brought up as objects of censure by the minority in the supreme council. His death, which we Oct. 3d. have already noticed, put an end to all attempts at farther enquiry; and prevented his difmission from the command of the army, which had been at length determined.

The death of Mr. Elliot, on his way to the court of the Berar Rajah, which happened fomething fooner, threw an unexpected delay and embarrassment in the way of that negociation. The bufiness, in consequence of that check, lay dormant for some time, and seemed apparently to have been given up. It was, however, again revived, when it was determined, that Colonel, fince General Goddard, who fucceeded Leslie in the command of the detachment, should be furnished with the same powers which had been communicated to Mr. Elliot, and should accordingly proceed in conducting the negociation. The authority given to Bombay to direct the course and point out the objects of the detachment, was upon that account revoked, and General Goddard ordered to make his way to the Nerbudda, which forms the northern boundary of the Berar Rajah's dominions.

In the mean time, Bombay feemed rushing with rather too much impetuofity into the Maratta war; and was fo confident in its fuccess, that instead of proposing to wait for, or regretting the delay of Goddard's detachment, they appeared apprehensive that any other should partake in the glory and advantages of the revolution. Neither did they feem provided with all the information, which could either warrant an undertaking of fuch danger and magnitude, or afford the guidance necessary to its direction when undertaken. They were not only missed with respect to the number and power of Ragonaut Row's adherents; they were equally misinformed with respect to the state and situation of the Maratta armies; which it feems they understood, to be totally engaged, at a great distance on the Kiistna, in the losing war with Hyder Ally. It was likewise reported, and seems to have been credited, that the Bombay army would be joined on the borders, by 20,000 horse under Ragonaut's partizans. Thus the expedition to Poonah was rather confidered as a fort of holiday adventure, than a matter of difficulty and danger.

Though expedition feems to conflitute the foul of fuch an enterprize, the movements of the Bombay army were unaccountably flow. In a few days after the army passed over to the continent, Captain Stuart was detached with [B] 2 a select

a select party of 600 grenadier Seapoys, to take possession of the Bour Ghaut, a pass through the mountains of the utmost importauce, and which opened the way directly to Pronali; that capital being within less than 50 miles of This fervice was perthe pass. formed without oppo-Nov. 25th. fition, and Stuart continued to fortify the pass for a full without any reinforcement, and without his meeting the finallest interruption. It feems probable, that the motive of this delay was to afford time to Ragonaut's partizans to affemble, and to join him in force on the frontier. If this was the object in view, it afforded a miferable deception; not a fingle hand was raifed for Ragonaut, nor did a Maratta of confequence appear in his favour, from the outfet to the end of the expedition.

The Bombay regular force amounted to about 4000 men, (of which 700 were faid to be Europeans) with a powerful train of artillery. Ragonaut Row commanded a feparate division, of two regiments of Seapoys, and about 600 horse, composed of his own followers. The army was encumbered with an enormous baggage, and fuch a number of carriages and cattle, as were totally inconfistent with the nature of the fervice and shortness of the distance. The military maxims of the East were never held in any estimation among warlike nations; but it would feem from this instance, and that of the Bengal detachment, as if the English were falling into one of their most inveterate and ruinous vices.

The nominal command of the

Bombay army lay in Col. Eger" ton; but the felect committee appointed the second in council, and another gentleman, as their deputies, to fuperintend the operations of the army in the field; investing civilians with powers as incompatible with their own fituation and knowledge, as with military fabordination and fervice. Thefe two gentlemen, with Col. Egerton, composed what was called the Poonah committee.

On new year's day, 1779, the whole army began their march from Condola, the first village on the Poonah side of the pass, and foon found the Marattas hanging on all fides, who impeded their progress by a cannonade, and distant attack with rockets, through the course of the day. Col. Cay was mortally wounded in this outfet of the business. The same fort of cannonade and interruption was repeated through every day's march, from nine in the morning till three in the afternoon, which we suppose was the time that the troops were in motion; the Marattas cautiously abstaining from coming within reach of the finall arms; and the lofs varying according to Thus constantly harstances. raffed, the army could only advance at the rate of from three to four miles a day. On the 4th of January, Capt. Stuart, a brave officer, who commanded the felect body of grenadiers, was killed by a cannon ball, which obliged the army to halt at a village called Chockley.

In a few days, on their arrival at Tullicanoon, a beautiful village adorned with noble buildings, (which was, however, burnt on their

their approach) and only about 20 miles short of Poonah, they found their difficulties and dangers multiplied in fuch a degree, as put an end to all hope of farther progress. They were already so completely furrounded, that every kind of fupply, and all intercourse with the country were entirely cut off. The enemy had been every hour increasing in force from the time of their quitting the Gaut, and it was now become tremendous. The Marattas themfelves fay it amounted to near 60,000 horfe. Upon their arrival at the fmoaking ruins of that fine village, they were closely attacked, with a determined vigour and confidence which they had not before experienced. In this skirmish the enemy acknowledged the lofs of 200 men; and faid that on the British side 25 Europeans, and 100 Seapoys fell.

In this state of things, Jan. 11th, the two remaining members of the committee (one of them being at this time either dead or irrecoverably ill) determined upon a retreat in the night, hoping to fave the army, by regaining the Gaut, or Mountain Pass. The profligate and abandoned Ragonaut Row, endeavoured to profit of this deplorable fituation, and to purchase personal fecurity, and peace with his country, at the price of betraying his allies to destruction. He is faid to have made the overture to Sindia, who feems to have been the principal Maratta commander; and that he not only informed him of the defign, the hour of departure, and the order of march, but that he promised to fall upon them with his own forces in the hurry

and confusion of the attack. This charge upon Ragonaut is not made by the English; but comes from a quarter which had much better means of information, and was not so liable to taciturnity upon that particular subject. At any rate, it can offer no injury to Ragonaut; the abhorrence in which he has been constantly held by all the princes of India, as well as by his own country, marks his character too strongly to admit of any additional colouring.

The line of march on the retreat being altered, and Ragonaut with his forces placed in a new polition, it was supposed, that the English commanders had received fome intelligence of his treachery. However that was, their rear was attacked before it had well got off the ground, foon after one in the morning; and by day-break the whole army found itself furrounded, and furiously assaulted on all fides. The engagement continued till four o'clock in the afternoon, with scarcely any cessation on either fide; and was then only terminated through extreme heat and weariness. The cannonade during the whole time was tremendous on both fides. Nothing could exceed the bravery firmness displayed by the company's troops, Seapoys as well as Europeans, during this long and fevere conflict. The British artillery were admirably ferved; and the furious attacks repeatedly made by the Maratta horse to charge the line fword in hand, were constantly repelled with great lofs, by the well timed and well placed discharge of their grape fhot; which was, however, accompanied and supported by an $\begin{bmatrix} B \end{bmatrix}$ 3 uniform

uniform and severe fire of musquetry. Captain Hartley, who commanded that division of the army which was most severely preifed, was highly and particularly diffinguished by his conduct

on this day,

The native accounts state the loss on the British side in this action, at 150 Europeans, and 800 Seapoys; but the loss feems to be much exaggerated. The Marattas furrounded the camp during the night, and kept patrolles constantly in motion, to prevent even the possibility of escape. Being now secure of their prey, they were contented with a cannonade, without attempting any close attack on the following day. It was returned by the enclosed army, until the afternoon, when the firing on the English fide ceased. A flag of truce being fent out, the Marattas likewife ceafed firing. The request which accompanied it, requiring that hostilities might cease for a given time, until proposals could be made for an accommodation, was as freely complied with. Maratta generals, however, remitted no part of their watchful care, in guarding all the avenues from the camp during the night.

Two gentlemen were deputed by the committee in the morning to confer with the Maratta chiefs. The only account which we have feen or heard of the conference, is given in a letter fent at the time to the Nabob of Arcot, from his envoy at the court of Poonah, and which states it in the following manner. That the deputy having first declared (it is to be supposed in the name of the company) that they were only

merchants, then proceeded to state, that Ragonaut Row had come to them and demanded their protection. That they thought he had a right to the government, and gave him their affistance. That nothing but ill fortune attended him, and they had been brought to their present miserable state by keeping him with them. The Marattas were now masters, and might take him from them .-That they should henceforth adhere to the treaties established between both nations; and requested that what had happened might be forgiven.

The Maratta minister answered, Ragonaut Row is one of us: What right could you have to interfere in our concerns with him? He then laid down the following terms: that they should restore Salfette, Baroach, and whatever else had been taken from the Marattas in the late war. That they should adhere to the treaty concluded with Balajee Row in the year 1761; and that they should

require nothing farther.

The deputies went back with this answer, and did not return untill the following day at noon; it is not clear, whether hostilities were, or were not recommenced during the interval. They informed Sindia that they had brought a blank paper, signed and sealed by the committee and principal military officers, which the Maratta chiefs were to fill up they pleased. Sindia, with equal moderation and wisdom, (for the wisdom and policy of the meafure are not to be judged of from the event in this particular instance) advised the Maratta council not to take any unreasonable advantage of their own power, and of the distress and necessity, which compelled the English to submit to any terms they chose to prescribe; "For," said he, "our making large demands would only sow resentment in their hearts, and we had better demand only what is ne"cessary. Let Ragonaut Row be with us, and the treaty between us and the English will be ad"hered to."

The treaty was accordingly concluded, upon the immediate condition of giving up Ragonaut Row, and the future one of restoring all the late conquests.—The former treaty with Balajee Row, to supply the place of the late Poorunder, and to be firmly adhered to by both parties. It was likewife slipulated, that the Bengal army should return; but it has been since said, that the committee declared, that their presidency had no authority which could reach to bind the supreme

council, with respect to the disposal of their forces. All these terms were sufficiently savourable; but they were clogged with the disgraceful condition, that Mr. Farmer and another gentleman should remain as hostages, until the treaty was ratisfied at Bombay, and the island of Salsette, with the other conquered countries restored.

The treaty being returned perfected to the Maratta camp, the articles written in the English, Persian, and Maratta languages, the whole confirmed by the company's feal, and figned as we hefore observed, the late enemy sent an immediate supply of provisions to the Bombay army; through the want of which (our account fays) they were reduced to the last state A body of Maratta of distress. horse conducted them back to the fea shore, and saw them on board the boats which re-conveyed them to Bombay.

C H A P. II.

Situation and conduct of Moodajee Boosla, the Rajah of Berar. Gen. Goddard passes the Nerbudda with the army, who are liberally supplied with provisions and necessaries in the dominions of Berar. Negociation with the Rajah, who refuses to accede to the conditions held out by the proposed treaty. Goddard fets out on his march for Poonah; receives contradictory instructions on the way, from the committee appointed to superintend the Bombay army; is met by a minister from the court of Poonah, who defires his return with the army to Bengal, in pursuance of the treaty of Worgaum: Goddard refuses to comply, and directs his course to Surat. Prefidency of Bembay disavore the treaty of Worgaum, and thereby expose the hostages to great apparent danger. New schemes adopted for a revolution in the Maratta government. Supreme council confirm the conduct of Bombay in disavowing the convention of Worgaum; but empower Goddard to negociate a treaty upon other terms with the Marattas. Great preparations at the same time made for war, and a renewal of the negrciation with Moodajee Boofla determined. Strong complaints made by the court of Poonah, of the faithless conduct of the company. Ragobah escapes from the custody of the Marattas, and slies for refuge to Goddard's camp; which increases the difficulties of the negociation with the former. [B]4

former. Various caufes which led to the confederacy of the great princes of India for the extermination of the English. Maratias break off the negociation with Goldard, and conclude a peace and alliance with Hyder Ally. Treaty of alliance concluded by the supreme council with the Rivens of Ghod. Gen. Goldard concludes a treaty with Futty Sing; takes Abmedahad, the capital of the Guzerat, by Sorm, and reduces the whole province. Sindia and Holkar arrive with a Maratta army. Sindia referes the faultmen who were given as heftages at Wergaum. Proposals by Sindia for an accommadation rejected. Cen. Goddard attacks and diffeats the Marcita army. Capt. Campbel repulses Sindia, and preferees his convey Lieut, Walfo furprizes and defeats a large body of Marattas. Another large budy defeated by Major Forbes. Major Popham's juccesses on the file of Bengal; drives the Marattas out of the country of Ghod; and jurgrips the fortress of Gualier, which had always been decated impregnable. State of affairs in the Carnatic. Treaty with Bazalet Jung for the Guntoor Circar, with other transactions, which led to great jealoup, diflike, and ill-will, on the fide of the Nizam of the Decan, and of Hyder Ally.

A S we have seen the unfortunate iffue of the Bombay expedition in favour of Ragoba, it will now be necessary to take some notice of the result of that greater and more comprehensive part of the fystem, which had been formed for the overthrow of the present Maratta government and the eilablishment, in a great meafure of a new arrangement, of power and policy in India. Moodajee Boosla, the Berar Rajah, from whatever motives it might arise seems to have been very favourably disposed to the British interests; at least it is evident, that he was willing to enter into any conditions of mutual convenience and good neighbourhood, which could tend to strengthen and render permanent a friendly connection. The Rajah's dominions were too remote, and too fecurely locked in from all maritime enterprize, to render him in any great degree apprehensive of the company's power; and the same causes, with others, prevented almost all commerce between his

fubjects and theirs. He, however, possessed a claim, which, if he had been disposed to enforce it, must have afforded continual room for angry discussion; this was the demand on Bengal of the chout, or annual Maratta tribute, which had been long paid by that kingdem, and to which, if at all allowable, he seemed entitled; but this claim had lain fo long dormant, as to be now scarcely thought of; and could only be revived by some unexpected and extraordinary change of circumftances.

As the conduct and disposition of princes are usually attributed to political motives, this attachment of the Rajah to the company must be fought for in other causes than we have yet feen. It is faid, that he formerly had in contemplation fome defign of enforcing his claim to the throne of the Ram Rajah, in the profecution of which, the fupport, or even the countenance of the company, would have been an object of no small consideration and import. The friendly inter-

courfe

course thus commenced, might well have been continued and improved, although, from the apparent impracticability of the defign, and the Rajah's subsequent connections with the court of Poonah, the idea from which it originated had been long laid aside. The Berar Rajah might also, in a general political view, have confidered the company as highly uteful, in contributing to support some tolerable ballance of power between the native princes of India; and, as in a late particular instance, he had himself been over-matched, worsted, and loft a confiderable portion of territory, in his war with the Nizam of the Decan, he perhaps hoped that their friendship and alliance would be a means of preventing future injury or loss.

· But it was long and late before the Berar Rajah was admitted into the mystery of that new system of policy which was in contemplation at Calcutta, and in which he was intended to hold fo great and conspicuous a part. Repeated hints had indeed been thrown out, both to his resident at Calcutta, and in letters to his prime minister, that a treaty of the first importance, and fraught with the greatest mutual advantages, was in view, and would foon be disclosed to him. This intelligence being entirely fuited to his own wishes, could not but afford the greatest satisfaction; and he accordingly expressed no fmall regret at the death of Mr. Elliot, the minister, who we have feen, had been appointed to negociate and conclude the business at his court.

In the mean time, he used the most friendly and unremitting endeavours, to prevent or to compro-

mise the differences, between the court of Poonah and Calcutta. His central fituation, his intimate connections with one, his friendly correspondence with the other, and his good wishes to both, rendered him the natural mediator between the parties; and it is but justice to say, that he was indefatigable in his endeavours to difcharge the duties of that office. He was equally industrious Poonah and at Calcutta, in explaining the meafures, conduct, and views of the opposite side, and in restraining or curing the jealousies rising on both. As the apprehension of a French alliance was the great object of complaint and alarm held out at Calcutta. his representations at the court of Poonah were to effectual, as to procure the abrupt difmission of the Chevalier de St. Lubin; and this fatisfaction, as the Maratta ministers affert, was given in fo clear and complete a manner, that he was fent away without hearing or receiving his proposals.

On the other hand, he was no less urgent, though less successful at Calcutta, in remonstrating on the impropriety, evil confequences, and ultimate danger of Leslie's expedition. He strongly stated, that exclusive of the effects which it must unavoidably produce at Poonah, it was a measure of such a nature, as could not fail to difgust and alarm all the princes of It was not only without example, but it was contrary to all treaties, and a direct violation of all the rights of fovereignty Every prince, through whose ter-. ritories the army paised, must refent, so far as he was able, such a flagrant outrage. He stated the

number-

numberless difficulties of every kind which they were to encounter: the unknown countries they were to explore, the difficulty of procuring provision in the midst of hostility, with the impracticable roads and the dangerous passes and defiles, through which they must attempt their way.

The inattention paid to the Rajah's counfel and opinion, did not produce any remission of his kindness and good offices. Two of his principal officers had long been in waiting on the banks of the Nerbudda, with ample supplies of provisions and necessaries, as well for its future support, as for the immediate relief of the Bombay army on its arrival. His zeal went fo far, as to lead him to disclose the preparations making by the court of Poonah for cutting off the detachment, even to the number of the troops and the names of the leaders, which were in different quarters assembling, and appointed for that purpose. When the army were arrived in the dominions of Berar, that prince, after specifically pointing out the dangers to which they would be exposed, and the enemies they had to encounter, then regretted, with much apparent fenfibility, that he did not, however, think, they could at that time return, without difgrace to the company's arms and councils; and thence concluded, that it was better they should at all hazards proceed. But, at the same time, still attentive to the prefervation of the troops, he pointed out the nearest line of march for them to the Guzerat, as the means of evading the impending dangers.

It was evidently in his power to have facrificed the detachment,

without risque or difficulty, to the views of the Nizam and the Court of Poonali; and no conditions or advantages could by them have been thought too great for such a fervice. Yet, although he was himfelf equally difguited and alarmed, at the defigns and objects of the new league, which were then unveiled to him, his fidelity continued unshaken; and instead of detaining the detachment under apparent circumstances of the greatest danger, he advanced money, upon bills from Calcutta, to enable them to profecute the march, when it could not otherwise have been remitted in any time equal to the exigency. This conduct does not belie the affertion, which was thrown out upon a subsequent occasion, by one of the Berar Rajah's ministers "That the family of Boosla " had never yet departed a hair's " breadth from their public or pri-" vate faith."

But with these good dispositions and qualities in other respects, the Berar Rajah was exceedingly ill calculated for the high part which was allotted to him in the new fystem of policy. It perhaps requires little less greatness of mind, to comprehend and adopt, than to conceive and frame, vaft and daring defigns. Moodajee Boofla was old and timid; and had no more disposition to break in upon the tranquility of his neighbours, than to hazard his own fecurity. Inflead of being fascinated by the glorious views of victory, conquest and empire, he was struck with horror at the means by which they were to be attained. He feems to have been biaffed by ideas, which cannot but appear strange and extraordinary in a Maratta; and his

long

long letters upon the subject, may be considered as little less than lectures upon political morality.

Colonel Goddard, who departed from the Bundelchund country on the 12th of October, 1778, was, during a march of about feven weeks to the Nerbudda, almost continually harraffed, his supplies cut off, and his progress interrupted, by a body of Maratta horse under Ballagee Pundit. It however appears, that the army in this course passed through defiles, buried in the woods and mountains, of fuch length, difficulty and danger, that a handful of men might have stopped the progress of an army, and a moderate, well conducted force have that it up entirely. Fortunately, the advantages to be derived from such circumstances of situation, were not within the compass of the enemy's skill.

The army arrived on the northern banks of the Nerbudda, fatigued, exhausted, their carriages broken, their draught cattle worn down, and in want of all manner of supplies, on the last of November; and passed over to Hussinabad, in the Berar dominions, on the following day, where all their wants were amply supplied. Colonel Goddard, with the army, continued at Hussinabad, until near the middle of the following January; he immediately fending an agent to Naigpore, the Rajah's capital, in order to negociate the proposed alliance. Notwithstanding friendship shewn by Moodajee Boosla, he was by no means disposed to admit of their advancing, under any pretence, into the interior parts of his dominions; and he shewed no small jealousy at fome intimations that were given,

of their good disposition to the protection of his capital against any possible consequences of the

proposed alliance.

The result of the negociation was, that the Court of Berar abfolutely refused concluding any alliance, or entering into any conditions, which tended to hostility, either with the Paishwa, or the Soubah of the Decan. They represented the breach of friendship. violation of faith, treachery, and positive perjury, which, on their fide, would attend the former; and they confidered as not a great deal less heinous, the unjustifiable violation of a treaty of peace folemnly ratified with the Nizam. They likewise totally condemned the scheme with respect to its policy, as being rash, immature, hastily formed, highly dangerous, and as impracticable as it was unju£.

Moodajee Boosla himself entered into much reasoning upon the fubject, both in writing and otherwife. It feemed as if he wished to fosten the refusal, by stating the impracticability of the defign; flewing the total incompetency of his own forces joined with the English, to oppose the powerful and numerous enemies which it was intended to provoke; and the inevitable ruin to himself and his country, which must necessarily attend his engaging in the meafure. He feems every where treat the scheme as a matter hastily taken up and adopted, without deliberation, judgment, or a due attention to means or quences.

It was in this state of things, that the Berar Rajah received intelligence, of the landing of the Bombay army on the continent,

with

with a view of conducting Ragonaut to Poonah, and placing him by force of arms in the Paishwathip. The impressions which this intelligence made upon his mind can only be supposed. It certainly could not excite very favourable ideas with respect to the rectitude of the company's conduct and views, any more than to the faith or honour of the nation. However ruinous and difgraceful the Bombay expedition was in itself, it undoubtedly proved the means of preserving Goddard's detachment; the large forces which were affembled in different quarters to intercept their passage, being, in the first indance, necessarily called off to encounter the nearer danger; and the treaty or convention of Worgaum, having afterwards lulled the Court of Poonah into a fecurity, which excluded all ideas of farther hostility.

The negociation with the Rajah having thus failed, Colonel God-

Poonah. But he had not advanced many days, when he received a letter from the Poonah committee, being those field deputies who, we have feen, conducted the operations of the Bombay army, advising him to proceed either to Baroach or Surat, or otherwise to continue on the borders of Berar; but by no means to advance towards Posnah. This letter was dated on the 11th of January, before the final engagement with the Marattas. The colonel, however, kept his way; not thinking himfelf warranted by these advices to return to Berar; and the same common road still holding to the other specified places. On the 16th of January,

when the terms of the treaty of Worgaum were agreed on, the Poonah committee wrote a letter to Goddard, with positive directions to march back with the army to Bengal; but in three days after when the impressions that then operated were worn off, and they had come to a refolution of difputing the validity of the treaty, they dispatched another letter, informing him, that upon due recollection, they found they were not authorized to iffue the former orders and he was therefore to

pay no regard to them.

Colonel Goddard, without being moved by these contradictory orders, continued his courfe, until on the 5th of February, being arrived at Brahmpore, he received dispatches from the council of Bombay, with orders for his proceeding immediately to Surat; obferving at the fame time, that they were not at liberty to give him any precise information as to the causes of the return of their army, nor as to the probable confequences of that event. These advices were fucceeded by the arrival of a Vackeel, or minister, from Poonah in his camp, with a copy of the convention at Worgaum, by which his immediate return to Bengal was stipulated. Colonel Goddard denicd, that the committee who figned the convention had any manner of authority over him; faid that he was under orders to march to Bombay, for the fecurity of the company's possessions against the defigns of the French; that he could not dispense with his orders. and fhould accordingly profecute his march. Being now fenfible of the fituation of affairs, he bent his course directly to Surat, where he arrived by the end of February.

Bombay

Bombay was exceedingly flow in communicating its misfortune, or intended mode of conduct in consequence of it. The intelligence had been fo long received from Madras and Poonah at Calcutta, before any direct account was tranfmitted from that presidency, that fome censure seemed to be in agitation for fo unaccountable a negligence in the supreme coun-The Bombay dispatches did not arrive until after the middle That presidency had of March. publicly disavowed the treaty of Worgaum; although (it was ratified by two members of the felect committee, who were in effect armed with all the powers of the government; and thus were the lives of Messrs. Farmer and Stuart, the two gentlemen, who relying on the faith of the company (which in that instance should have been deemed particularly facred) committed themselves as hostages for the faithful performance of the conditions, to all appearance facrificed.

No misfortune feemed capable of laying the spirit of intrigue in Bombay. In the midit of difgrace and calamity, a scheme was inflantly formed for finding a fubstitute to supply the loss of Ragobah, and thereby reviving the never abandoned defign of itill effecting a revolution in the Maratta government. The late great kindness shewn to the English, and the eminent service done by Madajee Sindia, in preventing the whole army from being difarmed and detained as hostages, and thereby affording an opportunity for evading the treaty of Worgaum, pointed him out as the proper instrument for this purpose. Such fignal acts of fervice, it was supposed, could only proceed from interested and finister views, or from some very extraordinary strain of friendship. In either cafe, though with more certainty in the former, the motive might operate to the same end in promoting the defign. power, refources, influence and character of Sindia, rendered him a much more eligible instrument, and infinitely more capable of carrying the business into execution, than the profligate Ragobah. Measures were accordingly taken for making fecret proposals, holding out great advantages to Sindia, to induce him to adopt the new scheme of revolution; but we do not find that they produced either answer or notice from that chief.

In the mean time, Bombay and Calcutta charged each other with the late misfortune and all its confequences. The fupreme council charged the prefidency with dilatoriness and caution when they fhould have been alert and in action; with missing the fairest opportunities of advantage and fuccefs; and at length, with the utmost precipitancy and rashness, in adopting the late expedition when the featon was over, and under circumttances which rendered fuccess impracticable. On the other hand, the prefidency of Bombay attributed all their failure and misfortune to the proposed treaty with Moodajee Boosla, and to the keeping them to long in the dark with respect to the design, that it was too late to benefit by the knowledge when communicated. While recrimination was bandied, Madras was foreboding and lamenting the evils, calamities and dangers, to which the rashness and violence of both, in continually forcing the Marattas

to war, must expose that government in particular, and the company's affairs and possessions in general; at a time when Hyder Ally and the French were only waiting for the proper opportunity to wreak all their vengeance upon the

English.

The fupreme council, however, confirmed the conduct of Bombay, in difavowing the treaty or convention of Worgaum. But fome pacific disposition, notwithstanding, now appeared; and Colonel Goddard was endued with full powers for entering into a negociation with the Marattas; and for a renewal or confirmation, or both, of the Poorunder treaty; but with a strict article against the admission in any manner of the French, or the entering into any connection whatever, with that nation; and an inviolable determination declared, not to give up any of the new conquests or accessions. It had been previously laid down, as a general position not to be departed from, in the council, that the Marattas ought to be fully fatisfied with the poffession of Ragonaut Row; and that they had no right to claim or to expect any farther concession in consequence of the late convention.

But with these pacific appearances, if fuch they may be confidered, it was at the same time determined to renew the negociation with Moodajee Boofla, and to urge that prince by every motive to accede to the proposed treaty. Every possible preparation for a renewal or carrying on a war was likewife made; and the first brigade, which had for fome time been waiting on the banks of the Jumna for that event, was now inpplied with artillery, ammunition, and all other necessaries, in order to be enabled to enter the Maratta countries, and proceed to action, at the fhortest notice. Other divisions of troops in the most advanced or suitable stations, were also ordered to be in constant readiness for motion or fervice.

Under the various circumstances we have feen, exclusive of a far greater number relative to the fame fubject which cannot come within our observation, it can excite no furprize, that the following passages of complaint or reprehension, should, along with many others, appear in some of the letters which had been written in the name of the Paishwa to the governor-general, even before the late Bombay expedition; viz.— " When the government of Bom-" bay, in former times, put on " the mask of friendship, for the " purposes of deceit, and aided " the enemy of this government, " regarding you, fir, as fuperior " to all the other chiefs, I made " peace and friendship with you, " and these are the fruits pro-" duced by this friendship." —
" You write, that the maintain-" ing of friendship and strict " union between our states, is " your resolve. Is it, in effect, " for the prefervation of friend-" ship, that you trouble the do-" minions of this government? " Such a mode of conduct is in-" confistent with the maxims and " usages of high and illustrious " chiefs." - "The maintenance " of every article of the treaty, " is equally incumbent on both " parties. It is not stipulated in " any article of the treaty, that " either party may fend forces " through the dominions of the " other,

" other, without confulting him " beforehand; and thereby to " cause trouble and distress to the " people. To what rule of friend-" ship can be attributed, the sta-" tioning garrisons, and the rais-" ing of money in the country of " the other party? What has " happened is then agreeable to "English faith."-He concludes with the following declaration-" From the commencement of the " authority of the family of the " Paishwa, they have entered into " treaties with many of the chiefs, " both of the East and of the "West, and have never before " experienced fuch a want of faith " from any one; nor ever, to the " present time, deviated from "their engagements, nor been " wanting in the duties of friend-" ship and alliance. The blame " rests with you."

Colonel Goodard, who was about this time advanced to the rank of brigadier-general, was highly caressed at Bombay, appointed to a deliberative feat in their councils, and feems to have entered very speedily into the spirit of that presidency, to which his military fituation and habits no doubt contributed. Before he entered upon the duties of his new office as plenipotentiary, he communicated to Calcutta an account of the distracted state of the Maratta affairs, the dissentions by which the court of Poonah was torn to pieces, and pointed out the great advantages that might be derived from that fituation. did not extend his views fo far for the present as to a total revolution in the Poonah government, but shewed the weak state of the Maratta frontier on the quarter where he commanded, and pointed out the ease with which valuable conquests might be made, particularly on the Guzerat side, during this season of weakness and intestine disorder.

In the mean time, he notified to the court of Poonah the powers and instructions he had received for accommodating matters; but before an answer could be returned, the old torch of discord suddenly and unexpectedly blazed up again between the parties; Ragonaut Row having made his escape from the custody of Madajee Sin-dia, and slying, in the beginning of June, for refuge and protection to General Goddard's camp near Surat. It appears that Bombay, fmarting under a fense of the censure arising from the late misfortune, did not choose to hazard the charge of embroiling matters farther by receiving Ragonaut, at a time when a scheme of accommodation had been adopted and was proposed to the Marattas. Thus, however unwilling to lofe him, they were, in the present delicate circumstances, glad to shift the responsibility to Goddard; while Ragonaut himself could not conceal, how much he would have preferred a renewal of the connection with them, to a dependence on the fupreme council.

It was only a little before Ragonaut's escape, that the Paishwa and Madajee Sindia had written to the presidency of Bombay, informing them of their immediate preparation and intention of marching against Hyder Ally, hoping sufficiently to avenge all the injuries they had received from him; and at the same time expressing the most earnest desire of amicably settling all differences with the British government.

The

32] ANNUAL REGISTER, 1782.

The protection afforded to Ragonaut by General Goddard was approved of at Calcutta, and the former was affured of its continuance; but his political fituation with respect to the company was totally altered. All ideas of adopting his projects of revolution, and of support in his ambitious defigns were at an end; and he was now confidered only as an inthrument, that might be rendered in some degree useful, whether in renewing the war, or in fettling the terms of peace. It was, however, determined, that whenever the latter event took place, a fuitable provision should be made for him by the Marattas, and to be paid to him at whatever place he should choose to reside. So widely were things now changed from what he had experienced at Bombay, that the allowance of 50,000 rupees a month, (fomething about 6000l. flerling) allotted for his fupport by General Goddard, was highly diapproved of by the fupreme council; and that commander was ordered to reduce it within very narrow limits. Ragonaut's character was marked by the instructions given with respect to his being protected, which was limited to his not forfeiting the right to it by any act of infidelity, and his not making any attempt to defeat the effects of the negociation with the Marat-

The unexpected arrival of Ragobah in the British camp, and the protection necessarily afforded to him as a fugitive, was early announced at the court of Poonah. That government, however, a greed to send agents to the camp, in order to open the negociations with General Goddard. This, how-

ever, was flowly done; and fome fymptoms began to appear which feemed to indicate, that the defire of accommodation on that fide was by no means growing stronger. The agents did not arrive in the camp until the middle of August; and fo much time was lost, through the fending of messengers to Poonah upon every dissiliculty that arose, together with the very flow return of answers from thence, that the negociation was spun out, without any point being conclusively settled.

In the mean time, all the hopes of an alliance with Moodajee Boofla, were now as totally fruftrated as they had been in the first instance. General profesfion of friendship and goodwill, were all that could be obtained from that prince; excepting, indeed, advice, of which he was by no means sparing. This constantly tended to a speedy accommodation with the court of Poonah; the wifdom, and even necessity of which he took no fmall pains to He was uncommonly earnest upon this subject; offering to be himfelf both the mediator and guarantee; and engaging, effectually to fettle the differences, and to cure all the jealousies on both fides. The refufal of his mediation was not likely to increase his attachment.

In the mean time the foundations were laying down of that dangerous league, which was to combine all the princes of any confideration and power in India, in a general confederation for the downfall of the company, and the final extermination of the English. It required a long feries of meafures and events, tending to irritation, jealoufy and alaim, and to

nfuſe

infuse an idea, not of partial, but of general danger, to unite fuch discordant interests, and house dispositions, in any scheme of reciprocal benefit, and mutual action. Of these too many inflances were unhappily afforded. Some we have feen; others did not come within the line of our arrangement. Hiring out the company's troops for the extermination of the Rohilla nation; the motives which caused the elevation of Sujah Dowla, to great additions of wealth, power, and dominion; together with the stripping of the Mogul of the stipend which had been allotted to him by themfelves as a tribute for the kingdom of Bengal, although the fanction of his name and authority, which they obtained by it, was of infinitely greater value to them in the government of the country; these, with other charges of a fimilar nature, were held out, in the public confultations of the native chiefs, to shew the dangers to be apprehended from a people, whom they represented as being so perfidious and rapacious, that they trampled upon all laws, human and divine, which stood in the way of their ambition or interest.

The repeated and continued breach of faith with the Marattas, could not but renew every fends of past or more distant grievance, and increase the general odinm and alarm, even with those who had no interest in, or who were even perhaps adverse to that people. It was natural to others to conclude, that they might themselves experience a fimilar The extraordinary treatment. march of the army across India, excited a general alarm with re-Vor. XXV.

spect to the ambitious designs of the company, as the utter expulsion of the French did, with regard to the dangerous extent of its power. It would have required no small degree of prudence, moderation, and caution, to have obviated the effects of that event, independent of all other causes of jealousy and alarm.

It feems fearcely credible, that both the fidelity and the fecrecy of the clust of Berar should have been to fingularly eminent, as that the Nizam, Soubah of the Decan, should have received no manner of intelligence, either at, or after the time, that he was himself one of the sacrifices proposed in the treaty with Moodajes Boofla. Yet, fingular as it is, neither in enumerating the causes which induced him to become the founder of the league against the English, nor upon any other occafion, did the Nizam ever throw ont a hint of this nature. His oftenfible causes were, besides his share in the general apprehension, the close friendship, connection, and alliance between him and the Poonah government; the mortal animofity he bore to Ragonaut Row, whom he deferibed as " an " invincible willain, and atterly " incapable of faith;" the sense of injury and injustice, in which he to strongly regarded the conduct of the Bombay government, as to attribute the loss of their army to immediate interpolition of Providence, in condemning the unjust to fall into their own snares; together with the immediate perfonal injuries, which he charged to the government of Madras. It appears that Moodajee Boofla had [C] carly early apprized the governor-general, " that the Nabob Nezam, " and others also, who were all " alarmed at the encroachments " of the English in the Decan, " were waiting a favourable op-

" portunity to repel them."

The Marattas found themselves pretty early in the year reduced to the following alternative, either to accommodate matters in the best manner they could with the English, and to take a full vengeance of Hyder Ally for all their losses, or, if that was found inpracticable, to make peace with Hyder, and to join their forces with his against the former. Hyder himself opened this ground early to them, by an offer of paying a large fum of money to them as an indemnification, a confiderable tribute for the conquered countries, and his whole force to affift them against the common enemy. They were, however, fo strongly inclined to the first part of the alternative, that no answer was returned to Hyder's propositions; while the escape of Ragobah, with various other circumflances, continually threw new difficulties in the way of an accommodation with the English.

The Nizam, at length, decided the conduct of all the parties. Peace was fuddenly concluded between the Marattas and Hyder, and the grand league of confederation against the English formed. The principal parties were, the Nizam, Marattas, Hyder Ally, and Moodajee Boosla; while Nudjiff Cawn, and other chiefs on the western side of India, were invited to accede to the confederacy, and to make the confusion and langer general, by directing their

attacks against Oude, Allahabad, and other provinces in that quarter. The grand outline of warfare was laid in the following manner; Hyder and the Nizam were to attack the Carnatic and the Northern Circars; the Marattas were to direct their force on the side of Surat and the Guzerat; and Moodajee Boosla was to invade Bengal with the greatest

army he could raife.

It is not certain how far the latter was a willing, or even a free agent in this confederacy. He has fince pleaded compulsion. He faid, that his army being disbanded, he was threatened with immediate invalion, both by the Nizam and the Marattas; so that he had no other means of faving his country from ruin than by an apparent compliance. It would almost seem, indeed, that it was fo understood by the Company. Certain it is, that the part he took in the war shewed no marks cither of zeal or vigour. He was, in the first instance, unaccountably flow in the outfet of his army; and the time was fo oddly chosen, that it did not arrive near the borders of Bengal until the rainy feafon was just fetting in, which, however disposed for action, must have rendered it for feveral months of necessity inactive. And so sar was any hostility afterwards from taking place between the parties, that the supposed invader would have been in danger of starving, if it had not been for the kind fupply of provisions with which he was furnished from Bengal, and by which the kindness shewn to General Goddard's army on the Nerbudda was returned.

After much correspondence be-

tween Surat and Poonah, and fome peremptory meffages from the former, charging past delay, and infitting upon immediate and decifive answers to the specified propositions made by General Goddard, the negociations were at length abruptly broken off in the month of November, by a declaration from the Maratta agent, in the name of his master, that he would not accede to any propofals made, or conclude a perce with the English, unless the delivery of Ragonaut Row, and the restoration of Salsette to the Maratta government, were laid down as preliminaries.

The preparations for war, already in forwardness, were now every where quickened on the fide of the Company. Bombay, which had stipulated with Goddard for the share it was to possess of the new conquests, supplied him with its whole force, excepting what was merely necessary for the garrison defence of their own island; but that presidency totally declined being in any degree responfible, either for the intended meafures or their consequences; and at the fame time declared their utter inability to contribute in the fmallest degree to the expences of The government of Madras, who confidered this war as fraught with every degree of danger and ruin to all the fettlements, were notwithflanding obliged to fend a very valuable and effective part of that force which they were foon to experience the want of, to the aid of the Surat army. On the other fide, the governor-general and fupreme council concluded an alliance, offenfive and defensive, between the Company, and the Ranna of Gohud, or Ghod, a petry prince, whose mountainous territories lie on the Maratta side of the Jumna, and the greater part of which were then possessed by some of their troops.

The want of money, operating along with their usual internal divisions, rendered the preparations on the side of the Marattas exceedingly slow, and their military operations languid and inessective; o whilft the great pecuniary refources which were yet in the hands of the company's servants, could not fail to give great energy and effect to their enterprize.

The Maratta family of Guiacawar held fome confiderable poffessions under the Paishwa, on the weitern borders of the Guzerat, and pointing from thence towards the Indus, the boundary of Hindostan on that fide. In the first Bombay war, disputes then prevailing in that family with respect to the fuccession, the pretensions of Futty Sing Guiacawar were favoured by the English, in opposition to those of the other claimants. Such fort of fervices are feldom supposed to proceed from difinterested motives. The transactions are by no means clear; but cessions of lands to a considerable value in the Guzerat, were by fome means obtained from Futty Sing; and the claim, to some of them at least, was afterwards supported in the Poorunder treaty, and became the principal article in reference to future enquiry which was then left undecided. Futty Sing after-wards declared, that his fignature was not only extorted by force, [C] 2

but that he had himfelf no right to the lands of which he was supposed

to have made a cellion.

Some farth r use was now, however, intended to be made of this chief, with respect to the proposed conquest, or division of the Guzerat; but whether this related to the military affidance he might give, to the appearance of right that might be derived fr m his claims, or to both, does not peril cliv appear. However that might · be, Futty Sing was fo little difpoied to accept of the advantageous conditions held out to him by the proposed treaty of alliance, that the first military movement made by General Goddard was the passing of the Tappee, on the fecond day of the year 1780, in order that his approach might flimulate that prince to a speedy determination.

The reduction of the fortrefs and territory of Dubhoy, appertaining to the Paishwa, was the oftenfible motive of this movement, which otherwise must have been confidered as directly hostile to Futty Sing himfelf; as it was the highway to his capital of Brodera, where he is mediately refided. Dubhov, with its diffrict, were reduced without much difficulty; but neither the faccess nor vicinity of the army, nor the acknowledged talents of General Goddard in negociation, were fufficient to induce Futty Sing to accade with a good grace to the proposed alliance. His difficulties were, however, at length furmounted, and by the end of the month the treaty was figured, for the allotted divisi m of the Guzerat between the parties, and the perpetual exclusion of the Pounah government.

The army being reinforced by Futty Sing's cavalry, General Goddard marched to befige Feb. 15th, the city of Ahmedabad, 1780. the capital of the Guze-This place, of so much importance, was taken by florm, in only five days after the appearance of the army before it. The reduction of the capital was immediately followed by that of the rest of the province; and Futty Sing being placed in the government at Ahmedabid, by the general, then proceeded to pass grants to his creators, of those districts which they yet chose to keep in their own hands. He likewife granted the privilege to the company of establishing a factory at Ahmedabad; a favour, from whatever cause, which there was no great disposition at prefent to receive at his hands.

The policy intended to be obferved with respect to this prince, feemed to be of the same nature, with that which had of late been in the usual course of practice with others. The general, who was by no means unfuccefsful, in grafting upon the character of the foldier that of the politician, recommended delay is the final fettlement of the province, until all the great objects of the war should be fecured, left any disputed claims should excite jealouty or apprehension in Futty Sing; for whose services at present they had much occasion. The prefidency of Bombay were more explicit. They complained to the governorgeneral and council of the dittribution of the province, the company's portion, in their opinion, being by no means adequate to her rights or pretentions; they therefore advised, from their own

knowledge

knowledge of Futty Sing's character, that the board would not give a hasty or definitive ratification to the treaty, without at least a guarded referve, for a new and equitable fettlement to be hereafter

provided.

Defore the immediate settlement of the province had well taken place, Sindia and Holkar arrived with an army, and feemed to be directing their course towards Surat. General Goddard, by feveral forced marches, prevented their defign; and having reached their encampment on the 8th of March, intended to attack them in the night. tie was most unexpectedly diverted from this defign, by a letter which he received from Mr. Farmer, one of the gentlemen who was left a hostage at Worgaum, and was now in the enemy's camp, informing him of the friendly professions made by both those chiefs, and of their wish to be on amicable terms with the English.

Thete favourable dispositions feemed confirmed on the following day, by the arrival of Mr. Farmer and Captain Stewart, two hoftages, in the camp, who had been freely enlarged by Madajee Sindia, and discharged from all obligations on account of the treaty of Worgaum. They were accompanied by a vackeel, or confidential meffenger, from that commander, who affured General Goddard, that Sindia's enmity to Nana Furnese, the Maratta regent, was equal to that of the English, and defiring an explanation of their deligns with respect to the Paishwa and himfelf, confidered dittinctly from that minister; and at the fame time withing to receive propofals from the general for an accommodation, on fuch terms as might be conducive to the views and interests of both parties. Goddard declined fending thate prop. fuls; but defired to be made acquainted with the fentiments of Sindia, who was the belt julge, in what manner a new fettlemeat of the government of Poonah might be effected with most ease

and advantage.

After some inexplicit letters of friendly profession, Sindia at lengthcommissioned his vactued to open explain his propolitions, which, it is faid, were evidently calculated to get Ragobah and his fon into his own possession, and thereby to aggrandize himfelf in the flate, without any regard to the interests of the English. These were immediately rejected, and the vackeel dimiffed with an aifurance that the English would put no reflraint upon Ragobain, nor risque the safety of his fon; and, before they put the power of the state into his master's hands, they would expect tome conditions in their own faveur, though they were entirely disposed to a fair accommodation.

Upon the whole, the conduct of Sindia in this transaction techns, in the present state of information, very inexplicable. The girls up of the hostages, if it had been f'llowed by no interested projofals, must have been confidered as an act or generolity. But it is fearcery credible, that Sincer cerild have expected Ragobia and ms fon to be given up in the manner Le proposed, and without his nolding out any conditions adequate to fuch a concession, accumpanied with $[C]_3$

with so shameful a breach of faith. If that had indeed been his object, it is to be supposed that he would have made the release of the hoftages the price of Ragobah's furrender. However ineffective that scheme was likely to prove, it would not, at any rate, have been fo vifionary as the idea, that mere gratitude for an unconditional obligation, should produce an act of so extraordinary a nature in return.

However it was, General Goddard found, or supposed reason, for questioning Sindia's sincerity in every respect. He suspected that mere delay was not his object in holding out these incordulive terms of accommodation, as he discovered that he was at the time helding a feeret correspondence with coind Row, a refractory and difanceted brother of Futty Sing's; and had not only promiled him affifiance in the support of whatever his views were; but had retually received him in his This, with feme other inflances of duplicity, rendered the general exceedingly ant in endeavouring to bring Sindia to action; but he found him so watchfully upon his guard that surprize was impracticable; and fo cautious, that he would not voluntarily hazard a battle.

Even this negociation with Govind Row, (which produced no manner of effect, and feemed capable of little) by no means affords a fatisfactory explanation, with respect to what we have obferved of Sindia's conduct. General Goddard, after various manœuvres and forced marches to bring the enemy to action, and still convinced of the necessity of

the measure, in order to curb their rapid incurfions by driving them to a guarded distance, as well as to wear away the memory and effects of the late mifadventure at Worgaum, at length, leaving his tents flanding, and all incumbrances behind, he advanced with such rapidity, with the cavalry, grenadiers, artillery, and other the most alert parts of his army, that the Maratta caution could no longer prevail, and they were compelled to fland an

engagement.

Goddard, having April 3d, passed their principal 1780. guards with great dexterity, fell in without hefitation upon their camp. The artillery did excellent fervice, and made great havock among their numerous and crouded cavalry; at the same time that he conducted the different attacks with fuch boldness, rapidity, ar I judgment, that in about an host they were thrown into disorder, and soon after obliged to retreat, and, with very confiderable lofs, totally to The fuabandon their ground. periority of discipline and a wellferved artillery, to courage and numbers, has ieldom been better exemplified.

A strong sense of the late difgrace, and an eager defire to retrieve the honour, and to establish the superiority of the British arms, feemed at this time to operate very generally, and with great force, British officers; and upon the even the sepoys, though sighting against their countrymen, seemed fully fertible of that pride of diftinction, which the French distinguish by the term of l'ejirit de corps. On the other hand, the

Marattas

Marattas could not but be greatly dispirited by this defeat, which so effectually tended to destroy all confidence in a superiority of number.

Captain Campbell, on his return foon after from a diftant foraging expedition, with two battalions of sepoys, four field-pieces, and a large convoy of provisions, was either waylaid or overtaken by Sindia, at the head, it is faid, of twenty thousand men. lt will not at all affect Campbell's reputation, nor lessen our opinion, any more than the real gallantry of his troops, to suppose that they had a fair choice of ground well fuited to their condition, and calculated for defence. However that was, he formed his detachment and placed his artillery to fuch advantage, that he repulfed Sindia with the loss of five or fix hundred of his men, and brought his convoy off unimpaired and in triumph. It was observed in this action, that the fire of the flank companies was peculiarly destructive to the enemy; a circumstance which, in a great measure, must have depended upon fome peculiarity of situation.

In the same prevalent spirit of the time, Lieutenant Walsh being detached with a regiment of cavalry and a battalion of sepoys, to furprize a camp of fix thousand Marattas, he found on his march, that if he waited for the infantry the defign must be entirely frustrated, as it would be open day before he could reach the enemy's camp. Thus circumstanced, he, with that decifive turn of mind, which is the true fign of military genius, at once determined to put

all to iffue.

Fortune, as usual, be- May 3d. friended boldness when The Marattas rightly directed. were roused, and driven out of their camp, before they could well recollect their fituation; and their own cannon turned upon the fugitives, before they had an idea of their being hostile. rout could be more compleat, or victory, fo far as it went, more decifive. The Maratta commander, with a great number of his men, were left dead upon the ground. The camp, with every thing it contained, were in the hands of the victors.

The campaign was closed by a fimilar action under the conduct of Major Forbes, who with two battalions of fepoys, furprized and routed a body of 7000 Ma-The approach of the rainy feafon obliged the hostile armies to go into winter quarters. thing could redound more to the honour of the commander in chief, of the officers in general, and of the troops, nor ferve to impress a ftronger idea of the decided iuperiority of the British arms, than the events of this short campaign.

Some brilliant fervice was likewife performed on the fide of Bengal. Major Popham having, in consequence of the late treaty, gone to the relief of the Ranna of Ghod, with a very disproportioned force in point of number, not only drove the Marittas out of that country, but purfuing them into their own, made fuch an accession of territory, as, if it could have been retained, would prove of confiderable value.

They, however, fill retained the impregnable fortress of Gua- $[C]_4$ lier, lier, which fieed in the center of the America committee, in their own hands; and with such a bridle in his much, could not fall to keep him under continent apprehension, if not abilitie command. The forprine of this fort, may be ranked with the first actions of the fame rate e whether antient er in dern. The fortifications enclosed the summit of a very high hill, walled round by rocks, and guarded on all fides by the most areadral precipices. The enclosed ground was so extensive, and so fertile, as to be fully equal to the constant maintenance of any garriton which could be necessary for its defence. We cannot avoid recalling to memory on this occafion, the extracrdinary agility, boldness and dixterity, of the young mountaineers and therherdfoldiers, who were employed by Alexander the Great, in climbing up fimilar precipices, and the furprize of such a hill. Nothing but the too confident fecurity, naturally incident to fuch a fituation, could expose it to danger. In a word, the fortress of Galier had in all ages been deemed impregnable.

Some individuals of a native tribe of ficebooters, called Mewattes, had, from tone matives which do not appear, different away, by which they rejectedly climb dup the precipious, and entered the place with lafety in the right. During the letture from an military thicle induced by the rainy tenson, the hope of rejard prompted these men to communicate the discovery to Major Popham. This vigitant and distinguished officer immediately employed some persons of judg-

ment, on whom he could firmly rely, to attend the Menattes by night, and flrictly to examine the track by which they entered the place. He could gather no more from their report, than that it was barely possible to succeed. He, however, confidered the reduction of the fortress to be of fuch importance, that he boldly determined to rifque all the personal consequences of a failure. The defign was conducted with fuch admirable fecreev, and fuch ability displayed in the execution, that the supposed impregnable fort of Gualier was Aug. 4th. taken with the lofs of

a very few fepoys.

We are now to direct our attertion to the florm which was gathering to the fouthward, and which was not only defined to the ruin or the Carnatic, but feemed doomed to the extinction of the English name in that vast peninfula. We have already noticed the cold civility of intercourse which Hyder Ally Caun maintained, but the real jealousy and diflike which he nurtured, with respect to the government of Madras. It feemed no lefs fingular than unfortunate, that while that prefidency loudly condemned the continued causes of offence given to, and the repeated wars forced up in the Marattas by Bombay and Calcutta, and most pathetically complained of and pointed out, the dangerous confequences to the company's interests at large, and the particular ruin to themselves, which those measures must necesfamily produce, they were at the very same time in the exercise of a conduct, no less capable of producing jealoufy and milunderftanding,

flanding, if not actual hostility, with their old ally, and very powerful neighbour, the Nizam, Soubah of the Decan; thus increasing the very evils, and adding to that danger, of which they complained so much in others, and were so extremely apprehensive of with respect to themselves.

That prefidency had, in the first instance, suffered a long arrear to rife upon the very moderate annual pethouth, or tribute, in the payment of which the company was bound to the Nizam, for the five large and valuable northern circuis or provinces; a neglect which feems the less excufable in fuch cases, from the fmall proportion which that kind of chief-rent bears, to the real value of the possession. Of these provinces, however, the company were yet only in the immediate posiession of four; the Guntoor circar, (which is the most fouthern, and confequently the neureft to the Carnatic) being fettled for life, as a jaghire, upon Bazalet Jung, the Nizam's brother, and forming no inconfiderable part of the appanage allotted for the support of that prince's dignity. Upon his death, the Gultoor was immediately to revert to the company; and during the intermediate time, a proportional specified deduction was to be made, on that account, from the annual tribute, which would afterwards rife to the amount fettled for the whole.

Bazalet Jung was frecially bound, by articles, to his brother, not to alienate or d'ipofe of the jaghire, in any manner, or to any perion, without his confent and approbation; and the company were equally reftrained, by the treaties of 1766, and 1768, with the Nizam, by which the provinces were conveyed and confirmed to them, from all attempts by negociation or bargain, excepting directly through himself, to obtain possession of the Guntoor before the time allotted. As a farcher part of the fervice which the company owed for thefe provinces, they were bound, by the treaties we have mentioned, to affift the Nizam with their ferces, and to protect his dominions, in all cases of war or invasion; and were even constituted a check upon the refractoriness of Brazilet Jung himfelf, being authorized to disposies him of the jaghire, if he should enter into incafures dangerous to his brother, or subversive of the peace and fecurity of his country. By another article, Bazalet Jung's entering into alliance with, or giving any affiltance to, the oneinies of the company, would render him liable to a forfeiture of his jaghire.

The fituation of the Guntoor circar rendered it of great importance to the company. It lay on the fame fide of the Kriffra with their own possessions, and these of the Nabob of Arcot; being bounded by the latter to the fouthward, as it was by that great river on the north. Thus it afforded a direct intercourse with the four other previnces, which, firetching in faccession to a great extent along the couft to the northward, are only deparated on the fouth from the Guntoor by the Kristna. But what rendered it of thil greater importance

thar

than all other matters whatever, was its possessing the sea-port of Mootapilly, which afforded the covering that either the line whis brother could have the line whis brother could have the line whis brother could have the line with brother could have the line with brother cannon in the Decan, as well as for the litroduction of arms, amount it is a suffer, and even troops, when the occasion should require, by that nation.

Under these circumstances, it was natural that the prefidency of Madras should earnestly wish to anticipate the possession of the Guntoor circar; and it was reafonable that they should pursue fuch moderate and temperate meafures, as feemed likely to facilitate that purpose. Overtures were accordingly made, so early as the year 1769, and afterwards more than once renewed, upon the subject; undoubtedly holding out some terms of equivalent, exchange, or of yearly rent for the Guntoor. But the advantages it afforded being equally understood on both sides, nothing conclusive was done; nor did the Nizam feem much to relish the febject; who perhaps felt, that the granting of too much, was the fure means of producing ungrateful and difagreeable claims or applications for more. However that was, it was never once thrown cut upon these occasions, nor did the idea feem to be entertained, whether in confultation or negociation, that any propofitions relative to a new settlement or arrangement of the Guntoor, were to be made to any other person, than to the real sovereign, the Nizam.

In process of time, various jealoufies forang up, and differences arofe, between the company and Bazalet Jung; as there likewise did, but in a fill greater dearce, between that prince and the Nizam his brither. With respect to the company, Bazalet was at different times charged with being in a greater or leffer degree connected with, and under the influence of France. But what was particularly complained of, was his receiving a body of troops, under the command of a Mr. Lally, into his fervice; which, though composed of vagrants and deferters of all the European nations, intermixed with the degenerate relicks of the antient Portugueze, yet being nominally French, and conducted by officers of that nation, the measure was of a nature which could not fail to give fome alarm, and much offence to the prefidency of Madras. Strong remonstrances were accordingly made to Bazalet, and the justification or defence which he fet up, not affording entire fatiffaction, hints were thrown out that fuch proposals would be made to his brother for the Guntoor, as could not fail of producing their effect.

In the mean time, the conquests made by Hyder Ally on his northern frontier, and the rapid progress which he thereby made in extending his dominion towards Bazalet Jung's borders, as well in his patrimonial territories as his jaghire, filled that prince with apprehension and dismay. While Hyder was at a distance, he pretended that he hired the French troops as a protection against his designs, but on his approach, it

*y*vas

was evident that he placed no reliance in the fecurity they could afford. It was faid, and is by no means improbable, that he was likewife thoroughly weary of, and highly difgusted with his new auxiliaries. But, however that was, about the clote of the year 1778, he thought it necessary to throw himfelf into the arms of the English for protection.

Whatever the operating motives were, he proposed, negociated, and concluded, directly from himself, and without the knowledge or intervention of the Nizam, a treaty of April 1779. friendship, alliance. and, on their fide, of defence and protection, with the prefidency of Fort St. George. By this treaty he dismissed the French troops, and furrendered the Guntoor into the hands of the company; they being bound on their part to its immediate and future defence, and to the payment of a prescribed specific annual revenue out of it for life to Bazalet Jung. It feems also, as if his other territorial possessions of Adoni, with some neighbouring districts, were taken under protection.

It had been proposed in the council at Madras, upon the first opening of the business, that, consonant to the substitutes, an account of the transaction as it then stood, of the oners made by Bazalet, the immediate motives which led to them, and those which still operated on both sides, should instantly be transmitted to the Nizam, and that the treaty should of course be conducted and concluded with him, laying the proposals made by his brother down

as the groundwork. This wife and temperate advice was, however, overruled by the majority.

Such was this transaction, by which a treaty, including new arrangements of connection, revenue, and territory, was concluded with Bazalet Jung, himfelf a subject, without the participation or consent of his brother and sovereign. The Nizam did not afterwards by any means forget to remind the presidency, that they had violated the treaty by their acquisition of the circar; and that Dazalet was released from that obedience, which they had expressly bound themselves to inforce with their arms.

It may not be unworthy of notice, that the account of the commencement and process of this bufinels, which was transmitted from Madras to the governor general and supreme council, was to looke and general in its terms, that no other information could be gathered from it, than merely that a treaty for granting the Guntoor, upon certain conditions, to the company, was in a fair train of being brought to a conclusion; but without the smallest specification with whom it was conducted, or by whom the grant was to be made. And it farther appears, that the treaty was concluded about ten months before any account of the transaction was transmitted to Bengal.

It had been observed, that most of the transactions relating to land or revenues at Madras, had of late a reference to the interests of the Nabob of Arcot. In the present inhance, one of the first acts that deferted notice in the administration of the new government, was

the farming out of the Guntoor circar, upon a leafe of ten years, to that prince. Nothing can appear more injudicious, whether confidered with respect to the domedia economy of government, or to general policy. The Nabob was already the renter of all the company's lands in the Carnatic; and befides being deeply in arrear, vas fo dilatery and uncertain in all his payments, that they fearcely ever came in time to answer the purpoles to which they were affigued; to that many, if not most of the difficulties and diffresses which that government had for fome time experienced, charged to this detault; and it was become a popular observation, that in proportion as he advanced in life, to the talk of extracting moncy in any manner from him became every day more arduous.

The Nizam had ever been jealoss of the Nabob's defigns upon the Decan; and this jealouly was undoabtedly not leilened by his connections. And he faw him now, under a very alarming afpect of public affairs, and the impressions of several late transactions not less so, at once pushed forward into a fituation fo near and so critical, that no moderation could prevent disputes if they were fought for, nor vigilance guard against danger if it was intended.

Lut the double offence thus given to the Nam, was by no means to danger us in its confequences, as that with which the measure of the farm was clogged with reforce to liyder Ally. either cate, it was well to be doubted, whether any advantages

which could even be hoped for to the company from the measure, were at all fufficient to compensate for the effects of the jealoufy which it necessarily created. Nobody was ignorant of the inveterate animofity ever fubfisting between Hyder and the Nabob. He must consider the placing of his mortal enemy in the Guntoor, not only as intended to restrain his designs on the northern border, but with a view to diffurbance in his new acquifitions, and even the prelude to a concerted attack upon him in that unfettled quarter. It must indeed be allowed, that the Nabob was little calculated to discuss doubtful claims, or to contest difputed boundaries with Hyder Ally; but he was confidered as the willing and forward infrument, if not the immediate infligator, of a much greater and more dangerous power.

Another measure which arose from this, and immediately related to Hyder, was scarcely better calculated to promote good temper. Bazalet Jung, who feems to have been originally very apprehensive of the confequences of the measure he adopted, foon became exceedingly terrified through the menaces he received, and the dangers which he forefaw; and not thinking the troops within reach of the Guntoor at all equal to his protection, urged the prefidency to fend a strong reinforcement for that

purpcfe.

Col. Harper being accordingly deflined with a confiderable detachment to this fervice, was, it muit be faid, without any apparent necessity, and without leave being chained or applied for, ordered to take his route through a

part

part of Hyder's dominions. His courfe lay through the Cuddepah province, a country newly conquered by Hyder, and which must necessarily be still in an unsettled flate; a circumstance and fituation of things, which could not fail to render the appearance of foreign troops fuspicious, even between nations that were upon the most amicable terms. Upon Harper's entering the Cuddepah country, he immediately gave notice to Hyder's officers of his object and destination; who were as ready in their answer, that he had no right to march without leave through their territories; that he should accordingly be opposed, and the passes barricaded against He notwithstanding purfued his course for some days, until arriving at the narrow pass of Atcour, lying between the hills, he found the trees cut down across the way, other means of defence and obstruction adopted, and a confiderable body of men advantageously posted to dispute his passage. He had no orders for direct hostility, if the measure had otherwise been safe or prudent; but he had no great time to hefitate upon the matter, for he foon difcovered that measures were taking on all fides for furrounding and enclosing his detachment. In this unexpected fituation, he found it necessary to give up the design for the present, and to fall back Aug. 14th, to Innaconda, where he arrived, after spending fix days in Hyder's country.

It may now be necessary to see what measures were taken by the presidency, to reconcile the Nizam to the treaty concluded with Ba-

zalet Jung. Early in the negociation, and in the beginning of the year, Sir Thomas Rumbold, the prefident, stated to the felect committee feveral reasons, which shewed it would be necessary to fend a refident to the Nizam's court; among these were the following, the making an apology for the arrears due on the pelhcush, with a promise of payment as soon as it could conveniently be done; and the fettlement of the Guntoor circar. The prefident further observed, that if no other confequence were to arise from it, than the obtaining, from fuch authority as could be depended on, that intelligence which now was received only by chance, and thereby being at a certainty with respect to the Nizam's views and intentions, and to any intrigues the French were carrying on with him, they were objects of fuch importance as fully shewed the propriety of the measure. The proposal being agreed to, Mr. Hollond was appointed resident at the court of Hyderabad.

In the letter to the governor general and fupreme council, conveying an account of this appointment, which was written in the beginning of February, among some observations on the probable consequences of the difgrace brought upon the company's arms, by the late disaster which had befallen the Bombay army, they particularly take notice of the effect which it was likely to produce on the conduct of the Nizam, whose avowed attachment to the court of Poonah, aversion to Ragonaut Row, along with the flrong remonstrances which he had prefented against the measures pur-

iued

fued in his favour, as they left no room to doubt of his disposition in that respect, afforded too much reason for being apprehenfive that he would now take a part to the prejudice of the company. They farther state, that as their northern circars are entirely open to invasion from the Nizam's dominions, and his friendship extremely doubtful, it was highly expedient, that they should have the best intelligence of his designs, and the earliest notice of any movements he might make indicating danger to those provinces. That for that purpose, and the fettlement of every thing relative to the Guntoor province, and the difmission of the French troops, they had appointed Mr. Hollond their resident at Hyderabad; with instructions to correspond with the fupreme council, and to communicate to them all intelligence from that quarter.

Hollond's instructions went to feveral matters which were not included in this letter, nor held out in the first proposals to the council. The treaty with Bazalet Jung was now nearly coucluded; and the ground which he was to take on that tender subject was much laboured. He was to declare the determination of the prefidency to adhere inviolably to the treaty of 1766, and to cu'tivate the friendthip thereby established. He was to endeavour to fnew, that the measures now in act with respect to the Guntoor, though apparently affecting the terms of that treaty, were in reality no infringement of it; that they had hitherto made all their applications to the Nizam, as confidering him responsible for the conduct of his

brother; he was to expatiate largely on the danger to be apprehended from the French troops, in Bazalet's fervice, and to state that circumstance as the cause of their opening a negociation directly with him; and he was to hint, that they c nfidered that measure as an infringement of the treaty, and that it was on that account they had retained the Nizam's pethcush, or tribute; but this latter part of the business he was to manage cautiously, and to give fuch explanations, as should prevent the Nizam from entertaining any doubts relative to the future regular payment of the peshcush.

Mr. Holland was received with great honour by the Nizam, who assured him of his determination to live upon terms of the most perfect friendship with the company, and to adhere inviolably to the treaties between them; that he had ever religioufly obferved that conduct, had refifted all the folicitations made to induce him to support the French interest, had caused his brother to dismiss Lally and his troops, and had taken them into his own fervice, merely to prevent their going either into that of Hyder or of the Marattas. He confirmed and repeated these dispositions in a letter written direstly to the prefidency; expressing at the same time his satisfaction at Hollond's appointment to his

The grand affair of the Guntoor was yet held back. when at a subsequent audience it was opened by Hollond, who likewife informed the Nizam, that the prefidency had ordered a body of troops to the Guntoor, for the

protec-

protection of Bazalet Jung and that country against the designs of Hyder Ally, and urging him to join his own forces with theirs for the accomplishment of that purpose, his countenance was at once exceedingly changed, being equally expressive of astonishment, and of the greatest distress of mind. After some time, being pressed for an answer, the Nizam said, that the affair was of a nature which might be attended with very ferious consequences, and which required the most mature deliberation. He, however, stated feveral causes which prevented his supplying either troops or provisions. In another conference that prince observed, that it was very extraordinary, when the company fent a person to strengthen the friendship sublisting between them, they should in the same instant engage in measures which were so little likely to produce that effect.-That he had read over the treaty of 1768, and that entering into engagements with his brother was a direct violation of it.-That the prefidency had no right to interfere in his family concerns, and that he ought to have been confulted. Upon Mr. Hollond's endeavouring to excuse the measure, from the urgency of the case, which did not admit of time for a communication with the Nizam, as Hyder Ally intended an immediate attack upon his brother's country; that prince totally denied that Hyder had any fuch intention; and confiantly reverting to the treaty, faid, that nothing could be urged in vindication of the steps which had been taken; and that if the treaty was to be bferved, or confidered as at all

binding, the troops fhould be ftopped from marching into the Guntoor; but if the treaty was not to be regarded, he should himself oppose them. He informed Hollond at the same time, that Hyder intended speedily to fall on the Carnatic, in his former manner of overrunning the country, plundering and burning every thing before him, and cautioully avoiding pitched battles.

From this time the Nizam appeared to be much diffatisfied with respect to the conduct and views of the company, and particularly and greatly offended with the prefidency of Madras. But another matter was foon to come forward, of a nature fo much more vexatious and provoking, that the former could feem in comparison only

trivial.

For the better comprehention of this business it will be necessary to take notice, that at the time the poor prince, Sha Allum, the representative of the Mogul family, and generally called the King, had put himfelf into the hands of the company, hoping to derive fome fignal benefit from making them grants of countries into which he would not be permitted to enter, and of revenues which he could not touch, he passed a phirmaund or grant, by which he assigned to them, in the year 1765, those five northern circars, which were then in the possession of the Nizam, and which the prefidency of Madras afterwards obtained from him by treaty. The value of such a grant as that of Sha Allum's, it is eafily feen, must depend entirely upon the ability of the party to enforce it: and, even in that cafe, is worth no

more than (what is never wanted) a pretence for war and conqueit.

Upon receiving the Nizam's letter at Madras, with one from Mr. Hollond, containing an account of the very favourable and flattering reception which he met with, the prefident observed to the committee, that he had always confidered the perhauft as difgraceful to the company, and as an acknowledgment which the Nizam had no right to demand. That the giving up of the Guntoor to his brother for life, was a fufficient condescension from the company. That the grant from the Mogul, was free and unconditional for the five circars; and the receiving them afterwards from the Nizam, on paying blin an annual tribute, was a facrifice of the company's rights. He observed, that the time feemed favourable for throwing off to heavy a burthen; that the immense expenses which the company were pat to, both to the northward and in the Carnatic, rendered it necestary that they should endcavour to relieve them as much as possible.— He was perfuaded that the lazum was not fufficiently powerful to chforce the demand. At all events, they might with faf ay make the attempt, and try to obtain a remission of so unnecessary, and so improper a tribute, to which the Nizam had no legel too, and which could only have by a originally agreed to, through the want of paving a proper accention to the Mugul's pairinguad; ber if, in the progress of the business, the attempt should appear impolitic, or attended with 100 much difficulty, the matter might then be dra, ped, and the payment of the tribute made good. He accordingly proposed that a letter should be written to Mr. Hollond, particularly instructing him to use his utmost endeavours for the attainment of to definable an object. He achnowledged, at the fame time, that the fubject was very delicate, and frould not be abruptly gone into; and that the opening of it to the Nizam, would require much management and address on the part of Mr. Hollond, who must. by turns, footh, and work on his apprelientions, as the occasion might

require.

The prefident's arguments feemed to be conclusive with the committee, and his proposal met with their full approbation. Hollond was instructed, not to mention any compremise, nor to stipulate for the payment of any part of the pefficult, until every endeavour to induce the Nizam to relinguish the whole had failed of cffect; and he was likewife from his own observation to learn whether there were any points in which he wished that the company fliould accode to, as a return for his giving up his chim to the pelicula. In the clak, however of the letter, they oblinve to Holland that although their withos extended to an entire remaillion of the post cush, and unich was accordingly to be the basis of is first projusal, and to be supported by his best endeaverre, yet they confulled, that a transfer formething of importance to tempt men, they could hardly explorenal he would at once be brought to to great a concession; but they hoped, that making the den area at that time in its full evient, they fact 'd the more cafily obtain a confiderable abatement in the amount of the Peshcush. If, therefore, all his endeavours for an entire remission of the tribute should fail, he was then to try to bring the Nizam to an abatement, from sive lacks, which was the present standard, to two lacks of rupees a year; being the rate at which the company held the Circars by treaty, for the first six years.

This unexpected demand on the Nizam was made in the latter end of June; and coming in the place of payment of the arrear, or apology for the delay, and while the fresh sore of the Guntoor was green and rankling in his mind, could not fail greatly to affect and alarm him. He was accordingly exceedingly agitated-faid, that he now found the prefidency were determined to break the treaty, and there was no further occasion for Mr. Hollond's staying there; that if they were bent on war, he was likewise ready; and that if they faw any advantage in breaking with him, he should be very well pleased, as he was convinced, in case of a rupture, the advantages of the contest would be on his fide.—He stated, that the furrender of the Circars to the company, had proceeded from the fraud and ignorance of his managers; and that he had submitted to that heavy loss from a fense of his engagements, and confidering himfelf bound by the treaties, had still adhered to them. He concluded, by threatening immediately to join Hyder Ally, and defired that his declaration might be immediately communicated to the prefidency, and a speedy answer returned; for if there was any delay, his troops might possibly advance upon Col. Harper, on his way to the Guntoor.

Vol. XXV.

In the answer returned to Hollond upon this fubject, the committee observed, that, although the Nizam's refentment was raifed, they still flattered themselves with greater success than they could have procured by a different line of conduct :- He was instructed to reprefent to him that no threat was meant, but that it was intended the remiffion should proceed from his favour and generofity — that the claim, however, was built on fuch a foundation of equity, that it could not be relinguished, and hoped he would be convinced of it. Hollond was farther instructed, that as a remisfion of the whole could not be hoped for, he should aim at the proposed abatement; and he was also to throw out, that though they should pay what was owing to the Nizam, when circumstances permitted, they should be fully prepared to revenge the least infult that was offered to them.

It should scarcely be overlooked, that in this season of extraordinary transaction and unlooked-for demand, amidst so many other subjects of irritation, the dismission of the forces under Lally, and the sending them to the sea coasts, in order that the European part should be shipped off for their own quarter of the world, and the native dispersed, was among the points warmly insisted upon with the Nizani.

That prince at length concluded a Aug. 31st. conference with Mr. Hollond by informing him, that the commencement of hostilities must be the necessary confequence of withholding the peshcush; and that he might have his audience of leave in two days; which was succeeded by a [D] formal

formal notice to Holland to prepare for his departure. In the mean time, the Nizam talked publicly of taking the field as foon as the rainy feafon was over.

It was no fmall degree of good fortune, that the governor general and fupreme council totally difapproved, of and condemned, those offensive measures with respect to the Nizam, which were purfued on the fide of Madras. For it is probably to their interference on this occafion, that we are principally, if not entirely, to attribute the subsequent inactivity of this prince, in the support of that grand league of confederacy against the English, of which he boasted himself to be the tounder.

It was, however, late, before they received an account of these transactions, and confequently more fo before their interference could take effect. Advices being at length received from Mr. Hollond at Calcutta, it was immediately and unanimously determined in the supreme council, that they should take an active part in the bufiness, in order to prevent or remedy those mischiess and dangers which were likely to proceed, from the unjustifiable meafures purfued with the Nov. 1st. Nizam. They accordingly dispatched a letter to that prince, calculated to quiet or remove his apprehensions, but, at the same time, imputing as little blame as possible to the presidency of Fort St. George, in order to avoid lessening or difgracing that government in his eyes. In this they stated, that the government of Madras could not have had an idea of the offenfive intentions which his highness imputed to them; for if they had, they must have imparted it to the government of Bengal, as fuch a defign could not be carried into execution, nor could the company's name be ever pledged, without the fanction of the supreme council. They likewife acquainted him, that they had directed Mr. Hollond to fuspend his negociation, until he should have received further instructions from his immediate constituents, to whom they had themfelves written on the fubject. They enclosed a copy of the letter to the Nizam in that which they directed to Madras; and without any fevere censure or heavy condemnation of what had been done, only enjoined a strict compliance with the injunctions now laid down for restor-

The Nizam expressed great sa-

tisfaction, to Mr. Hollond, on read-

ing amity.

ing his letter, which he only received a few days before Christmas; and after dwelling on the reputation which the English had obtained through former good faith, asked how the late conduct of his employers could be reconciled with that character? After charging them with a violation of treaty, particularly in feizing his brother's Circar, he declared that he was on the eve of revenging these insults when the letter arrived; but that he would now put a stop to his meafures. He then added, " If what " you write is from your heart, and the government of Madras " will adhere strictly to treaty, " and will relinquish the possession " of the Circar, it is well; if not, " I have nothing of greater confe-" quence than defending my coun-" try. It is from this new line of " conduct of the English company,

" that the foundations of enmity " have been laid in the whole coun" try of Indostan." He concluded by desiring that their friendship

might continue steady.

This interference of the supreme council was exceedingly ill taken at Madras. They testified the greatest surprize, that their endeavours to get rid of a heavy and difgraceful burthen, should be represented as a violation of faith; they charged themselves only with erring on the fide of forbearance in their conduct with the Nizam, and attributed his violent behaviour to that fort of passionate folly, which sometimes arifes from a fenfe of inability and weakness; but if he really entertained ideas or designs inimical to the company, they arose entirely from the Maratta war, and not from any transactions that passed between him and their presidency; and they justified their stopping of the peshcush, by recriminating with great warmth upon Bengal, for the example which they had fet, in ftripping the Shah Allum of his tribute. But they went still farther, and stiffly disputed the point of jurifdiction with the fupreme council; totally denying their right of interference, and putting fuch a conthruction upon a clause of the act of parliament from which they derived their authority, as tended to shew, that their restraining powers did not at all extend to the present instance.—The presidency, at the same time, recalled and suspended Mr. Hollond; for whose disgrace no other cause appears, than his communicating to the supreme council the tranfactions with the Nizam; which, by his original instructions, n appears to have been his duty to do. He was, however, continued by the supreme council at the court of Hyderabad, and appointed their resident to the Nizam.

This dispute, between the supreme council and the presidency of Madras, run deep into the following year; and was at length only ended, and satisfaction obtained for the Nizam, (in the midst of the confusion occasioned by Hyder Ally's invasion of the Carnatic) by the former proceeding to the last extremity of suspending Mr. Whitehill, who succeeded Sir Thomas Rumbold as president of that council.

We have feen Col. Harper's ineffectual attempt to pass through Hyder Ally's newly-acquired territories in his way to the Guntoor Circar, which equally extended to the relief or protection of Bazalet Jung in his capital of Adoni; and of Harper's consequent return to Innaconda. The failure of this expedition, which arofe entirely from an ill-judged and uprofitable attempt, not at all connected with it, totally disconcerted the views of the prefidency with respect to that prince. Harper was then not only detained for fresh orders, but when they arrived, he had neither money nor provisions to enable him to purfue his march by that way, which should have been originally adopted, and which then would have produced the intended effect. The prefidency fretted at a delay, which fo materially interfered with their defigns, and which, though it proceeded from, they were by no means willing to attribute to themselves, charged Harper with dilatoriness, and gave the command of the detachment to Col. Baillie.

In the mean time, Bazalet Jung, pressed on both sides by his brother [D] 2 and

and Hyder Ally, to renounce the engagements into which he had entered with the English, and particularly terrified by the threats of the latter, was incessant in his applications at Madras, for that immediate fuccour and protection, without which he could no longer maintain them. Hyder no longer held any referve with respect to his enmity to the English, or, perhaps more properly, to the government of Madras. In his letters to Bazalet Jung, he affected to hold their councils in the utmost contempt, at the same time that he reprefented their views and defigns, as the most atrocious and dangerous that could possibly be imagined. He faid, that he knew them well; and while he represented them as the common enemy of the country, if not of mankind, he endeavoured to flew from his own experience and fuccess in the last war, that they were not near fo formidable, even in arms, as was vainly imagined by these who had not courage to try their force. He concluded, with what was equivalent to a threat, that he could not admit of his putting the Circar into the hands of his old and bitter enemy.

The Nizam asked him if he did not know the disposition of the Europeans? and that nothing, which they, by any means, once got posfession of, could ever be got out of their hands? He quoted the instance of their treatment of Sujah Dowla and his son, to shew the danger and ruin which even attended their friendship; and concluded with menaces, that if he persisted in his connection with them, his troops should join Hyder Ally's, in totally dispossessing him of all his territories; and that he would then grant the Guntoor Circar to Hyder.

But letters and menaces not producing the expected effect, Hyder's troops, taking advantage of the delays, which Harper and his fucceffor's detachment met with, fuddenly entered Bazalet Jung's territories, and feizing all the open country, confined that terrified prince within the walls of Adoni, his capital. this state, he represented at Madras the impossibility now of fulfilling his engagements, accompanied with a request, that they would withdraw their troops and civil officers from the Guntoor Circar, as their continuance there would prove his inevitable ruin.

Such was the state of public affairs at the close of the year 1779, and the beginning of the following And fuch were the measures purfued on both fides of India, whether for the maintenance of the public tranquillity, or for giving occasion to that dangerous confederacy of the native powers, calculated for the annihilation of the English power and interests in that part of the world. The prefidency of Madras, the supreme council, and the government of Bombay, have all accused each other, of having given rife to the fatal events that enfued.

C H A P. III.

State of affairs on the coast of Coromandel. Mahie taken. Nahob of Arcot. Strong indications of Hyder Ally's indisposition to the government of Madras, and of his designs upon the Carnatic. Neglect of preparation. Dissentions in council. Hyder invades the Carnatic with a great army. Country ravaged; Conjeveram burnt. Arcot besieged. Gen. Sir Hector Monro marches with the army from the Mount, in order to form a junction with Col. Baillie, and to relieve Arcot. Hyder raises the siege, and places his army in a position to prevent the junction. Baillie deseats Meer and Tippoo Saib, but Hyder's whole army being in his way, is unable to proceed on his march. Col. Fletcher fent with a chosen detachment to reinsorce Baillie. Desperate assion between Hyder's army and the united detachment. Singular gallantry displayed by that small body of men. Accidental blowing up of their powder, changes the fortune of the day, and occasions the loss of the whole corps. Great slaughter; Col. Fletcher killed, and Baillie, with a small number of Europeans, taken prifoners. Gen. Sir H. Monro retreats to Chingleput, and from thence to Madras. Deplorable state of the country, and of the company's affairs. Guntoor Circar restored to Bazalet Jung; and a conciliatory letter sent to the Nizam. Hyder renews the fiege of Arcot. Takes the city, and afterwards the fort or citadel. Vigorous measures taken by the Supreme Council, for the relief of the Carnatic. Sir Eyre Coote arrives at Madras, with a large sum of money, and a reinforcement of Europeans, from Bengal: takes the command of the army. Mr. Whitehill suspended from his office of president and governor.

T was not a little fingular as well as unfortunate, that while meafures of irritation tending strongly to hostility with the neighbouring powers, were purfued by the government of Madras, no fuitable military preparations were made, nor means provided, whether for diverting the confequences which might be apprehended from those measures, or for supporting the designs which some of them apparently indicated. Hyder Ally's indisposition towards that government, as well as his intimate connections with the French, were publicly known. He affected to make a distinction between that prefidency and the company at large; for whom, and for the

English in general, he occasionally professed good withes and regard; but took no pains to disguise his

jealoufy of the former.

Besides the failure on the side of Madras, in not acting up to the conditions of the treaty of 1769, at the time that Hyder was diftreffed and overborne by the Marattas, various other matters which afforded ground for complaint and difgust had fince occurred. It is probable, that he was of late industrious in feeking or watching for occasions of this nature; but it should likewise seem, that he was not without fome well-founded causes of complaint. A gentleman of confiderable rank and command in the company's military $[D]_3$ ferfervice was fo sensible of it, that he did not feruple in a letter to the prefidency, indirectly to arraign their conduct, by complaining of the many things which had been done to irritate Hyder's government, without their providing in any manner against the inevitable con-

fequences.

It was even the general opinion, both with natives and foreigners, that nothing less than Hyder's being so deeply engaged as he was in the Maratta war, could have prevented his marching to the affistance of the French, when Pondicherry was reduced in 1778. His behaviour with respect to the expedition against the French fort and fettlement of Mahie, in the beginning of the following year, not only afforded a demonstration of his attachment to that nation, and indisposition to the government of Madras, but might have been confidered as an index to his future conduct.

Mahie was fituated in the territories of one of the small princes on the Malabar coast, who, with his neighbours, being overruled by the fortune of Hyder Ally, had been forced to submit to a dependance on him. Hyder made this circumstance a pretext, for affecting to confider Mahie as a part of his dominion; and in a high and authoritative tone, remonstrated against the expedition. He declared, that many Europeans, French, English, Dutch, Danes, and Portuguese, had established factories, or were individually fettled in his dominions, for the purposes of commerce, and to the mutual benefit of his own fubiects and theirs: that they were all under his pretection, and should

fully receive it: that he had nothing to do with their particular quarrels; that he should consider the intended attempt on Makie as a direct attack upon himfelf, and that he would accordingly repel and revenge it to the utmost of his power. At the fame time, his vakeel, or refident, at Madras, denounced, in plain terms, an irruption into the Carnatic if the expedition took place. These threats occasioned some pause in the profecution of the measure; but Hyder being still engaged in war, and the expulsion of the French from Mahie, confidered as a matter of the utmost importance, it was at length determined to encounter the confequences. Brathwaite's rapid fuccess in the reduction of that place, defeated Hyder's views for its preservation; but he treated it upon all occasions as an injury of a nature not to be borne, and in a manner, which indicated his determination of obtaining in due time full fatisfaction.

Little doubt feemed now to remain, as to the part which Hyder would take, whenever he was difengaged from the Maratta war; and this disposition became scon more dangerous, from the number of troops which the French were continually fending to their African islands of Mauritius and Bourbon; as well as the strong squadron which they not long after dispatched from Europe, for the support of their interest in the

East.

Yet, with all this diffatisfaction and ill temper, on the fide of Hyder Ally, the commander in chief of the British forces in India has fince recorded his opinion, by a written

written minute in the council of Madras, and in terms which shew a full conviction, that, notwithstanding the affair of Mahie, and all other subjects of jealousy or difference, peace might not only have been still preserved, but an advantageous and firm alliance concluded between him and the company, if it had not been for the untoward measures pursued with Bazalet Jung relative to the From that time Guntoor Circar. indeed, Hvder held no reserve in declaring his fentiments with respect to the government of Madras.

Although the Nabob of Arcot was most shamefully and culpably negligent, in every thing that depended upon himfelf relative preparation and defence, yet he was a vigilant watchman with respect to the presidency, and gave them repeated warnings of the approaching danger. He had been early in advising the wholesome measure, of drawing the troops together in the Carnatic, and of forming one or two camps in fach positions, as would appear the best calculated for preferving the communications, and for protecting the country in case of invasion.—
He stated, in support of his advice, the fuddenness of the irruption, if it took place, and the rapidity with which the enemy's horse would overspread the country; the difficulty and danger which would then attend every attempt to collect the troops, if they lay scattered in remote quarters; and what would be scarcely less pernicious, the impracticability of procuring, under the general impression of terror, bullocks, (which are generally used in India)

for the service of the artillery, or a sufficient number of those native coolies, or porters, who are necessary to all armies in that country, for the purpose of assisting in the conveyance both of baggage and provisions. He at the fame time declared, that he had neither treasures nor cavalry upon which he could found a hope of making an effectual refittance. The nabob's intelligence and advice were both good, but his rooted enmity to Hyder Ally rendered them suspected, and probably, not always without reason. He had long urged the presidency to an alliance with the Marattas against Hyder; a proposal, which if it had been otherwise approved of, the measures pursued on the other fide of India would have rendered impracticable.

Towards the close of the year 1779, the prefidency received intelligence from the nabob, of the peace concluded between Hyder and the Marattas, with fome faint fketch of the alliance formed between those powers and the Nizam against the English. This was not at first credited, but by the end of the year was too well confirmed. Although the nature and extent of the new confederacy were not exactly known, yet, as things stood, a peace of any fort between Hyder and the Marattas, might have been confidered as the signal of a war with the former. Though this feemed in fome fort to be understood at Madras, and that the ruinous confequences of an invalion of the Carnatic were fully ditplayed in their correspondence with Bengal, yet that government relied fo much upon an accommodation between the other

[D] 4 pre-

presidencies and the Marattas, as the certain means of averting the evil, that it perhaps flackened their endeavours to provide for the last extremity in case of failure. They did not believe that Hyder would have ventured upon a war, if the disputes with the Marattas were fettled; (an opinion which, however, appears fufficiently problematical) and they perhaps depended too much upon the accommodating spirit of the other parties.

The governor of Fort St. George had already employed a private person to convey a letter to, and to open a fecret negociation with Hyder, hoping by a direct perfonal communication, to be able to fettle or remove the cxisting differences, and at any rate to acquire a real knowledge of his fentiments. Hyder's answer to his letter, corresponded with the cold and haughty manner in which he treated the bearer of it. He obferved, that when a friendship, confirmed by a folid treaty, had Subfisted between the company and him, he imagined it would daily increase, and not have been broken through, as he afferted it had been on our fide; he faid, that out of confideration for the friendship of the king of England and the company, whom he had confidered as one, but now thought otherwise, he had not yet taken vengeance. He concluded in the following ab rupt fentences :- " It is no mat-* ter !- But if you, henceforth for-" getting all treaties and engage-" ments of the company, still are " intent on breaking with me, "what advantage can attend " writing to you?-You are ac-" quainted with every thing; it

" is right to act in all things " with prudence and forefight." Notwithstanding these circum-

stances, it appears by a letter from

the prefident to the court of di-

rectors, in the following month

of February, that all apprehenfion of a war with Hyder was then over at the presidency. a letter which Hyder fent in the following month to the March 19, prefident, was confi-1780. dered by Admiral Sir Edward Hughes, (who commanded the British squadron in the Indian feas) as containing fuch evident testimonies of his hostile difposition, that he thought it his duty to dispatch a copy of it home to the fecretary of state. letter contained a short but explicit detail of various causes of complaint which he had exhibited against that government, from the conclusion of the treaty in the year 1769, to the present time, and conveyed in a language and manner, which not only shewed that those injuries were fresh in memory, but likewise expressed a strong sense of their not being yet accounted for. It coucludes with the following exposulation: -"When fuch improper conduct " is purfued, what engagements " will remain inviolate? I leave " it to the judgment of you and " your council to determine, on " whose part the engagements and

He expressed himself to the same purpose, in a letter of answer which he had written a short time before to Bombay, relative to fome English gentlemen who had been imprisoned in his dominions, and whom he released upon the application of that prefidency: he in-

" promifes have been infringed."

formed

formed them, after stating his complaints, that he had given orders to his officers to oppose by arms any future encroachment on his territories, by the government of Madras; but, as there were no differences between him and Bombay, he declared, that his resentments should fall only on those who were the authors of injustice.

Such were the indications of the future storm. As the summer advanced, every thing was in motion in Hyder's dominions. Large bodies of his troops were affembled on the borders of the Carnatic, particularly in the neighbourhood of those gauts, or difficult passes through the mountains, which afford the only means to an army of penetrating into that country; great magazines were formed, artillery, and all the equipments of war brought forward; Hyder himfelf advanced from his capital, of Seringapatam, to the frontiers, and the most evident marks were displayed on all hands of the approaching danger.

In this state of things, the means of defence provided by the government of Madras, and the Nabob of Arcot, in order to preferve the Carnatic, were not by any means so abundant as might have been desired. It is necessary however to relate the situation of both.

That prince, through the ill government of his affairs, and a diffipation of his treasures, (for which it is difficult to account) was in debt to all the world; to the company, to his army, and to individuals. He borrowed from all who would lend, and never paid. His garrifons were without flores, ammunition or provisions:

and he was so deeply in arrear to his officers and troops, that all discipline and order had long been at an end, and mutiny and defertion every where prevailed in his army. His cavalry, in particular, were totally ruined. They deferted, that is to fay, they marched off at noon day, with their horses and arms, by whole regiments. His best regiment of horse was, in these circumstances, recovered and brought back, by the generosity and public spirit of a British military officer, who advanced his whole fortune for the payment of their arrears. This gentleman being afterwards obliged to return to England for the recovery of his health, was exceedingly distressed for the money which he had fo applied, until it was advanced on the nabob's account, by the government of Madras.

On the other fide, the government of Madras had a gallant and well-disciplined army, amounting to fomething about 30,000 effective men; and had been lately reinforced by the arrival of Lord Macleod, with a new-raifed regiment, of a thousand men, from England. But this force, which would have been so considerable in its effect, if collected and acting in a body, was rendered weak and inert, by its being broken into fmall parties, dispersed at great distances, whether in quarters, garrisons, or upon various detached fervices. A confiderable party, but much more fo with respect to the nature and value of the troops than their number, were, in this season of danger, sent to assist Gen. Goddard in the Guzerat war. The applications from Bengal for this reinforcement, were, however, too urgent not to be complied with. Others were in garrifon on the Malabar coaft; and a very valuable detachment was in the Guntoor Circar, under the conduct of Col. Baillie. Those immediately in the Carnatic were disperfed in the manner we have before observed. A fearcity of money usually superinduces every other want. This misfortune now prevailed; and the troops were generally destitute of all those necessaries and means which could enable them to take the field.

Whether it proceeded from a shame of exposing his ill conduct. or from fome strange pride or jealoufy, no account could be obtained from the nabob, either now or for fome years back, though earnestly urged by the presidency, of his military establishment, or the state or number of his troops. It was, however, known, that the usual establishment of his army, at some former periods, was about 35,000 men; a number which, if only in tolerable condition, that, joined to the company's forces, would have feeured the Carnatic against any invasion. But indeed, the behaviour of his officers and troops, rendered their number of little consequence. It is to be obferved, that upon the repeated intelligence which the nabob conveyed of Hyder's defigns or movements, he was as constantly urged and warned by the prefidency to be prepared for the worst that could happen; not only by having his army, forts, and garrifons, well fupplied and in good condition, but by discharging the large debts and arrears which he owed to the company, and thereby enabling them to act with vigour, in his

fupport as well as their own.— His plea of inability and poverty, though treated as too incomprehenfible to be credited, brought out much fevere reproof from the prefident, relative to the unaccountable ill conduct, which could possibly produce such a state of his assairs.

The prefidency feemed however to have given no farther credit to the various intelligence received, than was necessary for making it the ground of their remonstrances. All accounts of Hyder's defigns, and of the movements of his forces, were not only flighted, but at the last, and when he had actually penetrated into the Carnatic, the first intelligence of the invasion was treated with the highest contempt at Madras; so that the burning of Conjeveram, four days after his entering the country, and the arrival of some of his horse in the neighbourhood of Madras, were the first evidences of danger that were admitted.

Two members, however, of the council, had repeatedly endeavoured to awaken the majority to a fense of the common danger; and particularly to collect the troops, and adopt other measures of preparation, necessary to the defence and protection of the country. Another member of the council, but not of the felect committee, in a minute which he delivered a few days after the invafion, declared, without referve, That they had been long approaching to that unhappy flate, at which they were now arrived; that private mismanagement, and not public calamity, had brought them to the brink of destruction; that Hyder had long treated them with neglect and infult; that he

had for feveral months been affembling a large army on the frontiers, while his vakeel (or refident) was allowed to remain at Madras, to give him daily intelligence of the effect his motions had upon that government, which remained inactive, and had neither refolution to question him about his intentions, or wisdom to provide against the danger. That they had fuffered their troops to remain scattered in different parts of the country, without stores or guns; that their garrisons were not put in a state of defence; that no pains were taken to replenish an empty treasury; and that their want of exertion on the imminence of danger, was equal to their want of timely precaution.

These severe strictures on the conduct of government, accompanied by many others not lefs fo, excited the warmest resentment of the prefidency. They pro-nounced Mr. Sadlier's observations to be illiberal reflections on the conduct and measures of government, and the whole minute to be an inflammatory declamation, which they attributed either to a shameful weakness, or to the most unworthy motives; and laying hold of some expressions which they contirued into a defign of fowing disaffection among the people at large, and others which called in question the authority of the felect committee, they made them the grounds of a vote, for suspending that gentleman from his feat in the council, as well as from the company's fervice in general. Nor did the matter rest there; but was followed by a challenge from the commander in chief of the forces in the Carnatic.

The two gentlemen of the felest committee, whom we have before-mentioned, (Mr. Johnson and Mr. Smith) strongly opposed, and protested against the act of fuspension, which they represented as irregular, violent, and unjust, They declared, that the reprefentation made by Mr. Sadlier, agreed in many particulars with their own fentiments; that this would fully appear from their former remonstrances upon the indolence and negligence which prevailed in that government with respect to preparation and defence. In protesting against the violence of the measure of suspension, they declare their apprehension, that the terror of the example was calculated to overawe the members of administration from a free declaration of their fentiments; they support their imputation of injuttice on the ground, that no specific charge was brought against Mr. Sadlier, and that he was not heard in his defence; and they venture to intimate a suspicion, that private refentment, more than public rtility, had caused the severity exercifed against that gentleman.

Charges of neglect, with respect to the garrisons, stores, and the flate of the army for taking the field, by no means distimilar, tho? delivered in fofter language, to those brought by Mr. Sadlier, were afterwards delivered in council by the commander of the forces himfeif. In the mean time, Hyder Ally openly treated the conduct and councils of the government of Madras with Superlative contempt. He publicly declared his determination to ruin the Carnatic, and to challife the English. He had tried them, he faid, already, and he knew them well; they had no conduct; "and even now," faid he, when I have affembled fo great a force to enter into their country, they have not manifested the least glimmering of ability; and now therefore is the time to

" go against them."

Such was the state of things, when, about the 20th of July, 1780, Hyder having made his way through the gauts, burst at once, like a prodigious torrent, into the Carnatic. No care whatever had been taken to guard or fortify these mountainous defiles; nor did he meet with any other obstruction in his passage, than what arose from the narrowness and difficulty of the ground. Even fome of the garrifons near their opening, which had made previous remonstrances of their weakness and danger, and applications for speedy reinforcements, had been totally unattended to.

Hyder's army was estimated at 100,000 men; but by accurate accounts, they exceeded 86,000 men, of all forts, (the irregulars forming a great class) besides a ftrong body which had been difpatched under Meer Saib towards the northern Circars, and other parties which were employed in every where alarming the frontiers. In the grand army under his own command, it was computed that he had about 30,000 well-disciplined foot, and 20,000 good cavalry; his force being rendered more formidable and effective, by the aid of Lally's troops, whom he had obtained from the Nizam, besides the number of French officers, and other

Europeans, who were before in his fervice.

The general terror and confufion which now prevailed, could not be leffened by the indecision which appeared in the public councils. Different and fluctuating opinions were held, with respect to the modes of defence proper to be adopted, and the manner and place of affembling the forces. Orders were accordingly haftily issued to the commanding officers at different stations, and were again fuddenly revoked. What appears an odd resolution was passed in the select committee, that the commander in chief's counfel rendered his presence more necessary at Madras, than at the head of the army. In confequence of this resolution, instructions were fent to Lord Macleod, to supply his place, by collecting the forces, and forming an encampment. But that officer differing much in opinion, from the arrangements made in council, particularly with refpect to the place prescribed for affembling the army, fubmitted his thoughts upon the subject, along with a plan which fuited his own ideas, to the prefidency, at the same time declaring, that he could not adopt a responsibility in the execution of plans which did not coincide with his own judgment. This difference of opinion, as the proposed change of arrangement was not approved of, occafioned a departure, in the felect committee, from the late resolution of detaining Sir Hector Monro at Madras.

In the mean time, intelligence upon intelligence was continually poured in, of the ruin spread on

all fides, and the danger threatened in every quarter, by the enemy; and thefe accounts were generally accompanied with reprefentations from the different garrisons, of their inequality to any effectual refistance; and that without a fpeedy and material supply of men and stores, they must fall

an easy prey to the invader.

The Nabob answered the urgency of the prefidency, for exertion on his part, and for speedy supplies of provisions and means to enable the army to act, partly with excuses, and partly with reproaches for their tardiness and inactivity. He promised, however, to procure supplies of oxen, sheep and rice, in as great number and quantity as he could. That he would exert himself to complete four regiments of cavalry, which should be put under the directions of the commander in chief, during the war; and he confented, to make affignments of territory, for the fums which should be advanced by the company to pay his troops.

But so defective was the order established in this prince's government, and fo heedless were his ministers and council, in at all providing for those sudden emergencies which were to be expected in the present state of invasion and danger, that his commander in the very ftrong and important fortrefs of Gingee, when, under the apprehension of an immediate attack by Hyder, and though his own force and provision were totally incompetent to the preservation of the place, yet refused to permit a British officer, who was fent with a reinforcement, to take any meafures for its defence, until he had

received specific orders from his master for that purpose. Brathwaite felt great furprize and concern upon his arrival at Carangolly, to find the defence of that important post in the hands of a very inferior officer, and only 20 of the Nabob's sepoys; but his furprize was heightened, when that petty commandant scrupled to receive even a fupply of ammunition from him, because he had received no particular orders on The troops which the subject. that colonel was leading from Pondicherry to join the army, afterwards experienced the greatest distresses upon their march, through the same want of orders, which the Nabob's renters made a pretence, for absolutely refusing to

supply him with provisions.

Such was the state of vigour, concert, and preparation, which appeared on the fide of the defenders of the Carnatic, in this feafon of imminent danger, and actual invafion; when every day furnished new accounts of devaltation and loss: and there was fearcely a place from one end of the coast to the other that was not menaced, and in a flate of alarm and confusion. Nor were these confined to the Carnatic. poo Saib advanced with a great body of cavairy upon the northern Circars; whilft, at the opposite extremity, different parties of the enemy were approaching to Madura, and the borders of the Tinivelly country. In this flate of things, the company's forces, tho' in excellent condition with respect to discipline, and the goodness and fpirit of the troops, were rendered incapable, from the causes already stated, of assembling, and confequently quently of acting with effect. And while the army, which was capable of acting in the field, was restrained by these impediments, the spirit of disassection and mutiny, which bad payment and long arrears had spread through the Naboh's garrisons, left little room for hoping, that they were not much more disposed to with for and accelerate a change of matters, than to undergo the hardships, or encounter the danger, of maintain-

ing their posts.

The only measure that carried any appearance of vigour that was now adopted, (although the fcheme was well laid, and the defign capable of good effect) funk under the prevalent fortune of the This was a plan committed, time. in the beginning of August, to the execution of Col. Cosby, for fuddenly drawing together a confiderable body of troops from the nearer garrisons, to be joined by two regiments of the Nabob's cavalry, with a view of cutting off fome great convoys of stores and provisions, which were to come through the passes, in their way from Hyder's country to the fupply of his army.

Notwithstanding the provoking and unexpected delays which occurred in collecting the troops, Cosby's activity and bravery might still have been crowned with success, if it had not been for the general disaffection of the country people, and the treachery of the Nabob's servants and officers. While the former not only refused to communicate any true information, whether with respect to the enemy or to the country, and were industrious in forging falsehoods, on purpose to mislead that com-

mander, the latter were no less diligent in giving the most exact intelligence to Hyder of all his By these means, the motions. hope of an enterprize which might have had great effect in ch nging the fortune of the war, was not only overthrown; but it was with great difficulty, and no finall exertion of diligence and activity, that Cosby's party escaped being cut off, in his endeavours to join the army; which he only effected upon the retreat from Conjeveram, in the middle of the following month.

In the mean time, Aug. 10th. an attack made by Hyder's horfe upon the villages and gardens about the Mount, brought the alarm immediately home to Madras; and occasioned confultations for the throwing up of fome works to cover the black The army had been ordered to affemble at Conjeveram; but on the day preceding the middle of the month, the general informed the felect committee, that this defign could not be effected, through the want of bullocks to convey a sufficient quantity of provisions; the country people, to prevent their falling into the hands of the enemy, having conveyed them to diffant places of refuge. He therefore advised, that the Mount should now be made the place of general rendezvous, where the troops should remain, until eight days provisions could be collected, and the means of conveyance procured; when the army should immediately proceed on its This being agreed to, march. another application was made to the Nabab, to urge his exertion in procuring a speedy supply of bullocks

bullocks and provisions; and farther requiring, that he should appoint some person of distinction and consequence to reside with, and attend to the wants of the army, in order that their suture supplies might be regular and constant.

Hyder, after menacing Gingee, and fome other places with a fiege, as a blind only to his real defign, fuddenly marched, and fate down before Arcot, on the 21st of August. This circumstance forwarded the Nabob's answer to the late application; in which, he reminded the committee of the stores of all kinds which he had laid up in feveral of his forts; and intreated, that they would order the army to march immediately to the relief of his capital, where, he affured them, that the troops should be plentifully supplied with every necessary they wanted. However Hyder endeavoured to cover his defign upon Arcot, it had been so far penetrated, or fuspected, that a confiderable detachment of the company's troops had been previously fent from the important fortress of Vellore, which arrived in time for the reinforcement of that garrison. It was in a few days after Hyder invested Arcot, that it was found necessary at Madras, that Sir Hector Monro should quit the committee for the camp; and he accordingly proceeded on the 25th to take the command of the army at the Mount.

We have already feen, that Col. Baillie commanded the company's forces in the Guntoor Circar. The orders which that officer had from time to time received fince the invafion took place, were various and contradictory, and had

occasioned no fmall clashing of opinions in the felect committee at Madras. His first, and fome subfequent instructions, went to the direct attack of Hyder's dominions in that quarter, particularly to the reduction of the Cuddepah country; with, however, a discretionary latitude to the exercise of his own judgment, in immediately directing his operations to those particular parts, where it might appear at the time they were most likely to prove effective. orders were strongly opposed and protested against by two members of the committee; who stated various reasons to shew, that Baillie's detachment should be immediately directed to march forward with the utmost expedition, and to join the army, at its then intended rendezvous near Conjeveram.

Advices being foon after received from Baillie, that the nearnefs of Hyder's cavalry to the fouthward, with the overflowing of the Kristna on the northward, had, on both fides, so contracted the fources, and interrupted the course of his supplies of provision, that the providing subfistence for the forces became every day more alarming and precarious; and, what was no lefs alarming, that he was aprehensive of not being able much longer to detain the bullocks necessary for a march, and without which the army could not in any circumstance at all These advices occasioned, on the last day of July, some enlargement of that commander's instructions; he being authorized, by the dispatches then forwarded, to march towards the prefidency, if he should find it absolutely impracticable to subfift the forces, either in the enemy's country, or

from fome other quarter.

But as the danger at home approached more near, and became every day more urgent, the committee, very foon after, thought it necessary to become converts to the original opinion of the two diffenting members, and to difpatch accordingly an express to Col. Baillie, with orders to march towards the prefidency at all events; but with an avaricious eye still to more distant service, advised him to take fuch a route, as might possibly afford him an opportunity of cutting off fome of the enemy's The delay occasioned convoys. by this indecision with respect to Baillie's detachment, though not amounting to very many days, was the means of producing the fatal catastrophe that followed, the effects of which will be long remembered, and late, if ever, recovered.

The only cavalry Aug. 25th. in the army at St. Thomas's Mount, was a fingle regiment belonging to the Nabob. Upon the arrival of the general, Sir Hector Monro, in the camp, this regiment totally refused serving any longer, unless their arrears were immediately discharged. The Ameer, a principal officer of the Nabob's, who was prefent, notwithstanding the greatness of the exigency, when the fate of his master's capital was depending, refused to comply with the demand. The troops continuing obstinate, the remedy adopted was to break the regiment, and to strip them of their horses and arms. Seventeen black officers, and about fixty of the men, offered to ferve in a new corps, under the company, and

were gladly accepted by the general; the rest of the broken troopers were ordered to be fent under a guard, as prifoners, to Madras; but the Ameer, on the following morning, took an opportunity of enlisting them all into his own body guard. Such was the disposition and attention to that prince's fervice and interests, which then appeared among his

principal fervants.

The continual rain which now fell, had fwelled the rivers in fuch a degree, as to render the way from the Guntoor nearly impassawhich, besides greatly retarding the march of Baillie's detachment, incommoded and diftreffed the troops exceedingly. Although Sir Hector Monro's force at the Mount was fo totally inferior in point of number, as not to feem by any means equal to the encounter of Hyder's army in the field, yet the excellency of the troops, along with the fine train of artillery that accompanied them, was no small counter-balance to the great superiority of the enemy in other respects, and the junction of Baillie's corps, it was expected, would have enabled them to undertake any enterprize with effect. In these circumstances, the general considered, that a forward movement towards Arcot, would probably alarm Hyder fo much, as to induce him to raife the fiege of that place; and that the junction with Baillie, would produce a greater or more timely effect, by its taking place at Conjeveram, which was near forty miles on the way to his object, than it would, by waiting for his arrival at St. Thomas's Mount. It is true, that Conjeveram

veram was entirely out of Baillie's direct way, and necessarily led him to change his course considerably to the westward; but no idea was then entertained, of any danger or difficulty that could occur in making good the junction.

Under this determination, difpatches being forwarded to Baillie, with instructions for the new course he was to take, the army was ordered to march from the Mount. Such was the wretched state of things at this time, that it was with the greatest disticulty, (after a month's preparation or alarm, and within fix miles of Madras) that the general could procure eight day's rice for the army; while the collecting of draught bullocks was fo impracticable, that the Sepoys were obliged to carry half this provision on their backs. whole force was only about 6,000 men; but of these, were Lord Macleod's and a company's regiment of Europeans; besides a company or two of European grenadiers, belonging to other regiments, and 300 artillery.

They arrived in four day's march at Conjeveram, being harraffed by the enemy's horfe, which followed and hung on all fides of them during the way; but they were much more incommoded by the violence of the rains than by the enemy; and their condition was not amended, by finding the whole country under water at their arrival. An officer from the Nabob attended the coming of the army at Conjeveram, who was to conduct them on their way to Ar-To him the general immediately applied to procure provifions, as well for the troops prefent, Vol. XXV.

as for those that were expected on the following day; accompanied with a requisition equally urgent, that he would use all possible means to obtain intelligence of the state and motions of the enemy. The answer made by this agent of the Nabob's, is perhaps without a parallel upon any fimilar occasion. He told the general, that he was under orders to attend him, but that he had no authority to procure either provisions or intelligence.-As there was only four days provision left, the army had no other resource than to encounter the difficulties of the weather, and the danger of the enemy's horse, by collecting paddy, as the growing rice is called, in the open, but overflowed furrounding country.

Hyder Ally, as the general forefaw, raifed the fiege of Arcot, upon his movement towards Conjeveram; but what had not been expected, he threw his army in fuch a manner across the course which Baillie's detachment were making to that place, as to prevent the intended junction. This was expected to have taken place the day after the arrival of the army; but Baillie, before the intervention of the enemy, was for fome days stopped, at no great distance, by the sudden rising of a fmall river in his way. For about a week after the arrival of the army in the neighbourhood of Conjeveram, it rained almost continually by day and night, and the waters were out in fuch a degree, that they were obliged to change the fituation of their encampment to higher ground; whilst the industry of the troops, in collecting paddy, and beating the rice from the straw, was no more than fusiicent for their present sublishence. Such was the flate of intelligence under all these difficulties, de t, excepting the accidental rejett of a deferter, the first account which the general received of Llyder's having quitted his ground before Arcet, of his having croffed the River Palaar, and being encamped within five Sept. 3d. miles of his front, was from one of his own oficers, who was out upon decrebed fervice. In two days after he received intelligence from Cel. Baillie, or his having at length croffed the river, which had fo unfortunately barred his passage.

But that officer was now doomed to meet with more unfurmountable obflacles. On the day after the general had received this advice, the enemy's army made a great movement to the north-east, which induced Sir Hector Monro to change his position likewise, and to advance about two miles, to a high ground on the Trepassore Road, which was the way that the expected detachment was to come. By these movements, the hostile camps were brought within two miles of each other; the enemy lying about that distance to the left of the English.

Hyder's view in this movement, was to cover and support the great attack, which he intended that day upon Baillie's detachment. He had already fent his brother-inlaw, Meer Saib, with 8,000 horfe, upon that fervice; who being gallantly repulsed on the preceding day, he, immediately after this movement, detached his fon, Tippoo Saib, with 6,000 regular infantry, 12 pieces of cannon, and

18,000 cavalry, the whole being composed of the best troops in his army, to join the former party, in an united and decinve attack. They encountered Col. Baillie at a place called Perimbancum, where he made the most masterly dispositions to withstand this prodigious superiority of force. After an exceedingly fevere and well-fought action, of feveral hours continuance, the enemy were routcd, and Baillie gained as complete a victory, as a total want of cavalry, and the smallness of his number, could possibly admit. Through these circumstances he lost his baggage; and that of a number of brave men was inevitable. His whole force did not exceed three or four battalions of Seapoys, and from one to two companies of European artillery. The event shewed the superior excellence of those troops.

The conqueror now experienced a new and itrange fituation of things; being reduced to the most distressing circumstances in the arms of victory. The English camp was within a few miles; but Hyder's whole army lay full in his way; and, if any advantages were to be derived from his prefent post, he could not retain them through the want of provisions. He accordingly difpatched an express to the general with an account of his situation; stating the loss he had fustained in the late action, which rendered him incapable of advancing; and the impossibility of continuing where he was. He accordingly urged the necessity, holding out, at the same time, the fellest confidence, of his being speedily extricated, by the arrival of the army at Perimban-

The general's fituation upon this occasion, was undoubtedly very difficult. He found himself in a dilemma, where the hazard and danger were so balanced on both fides, that the determination which to take, feemed to be a matter rather of fortune, than of judgment. The question was, whether, for the purpose of extricating Baillie's detachment, which was to be confidered as a matter of absolute necessity, he should, with the very inferior force under his command, give Hyder every possible advantage over him in a general action, by advancing with the army into a flat and open country, where the immense cavalry of the enemy could act upon them on every fide with the utmost effect? Or, whether he should endeavour to attain his object at less apparent hazard, by fending fuch a reinforcement to Baillie, as would enable him to push forward to the camp, in despite of the enemy. In the former case, besides the disadvantage we have mentioned, the army must have abandoned their only provision, consisting in a pagoda full of paddy, which they had collected fince their arrival. This the enemy would immediately have feized, as well as the post of Conjeveram, and the strong grounds which they had quitted. Thus the army would have been equally destitute of shelter, and exposed to the danger of starving, upon its return from Perimbancum. Nor was the other part of the alternative without its full share of difficulty, hazard, and danger.

This was, however, adopted; and Col. Fletcher, an officer of dif-

tinguished merit, appointed with a ftrong detachment, composed of the flower and most active part of the army, to the relief of Bail-The force upon this expedition, confisted of the grenadier and light infantry companies of Lord Macleod's highland regiment, two other companies of European grenadiers, one company of Sepoy marksmen, and ten companies of Sepoy grenadiers. their fecurity depended upon the remoteness and difficulty of their way, as well as the filence and fecrecy of their march, Fletcher refused four fix-pounders which were offered, and fet out from the camp at nine o'clock at night. Though the men left their knapfacks behind, it was thought necessary that they should carry two days rice, with fome bifcuit and arrack, to provide against the penury at Perimbancum.

Hyder had fuch excellent intelligence in the English camp. that he had an early and exact knowledge, not only of the defign, but of the particular circumstances relative to Fletcher's detachment; the time, the route, the number and nature of his troops, and even their proceeding without artillery, were all faithfully communicated by his spies. He accordingly fent a firing body of forces to intercept and cut off the detachment on their way; but Col. Fletcher, by a fingular fagacity, having conceived fome suspicion of his guides, fuddenly changed his route, and by a wide circuitous fweep, through rice - fields and fwamps to the right, he by that means, and the cover of the night, evaded the danger.

The late defeat of Meer and $[E]_2$ Tippoo

Tippoo Saib, by a force so totally inferior in point of number, had greatly damped the spirit of the Mysore army; but the account of Fletcher's junction with spread universal dismay through their camp. The foreign officers were particularly alarmed. They considered the whole as a masterly stroke of generalship, by which the army would be enclosed, and being attacked on both fides at once, that nothing but ruin could enfue. Under this impression, Col. Lallie, with most of the native general officers, strongly remonstrated with Hyder, on the necesfity of immediately breaking up his camp, and repassing the Palaar, to avoid the immediate danger, which they otherwise confidered as inevitable. Hyder himfelf was undetermined how to act, and feemed to be giving way to the general fentiment, when the arrival of two of his spies from Conjeveram, suddenly changed the The assurances state of things. given by these, that the English army was perfectly quiet in camp, and that the smallest preparation was not making, nor in fact any defign of a movement entertained, at once determined Hyder's conduct. The Europeans still, to a man, held their former opinion. They confidered the intelligence as too extraordinary, and even too near an impossibility, to be at all credited. They accordingly concluded, that the spies had fold Hyder; and that his facility in giving way to the deception, had rendered his ruin inevitable. ly, however, went once more to Hyder, to urge the necessity of fending off, at any rate, the guns and infantry.

In the mean time the trap was preparing, and laid with no small degree of art, ability, and judgment, for the unfortunate corps that were under the command of Baillie and Fletcher. The most covert and difficult ground on the road which they were to pass, was occupied and enfiladed by feveral batteries of cannon; and as the time and circumstances of their march were known, large bodies of the best foot in Hyder's army, lay in ambufcade on either fide; he himself, with almost his whole force, being in readiness to support the attack. While these real dispositions were making, or taking effect, which, by degrees, occupied all the valuable part of Hyder's army, a cloud of irregular cavalry were employed in various motions on the fide of Conjeveram, in order to attract the attention of

the English camp.

Just at day light, Sept. 10th. Baillie's corps was perceived by the enemy advancing into the very center of the toils which they had laid for them. They marched in column, and the first notice they had of their danger, was the opening of a battery of twelve guns, loaded with grape shot, which poured in upon their right flank. In half an hour, 57 pieces of cannon were brought so to bear, as to penetrate into every part of the British line; and by seven o'clock, the action was become as general, as fuch a handful of men, engaged with fo vast a host, could make it. Such a conflict has feldom been heard of; nor will the example render it common in the practice. Surrounded and attacked on all fides by 25,000 cavalry, by 30 regiments of disciplined Sepoy

Sepoy infantry, besides Hyder's European corps, and a numerous artillery, generally playing upon them within grape shot distance, yet this invincible column stood firm and undaunted, and repulsed every charge made by the Mysore army, with a prodigious flaughter of their bravest men. Some European gentlemen who were upon business in Hyder's camp, and thereby became spectators of the battle, while they beheld with admiration the cool and intrepid countenance preferved by the commander, and by his unequalled followers, were still struck with greater astonishment, in the midst of all the tumult and danger of so unequal a conflict, to fee their various evolutions performed, with a precision and steadiness, which would have gained applause in the regulated exercises

of a field day,

Col. Baillie had only ten pieces
of cannon; but these were so excellently served, that they kept

during the whole engagement.—After a dubious contest of three hours, victory began, at half past nine o'clock, to declare for the English; the flower of the Mysore cavalry, after many bloody repulses, were at length entirely defeated, with great slaughter, and driven back upon the main body; and the right wing, composed of

up an unremitting fire, and made

great havock among the enemy

Hyder's best forces, was thrown into disorder, and began to give way. Hyder himself, despairing of keeping his infantry much longer in the field, prepared for a retreat. A rapid and masterly

movement, from the right to the center, made at the instant by Col. Baillie, confirmed this dif-

position, and seemed entirely to decide the fortune of the day. Orders were accordingly given to Lally to draw off the artillery, and to the cavalry to cover the retreat.

At this moment of joy, exultation, and triumph, as well for unhoped deliverance, as for victory, on the one fide, and of difappointment and difmay on the other, an unforeseen and unavoidable misfortune, suddenly changed the fortune of the day.

From whatever fatality it proceeded, the tumbrils which contained the ammunition, suddenly blew up, with two dreadful explofions, in the center of the British lines. One whole face of their column was entirely laid open, and their artillery overturned and destroyed. Though the destruction of men was great, the total loss of ammunition was still more dreadful to the furvivors. Tippoo Saib instantly caught the moment of advantage, and, without waiting for orders, fell with the utmost rapidity, at the head of the Mogul and Carnatic horse, into the broken fquare, which had not yet time in any degree to recover its order or form; and the cavalry being speedily followed by the French corps, and by the first I'me of infantry, the fate of that gailant band was no longer doubtful. After the prodigies of valour which they had so nobly exhibited, the brave Sepoys were almost to a man cut to pieces.

Col. Baillie, though already feverely wounded, rallied the Europeans, and under the fire of the whole immense artillery of the enemy, gained a little eminence, and forming a new square, these

[E] 3 invin-

invincible relicks of the field, without ammunition, the officers fighting only with their twords, and the foldiers with their bayonets, and most of them grievously wounded, resisted and repulsed the enemy in thirteen different attacks; until at length, incapable of withstanding the torrents of fresh troops that were continually pouring upon them, they were borne down and trampled under soot by the horse and elephants.

Many of the still unconquered private foldiers, though cut down and miferably wounded, distained to accept of quarter, and as they lay upon the ground, continued to thrust fiercely with their bayonets at man and horse that approached. Never was reputation more highly established, or more dearly purchased by any army. This action assorted the first instance, in which Sepoys were only distinguishable by their colour from Europeans in a

hard and desperate action.

The lofs on the English fide has been variously estimated, from 3,300, to 5000 Sepoys, and from five to seven hundred Europeans. The lower calculation is probably nearest the truth; at least with respect to the Sepoys. The gallant and lamented Col. Fletcher, was one of the number of brave English officers who lay on the field. It is indeed a matter of no imall wonder, that any of them could have escaped the rage of fuch a carnage. Col. Baillie, with fomething about 200 Europeans, were, however, made prifoners. Less mercy has often been shewn, in conflicts of much less blood and feverity, between Europeans and Christians. Col. Baillie, stript, forcly wounded in three places, and covered with blood, was brought in that condition before Hyder. conqueror, enraged at his lofs, and at the same time intoxicated by his fudden and unexpected fuccess, with that rough barbarism in war, which only European manners have yet been able in some fort to fubdue, is faid to have infulted his brave prisoner, by the haughty and imperious tone of his exultation. Baillie, disdaining to fink under misfortune or danger, indignantly appealed to his ion, and to the general officers who were prefent, asking if the victory was not in his hands, until he was deprived of it by a disaster which no human forefight could have prevented?

This fatal disaster is said to have proceeded from the loofe powder which was conveyed in bags by Col. Fleicher's detachment, and which there had not been time for flifting into proper packages. every thing relating to 10 fignal and extraordinary an action becomes interesting, it probably will not be thought too minute to relate the account given by an European resident at Hyder's court (who was prefent at the action, and is faid to be a military officer of distinction in the service of his own country) of the behaviour of the prisoners. This ingenious foreigner, who feems to have felt all the fympathy of a brave man, in the fate of the troops, says of them:-"Officers and men, fup-" ported their misfortune with that " haughty, fullen fortitude, which is " the characteristic of their coun-" try."

The Myfore army purchased their victory very dearly. The flaughter seil almost entirely upon their

their best troops; and is faid to have been so immense, that if a particular account of the loss could be obtained, the amount would appear incredible. It is likewife faid, that if the Conjeveram army had come up, at any time during the engagement, previous to the fatal event of the tumbrils, Hyder would not have been able to carry a fingle gun, or a fingle battalion off the field. He appeared in the field mounted on an elephant; and it is faid, was fired at five times by an English artillery officer. Hyder was itill so apprehensive of the supposed danger of his situation, that only upon a flying rumour of Sir Hector Monro's army advancing upon him, he precipitately abandoned the field of batur, and retreated, in great confufion, to a place called the Round Wells, leaving a great part of his baggage, and all the wounded behind. But upon receiving information there, that the English army had abandoned their artillery, and were retreating towards Chingleput, he instantly dispatched all the fresh and irregular cavalry in purfuit, who returned fuccefsfully, loaded with fpoil, and fufficiently incumbered with wounded prisoners,

It appears that the Conjeveram army had advanced on that unhappy morning along the Trepaffore road, in order to meet the expected detachments; and that they both heard the firing, and faw the fmoke, on their left; but at too great a distance for their coming up before the firing ceased. It would feem, that no notion was entertained of Hyder's advancing with his whole army to action; that the firing was considered as

proceeding only from the defultory attacks of his cavalry; and that too great a confidence was placed in Baillie's fuccefs against every obstacle. The repeated firing of the appointed number of figual cannon, without any return being made, along with the dead flillness which on all sides prevailed, began to afford fome melancholy prefages of difaster, (though nothing near so bad as it really was) when, at length, the arrival in fuccession of two or three wounded Sepovs, who had the fortune fingly to escape from the carnage, although their relation was indiflinct and diffracted, carried fuch tellimonials about them, as left no longer a doubt of the fatal event.

The army, both officers and men, Europeans and natives, were flung with anger and with grief, almost to madness, at the deilruction of their friends and fel-They were accordingly, without regard to firength or condition, almost outrageous in their defire, to take an immediate and fevere revenge on the enemy.---Undoubtedly, in that temper, it would have been no easy matter to withfland their fury. But the general, who was fully fentible of the weakness of his force, and who fan and know the critical fituation of amirs, found it necessary to reflerain this impethouty. He was totally uninformed as to the flate and circumflances of Hyder's army, and ignerant of the great lofs they had fullained in the late action. His own was too certain; he had loft the flower of his army. His provisions were likewife within a day or two of being chausted; his weakness, and want of cavalry, rendered the procuring a supply [E] +

impracticable; his retreat was liable to be cut off, and the army might be furrounded, and, obliged, through mere hunger, to furrender at discretion, without striking a blow. The confequence would be the loss of Madras, and of the

whole Carnatic.

However sufficient these causes were, and however well founded those deductions and measures which arose from them, the greatest discontent prevailed in the army, and nothing but censure and reproach was to be heard. This temper and disposition was spread even among the officers; and went fo far, as it was faid, as to put an end to all friendly intercourse between the general and the nobleman who commanded the regiment belonging to the crown, which, as we have feen, had fome time before arrived from Europe. orders for a retreat, for spiking the heavy artillery, and destroying the camp equipage and baggage, not only increased these discontents, but are faid to have produced an unequalled scene of disorder and confusion. Such a series of lofs and difgrace was new to the troops, and could ill be borne by them. It was impossible that a retreat could be well and orderly conducted under fuch circumitances; and to these are to be charged the lofs which the army fuffered through the purfuit of Hyder's cavalry, on their return to Chingleput.

At Chingleput, they were joined on the day of their arrival, by the forces which Col. Cofby had collected for the enterprize against Hyder's convoys, consisting of ten companies of Sepoy grenadiers, about an

equal number of battalion and light infantry companies, with two regiments of the Nabob's cavalry. Small as this reinforcement was, if it could have joined the army before the late misfortune, a very different face of affairs might probably have appeared. The want of provisions obliged the army to proceed from Chingleput to the neighbourhood of Madras, where they were en-

camped.

The terror and confusion which now reigned in the Carnatic, may be much more easily imagined than described. The danger feemed every where immediate; and Madras itself, destitute as it was of provisions, and of most or all of the necessaries essential to defence, trembled under the apprehenfion of a siege. This state of difficulty and danger was rendered still more hopelefs, by the diffentions which prevailed in the government; if not by its conduct. Two members of the felect committee made grievous complaints of that of the majority; and charged no fmall degree of blame to the institution itself, which they represented as being exceedingly faulty in its construction, and pernicious in the effect. They alledged, that it threw fo much power into the hands of the governor as rendered him in a great degree independent of the council; and to this want of controul they attributed the most ruinous consequences; particularly charging the late governor, (who had some small time before the invasion returned to England) with withholding from them full and perfect information which he had received at various times, and in some instances long before before his departure, of Hyder's preparations and defigns. Their charges against the majority were of the same nature with those, for a representation of which, Mr. Sadlier had been degraded; like him, they laid all the present calamities at their door. They likewise objected, in strong terms, to the dispatches which were then making up for Europe. A favourable representation of conduct and transactions, was, they said, in a certain degree allowable; but a statement of things insupportable by facts, was not to be endured, nor could the purpose it was intended to produce be of much avail, as the detection, at no great distance of time, would be inevitable.

In this season of disorder, a mutinous spirit appeared, and great diffurbances broke out, among the Sepoys in the northern Circars. That order of men, in general, bear a mortal aversion to voyages by fea; so that it requires not only the most perfect discipline, but a strong attachment to their commanders, to induce them to forego a prejudice, which is founded as much in the peculiar maxims, habits, and rites of their religion, as in their natural apprehension of an element with which they have fo little acquaintance. It being now necessary to draw some of the troops from the northern Circars, and the way by land being impracticable, they were ordered to take their passage by sea, which the Sepoys absolutely refusing to comply with, the endeavour to force them to so hated and dreaded an adventure, produced the difturbances we have mentioned. At the prefidency of Mazulipatam, the mutiny was quelled, and order with difficulty restored, through the address of the commanding officer; the point of embarkation being, however, given up; but at Vizigapatam, the Sepoys proceeded to the most extreme outrages, and after killing feveral of their officers, made a complete plunder of the place, the property of individuals being no more fpared than that of the company. The revolted Sepoys then marched off in a body, with their arms and plunder; their farther design being not lefs alarming, than their past acts had been prejudicial.

In this state of danger and general disaffection it was no matter of wonder, that Sitteram Rauze, a man always of bad character. fhould now fhew how unworthy he was of the unaccountable fayour which he had lately met with at Madras; but it was fcarcely to be expected that his eldest brother, at whose expense Sitteram had been placed in great opulence, authority, and possession, (altho) his direct reverse in every thing) fnould so far forget the recent wrong, as to give, in this trying feason, a signal proof of his fide-lity. Whilit Sitteram kept at a distance, and evaded giving any assistance towards the preservation of the country, which, under the example of the Sepoys, and the diffatisfaction of the people, was on the point of throwing off all allegiance to the company, the injured Vizeram Rauze immediately collected the troops of his remaining zemindary, and with the vigorous assistance of another zemindar, in fimilar circumftances, who had likewife loft a part or the whole of his possessions, the mutineers were purfued

purfued with fuch spirit and effect, that after confiderable lofs, they were not only obliged to disperse, but to abandon their arms, and

much of their plunder.

While the prefidency of Madras were thus in every degree diffressed at home, their fettlements on the Malabar Coast were so straitened and endangered by the enemy, and the troops fo much wanted in the Carnatic, that a refolution was passed, for abandoning the antient fettlement and important post of Tellicherry; being thus reduced to the fad necessity of a dereliction of fome of their possesfions, in order to be the better enabled to preserve the rest. Thro' a subsequent change of circumstances, Tellicherry was fortunately preferved; the garrison berelieved by Sir Edward Hughes, who conveyed a reinforcement to them from Bombay. They likewise dispatched a letter to Bombay, stating the urgent necessity they were under for the fpeedy return of the troops which had been fent to support General Goddard in the Guzerat war. And the prefidency renewed their applications to Bengal, in still more preiling terms, for speedy supplies of money and of troops. This was enforced by a letter from Sir Edward Hughes, who, befides flating the imminent danger of the Carnatic, intreated, in the most urgent manner, the governor general and council, to lav afide all plans against the Marattas, and to direct their force and attention to oppose Hyder and the French, who were undoubtedly acting in concert. The arrival of a French force from the islands was at this time hourly expected.

The present misfortunes, along with the necessity of succour from Bengal, and the apprenention of the Nizam's joining Hyder Ally, ferved all together at this time, to quicken the determination of the prefidency on the buffness of the Guntoor Circar; which had been fo long delayed, and productive of fo much altercation with the fupreme council. Orders were issued for refloring that Circar to Bazalet Jung, as well as for withdrawing the Nabob's managers; and these were followed by letters to that prince and to his bro- Sept. 23d. ther. In that to the Nizam, besides informing him of a tranfaction which he had fo much at heart as the restoration of the Circar, they lamented the long disappointment they found to their hopes, of being able to pay him their arrears of the pefcush due for the other Circars; but hoped he would believe their affurances, that they would neglect no opportunity for the future of making good the balances; and fatisfaction being given on that point they expressed a confident hope, " that his highness would act ac-" cording to the treaties subsiding " between him and the company, " and endeavour to the utmest of " his power to check the defigns " of their enemies."

Hvder, as foon as his army had recovered the effects of their late victory, prepared to renew the fiege of Arcot. That place, ϵx clunive of its being the Nabeb's capital, was of the greatest importance to both fides; from its being nothing lefs than a prodigicus magazine of all manner of stores, provisions, and necessaries, and that in so ample a degree, as

so be equal to the support if not the equipment of a large army; and its being besides so capacious, as to afford cover and fecurity as well as fublistence. It was defended by about 7,000 of the Nabob's people, of all forts, in arms, and about 150 of the company's European infantry and artillery, with a few companies of their Sepoys. The place feemed capable of a long defence, at least against an Indian army; but besides the little dependance that was to be placed on the Nabob's people, Hyder's army was now become truly formidable even in ficges. His best troops, and thefe were sufficiently numerous, were composed principally of deferters from the company and the Nabob's fervice, who had been trained up and difciplined by English officers. approaches were accordingly conducted with fuch regularity, his attacks fo well supported, and his artillery fo well ferved, as could not but greatly furprize the Europeans in garrifon; who were particularly attonished, and no less disheartened, at the facility with which his batteries difmounted their cannon.

In the mean time, his cavalry were so thoroughly masters of the country, that even in the camp near Madras, the troops could not venture two miles from their entrenchments; and such was the disaffection that prevailed in the Nabb's garrisons that several of his forts were surrendered to parties of the enemies horse, without the firing of a single shot on either side. Nor was it among the smallest evils or misfortunes of the present time, that the government had become so generally odious to

the people as to have it supposed, that there was scarcely a native from one end of the Carnatic to the other, who did not wish success to Hyder's arms.

The government of Bengal were fo little latisfied with the pail, and placed fo little confidence in the future conduct of Madras, that they did not think it fitting, upon the first account which they received of the invasion, to take any immediate measures towards their relief; confidering it as better to wait for such further information, as would not only enable them to ascertain the degree of assistance that was really necessary, but likewise to adopt such measures as should insure

its right application.

But when accounts were received of the fevere blow fullained in the loss of Col. Baillie's detachment, and of the danger and ruin which involved the whole Carnatic, the most vigorous measures of relief were immediately adopted; to which, however, the monfoon feafon then prevailing was a great impediment. A confiderable reinforcement of European troops by fea, with a fupply of fifteen lacks of rupees in money, was immediately refolved; and as the repugnance of the pepoys to all expeditions on that element was too firing to be fafely meddled with, it was determined, as foon as the feafon and roads would admit, to fend a strong body of those forces to the relief of the Carnatic by land. But this being a meafure of much doubt, delay and difficulty, no great reliance was probably placed on its fuccess. For the route of the Sepovs, in their way to the northern Circars, was, of necessity, through Moodajee Boosla's territories in the province of Orissa; and that prince's disposition was not only doubtful, but his fon was then advanced with a strong army to the borders of Bengal, and lay in the Cuttack, full in the course which they should pass, with views apparently hostile. Measures were at the same time taken by the supreme council, for a plentiful supply of grain, as foon as it could be done, to Madras; and a quantity of falted provisions were directly sent, to provide against the necessities of a siege, if so unexpected an extremity should possibly

But all the hopes of the supreme council, for retrieving the British affairs on the coast of Coromandel, were centered in the abilities and fervices of that experienced and distinguished officer, Gen. Sir Eyre Coote; who was then a member of their own body, as well as commander in chief of all the It was urged forces in India. in council, that the danger impending on the company's interests in the Carnatic might be eafily repelled, even by its own immediate force, if that were properly applied and conducted -But that it did not appear to have been properly applied, nor could it be expected to be properly conducted, " unless Sir Eyre Coote would at " this crifis stand forth, and vin-" dicate, in his own person, the " rights and honour of the British " arms."

A resolution was accordingly passed, to intreat Sir Eyre Coote to take upon him the command of the army, and the application of the means for the relief and deliverance of the Carnatic; a requi-

fition with which, notwithstanding the badness of the season, and the precarious state of his health, he immediately complied. Doubts being then suggested, and the question agitated, upon the propriety of entrusting so large a sum of money as 15 lacks of rupees to the management of those, whose misapplication and waste had, it was alledged, brought on their own present necessities and dangers, it was refolved, that the treasure should be consigned to the care of Sir Eyre Coote, and by him, to be appropriated exclufively to military fervices; with, however, a discretionary authority in the general, of advancing any part of it on the requisition of the president and select committee of Fort St. George, but being himfelf to determine on the expediency of the measure.

The supreme council communicated, both to the prefidency of Madras, and to Sir Edward Hughes, an early account of the measures of relief which they were taking; together with an affurance of their disposition to a peace with the Marattas, and their determination to make speedy proposals for that purpose. Upon this head they were, however, more full with that admiral than with the prefidency, as an answer to the letter which he had so lately written upon the subject; they also requested, that he would, if possible, direct the operations of his fquadron against Hvder's ports and shipping on the Malabar Coaft.

Sir Eyre Coote's voyage was unufually short and favourable, for the scason, he being only 23 days on his passage from Calcutta to Madras, where he arrived on the

9

the 5th of November. He brought with him two hundred European artillery, fix companies of infantry, one of volunteers, and between fix and feven hundred Lascars. With this reinforcement, more confiderable indeed from the intrinsic value of the troops than their number, the whole force which he could collect in two months time at the Mount, (where he encamped) scarcely exceeded 7,000 men. The monfoon afforded a scasonable colour for inaction, with an army which was in every respect incapable of taking the field. The protection of Madras was the utmost, in the present state of things, that could be hoped for.

The city of Arcot had been taken by affault a few days before the arrival of the general; and the fort or citadel, which was capable of a long defence, was given up three days after. Nov. 3d. der, who feems to have been feldom deficient in fuiting his conduct to the occasion, whatever that might be, displayed an extraordinary degree of humanity and kindness to the prisoners taken in Arcot. These found means to inform their countrymen in the fort of the generous treatment and kindness which they had experienced; and at the same time that they extolled the conqueror, totally condemning their folly and obstinacy, in fruitlessly resisting the arms of so great and excellent a The consequence was, that all the Sepoys to a man deserted the fort in the night, and went over to Hyder, leaving their European officers to provide for themselves as they might; who were accordingly obliged to furrender the place and themselves.

It was undoubtedly the disaffection of the Nabob's people, which occasioned the continual differences that prevailed between them and the Europeans during the whole course of the siege; and to both causes may be attributed their afterwards charging them the loss of the place, when, being prisoners, they were equally incapable of knowing the charge, and of making any defence if they had. That Arcot was lost through their own treachery, there is every reafon for believing; and if others were wanting, Hyder's taking the Nabob's principal officer there into his fervice and particular confidence, immediately after the capture, might be confidered as no flight evidence. Indeed it had flipped (with more inadvertence than could have been well expected) from Hyder long before, that he had full information of the most secret transactions of the Nabob's court.

In two days after the general's arrival at Madras, he took his feat as fecond, in the council, and produced the orders which he had conveyed from the supreme government of Bengal, for the suspension of Mr. Whitehill, the president. This measure principally proceeded from his obstinate perseverance in those transactions relative to Bazalet lung and the Guntoor Circar, which had for much alienated the Nizam from the company's interests; notwithstanding the long repeated injunctions of the supreme council to the contrary. That gentleman now totally disclaimed, and protested against, the authority of the fupreme council, to deprive him of his office of prefident and gover-

nor :

nor; and held every member of the administration, who should submit to it in the present instance, to be answerable to the company for the subversion of the government, and to him, for any loss homight sustain in his person or liberty. The suspension was however consistend by a majority of the council; and the late president assumed a merit from that moderation, which induced him to prevent the evils of a civil war by submitting. Mr. Smith, as next to the chair, succeeded to

the government.

The fituation of affairs in the Carnatic, at the time of Sir Eyre Coote's arrival, was so deplorable, as far to exceed all report and imagination upon the fubject; and the unaccountable neglect which had marked every department of administration, seemed rather the effect of some fatality, than of indolence or weakness. That general observes in his letters to the directors, as well as to some of the principal officers of the state, that the fame inactivity and bad policy which had operated, in not collecting the troops, in the defect of every kind of preparation, in leaving the paffes open to Hyder's entrance, and, in fo many other ruinous instances, were still prevalent at the time of his arrival; and that what ought to have been their first care, lay as much neglected as if no enemy had been near. That even the necessary arrangements for the fecurity of Fort St. George, the very foundation of our existence on that coast, had not been made; that no pains had been taken, to repair the shattered con lition of the very fmall

army that remained for their defence; that the field artillery requifite for a campaign, was fo far from being in readiness, that the carriages were then making up. That the troops were dispirited, the Seapoys deferting, the country defolated, the inhabitants treacherous, all communications cut off, their provisions confumed, and their resources exhausted. That the Nabob, fo far from being able to give affiftance in this exigency, had neither men, money, or influence, and looked up to the company for the support of his interests and credit .-- After stating the dangerous and ruinous conduct which had been purfued with refpcet to Pondicherry, (the effects of which will appear) he observes, that to all the difadvantages, arifing from these misfortunes, and from the misconduct of government, on one fide, should be added, the increase of superiority to the enemy, arising from his good policy, as well as from the strength and fuccess of his arms; " tor, " that Hyder had taken every " measure which could occur to " the most experienced general, " to distress us, and to render " himfelf formidable; and, that " his conduct in his civil capacity " had been supported by a degree " of political address, unequalled " by any power that had yet ap. " peared in Hindostan."

Such was the enemy, with whom the East-India Company were now engaged in so arduous a contest; and such was part of a picture of the affairs of the Carnatic, drawn, upon the spot, at the close of the year 1780, by Sir Eyre Coote.

C H A P. IV.

Fir Eyre Coote's design of relieving the besteged fortresses construced by the opinion of the council of war, and the approbation of the scleet committee. Hyder raises the siege of Wandewash, and retires with precipitation, on the approach of the British army. The other beleaguered places relieved and jupplied. Dangers arifing from the perfidy of the French at Pondicherry obviated, by the General's difarming the inhabitants, destroying their boats, and removing their magazines from Carangolly. Hyder's shipping destroyed in his own ports by Sir Edward Hughes. Sir Eyre Coote marches to Porto Novo, to frustrate the enemy's design on Tritchi-Hyder's immense force. Numberless difficulties which the Eng. lish General had to surmount. Grand battle on the 1st of July. Hyder's vast host, after a very long and obstinate engagement, defeated. retreats towards Arcot, and Tippoo Saib raijes the fuge of Wandewalb. English General marches to the northward, and forms a junction with the forces from Bengal. Takes Trepassore, defeats Hyder, in a hard and difficult conflict, on the 27th of August. Defeats him a third time on the Succeeding actions, in which the English army is 27th of September. constantly victorious. Dutch settlements on the island of Sumatra subdued. Sir Edward Hughes, and Gen. Sir Hector Monro, besiege Negapatam by Sea and land. Place surrendered, upon conditions. The Admiral proceeds to the island of Ceylon, and takes the Dutch forts and sittlement of Trincamale.

MONG the good confequences which attended Sir Eyre Coote's coming to take the command in the Carnatic, the unanimity which from thence prevailed in the government was far from being the least. The council were unanimous in his fupport, and wifely committed the whole conduct and management of the war, without reserve, into his hands. An appearance of vigour, in despite of weakness and of all the wretched circumstances of affairs, accordingly took place in every department; and the enemy, impressed with a sense of the general's fame and military abilities, became more guarded in their conduct.

Hyder's army was by this time prodigiously augmented; his force, within the Carnatic, was supposed far to exceed a hundred thousand men; and fome accounts went fo far, as to estimate his matchlock men, and irregular infantry only, at not less than 80,000. The weakness of the army at Madras, the necessity by which he knew it was tied down to the protection of that place, together with the multitude of his own troops, encouraged and enabled Hyder, after the taking of Arcot, to lay flege, at one and the same time, to several of the principal fortresses in the Carnatic,

Few generals have had a more difficult game to play, or a greater flake

stake depending, than Sir Eyre Coote at this juncture. His whole force did not exceed 7,000 Yet with what may be comparatively called a handful of men, his dependance was fo great on the goodness of the troops, and upon his own ability, that in any Iess critical state of war, he would, without hesitation, have met Hyder's vast host in the field. But every thing was now at stake. The fate of Madras, of the British interests in the Carnatic, and perhaps in all India, to the very 'existence of the English name, being wrapt up in that of the small army he commanded, a greater degree of consideration became necessary. And, besides the principal danger of any misfortune to the army, it was foreseen that Madras itself might be exposed during its absence, however successful he might be in relieving the besieged fortresses. The multitude of Hyder's troops enabled him to make detachments to any amount, and the celerity of his numerous irregular cavalry, laid all parts open to their fudden enterprize; while his main army, instead of being weakened, was rendered more manageable by detaching.

In these critical circumstances, and under such a weight of danger and of personal responsibility, the general thought it wise and necessary, to take all the counsel which it was in his power to obtain; his own opinion going strongly, under a sail sense of all the possible consequences, to the relief of those fortresses, which were the most important, and in the greatest danger. He accord-

ingly drew a short but comprehensive sketch of the present situation of things in writing, fully stating the value, importance, and respective danger of the objects in view, the degrees of hope and apprehension to which the proposed measure of relief would be liable, with his own opinion upon the whole; and calling a council of war, composed of Sir Hector Monro, Lord Macleod, and Brigadier General Stuart, laid it before them, defiring, that after the most mature confideration, they would give their separate opinions writing upon the subject.

Vellore, Wandewash, Permacoil, and Chingleput were the places befieged; the first, from its situation and strength, afforded no cause of immediate apprehenfion, excepting from the treachery of the garrison; but some of the others were in imminent danger; and as they contained large magazines of provisions, the supply of the enemy in that respect, as well as with their artillery and flores, would have been a two-fold prejudice. It was remarkable in the statement upon this subject presented by the general, that he observed, as a known fact, that they had not only Hyder, but the whole Carnatic to combat against; so that they could not hope for the smallest assistance, in any part of the road through which they were to march, or of the country which they might enter: and he informs them, that the treachery of one of the Nabob's renters, in endeavouring to betray Vellore to the enemy, having been fortunately discovered by the commander of that garrison, he had ordered

ordered him to be put in irons; hoping, he faid, "that he might "be instrumental to the disco-" very of those dark designs, " which he had long suspected " to exist in the court of a native " power, living under the very " walls of our garrison of Fort

" St. George." The three general officers coincided entirely in opinion with Sir Eyre Coote, for the march of the army to the relief of the befieged places; and as Wandewash was in insmediate and imminent danger, and it was expected that Hyder would collect his whole force, and use his utmost efforts, to prevent their passing the river Palaar, which lay in their way to that place, Sir Hector Monro, so far from being discouraged by that circumstance, declared there was nothing more to be wished, than the bringing him to a general action; at the fame time generoufly declaring his confidence, that the army would be successful under its present leader. Upon the-fame ground, he did not wish that the commander in chief should be fettered by a resolution, for the immediate return of the army to the protection of Madras, when the intended fervice was performed; but on the contrary, that it should be left entirely to his own discretion to act in that respect, as future information might iudicate, or circumstances point out.

So nice, notwithstanding, was the caution of the general in this critical and momentous bufinefs, that he departed from the establithed military rule in fuch cases, by laying the whole proceedings of the council of war before the Vol. XXV.

felect committee, defiring their advice upon the subject; a meafure, however irregular and unusual, which could not fail effectually to rivet their confidence in him. The event was, a full approbation of the opinion of the council of war.

Sir Eyre Coote marched at the head of the army from the encampment at the mount, to the relief of Wandewash, Jan. 17th, in the beginning of 1781. the year. Hyder Ally, upon the first account of his approach, not only raifed the fiege of Wandewash with precipitation, but abandoned all the others in the fame manner; and so far from meeting the English army in the field, or opposing, as was expected, their passing the Palaar, retired with his whole force to a cautious and guarded distance. Thus the beleaguered places were not only relieved and provided, and other garrifons that were weak and exposed reinforced, but a great extent of country was recovered, and a new frontier formed; and from hence, Sir Eyre Coote continuing to keep the field, and prepared every where to look the enemy in the face, provided as effectually for the fecurity of Madras, as if the army had been encamped under its walls. fudden a change in the face of affairs, restored the spirit and considence of the troops, both European and native, and prepared them for every exertion which their commander might require.

The perfidy of the French in-habitants of Pondicherry, who had been treated with unexampled lenity and tenderness since the reduction of that place, had contributed [F]

tributed greatly to increase the alarm and confusion of the Car-These people, besides the fullest protection in the possession and enjoyment of their houses and estates, and the most liberal con-Aruction of the articles of capitulation in their favour, were even admitted to the rights of subjects, and to traffick under the English flag. The fortifications, and the powder magazine, had been alone demolished; in all other respects, the town, port, and public buildings, were left in their former state.

Upon the commencement of the present troubles, as it became necessary to withdraw the British troops to Madras, it was thought fitting to remove the French officers and veterans, who, through lenity, and a tenderness for their circumstances, had hitherto been left upon parole at Pondicherry, to the same place; while these gentlemen expressed the most grievous apprehension, lest this removal might proceed from any doubt of their honour in the strictest adherence to their paroles. At the same time, as the conduct of the inhabitants had lately afforded much room for jealoufy, and became daily more fuspicious, as the troubles in the country, and the expectation of the arrival of a French force increased, it was in contemplation to fend the late attorney - general, with feveral other of the principal inhabitants, who, from their conduct, influence, or turbulence, were deemed the most dangerous, to Madras likewise. Lenity, however, prevailed; and the measure was evaded, by these persons renewing their allegiance, and voluntarily pre-

fenting a written declaration, figned with their names, and binding themselves anew to the most inviolable fidelity; thus rendering

themselves doubly criminal.

For in return for all past favour and present confidence, Colonel Brathwaite, had fcarcely marched with his troops out of fight of the place, when the French inhabitants suddenly rise in arms, seize and plunder the folitary English resident who had been left to superintend their conduct; and to complete the outrage, compel him, with fixed bayonets at his breaft, to fign a written instrument, the contents of which he is totally They then unacquainted with. proceeded to raife and arm two or three battalions of Sepoys, most of whom, having composed a part of the late garrifon, had received the fame protection, and were bound to the fame conditions with themselves. As some cover to this breach of faith, they, however, pretended, that these Sepoys were in Hyder's pay and fervice; the former of which indeed was probably true. And, that nothing might be wanting for the reception and support of the fleet and army which they expected from the Mauritius, they proceeded to amass vast quantities of provision at Carangolly, a town at some distance upon the sea coait.

Such infractions of faith are to be condemned, besides their own inherent turpitude, as they tend to discourage the exercise of clemency and moderation. But we are always happy to find councils ever erring on the fide of lenity justified by the final event; as was the case in the present instance.

Surrounded, however, with difficulties and dangers on all fides, as Sir Eyre Coote was at his first arrival, he strongly condemned a degree of imprudent fecurity, thro' which Pondicherry was permitted to become a garrifon and place of arms for the reception and support of a new, as well as of the old enemy. One of his first measures, after the immediately necessary services, of obliging Hyder to raise the sieges, and of re-inforcing and supplying weak or exposed garrisons, was This the remedy of this evil. he accomplished effectually, by difarming the inhabitants of Pondicherry, by the destruction of all their boats, and by the removal of the provisions from Carangolly. The destruction of the boats was in a peculiar manner timely and fortunate; for M. de Orves, arrived with a fquadron foon after off that place, and being in great distress for water, provisions and other necessaries, the want of boats on both fides, occasioned his quitting the coast without obtaining any relief.

In the mean time, Sir Edward Hughes had performed excellent fervice on the Malabar coast towards the close of the year, and of a nature the most vexatious that could be to Hyder, by the destruction of his shipping in his own ports of Calicut and Mangalore; and thereby nipping in the bud his hopes of becoming a formidable maritime power, which was a favourite object of his ambition.

Sir Eyre Coote's force being too weak to encourage adventure, and Hyder too cautious to hazard much without necessity, nothing of consequence took place for several months between the armies.

Such a state of things, however, could not be lasting. Hyder having made preparations for the fiege of Tritchinapoly, Sir Eyre Coote marched with the army to Porto Novo, as well to frustrate that defign, as to repress his depredation on the fide of Tanjore, and the fouthern provinces. wretchedly was the army still provided for the field, and fo forely the want of a provident forefight, and timely preparation yet felt, that the general could not have made this movement, if Sir Edward Hughes had not attended at that place, to supply him with provisions from the ships; for befides the paucity in number of their cattle for draught and burthen, so miserable was the condition of the bullocks they had, that they were scarcely able to drag the artillery in any manner along, and were finking under the moderate weight of that proportion of camp equipage, which was indispensably necessary to the service, and could be conveyed by no other means.

Hyder was now fo confident in the strength of his immense army, and fo determined on his object, that he departed from his general resolution of avoiding field-actions with the English, rather preser-ring to stand the hazard of a general engagement, than to relinquish his defign on Tritchinapoly, and his views on the fouthern provinces. Thus impelled, he advanced on the direct road which the English army were to take on their way to Cuddalore, and took an exceedingly well chosen and [F] 2 advanadvantageous position within a fhort distance of our camp, while the troops were engaged in procuring a few days providen from the thipping, which, through the weather and furf, was with no

fmall difficulty landed. His a.my was new become enormous in bulk and number. Of this multitede, 11.000 Topaffes, clad and armed after the European manner, with 23 battalions of regular fepovs, amounting to about 15,000 men, composed, with fix or seven hundred Europeans, the dower and strength of his infantry; and were in fact, an extremely well disciplined and formidable body. His irregular infantry, armed with match-locks, pikes, and rockets, amounted to 120,000; his cavalry exceeded 40,000. His artillery was worked by Europeans, or by deferters from the nabob, who had been trained under English officers; and fome thousands of his and the company's Sepoys, who were either under the fame description, or had been taken prisoners since the war, were incorporated in Hyder's line of disciplined in-All these forces, of fantry. whatever fort, were in his own immediate pay; exclusive of several bodies of notive troops, who, under their reflective Poligars or Raja's, had joined him as allies, or followers of his fortune, fince the commencement of the war. If to these we aid the Lascars, pioneers, and artificers, who composed a numerous body, along with the other numberless followers of an Indian camp, the whole will form fuch a multitude, as may afford no very inadequate idea of the antient eastern armies. Yet, at this very time, Tippoo Saib, Hyder's fon, was befieging Wan-

dewath, with 30,000 men.

mighty Notwithstanding this force, the unexpected determination and approach of the enemy, afforded the greatest satisfaction to Sir Eyre Coote, who wished for nothing fo much as a general engagement, but was crippled in fuch a manner, from the want of cavalry, and of all the means of expeditious movement, that it was impossible for him to compel Hyder to abide that iffue. The valour and excellency of his troops, fupplied, with their general, the defect of number. The inequality in that refeest was too great to bear a comparison; in all others they were unrivalled. His Europeans amounted to about 1,700 men, and his Sepoys were fcarcely less to be depended on.

One of the great difficulties which he had to encounter, was the total impossibility of obtaining any information of the enemy's flate or position. Such clouds of Hyder's cavalry hovered round the English camp, and covered the country on all sides farther than the eye could reach, that the fending out of a reconnoitring party was not only impracticable, but even a fingle man could not escape detection; so that of all the fcouts whom the general difpatched for intelligence, not one ever returned, and no farther knowledge of the fituation of the enemy could be obtained, than the fhort view from his own advanced posts admitted. Thus forced to make his way in the dark, no previous disposition could be made,

nor plan of action formed; and Sir Eyre Coote was in the fingular fituation, of being obliged to truft entirely to his own genius, and to the quickness and fertility of his refource, for making his dispositions in the face of an enemy fo infinitely superior.

At five in the morn-July 1st, ing, the army began to draw out from the camp at Porto Novo; and at feven, commenced its march, with the fea, at no great diffance, on the right. Small as it was, and the utmost exertion of every fingle man it contained evidently noceffary, to the purpole of attacking and forcing fo prodigious an army, in a chosen and fortified fituation, yet the general was under the hard necessity of drawing off a confiderable detachment from his line, for the protection, during the march and action, of the baggage and of the numerous followers of the camp, from that multitude of Hyder's irregular cavalry, who, upon the first opening, would be ready to pour in upon them. These, with their usual guard, consisting of about 150 Sepoys, those few Poligars who had joined the company's forces, and a fmall Mahratta corps, were judiciously placed, in the opening between the aight of the army and the fea; and the detachment, now unavoicably drawn off from the line of action for their support, confided of two regiments of cavalry, and a battalion of Sepoys, with feven pieces of light artillery.

The country, in about an hour's march, opened an extensive plain to their view, and as the enemy's cavalry appeared drawn up in

great force on their way, Sir Eyre Coote formed the army in two lines, and proceeded on his march in order of battle. The grounds which Hyder cocupied, were naturally strong and commanding; and he had already rendered this position truly formidable, by the judgment and dispatch with which he had strengthened and fortified the most advantageous spots with well constructed front and flanking batteries. Indeed, it would have afforded no fmall demonstration of his military abilities, if other effential proofs of it were wanting, that he had formed luch a body of pioneers, as had never be

fore been known in India.

The army had not advanced far . when the enemy's position and works were clearly discovered, and their batteries feen to lie directly. upon the intended in oi march. Hyder's principal force, was drawn up in order of batcle in the rear of his works, and extending farther on the plain, than the eye could command; large bodies of cavalry caught the fight in every direction, and an infinite number of rockets were unintermittingly thrown, as well to prevent and confound the observation, as to disorder the march and impede the movements of the English army. At the fame time tiley were exposed to a warm though diffant cannonade; the enemy's artillery were well ferved, and did execution; while the English general could not afford to return many thot, as he was fenfible that every round he possessed, would, in the course of the day, be wanted to take the most decifive effect.

Critical and dangerous as this fituation was, a paute, little thort [F] 3 of

of an hour, became absolutely neceffary; not only to afford time to the general to examine the enemy's immediate position, but farther to discover, whether the country on the right, might not admit of his taking fuch a fweep, as would enable him to turn the enemy's left; and thereby to fall upon them rother obliquely, than to be obliged to make his attack in the full front and fire of their works and batteries. The country on the right fortunately anfwered his hope; and nothing was ever more boldl; a.d happily executed, than this daing and mafterly movement, in the face of fuch an enemy, and under the fire The of a numerous artillery. troops had endured the galling fire of the enemy, during the pause we have mentioned, with the utmost constancy and composure; the subsequent march and movement, they were obliged to pass, as it were in review, under the heavy flanking fire of all the enemy's batteries, while the Sepoys unharneffed their wretched oxen, which were totally unequal to the celerity of the occafion, and drew the artillery along at a quick pace, through a deep and heavy fand, for above a mile. The most admirable order was preferved through the whole.

This prompt and happy movement, which was performed by the first line only, decided the fortune of the day. Nothing less could have done the business, or indeed have well faved the army; for they had only four days provision, which they carried on their backs, and delay, or even a drawn battle, would have been no less rulnous than a defeat. The ge-

neral, in filing off to the right, had been necessarily obliged to contract his front and break his for er order; but as foon as he had gained the point he aimed at, and the ground would admit, he instant'y for ned anew, about nine o'clock, in order of battle, being within reach of, but partly covered from, the fire of the enemy's cannon He then looked eagerly back, to fee whether the heights in his rear were occupied by the second line; for on the fuccels of that part of his design every thing still depended, as the possession of them, would not only have enabled the enemy to separate the two lines, but entirely to enclose and furround the first, as foon as it ventured into action. General Stuart, who commanded the fecond wing, performed that fervice with fuch activity, as not to keep him long in suspence; and as foon as he faw they were covered, he advanced with confidence on the enemy.

These sudden and unexpected evolutions, performed with an alertness of which Hyder himself had yet seen no example, obliged him to a new arrangement of his army. His guns were withdrawn from the batteries to the line with equal order and expedition; he instantly formed a new front to receive Sir Eyre Coote; and feeing at once the confequences which would attend the possession of the high grounds, he detached a strong body of his disciplined infantry, with a fuitable artillery, befice a number of irregulars, and a very great force of cavalry, to attack the fecond line; while another detachment, or part of the fame, attempted, by getting

into

into the interval during the conflict, to attack Sir Eyre Coote in the rear. Thus the battle was double; and each wing, separately, and almost equally engaged.

The main battle was long and obstinately fought: and it was not until four o'clock, that, by dint of courage, the most invincible perseverance, and an exertion, for so many hours on the utmost stretch, that the English at length gained the day. At that time, the first line triumphing over every obstacle, drove Hyder's infantry, artillery, and cavalry, promiscu-ously before them, and compelled his whole army to feek their fafety in a retreat. During this time, the fecond line, under the conduct of Brig. General Stuart, had not only gallantly repulsed the repeated attempts made by the other division of Hyder's army upon the heights, but attacked, carried and maintained, those, of which the enemy had first gained possesfion; and while the rear of that line were thus fully occupied, their van most obstinately disputed, and at length totally defeated, the attempt made to attack the This possession, general's rear. and brave defence of the heights, likewise prevented the enemy, notwithstanding their multitude, from being able to make any push towards the sea, or the smallest attempt upon the bagage.

Thus the victory was complete on all fides. Many of its advantages were, however, loft, through the victors being bereft of the means of pursuit. If it were not for that unfortunate circumflance, the whole of Hyder's artillery and stores would have fallen into their hands, and he would undoubtedly

have been obliged to abandon the Carnatic. It was intolerably vexatious to these brave men, to behold the strong and vigorous cattle of the slying enemy, carrying off their artillery at a full trot, while their own were scarcely able

to drag the guns along.

The conduct and gallantry of Major General Sir Hector Monro, who commanded the first line on this day, was highly distinguished. Indeed the behaviour of every individual in the army, from the commander in chief to the meanest Sepoy, was beyond all praise. Sir Eyre Coote declares in a letter, that every individual of his little army feemed to feel, that all the interests of the nation and company were then at stake; that falling, as they already were, the most extraordinary exertions were necessary to their support; and, to their credit, faid he, " every nerve was exerted to the " very extent of possibility."

Hyder left about 3,000 of his men dead upon the ground. His principal and favourite general, Meer Saib, was mortally wounded; and several other of his leaders, and best officers, were among the killed or wounded. Sir Eyre Coote halted just beyond the enemy's ground, from his inability to continue the pursuit farther; and was joined by the second line and the baggage about midnight. The loss on his side was far from being confiderable, confidering the nature of the action; and did not exceed 400 men in killed and wounded; nor was there any officer of note in either lift. thing could more fully shew Hyder's conviction of his inferiority in the field, and his determination

[F] 4 not

not to hazard another action under any advantage of ground, than his leaving the strong and important plus of Puravenaur open to the purious of the English when he made his retreat through it in the evening. Among the immediate consequences or the victory, Tippoo Saib's raising the slege of Wander of was not the lead.

Hyder withdrew with his army to the neighbourhood of Arcot, where he was joined by Tippeo Saib's detachment. Sir Eyre Coote, having thus freed the fouthern provinces from depredation and danger, marched with his army to the northward, in order to meet the long exposted and withed for reinforcement from Bengal, which, under the favour of Moodajee Boolla, and his fon, had marched through his writories in Oriffa, and were now arrived in the northern circars. This jo ction was happly effected in the beginning of August; and the general being now cabled to act with vigour, marched to lay fiege to Trepaffore. This place capitulated after a few days flege, and rothing could be more Aug. 23d. timely or fortunate than the turrender; for besides that the possession was of importance, the advance of Hymr's army (who was in full march to its relief) appeared in fight, at the moment that the troops were taking poffession of the worlds, and there was then only one day's rice left in the English army.

Trepaffore afforded fome immediate relief, and the general finding that Inyder was in full force at about fixteen miles distance, determined to attack him; but was under a necessity of waiting to

draw some rice from Poonamalla. This supply being obtained, he marched to seek the enemy; and Hyder upon his appreach fell back a few miles to the very ground where he had defeated Colonel Barlie. There he took a very strong position; but was more influenced, as it is reported, by a superstitious confidence in its being a lucky spect, than by the strength of the ground, in his determination to try the fortune of a fecould batue.

Sir Eyre Conte arrived in 27th. fight of the cremy about eight o'clock in the morning; and discovered him to be in great force, his army drawn up in order of battle ready to receive him, and in poffession of feveral very commanding and advantageous potts. This fluction was rendered fill more formidable, by the nature of the country lying between both armies, which was interfected by feveral very deci watercourfes; fo that nothing could be more arduous than the approach of the troops to their object. The general, in order to present a front to the enemy, was under a necessity of forming his line under a very heavy cannonade, as well from feveral batteries placed to great advantage, as from the guns in the enchies line. This was an arduous trial of the discipline and firmnels of the troops, and the general declared, that the fleady valour which they shewed upon this occasion, could not have been furpassed by the first veterans of any nation in Europe.

They had full occasion for the continual exercise of these qualities, during the course of a very long and hard fought day. The

battle

battle lasted from nine in the morning until it was near fun-fet. By that time, Hyder was cured of his superfition; his army were criven successively from all their firong posts, and obliged to abandon the field of battle with precipitation. The loss sultained by the English army in this action was greater than on the 1st of July, and that of the enemy less; which, besides the causes we have feen, proceeded from their theltering themselves under the banks of tanks, and from their possesfing in general fuch inequalities of ground as afforded much co-It feems probable, that their artillery caused the principal loss in the English army. - General Stuart loft a leg by a cannon shot. Colonel Browne, an old, able, and experienced officer, his life, by the f..me means; and Captain Hislop, one of the general's aid de camps, an active and spirited young officer, was killed, close to his fide, by a cannon shot. These were the only officers of note who

I. feemed as if defeat had wrought the extraordinary change in Hyder's disposition, of readuring him enamoured of field battles. Sept. 27th. For, on the day month of the late action, he waited to be attacked by Sir Eyre Coute, near a place called Sholingur. But this affair was foon The action did not bedecided. gin until four o'clock, and before night his army was completely routed. In this battle both his cavalry and infantry fuffered extremely, while the lofs of the victors was so triting as not to deferve mention; but the enemy's troops were now used to be beaten.

The general then relieved Vellore, which was reduced to the last extremity; and afterwards befreged and took Cnittor. The seafon for some time occasioned a cestation of action on both sides; but Vellore being again reduced to great distress for provisions, the general was obliged, in the beginning of the year 1782, to march again to its relief,

Repeated defeat, was not capable of producing any remittion of Hyder's vig ur or vigilance. On Sir Lyre Coote's march to Vellore, as the army were passing through a deep morals, the enemy appeared in force on different Jan. 10th, quarters, and commenced a diffant but very heavy cannonade. Their object was, besides impeding the progress of the army to Vellore, (which was reduced to the last day's provision) to cut off the baggage and convoy, while the troops were entangled After an in these bad grounds. action, fuch as we have described, which lafted for four hours, the enemy being foiled in all their attempts, were at leagth forced to abandon their object, and retiring on all fides, the army, which had fuffered very little in this action, purfued its course without interruption to Veilore.

Upon the return of the army, three days after, their indefatigable, and ever watchful enemy, was again prepared for their reception. On coming up to the fame morafs, they found Hyder in full force on the other tide, and determined to dispute their passage. They, however, 1 filed the swamp, under the fire of the cannon, about four in the asternoon, and the general having immediately formed,

and focured ill biggage, the troops advanced with their usual alacrity upon the comv. These made but a faint relificace; they gave way on all fields, retreated with precipic ion, and were purfued with c anderable execution until dark. The vigour of Hyder's exertions was no longer feconded by that of his troops.

Such was the furprifing change which the admirable conduct and military abilities of Sir Eyre Coote, feconded by some excellent officers, and supported by the unparalleled efforts of a finall but glorious army, had, in a short time, produced in the affairs of the Carnatic: and fuch the events, of one of the most arduous campaigns of which we have any knowledge.

During these transactions, an account of the war with Holland having arrived in India during the month of August, it fortuned foon after, that five India ships from China, arrived, in their way home, at Fort Marlborough, on the coast of Sumatra. The arrival of these ships excited the gentlemen of that factory, to an enterprize against the Dutch settlements on that island. Mr. Botham, one of the council, was appointed to conduct this expedition, and Captain Clements, commodore of the five ships; the fort could only fpare Capt. Mandeville, with a hundred men for the service. The address and good conduct of these gentlemen fo effectually supplied the want of force, that the governor of Padang, being artfully imposed upon with respect to their strength, was terrified into a surrender, not only of that place, but of all the other Dutch lettle-

ments on the western coasts of Sumatra, into their hands.

The Dutch fettlement, in the town, port, and fortress of Negapatam, in the Tanjore country, could not, even in time of peace, but be confidered as fome eyefore to the company; but, in the present state of things, its being in the possession of an enemy was full of danger. The consequences of fuch a fortress and port being open for the reception of the French fleet and army, and of its becoming a great naval and military magazine, for Hyder's conflant fupply, as well as theirs, were indeed easily understood; but the immediate dangerous state of affairs, and urgent demands for every possible exertion in the Carnatic, feemed to render the application of a timely preventive remedy, a matter of the greatest difficulty.

The fuccess of Sir Eyre Coote's arms, having happily leffened the difficulties on that fide, this new evil and danger became an object of the first consideration; it was, however, some time before the defign against Negapatam could be carried into effect; but during that interval, Sir Edward Hughes had, from his first knowledge of the rupture with Holland, closely blocked up the place by fea. Major General Sir Hector Monro, was appointed to conduct this enterprize in concert with the admiral; and the troops already stationed in the Tanjore country, were the only land force affigned to this fervice. The difficulties which they had to encounter, required all the abilities and exertion of both commanders.

fortifications had already been confiderably strengthened by new works; the garrison re-inforced by a large detachment of Hyder's troops; and what was still a matter of more serious consideration, the season was far advanced for military operations, the shift of the monsoon being at hand. But the great importance of the object warranted risque, and reduced the difficulties to nothing in the minds of the assailants.

The troops being ar-Oct. 21st. rived at Nagore, a place 1781. on the sea coait, near Sir Hector Monro Negapatam, was immediately landed to take the command; and at the same time, all the marines of the squadron, amounting, with their officers, to 443, were likewise landed, and joined the company's troops. On the following day, a detachment of 827 feamen, with their proper officers, and commanded by three naval captains, were landed, under orders from the admiral, to co-operate with the general to the utmost, in every measure for the attack of the place. The great difficulty lay in landing the artillery (which were supplied by the squadron) through a great and dangerous This difficulty was furfurf. mounted, though with incredible labour, fatigue, and no fmall danger, by the courage and activity of the feamen. Catamarans, or rafts, were made with wonderful expedition, and with the aid of the boats, 16 eighteen-pounders, 2 twelve-pounders, with 2 heavy mortars, and 6 lighter, together with their carriages, shot, thells, powder, and all necessary artillery stores, were, on the same

day, under the superintendence of Captain Ball of the Superbe, landed, without the smallest loss

or damage.

The garrison amounted to about 8,000 men of all forts, and far exceeded the befregers in point of number. It was composed of above 500 Europeans, 700 Malays, 4,500 Sepoys, and 2,300 of Hyder's troops; of the latter, a thoufand were cavalry. The whole force of the besiegers, including feamen and marines, did not much exceed 4,000 men capable of effective fervice. The fick were pretty numerous; and the troops fuffered great incommodities from bad weather, and the dampness of the fituation; most of the wounded died; and feveral of the feamen and marines were carried off fuddenly by violent cramps and spasms, occasioned by wet and fatigue.

On the night of the 29th of October, the strong lines, flanked by redoubts, which the enemy had thrown up to cover and defend the approaches to the town, were attacked and carried by storm. In this very brisk action, the seamen and marines left but little to be done by the land forces; falling on with their usual intrepidity, nothing could withstand the violence of their attack for a moment. It was remarkable, that Hyder's cavalry were so terrified at the fury which they experienced in this rough encounter, that they ran entirely away into the open country, and never after

joined the garrison.

On the 3d of November, the general opened ground against the north face of the fort, and the approaches were carried on with unusual

unufual rapidity; to which the alacrity of the feamen and marines contributed greatly. On the 7th a battery of 10 eighteenpounders, being ready to open within 300 paces of the walls, the admiral and general fent a joint letter of fummons to the Dutch governor, which he answered with great respect, but no less firmness.

The garrison made two desperate fallies with almost their whole force, but were beat back into the town with much iofs in both. battery being opened with great effect on the face of a bastion which was intended to be breached, the enemy demanded a pariey, and commissioners were fent Nov. 12th. out to fettle the terms of capitulation with the admiral and general. By thefe, the town and citadel, and every thing they contained, belonging to the gevernment or company, were furrendered; private property was fecured, and the inabicants be protected in their houses and estates, upon taking the oath of allegiance; the garrison were allowed military honours, and then became prisoners of war; and the governor, council, and civil officers, were retained on parole.

Hyder's infantry, with most of the other Sepoys, abandoned their arms, and had made their escape out of the town, during the truce, on the night proceding the furrender. The whole lofs of the befregers, Europeans and natives, in killed, wounded, and milling, during a fervice of so much action and difficulty, amount d to no more than 133 men. A numerous artillery, with large quantities of shot, fhells, military and artillery flores,

were found in the place.

The taking of Negapatam produced the immediate happy effect, of Hyder's troops evacuating all the forts and strong posts, which they held in the Tanjore country and its borders. It likewife operated to strongly upon the Poligars of the Marawa and Tinivelly countries, who renouncing their forced obedience to the Nabob of Arcot, had early joined Hyder, that they endeavoured to make their peace with the former upon the best terms which they could obtain.

The monfoon now fet in with its utmost fury, and nothing could exceed the dreadful boilterousness of weather which the fleet endured, from the furrender of the place to near the end of the following month. This violence was fo constant, that it was with the greatest difficulty, and no small danger, that the admiral, in the course of about three weeks, was able to recal to their respective thips, those seamen and marines who had affifted with fo much honour and effect in the fiege, and to transmit to Madras only a part

of the military prisoners.

The weather becoming moderate towards the close of the year, Sir Edward Hughes proceeded to carry into execution the defign which he had formed against the Dutch fettlement of Trincamale, in the island of Ceylon. island, celebrated from the earliest ages for its produce of the cinnamon tree, has been long shut up from the rest of the world, through the avidity of the Dutch to engrofs and retain the whole commerce and distribution of that precious spice entirely to themselves. For this purpose they seized and fortified

fortified the fea coasts, and having driven the King of Candy and his fubjects into the interior parts of the island, where he is allowed to retain fuch a degree of authority as is necessary to their own purposes, they are effectually secluded from all communication with the rest of mankind. The island, with respect to commercial fituation, as well as to products, is capable of being one of the most valuable in the world. Trincamale lies on the north-east quarter of the island; its harbour is reckoned the best and finest in India; and is composed of several bays, where the most numerous fleets might anchor in the greatest fecurity; but its being so closely that up from the winds, may, in that climate, be well supposed to render it unhealthy.

Sir Edward Hughes was supplied by the general on this expedition, with a detachment of about 500 volunteer sepoys, and an officer with 30 artillery-man, in order to garrison the place in case of success. The sleet being arrived in Trincamale Bay, the marines, with two fix-pounders, a detachment of artillery

Jan. 5th, and two companies of 1782. fepoys, to act as pioneers, were landed at about three miles distance from the fort. These were immediately followed by the battalion of feamen, confifting of the same number of men and officers as had ferved at the attack of Negapatam; the sepoys closed the debarkation, and the whole party was commanded by Capt. Gell of the Monarca, who was well affifted by Captain Montagu, of the Sea Horse, and Capt. Reynolds, of the Combuftion fire-ship. The seamen and marines, with the guns and pioneers, immediately formed, and pushed forward, though it was nearly dark, to Trincamale fort; and the company of marine grenadiers, with the guns, coming up to the gateway, without any attention to regular forms, most resolutely forced their way through, and in an instant became masters of the place. The garrison confisted only of three officers and forty foldiers; but the fort was of confequence to their further operations, as it commanded the only place where provisions and stores could be landed from the ships.

Intelligence was received from the prisoners, that the enemy's remaining force was collected in fort Oftenburgh, fituated on a high hill that commanded the harbour, and holding an open communication with their ships, which lay under its protection. The next day was employed in landing the necessary stores, provisions and baggage for the troops, at Trincamale fort. On the following day, the commanding officers, with Major Geils, the engineer, were employed in reconnoitering, and in discovering the best road for their approach to the heights; and every thing being fettled in that respect, the troops marched early on the morning of the 8th towards a high hill which commanded the Oftenburgh fort, and on the top of which, the enemy had a post defended by an officer's guard. The hill was attacked in the night, and the post, which was within 200 yards of the fort, carried and maintained by a detachment of feamen and marines.

94] ANNUAL REGISTER, 1782.

In these circumstances of advantage and superiority, the admiral, very early in the morning, transmitted, through Capt. Gell, a letter of fummons to Mr. Homæd, the governor, stating his total inability of making any effectual refistance, and urging him, in the strongest manner, to prevent, by a timely capitulation, the fatal confequences of carrying things to the utmost extremity, when the great superiority of discipline, as well as of force, together with the known and tried courage which he had to oppose, would render every exertion of defence ridiculous. The governor, however, after stating the trust reposed in him, and the ties of fidelity by which he was bound, declared his resolution of defending, at all events, the place to the last.

Sir Edward Hughes was still exceedingly unwilling to proceed to extremities. Independently of the effect produced by national attachment, and by a fense of the long friendship and alliance which had subsisted between both countries, he was besides personally and intimately acquainted with Mr. Homæd, and the principals of those along with him; for the goodness of the harbour having rendered Trincamale a place of common rendezvous, it is probable, that there was fcarcely an officer in the fleet, who had not, in the happier feafon of peace, experienced, in a greater or lets degree, some portion of their friendship, hospitality, or kindness. He accordingly wrote a fecond letter to the Duc's governor, exportalating with him in kinder and more familiar terms

on the danger he was running, and attributing his own folicitation to its true cause, to former attachment to himself and his family, as well as to his other acquaintances in the place. would feem, from the superscription of the governor's answer, that he was not a little affected by this recal of past kindness and friendship, for it runs in the following form -- " His Excellency the generous, brave, and illustrious Sir Edward Hughes," &c. He did not justify, nor avow a disposition to resistance in his answer, but placed it to the strictness of his orders, which were to defend the place to the last; so that he could not answer for his conduct to his superiors, if he were to give it up in any manner.

Major Geils, the engineer, who was undoubtedly appointed to be the bearer of the letters of fummons, for the benefit of the obfervations which he might make, informed the admiral, that he was strongly of opinion, that the lower fort, at least, might be carried by affault; fome of the higher works he had his doubts about; but of the former, he fpoke with confidence, and the others must fall of course. This affurance coming from an officer of fuch experience and distinguished ability, afforded the highest fatisfaction to Sir Edw. Hughes, who was well aware of the labour, difficulty, and delay, which the dragging of heavy cannon up the heights, and the formal operations of a fiege, would necessarily occasion.

The necessary dispositions being made, the storming party, consist-

confisting of 450 seamen and marines, under their proper officers, covered on each flank by a company of pioneers, with 20 seamen armed with cutlaffes, who carried the scaling ladders, and supported by three companies of feamen, as many marines, with two field pieces, who formed the referve, advanced, at day-break, on the eleventh of January, to the assault. A small advanced party, under a serjeant, who might be confidered as the forlorn hope, having made their way through the embrafures without difcovery, were instantly followed by the whole storming party, who foon driving the enemy from their works, possessed themselves of the fort, and procured the immediate furrender of the ships and vessels in the harbour.

The humanity of the victors equalled, and was still more praise-worthy, than even their gallantry. Notwithstanding the fall of a brave and favourite officer with 20 of their fellows, besides two officers, and double that number wounded; and notwithstanding the heat and fury of a storm, when discipline, respect and command are at an end, yet, under these circumstances, the seamen and marines disdained to

stain their swords in the blood of a slying or prostrate enemy.— Through this unexampled magnanimity and elemency, very few of the garrison lost their lives.

A numerous artillery, a confiderable number of small arms, a valuable stock of gun-powder, with a great quantity of shot, and of various ordnance and military stores, were found in the place. In the harbour, two ships, richly laden, with a number of smaller vessels, The number of Euwere taken. ropean military prisoners, amounted to fomething near four hundred: a few Malay officers were likewise taken, but we do not hear of any native troops they commanded. The admiral greatly regretted the loss of Mr. Long, a young gentleman of the greatest worth, and his own second lieutenant in the Superbe, who fell at the head of his company which he was gallantly leading to the assault. He says that too much praise could not be beflowed on the conduct of the naval and marine officers; but he particularly acknowledges the eminent fervices performed, and the great abilities displayed, both here and at Negapatam, by Major Geils, an engineer in the company's fervice.

C H A P.

Retrospective View of affairs in Europe to the close of the year 1781. Second attempt of France upon the island of Jersey. Baron de Rullecourt lands his troops in the night, and perprises \$1. Helier the capital. Comtels the lieutenant-governor to fign a capitulation. Summons Elizabeth Caffie. Is gallantly attacked in the town by Major Pierjon. French commander julis, and his remaining troops Jurrender prisoners of War. Major Presson unfortunately plain in the injunit of victory. Necessities of the inhabitants and garrifon of Giraltar. Extraordinary prices of provipous and necessaries. Admiral Darby fails with the grand fleet and a large convey to its relief. Spanish fleet retires into Cadiz at his approach. Gun-boats. Dreadful cannonade and bombardment of the town and garryon from the Spanish camp. Town destroyed, and many of the inhabitants perill. Convoy from St. Eustatius taken by M. de la Motte Piquet. Secret expedicion, under Commonore Johnstone, and Gen. Meadowes. Flext attacked in Port Praya Bay by M. de Suffrein. French repulied. M. de Suffrein's timely arrival at the Cape of Good Hope, frustrates the design upon that place. Dutch ships taken by Mr. Johnstone in Saldanha Bay. General Elliot's grand Jally from Gibraltar, by which he destroys the enemy's batteries and works. Invasion of the island of Minorca. Combined fleets return from that service, to cruize at the mouth of the Channel. Proposal for attacking Admiral Darby at Torbay, overraled in a council of war. Enemy, frustrated in all their views, retire to their respective ports. State of the war with Holland, in Europe. Admiral Hyde Parker fails with a small squadron for the protestion of the Balic trade. Upon his return, falls in with Admiral Zoutman, with a great Dutch convoy, and a superior sorce. Desperate engagement on the Dogger-Bank. Dutch Fleet and convoy return in great diforder to their own coasts. Hollanaia of 68 guns Junk. Confequences of the action. Royal vifit to Admiral Parker at the Nore. Admiral Kempenfeldt sails to intercept a great convoy fitted out at Brest, with troops, stores and supplies, for the French sleets and armies in the East and West Indies. Fails in with and takes several of the convoy; but discovers the enemy to be so greatly superior in force, that he could not prosecute the design farther.

FTER the wide range which me have taken, through the transactions, wars and intricate politics of the Lattern world; it is now time to return to our own quarter of the globe. We shall in the first place take a retrospective view of fuch matters of moment, as, from the nature of our arrangement, or the limits of our

work, were necessarily postponed in the last volume.

Our nearest and most active, as well as most formidable enemy, began the year 1781, by a fecond attempt upon the island of Jersey. The Baron de Rullecourt, who had been next in command to Count Naslau in the former attack upon that island, was the undertaker,

and

and probably the framer of this enterprize. The personal objects he had in view were fufficiently encouraging; while his military ardour, and natural ambition, were in themselves capable of urging him to the most hazardous attempts. The rank of general, the order of St. Louis, and the government of Jersey, were to be the splendid rewards of his fuccess. Such powerful stimulants, operating upon a temper naturally fiery and bold, were liable to generate precipita-The Chevalier de Luxemburgh, who was his partner in the defign, and intended to be his second in the execution, was, through fickness, or some other cause, detained from taking any part in the enterprize.

Rullecourt's force for this expedition, amounted to about 2000 men, and was composed of the volunteers of Luxemburgh, and of detachments from other neighbouring corps. Having collected a sufficient number of vessels for their conveyance, and some privateers for their protection, at Granville, on the coast of Normandy, his impatience was so great, that without regard to the bad weather which then prevailed, he embarked the troops and put to sea.

The immediate confequence of this precipitation, was the dispersion of his fleet of small vessels in a storm, by which ten of them, with about half the troops, were driven back to France, and never after joined him; whilst he, totally ignorant of their fate, with the remainder, put in for shelter to a cluster of small islands and rocks called Chausey, or Choze, which lie between the French coast and Jersey. He was still too eager in Vol. XXV.

the pursuit of the high rewards in view, to be deterred by this miffortune; and forgetting the rough enemy he had to encounter, entertained no other apprehension than that of being driven back to his own coast. He accordingly feized the first opening of fair weather for passing over to Jersey; and having made his way with difficulty, but with good information; through the rocks of La Roque-Platte, arrived in the night in Grouville Bay, where he landed his troops in the dark, at a place called the Violet Bank, about three miles from St. Helier, the capital of the island. The coast was, however, fo dangerous, that a privateer, with four other fmall vessels were lost among the rocks, and about 200 of his men perished, A fmall party of militia, who guarded a redoubt at this place, thought themselves so secure, and were fo shamefully remiss in their duty, as to be feized afleep by the enemy, who were thus for feveral hours upon the island without the smallest alarm being given.

M. de Rullecourt, leaving about 120 men in the redoubt at Grouville, marched with the rest of his troops to St. Helier, where, having feized Jan. 6th, the avenues of the town, furprized the guard in the dark, and possessed the market-place, noise, the without inhabitants were aftonished at break of day. on finding themselves in the hands of an enemy. Major Corbet, the deputy governor, with the magi-firacy and principal inhabitants, being brought prisoners to the court house, the French com-mander wrote terms of capitulation, which he proposed to the [G]former

former to fign, by which the island was to be furrendered to the arms of France, and the troops to lay down their arms, and be tranfmitted to England. To urge an acquiescence in this measure, on which all his hopes depended, he greatly magnified his force, pretending that about 5,000 of his troops were landed and dispersed in different parts of the island, fo that all refissance was at an end; and at the same time held out the barbarous threat, of instant destruction to the town and inhabitants in case of refusal. It was in vain remonstrated, that no act of the lieutenant-governor's could have the fmallest validity in his present situation, and that the officers and troops were too well informed of their duty, to pay any regard to his acts while a prisoner. Rullecourt was peremptory in his demand; and the lieutenant-governor, under the impressions of the moment, too inadvertently figned the capitulation.

The French commander then fammoned Elizabeth Castle, under the terms of the capitulation, which was preferred by the inflant recollection, and the unshaken fortitude, of the Captains Aylward and Mulcaster, who had formnately escaped thither on the first alarm; and being now in some degree prepared against a sudden attack, rejected the fummons with great spirit, and peremptorily refused to pay the smallest regard to the capitulation, or to any orders whatever, extorted from or issued by the lieutenant-governor, in his present circumstances. The French placing Major Corbet in their front, still continued to advance towards the gate, notwithstanding

express warning to the contrary; but they were fired at with such vigour from the castle, that they soon found it necessary to make the best of their way back for shelter to the town.

In the mean time, as the alarm extended, the nearest troops, and the militia of the island, advanced with the utmost expedition towards the point of danger, and began immediately to form on the heights near the town, under the conduct of Major Pierson, of the 95th regiment, who instantly secured a hill of great advantage, the possession of which had been overlooked by the enemy. The French commander then fent a message to Major Pierson, to require his compliance with the terms of capitulation; but was peremptorily answered by that spirited officer, that if he and his troops did not, within twenty minutes, lay down their arms, and furrender themselves prisoners of war, they were at the expiration of that time to be certain of his immediate attack.

Pierson was punctual to his word, and made a very masterly disposition of his forces. As he was informed that the enemy had applied the town artillery to their defence, the two columns destined to the principal attacks, were each preceded by a howitzer. affaults were made in all accessible parts with fuch impetuofity, that notwithstanding the advantage which the enemy derived from the possession of the streets and houses, they were every where driven rapidly in upon the center of their force in the market place. There the action was foon decided; for the French general being mortally wounded,

wounded, the next in command feeing the hopelessness of their fituation, requested the lieutenent governor to resume his authority, and to accept of their surrender as prifoners of war.

The fatisfaction arising from so fudden a deliverance, and so brave exertion, was unfortunately damped by the fall of the gallant Major Pierson, who was shot through the heart in the instant of vic-The extraordinary military abilities displayed by so young an officer, (he being under five-andtwenty years of age) in what was probably his first essay in arms, as they would have held out the highest expectations to his country if he had furvived, could not but render his death an object of much general regret. By the island of Jersey he was lamented as a hero, who had generously facrificed his life to their prefervation. death of his uncle, Sir Richard Pierson, (an ancient general officer of repute) which happened immediately after, and was attributed only to that cause, served to render the misfortune the more striking and melancholy.

The unfortunate Baron de Rullecourt, persevered in the same extravagance of conduct to the last, which had fo strongly marked his character. When the attack was commenced in the market-place, he feized the lieutenant-governor by the arm, and declaring that he should share his own face, led him out of the court-house under a shower of fire, where he was obliged to fland close by him, until he had himfelf dropped under the pressure of three or four mortal wounds, which deprived him of the power of speech, though not of life; so that he had the misfortune to live until he had seen the ruin and surrender of his

party.

Duirng the engagement at the town, the redoubt at Grouville, was gallantly retaken with fixed bayonets, and without firing a thot, by the grenadiers of the 83d regiment, who were on their way to join the main body. Thus the whole of the French party that landed, amounting to fomething about 800 men, were either killed or taken prisoners. The British troops were new raifed, and nothing could exceed the valour and good conduct displayed both by them and the militia through the whole affair. The island decreed monuments, with fuitable inscriptions, to the fallen enemy, as well as to their gallant deliverer; but the former no less intended to perpetuate the memory of the surprize, as a warning to future times against fimilar negligence.

Such was the issue of the second attempt made by France in this war

upon the island of Jersey.

The necessity of the times had occasioned much too long a delay in the relief or supply of the important fortress of Gibraltar. unconfumed part of the provision which had been conveyed to that place by Admiral Rodney's fleet in the beginning of the preceding year, had by this passed its proper time of keeping, and besides its being generally bad in quality, was fo much reduced in quantity, as to afford room for the most serious apprehensions. So early as the preceding month of October, their wary and provident governor, found it necessary to make a reduction of a quarter of a pound [G] 2

from each man's daily allowance of bread. Their quantity of meat was likewise reduced to a pound and a half in the week; and that became latterly fo bad as to be fcarcely eatable. The officers were even forbid the use of powder in their hair; a regulation of œconomy, which though not very effential in itself, could not but produce a good effect in reconciling the minds of the common men to the necessity of their situation. Of all possible tests of the discipline, attachment, and virtue of an army, a restriction of food has ever, with justice, been deemed the greatest. To the honour of the foldiery, in the present instance, they not only fubmitted to it without murmur, but with universal chearfulness and

good temper.

If fuch were the streights of the garrison, under the care and providence of government for their support, what will be thought of the diffresses of the unfortunate inhabitants, who were far too numerous for fo new and unexpected a fituation, and were much increafed by the families of the married officers? The former were chained to the place by their houses, property, and occupations, as well as by habit, connexion, and the not knowing whither to From the time of the remove. last supply from England, and even earlier, not a fingle vessel had arrived with provisions or necesfaries, either from the neighbouring Barbary shores, or from any of the more distant coasts of Africa; fo that, along with every other misfortune, they were at once cut off from that great and long established source of a cheap and plentiful market, and reduced

to depend entirely for relief, on the casual arrival of a few small Minorquin vessels, whose supply was insufficient, and prices immoderate.

As it has not been the fortune of the English for many years past to have acted much upon the defensive in sieges, an account of the market prices at Gibraltar, during that period, may probably be considered as a matter of some curiosity; but it is of much more moment, as a means of conveying information to the public, of the obligations they are under to those brave officers, who so long sustained the honour and interest of their country, by their glorious defence of Gibraltar.

Of the most common and indispensible necessaries of life, bad ship biscuit, full of worms, was sold at a shilling a pound; shour, in not much better condition, at the same price; old dried pease, at a third more; the worst salt, half dirt, the sweeping of ships' bottoms and storehouses, at eight-pence; old Irish salt butter, at half-a-crown; the worst sort of brown sugar, brought the same price; and English farthing candles were sold at

fix-pence a-piece.

But fresh provisions bore still more exorbitant prices. Even when the arrival of vessels from the Mediterranean opened a market, turkies fold at 31. 12s. a-piece; fucking pigs, at two guineas; ducks, at half a guinea; and small hens fold at nine shillings a-piece. A guinea was refused for a calf's pluck; and 11. 7 s. asked for an ox head. To heighten every diftrefs, the firing was fo nearly exhausted, as scarcely to afford a fufficiency for the most indispenfible fible culinary purposes; so that all the linen of the town and garrison was washed in cold water, and worn without ironing. This want was severely selt in the wet season; which, notwithstanding the general warmth of the climate, is exceedingly cold at Gibraltar.

From this state of things some idea may be formed of the distresses of the inhabitants; and it need be little wondered at, if such officers as were not high in command, and who had families to maintain, should have been exceedingly emparrassed and distressed in their circumstances. Such men have the fairest claim, not only upon the benevolence but the justice of

their country.

The interests and honour of Great Britain were deeply engaged in the timely relief of that important fortress. It was accordingly one of the first objects of government in the commencement of the year 1781, and the grand fleet, under the conduct of the admirals Darby, Digby, and Sir J. Lockhart Rofs, was fitted out early for this service. It was divided into three fquadrons under their respective commanders; but though France, as well as Spain, had loudly boailed, that they would not only dispute, but absolutely defeat the execution of this defign, yet, so widely extended was the war, and so numerous and detached were the fervices of the British navy, that only 28 fail of the line could be spared for so great an object.

France had, at the fame time, a fleet little inferior either in number or force, nearly ready for the fea at Brest, and Don Lewis de

Cordova, with about 30 Spanish ships of the line, was continually parading in and out of Cadiz, avowedly to fight the British fleet, and to intercept the fuccours. But to prevent all trouble in the business, his force was magnified far beyond its real flate; and it was farther pretended, that it was to be joined by strong reinforce-ments, as well from Toulon, as from the French ports in The matter of fact was, ocean. that France was too anxious and eager for the completion of her own great schemes in the West Indies and North America, and for retrieving her affairs in the Eastern world, to be diverted from their pursuit by attending to the views of Spain with respect to Gibraltar. She accordingly directed her whole attention and induftry, to the early fitting out, and the effectual equipment, of the fleet which was to fail from Brest, under the conduct of M. de Grasse, for the West Indies, and to the fquadron under M. Suffrein, which was to proceed in company, on its way to the East Indies. On the other hand, Spain, being disfident of her own strength to prevent the succour of Gibraltar, boaited loudly of her courage, and of the greatness of her force, hoping thereby to deter her enemy from the attempt.

The fleet failed from St. Helen's, with the great East 1781.

and West India convoys, before the middle of March; but met with some delay on the coast of Ireland, in waiting for the victuallers from Corke, which were to proceed with them to Gibraltar. It was probably owing to this de-

[G] 3 lay

lay, that they missed falling in with M. do Grasse's steet of 26 ships of the line, which failed from Brest on the 22d of March. This circumstance has occasioned a question, which has since been not a little agitated both in parliament and out, Whether the intercepting of De Grasse should not have been the first object of our sleet, instead of losing time in going to Ireland, and thereby

missing the opportunity.

On the affirmative fide of the question it was said, that the meafure would have been the means of totally overthrowing the great defigns formed by France both in the Eastern and the Western world. That our West India Islands would have been preserved, Lord Cornwallis's army faved from the fatal catastrophe at York Town, and our hopes and claims not only kept alive, but with great probability of fuccess in North America.—To this it was answered, that no certain knowledge could be obtained of the time that the Brest fleet would fail; that the measure of intercepting it would be a matter of great uncertainty, and the attempt attended with much delay; and that the confequent detention of the great outward-bound convoys, which were under the care of Admiral Darby, would have been highly destructive to our commerce, and ruinous to the merchants. That in case of fuccess, the loss of Gibraltar must be the certain consequence; as it could not be supposed, that after the rough encounter of two fleets fo nearly equal in force, Admiral Darby should be in condition to proceed to a fresh engagement with the Spanish sleet

at Cadiz, which was superior, at least in number, to either. And, that the relief of Gibraltar, as it was executed, was highly honourable to this country; and, besides the importance of the object in itself, was absolutely necessary for the support of our character and consequence with the other powers of Europe.

The Haft and

The East and West India convoys, amounting to about 300 fail, having proceeded on their respective voyages, the British sleet, with 97 transports, storeships, and victuallers, kept on its course for Gibraltar; and meeting no enemy, which they expected to have done, in the latitude of Cape St. Vincents, arrived off Cadiz before the middle of April, and looking into the harbour, faw the Spanish fleet lying peaceably at anchor, without the smallest appearance of any intention to disturb their purpose. It has since appeared, that Don Cordova with his fleet had kept the fea for about a month before, and had narrowly escaped an unwilling encounter with the English; but having the fortune to receive notice from a neutral ship of their near approach, all the yaunts which had been so long thrown out, of his determination and eagerness to fight them, were at once given up, and he made the best of his way into Cadiz. On the fame day, after exploring April 12th. the fituation of the Spanish fleet, Admiral Darby forwarded the convoy, with fome men of war and frigates to cover them, to Gibraltar, as well as 13 fail into the Mediterranean, on their way to Minorca, whilst he cruized with the main body of

the fleet off the Streight's mouth, in order to watch the motions of the enemy if they should venture

to put to fea.

But though Spain dared not to encounter the British fleet at fea, she had by this time prepared, a new, exceedingly troublefome, and not a little dangerous, enemy, within the Bay of Gibraltar itself, upon which flie depended, not only for defeating the defign of relief to that fortress, but for burning the convoy in the attempt. We have heretofore had occasion to take notice, of the troubie, which a few gun-boats they had constructed at Algeziras, (on the opposite fide of the bay to Gibraltar) had frequently given, by coming from their retreat, and firing upon the town and garrifon under the covert of the night. The long leifure of the flege, and the continual opportunity which it afforded, for invention, experiment, and practical improvement, had enabled the Spaniards to arrive at the highest perfection in the construction and management of this fort of vessels, and to increase their number so as to form a little fleet of gun-boats. Each of these was worked by 20 oars, and carried a long 26 pounder in its prow, which threw shot much farther than any thip guns could reach; and this kind of force was rendered still more formidable and dangerous, by the addition of feveral bomb-boats upon a fimilar construction. Besides, they had (to the great misfortune of the garrison, in having no similar, or other force to oppose them) been fc long in the uninterrupted pofsession of the bay, that they had by this time measured all the

diffances, and knew the effect of their fire in every direction.

During the continuance of the convoy in the bay, about 20 of thefe, under the conduct of a Don Moreno, who appeared in his barge giving orders, fallied, under the benefit of the early calm every morning from Algeziras, and with a fixed and steady aim, regularly cannonaded and bombarded our thips; but as foon as the wind, at its stated hour, began to fpring up, they immediately fled, and were purfued in vain. These attacks were so dangerous to the convoy, that Sir John Lockhart Rofs, with his whole divition of two-decked thips, was fent in to their protection; and every captain in his fquadron, as well as the other officers, was obliged to take a perfonal and active part in this contemptible war-Nothing was ever more vexatious to the feamen, or excited their indignation in a greater degree, than the fuccessful audacity of this petty enemy. their prows were only exposed to view, the object was to finall, that when they ventured within reach of our shot, it was still no more than a bare possibility to hit the mark; and the repeated exertions of some of the braveit officers and best seamen in the world to cut off their retreat was fruitless. The Spaniards however failed in their grand object; their continued efforts were only capable of producing trouble and vexation; and fo far from burning the convoy, no material damage was done to any part of the shipping.

Nothing could be more grievous to Spain than this relief, nor more mortifying to her pride, than the

[G] ±

diferace, after fo much boafting, which her navy now fuffered in the eyes of all Europe. She had fet her heart so entirely on the recovery of Gibraltar, that fearcely feemed to have another She lavished object in the war. her is notes with an unsparing hand is that purfuit. The labour of the pation was exhaufted in the the endous works which the raifed before the place, and they were now covered with the most tremendous artillery that has perhaps been known in any fiege. Indeed the whole naval and military force of the flate, and its re-Sources of every fort, feemed directed to that fingle object.

Allthese powers were now called into action, and the unfortunate town, with its miserable inhabitants, were the victims to her indignation. 170 pieces of cannon of the heaviest metal, and fourscore mortars, diagorged their tremendous torrents of fire all at once upon that narrow fpot. feemed as if not only the works, but the rock itself, must have been overwhelmed. 'I his dreadful cannonade and bombardment, was continued night and day, for a confiderable time, without intermission. It is said, and may well be supposed, that nothing could be more splendidly magnificent, or dreadfully fublime, than the view and the report of this tremendous feene, to those who obferved them from the neighbouring hills of Barbary and Spain during the night; especially in the beginning, when the cannonade of the enemy being returned, with still superior power, and greater fierceness by General Elliot, the whole rock feemed to vomit out

fire, and all diffinction of parts was lost in flame and fmoke.

It was computed by the artillery officers and engineers in the garrison, that during more than three weeks from the first attack, the enemy continued regularly to expend, at least, a thousand barrels of gunpowder, of an hundred pound weight each, and to fire from four to five thousand shot and theils, in every twenty-four hours upon the fortress. powers of supply, could long support this expenditure. After difcharging 75,000 shot, and 25,000 il ells, in this course of firing, it was then lowered to about 600 of both in the 24 hours; at which reduced scale it was continued for

ieveral weeks longer.

While the fleet continued in the Bay, Gen. Elliot retorted the enemy's attack with a prodigious shower of fire; but as it was a flanding maxim with that experienced commander never to wafte ammunition, and that the great, and evidently increasing difficulty of supply, rendered that caution ill more effentially ne-ceffary, he foon retrenched in that respect, and seemed to behold unconcerned the fury and violence of the enemy. The lofs of men on the fide of the garrison, during this unexampled cannonade and bombardment, was much lefs than could have been possibly imagined, even, without confidering the narrowness of the ground which they defended, its high fituation above the works, and the great proportion of their number which were continually exposed, in the duty and relief of their numerous guards. The whole lofs, from the 12th of April to the end or June, amounted only to one commissioned officer, and 52 private men killed, and to sever officers, and 253 others wounded. The damage to the works was too trisling to give any concern to the defenders; but the duty and fatigue were extreme, and they experienced in a high degree all the incommodities and rigours of a fiege, famine and pessioned.

The town and its inhabitants were the facrifice. It could not be large, but it was extremely populous. Though the number of houses was under five hundred, the inhabitants (at least in the beginning of the fiege) confiderably exceeded three thousand. Thefe were composed of various nations and religions, the English amounting only to 500, the Roman Catholics to near 2000, and the Jews were little short of 900. They had been formed, early in the reign of George the Second, into a corporation, with a mayor and aldermen (according to the English model) for their government. The wives and families of the officers and garrifon, it is probable, are not included in this estimate.

Upon these fell, almost, the whole weight of this cruel cannonade and bombardment. Such as were not buried in the ruins of their houses, or torn to pieces by the shells, in the general destruction of the first night, sled, many of them nearly naked, to the remote parts of the rock. But the shells from the batteries reached to places which had always been deemed secure; and where these failed, the gun-boats lurking in the dark, poured death and destruction during

the night to the most sequestered recesses. No scene could be more deplorable. It is faid, that mothers and children, clasped in each others arms, were, at the same instant, so completely blown to pieces by the bombs, that it feemed rather an annihilation, than a dispersion of their thattered fragments. The casemates, which could alone afford fecurity, were filled by the garrison; and happy did ladies of the greatest fensibility and most delicate habits deem it, to be admitted to a few hours repose in them, amidit all the noise of a crowded foldiery, and the groans of the wourded who were brought in from their works.

Time and fear, by degrees, led to the discovery of new places of fecurity; nor was the fire of the enemy at all times equally fatal in these within reach; but when a cessation of its violence ensued, the surviving inhabitants having lost their houses and property, could no longer live in the place. They accordingly, including the families of the officers, eagerly seized every opportunity of shipping that offered for an escape, whether to England or to the neighbouring countries.

It feemed as if the spoil of the Dutch island of St. Eustatius had been subject to some fatality, which was to deprive the nation as well as the capters of its benefit. A rich convoy, freighted with the most valuable commodities taken at that island, was on its way to England, at the time that Admiral Darby failed to the relief of Gibraltar. France, determining to prosit of the absence of the grand sleet, had equipped seven or eight ships of the line with the utmost expedition at Brest, which were

fent

fent out under the command of M. de la Motte Piquet, in order to intercept the Euffatius convoy, as well as a rich deet, which was then likewise on its way home from

lamaica.

M. Piquet fucceeded in the first part of his defign. Commodore Hotham had only four ships of war for the protection of the convoy from St. Euflatius. Four-May 2d. teen or fifteen of the merchant ships were taken; but the men of war, with the remainder of the convoy, were sheltered in some of the western ports of Ireland. Advice of this miladventure being received in the grand fleet on its way back from Gibraltar, Admiral Darby immediately dispatched a sufficient force to intercept M. Piquet's fquadron, on its return to France. The French commander prudently evaded this danger; for upon finding the number and richaefs of his prizes, he thought their prefervation of too much importance to be hazarded upon a very doubtful contingency; and giving up at once all views upon the Jamaica fleet, his immediate return to his own coasts, was barely fusficient to prevent his falling in with the British squadron. It was said, that the under-writers, or infurers in England, loft fix or feven hundred thousand pounds by this capture.

A fecret expedition, to a very remote part of the world, had been long talked of, and supposed to have been more than once in contemplation in England. The reports of great commotions in Peru, and some other of the Spanish dominions in America, made it generally supposed that the South

Seas would have been the destina. tion of such an armament. It seems probable, that nothing less than the numberless exigencies, and the various untoward events of the war. could have delayed the profecution of a defign, which feemed pregnant with the most fatal consequences to the enemy.

At this time, when our enemies were multiplied, the defign feemed not only to be revived, but to be feriously adopted. A fmall fquadron (whose objects and deffination were kept fecret) under the conduct of Commodore Johnstone, with a body of land forces commanded by General Meadows, (who had been so highly distinguished in the action with D'Eftaing at St. Lucia) accompanied the grand fleet on its departure from England for the relief of Gibraltar. The fquadron confifted of a feventy-four, a fixtyfour, and three fifty - gun ships, besides several frigates, a bombveffel, fireflip, and fome floops of The land force was compoied of three new regiments of a thousand men each. Several outward bound East-India-men and store or ordnance vessels, went out with this convoy, and the whole fleet, including transports armed ships, amounted to more than forty fail. The object of this armament was undoubtedly changed in confequence of the Dutch war, which occasioned an attempt upon the Cape of Good Hope to be substituted, in place of the large field of enterprize which lay open in South-America. The war was too vast, to afford a possibility of feeding it in all its parts.

This

This change of object did not escape the penetration of France and Holland. The latter, trembling at the danger to which all her possessions in the East would be exposed by the loss of that most important and valuable fettlement, and being totally incapable her-felf of providing for its defence, had no other resource in this extreme urgency, than by an application to her new friend and ally for affiftance to avert an evil, which was capable in its confequences of fhaking the Republic to its foundations. France was fearcely less interested in the prefervation of the Cape of Good Hope, or less concerned in the consequences of its loss, than Holland; but she was besides desirous, and it was no less necessary, that, under the circumstances of so new and unexpected a connection, she should, by a timely display of her power and gratitude, justify to them and to the world, the extraordinary part which she had led the States-General to take in the contest. A squadron of five ships of the line, and fome frigates, with a body of land forces, were accordingly deflined to this fervice, under the conduct of M. de Suffrein, who failed from Breft, in company with the grand fleet bound to the West-Indies under the Count de Grasse, in the latter end of March. The naval part of this armament, was ultimately designed to reinforce M. de Orves, and to oppose the English fleet under Sir Edward Hughes, in the East-Indies; but Suffrein's immediate and particular instructions went, to purfue and counteract Johnstone's armament, upon every occasion, and in every possible

manner; fiil, however, keeping a centiant eye to his principal object, the effectual protection of the Cape of Good Hope, which was to take place of all other confiderations whatever.

As there was no great difference in point of time, between the departure of the two armaments from England and France, their encounter was, even in the usual course of things, not improbable; but as the court of Versailles was accurately informed of Johnstone's force, and of all the circumstances attending his convey, it may be reasonably supposed, that they were not totally ignorant of his course, any more than of his designation.

That commodore had, with the fleet under his care, put into the Cape de Verd Islands, belonging to Portugal, for water and fresh provisions; and as they had no idea of any enemy or danger being at hand, they feem to have lain without much care or order, as it fuited the convenience of the refpective captains, in an open harbour or bay called Port Praya. fituated in the most considerable of those islands, called St. Jago, and belonging to the principal town. A great number of the crews were absent from the ships, being engaged in the various purposes of watering, fishing, embarking live cattle, and all the other occupations, necessary to the preparation or supply of so many vessels, for so long a voyage. A number of men and officers were likewife on shore, partaking of the health and recreations of the ifland.

In this unprepared and difordered flate, the Isis man of war of

50 guns, which happened to be one of the outermost ships, perbetween nine ceived, April 16, and ten in the morn-1781. ing, a strange squadron, coming close round under a narrow flip of land, the extreme point of which forms the eastern angle at the entrance of the harbour; and although the land of the intervening neck was high, fo much was feen of their fignals and manner of working, that they were cafily perceived to be an enemy, and judged to be French. alarm being given, fignals for unmooring, for preparing for action, and for recalling the people on shore, were speedily thrown ont; for though the port was neutral, it was well known that the French, where advantage offered, were feldom ferupulous in the obfervation of it; and besides, as the Portuguese fort and garrison were utterly incapable of maintaining the rights of fovereignty, it might be supposed that they would be less attended to.

No fleet could be taken at a greater disadvantage; and among their various embarrasiments it was not the least, that the decks of most of the ships were encumbered with water casks and live stock, while the fuddenness of the attack afforded no time for their being cleared. M. de Suffrein, having feparated from the convoy, and hauling close round the eastern point of land, with his five fail of the line, was very foon in the centre of the British flect, the French ships firing on both sides as they paffed. The Hannibal, of 74 guns, M. de Tremignon, led the way with great intrepidity; and when he got as near our ships

(the Hero, of 74 guns, Captain Hawker, the Monmouth of 64, Captain Alms, and the Jupiter of 50, Captain Parfley) as he could fetch, dropped his anchors with a noble air of resolution, which gained the applause even of his enemies. The Heros, of the fame force, M. de Suffrein's own ship, took the next place; and the Artchen, of 64 guns, anchored aftern of the Heros. The Vengeur and Sphynx, of 64 guns each, ranged up and down, as they could, through the crowd of ships, and fired, on either fide, at every ship as they passed. The Romney, of 50 guns, the commodore's own thip, being too far advanced towards the bottom of the bay, and too much interrupted by the veffels that lay between, to take an effective part in the action, Mr. Johnstone accordingly quitted her, and went on board the Hero.

The engagement lasted from first to last about an hour and half ; and the ships being very close, and the English string only from one fide, the guns were incessantly played, and the cannonade was extremely heavy. In some time after the action began, feveral of the India ships, having recovered from their first surprize, fired with good effect on the enemy. the other hand, the two French feventy-fours carried much heavier metal than the English, their lowest tiers of 36 pounders throwing fhot equal to 42 pounds of our weight; and the Ifis, as well as the Romney, was by fituation cut off from any great share in the action; although the former fuffered feverely from the fire of the enemy as they passed.

In about an hour, the fituation

of the three French ships at anchor became too intolerable to be endured, and M. de Cardaillac, a knight of Malta, and captain of the Artesien, being killed, that ship cut her cable, and endeavoured to make the best of her way M. de Suffrein, thus deferted by his fecond a-stern, found the danger fo great, and the adventure so hopeless, that he followed the example. The fortunate Hannibal was now left alone as a mark to be fired at, by every ship in the fleet whose guns could be brought to bear upon the object; while she was herself so dismantled and ruined, that her returns were flow and ineffective. Overwhelmed by fuch a weight and quantity of fire, fhe exhibited an extraordinary spectacle of difirefs and gallantry; the only comfort left in so terrible a situation, being the impossibility of its long continuance. She had already loft her fore-mast and bowsprit, and her cable being either cut or thot away, in the effort of hoifting more fail to get out of the fire, both her main and mizen matts went overboard, so that she remained a mere hulk upon the water. It is not eafy to be understood by landmen, how the could escape in such Her colours were a condition. either struck, or shot away; the former being afferted on one fide, and denied on the other. She, however, joined the other ships at the mouth of the bay; and was towed off, and affifted in erecting jury masts by them. As their attack was fudden, their retreat was fo precipitate, that the Sphynx, of 64 guns, narrowly cicaped he-

ing lost upon a reef of rocks,

which runs out from the western point of the harbour.

Commodore Johnstone pursued the enemy, and endeavoured to renew the engagement. But various obstacles, among which were the damage fuffained by the Ifis, the nature of the winds and currents, and the late time of day at which there feemed any possibility of its being done, all concurred in defeating this purpose. The Hinchingbrooke East-Indiaman, which, after a gallant resistance, and being much torn, had been carried out by the enemy, was re-taken; and, as if it had been decreed, that they should bear away no trophy from this action, the Infernal fire-flip, which (by unluckily lying too near the mouth of the bay) had likewife been carried off, was recovered by her own crew.

Such was the iffue of this strangely conducted, irregular, and confused action, in which M. de Suffrein made no great display of those eminent qualities, which have fince, through the feries of hardfought and desperate conslicts he fustained against Sir Edward Hughes in India, rendered his name so highly and so deservedly renowned. The French feem to have built too much upon the advantages of their furprize; and to have acted as if they had been ruthing on to a certain prey, rather than to the rough encounter of an enemy, who was in all circumstances and fituations truly formidable. A few of our land others and fildiers, who were passingers on board the India ships and transporte, were killed or wounded; but the lofs of men upon the whole, confidering the closured of the action, the imcoth-

smoothness of the water, with the number and crowded fituation of the thipping, was very finall; and fuch as it was, was fo divided, that almost every vessel of the fleet and convoy funtained fome part. The merchant shipping received, however, confiderable damage in their hulls and rigging. The Fortitude Indiaman was distinguished by the extraordinary bravery of her defence; and when the was at length, after much fire, boarded, Captain Jenkinson, who, with his company of the 98th regiment were passengers, most gallantly cleared the deck and rigging of the enemy; and the victors had afterwards the satisfaction of taking up and faving fome of those whom they had compelled to jump overboard.

The fleet failed from May 2d. Port Praya in the beginning of May, and towards the middle of June the commodore dispatched Captain Pigot, with three or four of the best sailing frigates and cutters, to proceed towards the fouthern extremity of Africa, in order, if possible, to obtain some intelligence of the thate of the enemy in that quarter; with instructions to rejoin the fleet, at a given point of latitude and longitude. Captain Pigot had the fortune to fall in with and take a large Dutch East-India ship of 1200 tons burthen, which had newly failed from Saldanha Bay near the Cape; she was laden with stores and provisions, besides 40,000 l. in bullion, for the island of Ceylon; but the intelligence she afforded was of still greater value than the cargo.

From this it appeared, that M.

de Suffrein, with five fail of the line, most of his transports, and a confiderable body of troops, had arrived at False Bay, on the 21st of June; and that feveral Dutch East-India ships (homeward bound, but afraid to proceed) were then at anchor in Saldanha Bay, which lies about fourteen leagues to the northward of the Cape town and fort. To explain the cause of their lying at fo great a distance from their principal fettlement and defence, it may be necessary to obferve, that the Table Bay, upon which these lie, is not only much fmaller, and less convenient than that of Saldanha, but is exceedingly dangerous to shipping during the winds that blow in our fummer months. These bad pro-perties attending Table Bay, was the motive of M. de Suffrein's anchoring in False Bay, which lies at the back of that very long and narrow neck of land, running far out into the fea, the mountain at whose head forms what is properly called the Cape. The bottom of this bay lies within about three leagues by land of the Cape town (which is fituated a little higher up on the opplite coast than the junction of the continent with the peninfula) although the passage by fea round the neck is long, difficult, and dangerous.

The timely arrival of the French fquadron and troops was what preferved the Cape and its dependent fettlements to Holland; for neither their troops nor their fortifications were at all capable of refifting the land and the naval force, under General Meadows and Commodore Johnstone. The frigates having rejoined the seet, with

their

HISTORY OF EUROPE. [111

their prize and intelligence, pretty early in July, and the commanders finding that their views on the Cape were entirely frustrated, Mr. Johnstone determined to profit of what was yet within reach, by an attempt upon the Dutch ships in the bay of Saldanha.

This scheme was ably and successfully conducted. The perfect knowledge which our feamen had of that bay, as well as of the whole coalt, afforded them the greatest advantages in the execution. The difficulty lay in conducting the furprize in fuch a manner, as should prevent the enemy from having time to destroy the shipping. To facilitate this purpole, the commodore took the charge of pilotage upon himfelf; and running in under the shore in the night, and judging his distance only by the lead, he was enabled by traverses to turn into Saldanha Bay betimes in the morning; and was so alert and rapid in his movements, that though the enemy were apprehensive of their danger, and had kept their fore-top-fails bent in preparation, yet they had fcarcely time, from the discovery to the coming up of the British ships, to loose them, to cut their cables, and to run the vessels on shore. The boats being instantly manned, the seamen with their usual alacrity boarded the ships, which were already fet on fire by the enemy, and had the fortune to extinguish the flames, and to fave four large ships, from 1000 to 1100 tons each; but the fire raged with fuch fury in the Middleburgh, of equal burthen, that all their efforts to fave her were ineffectual, and the blew up in less than ten minutes after the

boats had abandoned her; but by a most extraordinary exertion of labour and courage, they towed her out stern foremost, and thereby saved the other prizes from destruction. It was a matter of some curiosity, to see General Meadows personally affishing in this dangerous fervice, which was so entirely foreign to his professional line of action.

A remarkable inflance here occurred, of the miferies to which royalty, as well as the rest of mankind, is at times liable, and of the ruin which generally attends all intimate connections between weak states and the more powerful; which becomes still more inevitable, and the calamity infinitely more grievous, if the stronger is, under any pretence, admitted to gain a hold and sooting in the country of the weaker.

A boat was feen rowing from the shore to the commodore's ship, filled with people in the eastern garb, who, while yet at a distance, made the most humiliating signs of supplication. These were no less than the two kings of Ternate and Tidore (two of the valuable spice islands) with the princes of their respective families, who had been long expiating, in the extreme of misery, those blessings of nature, which had rendered their countries the objects of foreign ambition and avarice. These unhappy princes having, upon fome jealoufy or fuspicion, been deposed by the Dutch, had, according to the harth and cruel maxims which have ever difgraced their government in the East, for several years been confined within the limits of a parched and defolate island near this place, which serves

as a common prifon and receptacle for malefactors and criminals of all degrees and countries, from their various settlements in India; where thefe royal personages, with their families, were, without regard to fex or quality, obliged to herd upon equal terms with the most profligate and abandoned of the human race. It feems they had been lately removed upon fome occasion from the island to the continent; and feizing the opportunity which the prefent moment of terror and confusion afforded to escape from bondage, they flew for refuge and protection to the English fquadron.

The prizes being got affoat, and their principal fails, which had been carefully hidden, fortunately recovered, they required but little delay in their equipment, which had been already completed for their homeward voyage. The commodore accordingly (as the great object of his expedition had failed) with the Romney, and most of the frigates, returned with his valuable prizes to Europe. rest of the fleet, with General Meadows and the troops, proceeded on their deftined course to the East-Indies. In that marked course of ill fortune, which has almost constantly attended us during this war, one of the prizes was loft near the mouth of the Channel, and a number of brave feamen perished in her. This expedition afforded much matter of discussion at home.

The fury of the Spaniards feemed exhausted before Gibraltar, and towards the close of the fummer, an extraordinary degree of quiet prevailed on both sides. The works were found by experience

fuperior to all their efforts, the garrifon held their fire in contempt, and the town being deftroyed, and the inhabitants gone, no gratification remained to revenge. The gun boats still continued to be troublesome at night; but the governor having received fome cannon of a very long bore, which were fent for the purpofe from England, and they, with a number of mortars, being fixed on the nearest batteries, their shot, as well as the shells, reached to the very centre of the Spanish camp; and it being foon observed, that these were only fired in return for the insolence of the boats, the Spanish commanders found it convenient to restrain the one, in order to obviate the inifchief and confusion occasioned by the other; so that by a fort of tacit convention, hostilities, for some time, ceased on both fides.

But during this calm, General Ellict, whose established character of prudence, caution, and the greatest tenderness for the lives of his men, was capable of lulling the most watchful enemy into security, was meditating a heavy blow upon the Spanish camp. It was not appreliended, that a commander who was fo great an economist even of his ammunition, as well as of every thing else, need be sufpected of great, daring, and hazardous enterprize. The event however shewed, that the most prudent caution, and the boldest enterprize, when under the direction of experience and judgment, were perfectly confistent.

General Elliot feeing that the enemy's slupendous works were now, after immense labour and expence, arrived at their highest

flare

Rate of perfection, confidered this as the proper feafon of attempting at once to frustrate all their views, by attacking, storming, and destroying them. The design was glorious, and the object great.

The time being fixed, and all the arrangements made, a strong detachment iffued from the garrifon, upon the fetting of the moon, at three o'clock in the morning of the 27th of November, 1781. The troops were divided in three columns, the centre being led by the Hanoverian Lieutenant-Colonel Dackenhausen; the column on the right, by Lieutenant-Colonel Hugo, of the same corps; and that on the left, by Lieutenant-Colonel Trig, of the 12th regiment. The referve was led by Major Maxwell, of the 73d; a party of feamen, in two divifions, by the Lieutenants Campbell and Muckle, of the Brilliant and Porcupine royal frigates; and the whole body was commanded by Brigadier-General Ross. Each column was formed in the following order; an advanced corps; a body of pioneers; a party of artillery men, carrying combustibles; a fustaining corps; and a referve in the rear. The pioneers of the left column were feamen.

Nothing ever exceeded the filence and order of the march, the vigour and spirit of the attack, or the nice and exact combination of all the parts. The whole exterior front of the enemy's works was at the same instant every where attacked, and the ardour of the troops was in every place irresistible. The Spaniards, astonished, and dismayed by the sury of the affailants, gave way on every side; and were soon obliged entirely, Vol. XXV.

and with the utmost precipitation, to abandon those prodigious works, which had cost so much labour, time and expence in the conflruction, and in whose expected effect, the hopes of all Spain were The most wonderful centered. exertions were made by the pioneers and artillery men, who fpread their fire with fuch aftonishing rapidity, that in half an hour, two mortar batteries of ten thirteen inch morturs, and three batteries of heavy cannon, with all the lines of approach, communication, and traverse, were in flames, and every thing subject to the action of fire, was finally reduced to ashes. The mortars and cannon were spiked, and their beds, carriages, and platforms deftroyed. The magazines blew up one after another in the course of the conflagration.

The fugitives from the works feemed to communicate their own confusion to the whole Spanish They continued tame spectators of the havock that was made, without an effort to fave or to avenge their works, unless, that an ill directed and ineffective fire of round and grape fhot, from different directions towards the fcene of destruction, might be considered as either. The whole fervice was performed, and the detachment returned to the garrison, before day-break; it not exceeding two hours from the time of their de-Their lofs was too inparture. confiderable to be mentioned. The destruction which they made among the enemy in the works, could not, from the darknet, and that rapidity of action which afforded no time for observation, be estimated; but it was evidently

[H] $\mathfrak{co.}$

confiderable. A wounded Spanish officer of quality, and a few private men, were brought in prifoners. The farmer died in Gibraltar, and the kindnefs and tenderness with which he was treated, were acknowledged by the Spanish communitiers.

It was no fmall confolation, in the midd of the most left g and unfortunate war in which lengtand had ever been involved, that overforne as she was by the mulatable of her enemies on all side, she coffered no diminution of her aucient military and har all renows, which was upheld in its full lustre, by the greatest exercions of valour in every quarter of the globe.

We have formerly had occasion to observe, that the war with Great-Britain was by no means a popular act in Spain, and was generally confidered rather as a court measure, originating under the influence of French counfels, than as the refult of a policy founded on the real interests of that country. The little fuccess, and the immense expence with which it had hitherto been attended, could not but increase the public disfatisfaction; and the court itself feemed at length to conceive a jealoufy, that France had been more attentive to other objects during the war, than to those which were fo intercsiing and fo dear to itself. It was necessary for the court of Vertailles to remove these impressions; and as neither Jamuica or Gibraltar could afford any fuch opportunity for the prefeat, the fequeftered island of Minorca, which, from the nature and particular circumnances of the war, was almost cut cil from the polibility of faccour,

could not escape observation, as the object immediately offering for the purpose. Excepting the two former places, nothing could be more flattering to the court, or gratifying to the people of Spain, that the recovery of that island. Nor was it less flattering to the pride and ambition of France, that, at the very time when her fleet was deciding the American war, and de ling out the relative defliny of Great-Bettain and her cotonies, the faculd establish fo helding a memorial of her naval The war fup.ricrity in Europe. with Holland had fill farther divilled the naval force of England, which, called upon to fuch remote and various fervices, was neceffarily unequal to great and fuccessful exertion, in any given point of action.

The Duke de Crillon, a French commander of repute, had been taken into the Spanish service, and appointed to conduct their forces in the enterprize against Minorca. And in conformity with this defign, M. de Guichen failed from Breit, near the end of June, with a powerful squadron of eighteen capital ships (of which four were of the greatest dimensions, and carried 110 guns each) in order to join the Spanish fleet, and support the invasion. The not endeavouring to intercept this fleet, or at least to prevent a junction so full of danger, and which could not then but be resistless, were matters which occasioned great complaints against the admiralty in England, and afforded a new handle for endeavours to bring on a parliamentary enquiry into the conduct of the first lord of that department; but which proved as ineffectual

HISTORY OF EUROPE. [115

fectual in the attempt, as the many others of the fame nature, which had been fo repeatedly foiled fince the commencement of the war. The friends of that nobleman vindicated his conduct, by afferting the impracticability of blocking up a fleet in Breft, and by reprefenting the danger to which our homeward-bound convoys would have been exposed, during the absence of the western or channel fleet on so fruitless a design.

The combined fleets failed from Cadiz with about 10,000 Spanish troops, before the end of July. The French had been reinforced by the Majestueux, of 110 guns, and some other ships of the line; and were commanded, besides the Count de Guichen, by Monfrs, de Beausset, and De la Motte Picquet. The Spanish fleet amounted to about 30 fail of the line, and was commanded by Don Lewis of Cordova, and Don M. de Gaston. The army effected its landing at Minorca, without opposition, on the 20th of August; and was not long after joined by fix regiments from Toulon, under the conduct of Major General Count de Falkenhayn, who was deemed one of the best officers in the French ser-The garrison was weak, confisting only of two English and two Hanoverian regiments; and what was little to be expected in healthy climate, and dry rocky country, was exceedingly fickly, and particularly afflicted with the scurvy, during the siege. It was, however, commanded by two distinguished officers. Lieutenant General Murray, formerly governor of Quebec, now held the same rank in Minorca; and was

feconded by Major-General Sir William Draper, who commanded at the conquest of Manilla in the last war.

The combined fleets were contented with feeing the troops fafe into the Mediterranean; and then trusting them to a small convoy, returned with diligence, to the amount, as it was faid, of 49 ships of the line, to cruize at the mouth of the English channel. Though this was an effectual means of preventing any fuccour from being fent to Minorca, the enemy had other objects in view. They hoped to intercept fome of our great homeward-bound convoys, which were then every day expected; and a very large outward - bound flect, which was on the point of its departure from Corke, in Ireland, held out a fimilar temptation. Nor can it be supposed, that the general alarm and confufion, which it was expected their appearance in the Channel, at fo critical a feafon, would occasion in thefe kingdoms, was by any means overlooked in the defign.

Our intelligence was fo exceedingly bad, that no information of this naval manœuvre was obtained, nor was the defign even fufpected, until the combined fleets were arrived in the chops of the Channel, and had formed a line from Ushant to the islands of Scilly, in order to bar its entrance; fo that Admiral Darby, who was then at fea with only 21 ships of the line, was on the point of falling in with them, when the accidental meeting of a neutral veffel, afforded him notice of their In thefe fituation. Aug. 24th. unexpected circum. stances he returned to Torbay,

 $[H] 2 \qquad \text{where}$

where he moored his fquadron across the entrance, while he waited for inflructions from the Admiralty to regulate his farther conduct. He was foon reinforced by feveral thips from different ports, fo that his squadron was increased to 30 sail of the line, with which he was ordered to proceed to fea with the utmost expedition, in order to the prefervation of the expected West-India convoy; an object for which he was to encounter all hazards whatever; but still with such a view to the vast superiority of the enemy, as to avoid, so much as it could confiftently with that be done, the being brought to a close and deci-The delay of five engagement. waiting for reinforcement and instructions, in the first instance, and contrary winds afterwards, detained the flect in Torbay, notwithstanding the urgency of the occasion, until the 14th of September.

In the mean time, a great alarm was fpread in Ireland as well as England, with respect to this unexpected movement, and to the apprehended defigns of the enemy. The great outward bound fleet for America and the West-Indies, was not only supposed to be in imminent danger in the open harbour of Corke, but that city itself, which is totally unfortified, and which was at that time flored with immense quantities of provision, was confidered as not being less fo. The regular forces in that kingdom were accordingly ordered to the fouthward, for the protection of that city and coast; and the patriotric volunteers, who had gained fo much honour in supporting and reclaiming the liberties of

their country, now shewed no less patriotism in their immediate offer to government, of instantly taking the field, and of marching whereever their services should be necessary to its defence.

As foon as the commanders of the combined fleets had received intelligence of Admiral Darby's position in Torbay, and of the inferiority of his force in point of number, a council of war was held, on the question of attacking him while in that fituation. feems they were under orders to fight, if the occasion offered; but the inflructions were thought not to reach to the present case, which would have been an attack on the fquadron, in a English (though that was open) upon their own coafts. And, under this change of circumstance, which their inflructions had not provided for, it was supposed that they were thereby left at large, to the free exercise of their own judgment and discretion.

The Count de Guichen is faid to have contended strongly for an immediate attack. He argued, that the English fleet would now be caught, as it were, in a net; that fuch an opportunity of complete advantage over that nation might never again offer; that if, by good fortune, and the valour of the combined nations, along with the powerful aid of fire-ships (in a fituation where they were capable of producing the greatest possible effect) that fleet was happily deflroyed, which they had every reason to expect, the power of Great-Britain on the feas would be at an end, and the war decided at a blow. Don Vincent Doz, the third of the Spanish commanders.

HISTORY OF EUROPE.

manders, strongly supported this opinion; he afferted that the deflroying of Darby's fleet was fo very practicable, that it would be highly difficult to justify or excuse their not making the attempt; and to give the greater effect to his fentiments, he boldly offered to command the van squadron, and to lead on the attack in his own

fhip.

On the other hand, M. de Beausset, a French officer of repute, held a totally contrary opinion. He faid, that all the advantage which the allies derived from their superiority of force and number, would be given up and entirely loft, by an attack upon Admiral Darby's fleet in its prefent fituation; that the whole of the combined fleets could not bear down upon him in a line of battle a-breast; that of course, they must form the line of battle a-head, and go down upon the enemy fingly, by which they would run the greatest risque of being shattered and torn to pieces before they could get into their stations, by the fixed aim, and the angular fire in every direction, of fuch a number of great and well-provided thips, drawn up to the greatest advantage, and lying moored and steady in the water. He therefore concluded, that as the attempt on Torbay would, in his opinion, be a measure unwarrantable in the defign, and exceedingly hazardous in the execution, fo, he likewife thought, that the allied fleets should direct their whole attention to that great and attainable object, of intercepting the English home-ward - bound West - India sleets. This was a measure which, as they were now mailers of the fea,

could scarcely fail of success; and it would prove a blow fo fatal to England, as she could not recover

during the war.

Don Louis de Cordova, with all the Spanish flag-officers, except Doz, coincided entirely in opinion with M. de Beausset; so that M. de Guichen being either brought over to, or over-ruled by the majority, the idea of attacking Admiral Darby in Torbay was entirely renounced. It feems very probable, that a recollection of the repeated defeat which D'Estaing met with in his attack upon Admiral Barrington's fmall fquadron at St. Lucia, had no fmall influence upon the determination of this council of war.

It has fince appeared that the combined fleets were in fuch exceeding bad condition, that had there been any force then at home in England, which could with any degree of propriety in respect to number, at all face them, their ruin must have been inevitable. They were originally (the Spaniards in particular) very badly manned; and besides a great mortality, which had prevailed during the whole voyage and cruize, and a prodigious number of fick in both fleets, a confiderable majority of the ships were in such a state, that they scarcely seemed capable of living at fea in any thing of a strong gale. But though the French sleet was in fufficiently bad condition, Spanish was, in all respects, much worfe. The fermer discovered upon this occasion, that their new vast ships of 110 guns cach, (a construction which they had run much into of late) were exceedingly unmanageable, dangerous, [H] 3 and,

and, in their prefent state, could be of very little use at sea.

The hard weather which came on in the beginning of September, accordingly frustrated all views; and abandoning all hope of intercepting the British convoys, they were glad to get into port as foon as possible. M. de Guichen returned to Brest with his division, on the 11th of September, and was near losing one of his greatest ships in the entrance Whether it proof the harbour. ceeded from the particular etiquette of the French with respect to that great naval arienal, or from whatever other cause, the Spaniards were obliged to proceed directly home, though feveral of their thips feemed fearcely capable of reaching their own coasts. the condition and circumstances of the combined fleets were little capable of fatisfying the people of France, with respect to the conduct of those commanders, who had opposed and over-ruled the opinion of Don Vincent Doz in the council of war. The coffeehouse politicians of Paris taught the people of that capital to believe, that the English fleet could not escape being either destroyed or taken in Torbay; and flattering an illusion being eagerly fwallowed, they could now hardly brook the disappointment, and were particularly violent in their centure and invective. The Count de Guichen did not escape his full share of these, being particularly blamed for fuffering any discussion to arise, upon the question of obedience to his general inflructions for fighting; and the prejudice was fo firong, that the rank and popularity of

the Count d'Artois, (the king's brother) who led him arm in arm into his own box at the playhouse, was scarcely sufficient to save him from insult.

The arrival of the West-India trade was fo much later than had been expected, that Admiral Darby kept the sea until the month of November, and it was probably his attention to that important object, which prevented his falling in with a rich Spanish flota, that in the intermediate time returned from America, and brought a large supply of treasure to Spain, which was then not a little wanted. It feemed almost remarkable, that neither the combined fleets nor the British, had taken a fingle prize during the long term they had been respectively at sea.

The war had hitherto languished, in Europe as well as every where clie, on the fide of Holland. Their fleets were not only in very bad condition, but they aftonished the world by the discovery of a weakness little thought of, confifting in a deficiency of seamen, and a total want of naval flores; in both of which they had ever been held to abound beyond any other nation, England only excepted. The vicinity and fituation of their ports, along with that state of preparation which they were still capable of making, proved, however, a great check upon the naval operations Great-Britain through the course of the year, and prevented fome of those vigorous exertions which might have been otherwise made against her former enemies. It was necessary to keep a squadron in the Downs, as well to watch their motions in general, as to

prevent

prevent their intercourse with the fouthern parts of Europe. And it was still more essentially necesfary to have such a force in the North Seas, as would be capable of ruining their immense commerce on that fide, and of effectually protecting our own; including the farther great object, of preventing the possibility of restoring their marine, by cutting off their only fources of every

kind of naval fupply.

This very important fervice was committed to the conduct of Admiral Hyde Parker, a veteran commander of established repute, who failed from Portfinouth, in the beginning of June, with four flips of the line, and one of fifty guns, for the North Sea. In the mean time, Holland strained every nerve for the equipment of fach a force, as might, at least, be able to convoy their outward bound trade to the Baltic, and to protect it on its return, if not to intercept ours, and to become entirely masters of the North Seas. It was not, however, until some days after the middle of July, that Admiral Zoutman, and Commodore Kindsbergen, failed from the Tenel, with a great convoy under their protection. Their force confifted of eight thips of the line, from 54 to 74 guns, of ten frigates, and five iloops. Several of the frigates were very large, and carried an unufual weight of metal. The Argo, carried 44 guns, and five more carried 36 guns each. They were joined by the Charles-Town, an American frigate of an extraordinary construction, she being as long and large as a fhip of the line, with feveral hundred men on board, and thirty-fix 42

pounders upon one decli; a weight of metal, in fuch a compals and fituation, which, it was thought, few fingle flips could long withfland. She took this opportunity of failing with the Datch deet, in order to go north about, on her

way home.

Admiral Parter was on his return with a great convoy from Elfineur. He had been joined by feveral frigates fince he left Portfmouth, and by the Dolphin of 44 guns; and, in this more critical and dangerous conjuncture, was very timely and forcunately reinforced by the junction of Commodore Keith Stuart, in the Berwick of 74 guns, who had been for fome time on the coast of Scotland. The fquadron now confilted of fix faips of the line, of which the Princels Amelia carried 80 gn s, the Fortitude (which was the Admiral's own thip) and the Berwick, 74 each, the Bienfaifant 64, the old Buffalo 65, and the Preston 50 guns; but the superiority of the enemy, obliged the admiral to take the Dolphin, of 44 guns, into his line. Of this force, the two faventy-fours were by much he best ships. The Princels Amelia, though a threedecker, was to very old and weak, that her metal had been reduced to the rate of a 50 gun ship, her lower-deck guns being only 24 pounders; and the Buffano, befides being old, was of fo bad a construction, that she had some years before beën difeharged from the fervice, and employed as a ftore-thip in America.

The hadile flects came in fight of each other on the Dogger Bank, very early in the morning of the 5th of August, 1781. Though

[H] 4

one of the Dutch line-of-battle fhips had, through fome accident, returned to port, yet, as the Argo of 44 guns was substituted in her place, their line still consisted of eight two-decked ships. Admiral Parker perceiving the number and thrength of the enemy's frigates, detached the convoy, with orders to keep their wind, fending his own frigates along with them for their protection; and as foon as this disposition was made, he threw out a general fignal to the fquadron to chace the enemy. The Dutch were by no means difposed to shun the conflict; they likewise detached their convoy to fome distance, when they drew up with great coolness in order of battle, and waited the shock with the utmost composure. This action, though upon a fmall scale, was conducted and fought in fuch a manner, that it recals fresh to the mind those dreadful sea-sights between England and Holland which the last century witnessed; and which feem to indicate, that those nations contend with the greatest animosity, whose interest it is not to contend at all.

None of that manœuvring was now practifed on either fide, through which the French in the present war, have eluded the complete decition of fo many naval The parties were equally actions. determined to fight it out to the last; a gloomy filence, expressive of the most fixed determination, prevailed; and not a fingle gun was fired, until the hoflile fleets were within little more than piftol Thot distance. Admiral Parker, in the Fortitude, then ranging a-breast of Mr. Zoutman's ship, the Admiral Ruyter, the action

was commenced with the utmost fury and violence on both sides. The cannonade continued without intermission for three hours and forty minutes. Some of our ships fired 2,500 shot each. The essect of the ancient naval cmulation was eminently displayed in the obstinacy of the battle.

The Dutch flips were much fuperior in weight of metal to the English of the same rates. This difference, however, was but little confidered; but their heavy frigates, as well as the Charles-Town, having intermixed with their line, took a very effective part in the action, and did much mischief by raking our ships, and firing at their rigging, while closely and desperately engaged with a fuperior enemy. Such returns were, however, at length made, that they paid dearly for their temerity; and the Charles-Town, among others, fuffered fo feverely, that it was long fupposed she had gone down, either in, or foon after the action.

At the expiration of the term we have flated, the fhips were fo ruined on both fides, that they lay like logs upon the water, and were incapable of answering fo much command, as would keep them within the distance necessary for mutual annoyance; while the combatants were unwillingly feparated by the mere action of the water. The English ships were chiefly wounded in their masts and rigging, which rendered them incapable of purfuing and profiting of their victory; but as they fired entirely at the hulls of the enemy, and by their superior alertness and expedition discharged a much greater quantity of shot, the greater

HISTORY OF EUROPE.

were fo woefully torn, that it was with the utmost difficulty they were kept above water, until they reached, feparately, and in the utmost distress, (notwithstanding the aid of their numerous frigates) fuch of their own nearest ports as they could first fetch. But the Hollandia, of 68 guns, and one of their best ships, went down in the night of the engagement; and the danger was fo fudden and extreme, that the crew were reduced to the melancholy necessity of abandoning their wounded in quitting the ship. Her topmasts, though she was funk in 22 fathoms, being still above water, and her pendant flying, she was discovered in the morning by one of the English frigates, who struck, and brought off her coloursas a trophy.

The action was very bloody. Even on the fide of the English, who were by much the least fufferers, in that respect, 104 men were killed, and 339 wounded, in the seven ships. Of these, 20 were killed, and 67 wounded, in the For-titude only. The lofs in the Berwick, Princess Amelia, and Buffalo, was not much lefs. death of the gallant Capt. Macartney (who left a widow and large family unprovided for) was much regretted. His fon, a boy of feven years old, was by his fide when he was killed; and his fortitude, as well upon that occasion, as through the whole action, aftonished the boldest feamen in the ship. Capt. Græme, who fought the Dolphin with the greatest valour, lost an arm, and his thip's company fuffered confiderably. Mr. Harrington, one of the admiral's lieutenants, an officer of forty years fervice, and of the most

greater part of the Dutch ships distinguished merit, was mortally wounded. Though this gentleman possessed an affluent fortune, and that his promotion had by no means corresponded with his merit, yet he nobly difdained to withdraw his professional abilities from the service and defence of his country, in this trying feafon. Other brave officers fell in this action; and the proportion of the wounded to the number engaged was very confi-Admiral Parker's letter. derable. giving an account of the action, was diffinguished by its conciseness and bluntness, by its modesty with respect to his own side, and by the full honour which it pays to the valour of the enemy.

> On the other hand, the Dutch gazettes tarnished the honour which their countrymen had defervedly obtained in battle, by the exaggerated accounts which they contained, and the gasconades with which they were stuffed. The truth, however, as is usually the case, in despite of authorized mirrepresentation, by degrees appeared. The confequences sufficiently told their defeat. Exclusive of the total loss of the Hollandia, two, at least, of their capital ships were so totally ruined in the engagement, as to be declared incapable of farther fer-Their lofs of men, which vice. was represented as being more triffing, than appeared confiftent with their own accounts of the nature of the action, and of the damage done to their ships, appears, by authenticated private intelligence, to have exceeded 1100 men, in killed, wounded, and funk. Their convoy, as well as the ships of war, returned home, fcattered, and in great diforder and confusion; every idea of profecuting the voyage to

the Baltic, was of necessity given up; all means of procuring naval stores cut off; and that immense carrying trade between the northern and southern nations of Europe, which, along with their fisheries, had been the great source of the Dutch power and wealth, was, along with them, for this year, annihilated.

As this was the first naval action of any value or consequence, in which Holland had been engaged for much the greater part of a century, the States General were beyond measure liberal in the praise, rewards and honours, which they bestowed upon their officers. miral Zoutman, and Commodore Kindibergen, were immediately promoted; and most, if not all of the first and second captains, as well as feveral of the lieutenants. were either rifen in rank and command, or flattered with fom: pecu-Har mark of diffraction. The gellant Count Bentinck, who bravely fought the Batavia, and who, though mortally wounded, and informed that his ship was in danger of finking, would not litten to a proposal for quitting his station, was foothed in his last moments by every mark of honour, and testimony of regard, which his country and his prince could bellow. In the few days that he lived after being put a-ihore, he was created Rear Admiral of Holland and West Friesland, and appointed Adjutant General to the Prince Stadtholder; and his funeral was not more honourable to the brave dead, than to the grateful Living.

In England, though the conduct and valour displayed in this action met with great and general approbation, yet the imputed neglect in government or the admiralty, of furnishing Admiral Parker with a force equal to the accomplishment of the great objects which he had in view, excited no lefs general diffatisfaction. This was not likely to be lessened by the prevalent opinion, that his want of support proceeded merely from the supposed circumstance of his not being a favourite; a fituation indeed, however useful or flattering, to which his disposition and habits were by no means likely to lead him. It was faid, in fupport of the popular opinion, that the admiralty could not be ignorant of the superior force which had been fo long fitting out in the Texel, and whose object was every where known; that there were at the very time, as many ships lying idle in port, or waiting for orders in the Downs, as would have enabled Admiral Parker to bring the whole Dutch fleet and convoy into England. That fo fignal and fatal a ftroke, must have been decisive of the war with Holland; and by compelling that republic to a separate peace, would have freed us from one of our numerous foes. But, that in confequence of the rumous conduct which had been observed, instead of the possibility of taking the Dutch convoy, the prefervation of our own, upon waich fo much depended, was left to reft folely upon the fuperiority of our feamen, and the extraordinary bravery and conduct of our officers. The admiral's subsequent conduct, as well as some intimation given in his letter to the admiralty, ferved flrongly to confirm the public opinion; and fumciently indicated, that he was no less diffatisfied distantisfied at the want of support, than they were at its not being given.

Those who imagine themselves capable of diving into the mysteries of courts, might possibly attribute, in fome degree, to this public diffatisfaction and complaint, the extraordinary favour shown to the admiral, by a royal vifit, upon his arrival, with his shattered squadron, at the Nore. It is not, however, to be doubted, that the royal visit was intended to be distinguished by some fignal and permanent marks of favour and honour to the admiral. But the rough and veteran commander, who was equally incapable of difguife and flattery, as he scorned to conceal his distatisfaction, had too much pride and sturdiness in his nature to be foothed out of it; and it was foon understood, that no intended promotion or honour would be accepted. The king went on board the Fortitude, where he had a levee of all the officers of the fquadron, who were received with the most gracious attention; and the admiral had the honour of dining with his Majesty and the Prince of Wales, on board the royal yacht.

It was faid upon that occasion, (the first lord of the admiralty, and a number of naval officers, being present) that the admiral took an opportunity of hinting, both his distatisfaction and intention of retiring by the following words to his sovereign,—" That he wished him "younger efficers, and better ships!—" be was grown too eld for the fer- wice;" and that though he received the most flattering compliments, and the greatest acknowledgements of his distinguished fer- vices to his country, these were not

capable of producing any change in his determination. It was related likewise as an anecdote at the time, that young Macartney being prefented on board the Fortitude, and a royal intention of providing for him, for the take of his brave father, being declared, the admiral apologized for informing his majeity, that he had already adopted him as his fon.

The admiral refigned his command immediately after; and it was, notwithstanding, probably intended as a mark of favour and regard to him, that his son, Sir Hyde Parker, who, for his gallantry in North America and the West Indies, had some time before the honour of being knighted, was now appointed to the command of a squadron of frigates, which were employed in blocking up the Dutch ports during the remainder of the season.

The utmost expedition had been used at Brest, after the return of M. de Guichen from his cruize, in refitting and preparing the French fleet for fea, notwithitanding the lateness of the season. The objects in view were of sufficient consequence to excite this diligence. was necessary to reinforce the Count de Graffe with both troops and flips of war in the West Indies. and it was determined to fend a confiderable reinforcement of both to support M. de Orves, and De Suffrein, in the East. But ships and troops were not fufficient for either fervice. It was well foreseen that M. de Grasse, after the hard service on the coasts of North America in the preceding campaign, must stand in need of an immense supply of naval and military flores of every fort; both for the land and the fea fervice,

fervice, and that his station in the West India islands would extend the want to, almost, every article of provision and necessary of life. The demand for naval and military flores in the East Indies was no less urgent. A numerous convoy of transports, storeships, and provifion veffels, were accordingly prepared and provided with the fame diligence as the fleet. And as it was likewife necessary to guard against the designs of the English, the preparation was extended to fuch a number of men of war, as was thought equal to the protection of the whole, until they had got out of reach. This part of the fervice, as well as the conduct of the whole while he continued in company, was committed to the Count de Guichen; and the command of the fquadron and fleet destined for the West Indies, to M. de Vaudrevil. The former was accompanied by Monf. de la Motte Picquet, and De Beausset; and when he separated from the convoy, was to join the Spanish fleet at Cadiz, in order to defeat any attempt that might be made from England, for the relief of the island of Minorca. Vaudrevil carried out a confiderable body of land forces, with a full confidence on the fide both of France and Spain, of now carrying into complete execution, the fo often laid project of reducing the island of Jamaica.

Intelligence of this preparation, and in a great measure of its object, being received in England, Admiral Kempenfeldt was dispatched in the beginning of December, with 12 sail of the line, one 50 gun ship, and sour frigates, in order to intercept the French squadron and convoy. The event of the war, at

least in the West Indies, and fcarcely lefs fo in the East, seemed in a great meafure to hang upon the complete execution of this de-The blow, in its full weight, must have produced very considerable and unexpected effects. But, through bad intelligence, or, as some perhaps may rather think, through a certain marked fatality, which feems to have generally attended our operations through the course of the present war, the French fleet was fo much superior to what had been conceived, as well as to Admiral Kempenfeldt's force, that the danger of being intercepted (if fuch had been the object of the enemy) lay entirely on his fide. The Count de Guichen had no less than 19 fail of heavy line of battle ships under his command, besides two more armed *en flute*, as the French call it, that is, their lower deck guns placed in the hold, in order to make room for the conveyance of a moderate cargo; and of the former, five were of that valt fize which we have already deferibed, four carrying 110, and the fifth 112 guns,

The English admiral, totally ignorant of the superiority of the enemy, and expecting that he had only an equal force, at Dec. 12th, the most, to encounter, 1781. had the fortune to fall in with them in a hard gale of wind, when both the fleet and convoy were a good deal dispersed, and the latter had fallen confiderably a-stern. Mr. Kempenfeldt, with that professional judgment and dexterity by which he was eminently diffinguished, determined to profit of the prefent fituation, by endeavouring to cut off the convoy, in the first instance, and to fight the enemy

after.

HISTORY OF EUROPE. [125

In the movement for this purpose, the Triumphant of 84 guns, which had flayed back to collect the convoy, in her way now to rejoin the fleet, came acrofs the Edgar of 74 guns, which led the English van; a sharp though short fire enfued, in which the former fustained fome confiderable apparent The defign in part took lofs. place; and if there had I een a fufficient number of frigates, (which are particularly necessary in all attacks upon convoys) the effect would have been still much more confiderable. About twenty of the prizes arrived fafe in England, two or three were faid to be funk, and feveral that thruck escaped in the night. A great dispersion of the convoy necessarily took place, and a number of the ships were reafonably supposed to have lost their voyage.

The French commanders were, in the mean time, collecting their fleet, and forming the line of battle. Admiral Kempenfeldt likewise, having collected his ships in the evening, and being still ignorant of their force, got upon the fame tack with the enemy, under a full determination of engaging them in the morning. At day-light, perceiving them to leeward, he immediately formed the line; but discovering their force upon a nearer approach, he found the necessity of changing his resolution; and the adverse fleets, after a full view of each other, feemed to part with equal confent on both

Near 1100 land forces, and between 6 and 700 feamen, were taken in the prizes. They were

fides.

mossly freighted on the French king's account, and were chiefly laden with the following articles, which will fufficiently shew of what importance their capture was in the prefent feafon, viz. brafs and iron ordnance; gunpowder; finall arms; flints; bomb fhells; cannon balls, and grenades, in a prodigious quantity; iron bars and sheet lead; travelling magazines and forges; all kinds of ordnance stores; tents, camp equipage, and utenfils of all forts; foldiers cloathing, and accoutrements; with woollen and linen goods for the land and fea fervice in great quantities; bricks; great cables; fail-cloth and cordage, with every supply for shipping, to a great amount; wine, oil, brandy, rum, flour, biscuit, and salted provisions, all in great, and the most necessary in prodigious quantities.

The value or importance of the capture ferved, however, only to excite the diffatisfaction of the public. It was faid, that, when fortune had thrown fo fair an opportunity in our way, of retrieving our affairs, and recovering our former rank and lituation, the golden moment was loft, through the negligence of those who had not supplied Admiral Kempenfeldt with fuch a force, as would have enabled him to take or deftroy the whole French fleet and convoy. A great clamour was accordingly raifed. which undoubtedly was not lessened, by the attempts which were made in both houses of parliament, to render this business a ground of complaint and charge against the first lord of the admiralty.

C H A P. VI.

State of parties at the meeting of parliament. Debates on the speech from the throne. Address moved in both Houses, and amendments proposed and rejected. Debate resumed on the report of the address from the committee. Motion for granting a supply to his majesty opposed by Mr. T. Pitt, and after a warm debate carried, on a division, in the affirmative. Mr. Burke's motion for a committee of the whole House to inquire into the confiscation and sale of the effects and merchandize taken on the island of St. Eustatius, rejected. Notion by Mr. Hussey for adding 10,000 seamen to the number moved for by government for the service of the year 1782. Sir James Lowther's motion for putting an end to the American war rejected, after a long debate, by a majority of only 41. Debate on the commy estimates. Conversation relative to the exchange of prisoners with America. Debate on the motion for adjournment. Petition from Mr. Laurens presented by Mr. Burke. Recess.

URING the recess of parliament no material change had taken place, either in the general temper of the nation, or in the political flate of the contending parties. A total indifference to the desperate situation of affairs, or at least to the means of retrieving them, feems to have marked, at this time, the character of the people, beyond any former period of our history. The unsuccessful operations of the campaign, a circumstance which in former times had shaken the stability of the most popular administrations, scarcely raised a murmur against the prefent. The retreat of the channel fleet recurred with the regularity of an annual review, and was regarded with as much unconcern. Our commerce was intercepted, the coasts of Great Britain and Ireland threatened and infulted; the ancient boast and security of this kingdom, the dominion of the sea, was seen in danger of being transferred to our enemies, without its exciting any other feeling than what the imminence of danger at the time produced. Our very successes had unfortunately been confined against a power whose interests had hitherto been confidered as in some meafure involving our own; and the inconfiderate joy, with which thefe triumphs over an ancient ally and a weak and unprovided enemy were received by the people, afforded matter of no small concern to these who revered the old and approved maxims of English policy.

In fuch a state of things, it cannot be wondered, that the enormous weight of influence which ministers derived from the ordinary and established power of the crown, the patronage of immense military establishments, and the annual expenditure of upwards of 20 millions of the public money*, should overpower the unaided and dispirited

^{*} The supplies voted for the year 1781 amounted to 25,380,324l. 103. $8\frac{1}{2}d$.

efforts of those, who wished to rouze the nation to a sense of its real situation. The only hope, therefore, that remained of rescuing it from the effects of a salfe system of politics, under which its rain seemed no longer problematical, was from the vigour and indepen-

dence of parliament.

It was evident from the numbers, which divided on the fide of opposition during the first session of the new parliament, that, notwithstanding the advantage the court party had derived from a fudden dissolution, the strength of the minister had declined in the House of Commons. The calamitous event of the campaign in Virginia, the news of which arrived in England but a few days before their fecond meeting, was likely to increase this defection, and threatened him with confequences not less fatal to his power at home, than it was decisive on the object in dispute abroad.

The contest in America had hitherto operated as an insuperable obstacle to the free exercise of parliamentary deliberation and control. The patient acquiescence of so large a majority in both houses, under the repeated difgraces, in which the pursuance of that object had involved the country, could be attributed to no other cause, than the necessity they found themselves under of supporting the minister at all events, or of abandoning a favourite war, connected in some measure with their political prejudices, and in which their passions had been artfully and fuccetsfully inflamed. But the event, alluded to above, having cut up from the root all hope of fubjugating the

revolted colonies in the minds even of the most fanguine adherers to that system, it was not to be expected they would so readily overlook the errors, or con ive at the misconduct of those, under whose mismanagement they had reased nothing but mortification and differences.

grace.

What effect an event of fuch magnitude would produce in the councils of government was looked for with an uncommon degree of anxious expectation. The ground. on which ministers stood, was known to be extremely flippery and dangerous. The profecution of the American war was generally understood to be the tenure, by which they held their offices from the court. To abanden the war, was at once inevitably to forfeit the support of that secret influence, of which they had too long experienced the effects to be ignorant of its power. To venture to look that power in the face, to bring a full exposure of the state of affairs before the public, and to fland on their own merits, was an experiment, which more fortunate ministers might have thought too hazardous to be lightly rifficed.

It was this view of affairs which appears to have directed administration in the first step that was necessary to be taken at the opening of the session, on the arth day of November, 1781. The speech from the threne continued to hold the same determined language, with which both houses had been last dismissed. The continuance of the war was assisted to that restless ambition, which hast excited our entire to commence it; and his inspessy was

made to declare, that he should not answer the trust committed to the fovereign of a free people, nor make a fuitable return to his fubjects for their constant, zealous, and affectionate attachment to his person, family, and government, if he confented to facrifice either to his own defire of peace, or to their temporary ease and relief, those essential rights and permanent interests, upon the maintenance and prefervation of which the future strength and security of the country must ever principally depend. The losses in America were neither dissembled nor palliated, but stated as the ground for calling for the firm concurrence and support of parliament, and a more vigorous, animated, and united exertion of the faculties and refources of the nation. This, with the mention of the fafe and prosperous arrival of our numerous commercial fleets, the favourable appearance of affairs in the East Indies, and a strong recommendation to parliament to refume their enquiries into the flate and condition of our dominions in that country, formed the fubiliance of the king's speech.

In the House of Commons, the motion for an address, framed in the usual form, produced on the part of opposition a warm and animated debate, which continued till two in the morning. The alarming declaration, contained in the speech from the throne, of the intentions of government to continue the profecution of the American war to the last extremity; the infidious attempt to pledge the house, by the proposed address, to the unqualified support of a determination fo frantic and

desperate, in the spite of seven years dear-bought experience, and in the teeth of national bankruptcy and ruin; the audacity of holding fuch language at the very inflant, when the calamitous effects of the misconduct of ministers called for penitence and humiliation, were topics urged by Mr. Fox with great eloquence and ability, and followed by a fevere reprehension of the principles of the war, of the delutions by which parliament had been led on year after year to fupport it, and of the gross and criminal mifmanagement that appeared in every branch of adminiffration, and particularly in the marine department. To the negligence and incapacity of the mimiter at the head of that board, he ascribed the loss of the army under Lord Cornwallis. minister, he faid, had declared in another affembly, that a first lord of the admiralty who should fail in having a fleet equal to the combined naval force of the house of Eourbon, would be unworthy of his fituation, and deferve to be dragged to condign punishment. The case, he contended, was now before them. The inferiority of the British fleet, in every quarter of the globe, he endeavoured to prove from the events of the campaign, and he conjured the house not to delay that justice, which the noble earl had called down on his guilt. After appealing to the cool and dispassionate fense of the house upon the utter impracticability of reducing the colonies by force, of which they had now had full experience, and calling particularly on the member, who at that time held the officer of paymafter-general, and who

HISTORY OF EUROPE. [129

who had declared on a former occasion, " that if the capture of Charles-Town produced no decisive consequences, be should grow aveary of the American war," to join him in obliging administration to put an end to it, he concluded a speech of great length with moving, that after the first paragraph of the address, the following words should be substituted in the place of the fubsequent clauses: " And we will, " without delay, apply ourselves " with united hearts to propose " and adjust such councils, as may " in this crisis, excite the efforts, " point the arms, and by a total " change of fystem, command the " confidence of all his majesty's " subjects."

impression, which The fpeech feemed to make on the house, and the filence of those who had formerly been the most forward, on all occasions, to juftify the principles and the policy of the American war, called up the minister early in the debate. He defended, with his usual dexterity and address, the grounds of the contest between Great-Britain and her colonies. It did not, he faid, originate, as had been falfely represented, in any design of ministers to aggrandize the power, or increase the influence of the crown: had that been their object, they had thrown away and rejected the opportunity. It was not the prerogative of the crown, but the claims of parliament, that America had refifted. It was, therefore, to preferve the supremacy of parliament, and to maintain its just rights and privileges, that they had engaged in the war, and forborne the offer of advancing one branch of the legi-Vol. XXV.

flature to the dominion of America, independent of the other two. With respect to the continuance of the war, the question, he asserted, was in no shape before the house; and that therefore no gentleman voting for the address, would, as the necessary result of such a proceeding, pledge himself to assert to any specific mode of operations, or to the support of war at all against the colonists.

Though this explication of the address was also supported by the third secretary of state, and by the right honourable member, who had been so particularly alluded to in the debate, it was still contended on the part of opposition, that whatever sense his majesty's servants might, for the present, find it convenient to put upon it, sind it convenient to put upon it, the language was too insidious and delusive for the house to adopt; and on a division there appeared for the amendment 129, against it 218.

The attack which had been made, during the course of the debate, on the conduct of the first lord of the admiralty, drew from one of the members of that board a reply in his defence. He afferted, that the crippled state in which the noble lord had found the navy, and which had been owing to the parfimonious œco-nomy of Lord Hawke's adminifiration, was the cause of its prefent weakness, if such a fact really existed. This, however, he pofitively denied, and endeavoured to prove, that it was even stronger than in its boafted flate in 1759. He afferted, that the first fleet fent out by Lord Sandwich, was fuperior to that of the enemy; [I]

that the nature of the war had rendered it impracticable to meet them in all places with that advantage; but, that even if it should be found we were unable to match them in force and numbers, the fault did not lie with the boa d of admiralty; it being a truth demonstrable from our naval history, that whenever the French directed their whole attention to the improvement and increase of their marine, they had always rendered it superior to that of Great-Britain. These positions were feverally denied by Admiral Keppel; but being irrelevant to the question before the house, they underwent no further discussion for the present.

An amendment to the fame effect with that moved in the House of Commons, and expressed in nearly the fame words, was moved in the upper house, and rejected by a majority of 75, including 10 proxies, 10 31. The debate also turned upon the fame general topics; but it was remarked, that the language of the two fecretaries of state in that assembly, was much more explicit and unequivocal with respect to the intentions of government to profecute the war in America, than what the ministers in the other house had ventured to maintain. This circumflance occasioned a second debate in the House of Commons, upon receiving the report of the address, on the following day, in which the question of the pledge, supposed to be conveyed by the address to support that war, underwent another very able discussion.

On the fide of opposition it was argued, that the present alarming criss of assairs called, in a parti-

cular manner, for the most explicit and intelligible language from parliament. That from the open and unqualified declaration of his majesty's servants in another place, the intentions of government could no longer remain a matter of doubt; and therefore, if the address was not meant to convey to the king an engagement on their part to support him in those designs, that it was hypocritical and delufive. That from the dark and ambiguous expressions of the minister in that house, in the former debate, and his total filence in the prefent, fome doubts might be entertained respecting his real private sentiments; but that whatever those might be, the meaning of the addrefs could only be collected from the terms in which it was expressed: that thefe were intelligible to the lowest capacity; and that it would be highly improper that the honour and reputation of the house should be committed in the intrigues of a divided cabinet.

The defence of the address, in its original form, was undertaken by Mr. Dundass, the Lord Advocate for Scotland. He began his argument with observing, that the news of a late great and national misfortune had not arrived unexpected by him, but that the impression it had left on his mind, had induced him to examine, with the most ferupulous jealoufy, the fpeech from the throne, fearing to find in it fome expression, an approbation of which might in any fort pledge him to a particular line of conduct in that house: that, on the most minute examination, he had not found any fuch expressions in it; that its language was firm and mauly, calculated to shew the

world

HISTORY OF EUROPE. [131

world that no difaster, however great, could depress the spirit, or fink the courage of the nation; but that still its language was general; that consequently the addrefs, which, as usual, was couched in the fame terms, must be geheral, and could not be understood as preclusive of any future vote or parliamentary proceeding whatever. This, he faid, was the fense in which those who proposed and those who voted for the address, understood it; and he ridiculed the attempt that was made by others, who pretended that they only could conftrue it, to force upon them a meaning which they utterly difavowed. Much of the intricacy, which had involved the present question, he conceived had arisen from the loose and indefinite use of the term, " Ame-" rican war." If by an American war, was meant a continental war in America, conducted on the fame military principles, on which it had hitherto been carried on, it was with great reason the house had been cautioned against pledging themselves to the support of it. But he could discover no such defign, either in the speech, or in the address. But if the retention and defence of fuch places as were still left in our possession in America, was to be called an American war, and under that denomination to be reprobated, he did not think the house yet ripe for such a deci-Thefe, however, were matters totally unconnected with the question before the house; whenever they came to be debated, which in a short time would undoubtedly be the case, every member, as well those who voted for as against the address, would be at full liberty to deliver their fentiments upon them.

With respect to the diversity of opinions which, it had been infinuated, prevailed amongit the members of the cabinet upon the fubject of the future conduct of the war, he should declare his opinion with freedom and boldnefs; that the minister who, to preferve his fituation, could fubmit to concur in measures which he difapproved, was highly criminal. It would not be admitted as any exculpation of fuch a minister, to fay, he had been overruled in the cabinet. " That the " king could do no wrong," was a facred maxim of the constitution, necessary for the personal safety of the sovereign, and for the free deliberation of parliament; but this maxim implied, that whatever was wrong in the administration of the state, was to be ascribed to his ministers; and that they, jointly and feverally, were responsible to the public.

In answer to the arguments that had been drawn from a supposed ambiguity in the language of ministers, it might be asked, he said, what purpose could such a delufion, if any delution is intended, The cheat would be anfwer? foon detected; it would fearcely last a week: a question would necessarily foon come before paritament, which would oblige miniflers to speak out fully and explicitly. Being called on to explain to what he alluded, he faid, that when ministers called on the house to vote a substitution of forces to replace the 7000 men loft with Lord Cornwallis, they mail meet the queition fully.

In answer to these arguments

it was again urged, that the intention, with which an individual member of parliament might propose to confine his own assent to a general proposition, could be no measure for the proceedings of the house. That the sense and meaning of a written production, arose from the words and phrases in which it was expressed. though the words, " American " war," were studiously avoided, yet, from the language of former speeches and addresses, and from the whole tenor of the present, it was obviously the profecution of that war his majesty called on them to support. That the learned lord had deferted the proper ground of debate, when he faid fo much about the mode of conducting the war. The object and end of it were the material confideration to be spoken to. The argument drawn from the shortness of the time, which the delufion prefumed could possibly operate, drew on the minister some severe and pointed animadversions from Mr. Burke. Such delusions, he faid, the minister dealt in; they were the daily traffic of his invention. A week! he had often held out a delution for half that time; for a day only; nay, for a fingle hour. He had practifed delutions upon the house, which died away before the debate was ended, only to ferve the immediate purpofe for which they had been contrived,

Amongst the miscellaneous matter which was introduced into this debate, the same gentleman called the attention of the house to what he conceived to be the most shocking and disgraceful proceeding, that had ever stained the British

name; this was the roth article of the capitulation of Lord Cornwallis, by which the royalists who had joined the British army, were left to the mercy of the civil power in America. By fire and fword, he faid, we had forced the Americans to join the king's troops; and those very men, who had been fighting with us to quell rebellion, were to fuffer an ignominious death for having themselves been rebels. He painted, in the ilrongest colours, the headlands of Chefapeak exhibiting the parched quarters of the king's friends; and asked, if it was not a glorious fight to meet the eyes of a prince of the royal blood on his first arrival in America! After a most eloquent and successful application to the feelings of the house on this subject, he begged leave to mention another circumflance that had occurred in the fame business, in which a serious mind, without being extremely addicted to superstition, might think it was the special hand of Providence. The Colonel Laurens who had drawn up the articles of capitulation, and in whose custody Lord Cornwallis was at that time a prisoner in America, was the fon of Mr. Laurens, late prefident of congress, who had been committed a close prisoner to the Tower of London, of which Lord Cornwallis was himself the governor, and had thus become a prifoner to the fon of his own prifoner.

Amongst the speeches most diflinguished in this debate, that of Mr. Wm. Pitt was received with singular marks of applause from every side of the house. At length

the

the question being put, there appeared for bringing up the report

131, against it 54.

Though the Nov. 30th. derate and accommodating language used by the minister in the debate on the address, and the more open declarations which had come from a quarter, known to be intimately connected with government, had tome effect in removing the apprehensions of the house with regard to the farther profecution of the American war; yet they were thought by no means fo fatisfactory by the members in opposition, as to relax their endeavours obtain some more explicit avowal of his intentions. cordingly, on the ufual motion for the house to go into a committee of fupply, Mr. Thomas Pitt rofe to object to the fpeaker's leaving the chair. It was not his wish, he faid, to deprive the crown of the means of carrying on its government in the present alarming juncture of affairs; he did not mean to hinder, but to protract the proceedings of the house in this bufinefs; left administration, carrying their point with a facility that rendered them callous to the distresses of the nation, should be encouraged to persevere in the fame councils and measures, which had brought the empire to the verge of irretrievable ruin. Before they looked for any fresh proof of the confidence of parliament, it was requisite they should shew a due sense of their own misconduct, and give a fure pledge of their intentions to change the whole fystem of their proceedings. What that pledge ought to be, would be for the house to determine. But to withhold the fupplies till fome positive assurance of repentance was obtained, till fome proof of their contrition flood on record, was not only a duty the members owed their constituents, but would be the most effectual means of strengthening the hands of government. That the redress of grievances should invariably precede the opening of the public purfe, was a principle on which flood the existence of the constitution. He was therefore warranted in opposing privilege to prerogative, and in refusing to vote a shilling to the crown, till its ministers had given the people fome earnest of their amendment.

This attempt to obstruct the ordinary course of business in the houfe, was reprefented, on the fide of administration, rather the effect of political heat and passion, than of any cool and serious defire of perfuading the house to adopt a measure of fo desperate and ruinous a tendency. A vote of fupply, it was faid, was the necessary consequence of the addrefs; to this they were undoubtedly pledged; but whenever the appropriation of the money voted should be proposed for the confideration of parliament, then they might refuse their consent to its being applied to the support of the American or any other war, or to any specific purpose whatever, if they should so think It was not denied, that the proposition of the honourable member was constitutional. right of refusing any supply, was allowed to be inherent in the representatives of the people. in the exercise of that, as of many other theoretical rights, the expe-

 $[I]_3$ diency

diency of the measure was the object to be attended to. In former times it had been the practice of parliament to make the redrefs of grievances go before the grant of supplies; but was this at prefent expedient, or even practicable? Before the Revolution, the Kings of England were possessed of a permanent revenue, and a yariety of extensive resources, by which they were enabled to fupport the ordinary, civil and military establishments of the kingdom. When, therefore, they called on the people, in particular emergencies, for an extraordinary supply, parliament wifely took advantage of the necessities of the prince, to obtain such concessions as they judged necessary for the fecurity of the rights of the subject. But at the time of the Revolution, the conflitution in this respect underwent a total change, and the former practice had, in confequence of that change, totally ceased. The revenue necessary for the defence and support of the kingdom was now annually provided for by par-liament; and the exercise there, fore of the right of refufal was become extremely difficult, if not To enentirely impracticable. quire into the existence of grievances, to discover and administer effectual remedies, would necessarily be a work of time; and was it not recollected, that the interval between the commencement of an endeavour to remove the evils complained of, and its fuccessful completion, would be filled up by the annihilation of the fleets and armies of the nation? Equal mischief would enfue, if the mode of carrying on

the war, or the operations of the cultuing campaign, were expected to be disclosed as the condition of granting the supplies. The compliance with such a requisition would be in the highest degree criminal in ministers.

But a pledge of the contrition of government was at least required. Might there not be equal difficulty in bringing the various descriptions of men, who were to be found in that house, to agree and fix upon fuch a pledge, as might be deemed fatisfactory. In the long investigation of the subject, nothing respecting the nature of this pledge, had yet tranfpired. In the opinion of fome, it might be a change of ministers; others might ask for it in a renunciation of the war against America; a third fet, in the ceffation of hostilities against the Dutch; a fourth, in the diminution of the influence of the crown; a fifth, in the reform of reprefentation in the House of Commons.

The fituation of the country was allowed to be, in an unufual degree, critical and alarming; and fome change of measures necessary. But these circumstances, it was contended, called for the most vigorous and united exertions of parliament. The eyes not only of the nation, but of all our enemies, were fixed upon them; and much of the spirit and exertions, both of the one and of the other, would depend on their resolutions.

In reply to these arguments, it was urged, that whilst ministers wanted to persuade the house to adopt their address, it was said, that it pledged the house to not thing.

thing.

But now it had paffed, and a supply was demanded, they argued that the house had bound itself by the address to grant it. The fame cheat was again attempted to be played off. grant of a supply, it was faid, did not bind the house to any specific appropriation of it; and thus the house was to be led on by a train of delusions to give its support to a continuance of those ruinous measures, which even minifters themselves no longer dared openly to defend

To allow that parliament poffessed the privilege of withholding the fupplies, and in the moment to pretend that the exertion of it must prove an act of political fuicide, was to leave us nothing of the conflitution, but The king, in virtue the name. of his prerogative, had the power of involving the nation in hostilities at his own discretion. event of this kind was usually announced to his parliament at the opening of a fession; and was it now contended, that how much foever parliament might difapprove of fuch a measure, it was bound to furnish the necessary grants for its support.

If no instance had occurred. fince the Revolution, of a refufal to grant supplies, this invariable acquiescence rested on a suppofition, that no circumstance had occurred to justify a deviation from the general practice. But did the prefent times afford no fuch grounds? Was it not even prefumable from the past conduct of ministers, that, with respect to the support and defence of the empire, it was a matter of indif-

ference whether the supplies were granted or not? Could the national misfortunes, which had thickened over the course of the preceding year, have possibly proved more numerous or more fatal, if no money whatfoever had been granted for the fervice of that period? Had those grants paid any interest to the public, either in victory or konour? Had they not even contributed to the annihilation of our fleets, and to the lofs of our armies, as much at least as a temporary suspension of

fupply could do?

In exculpation of the misconduct of one department of government, it had been faid, that all the maritime resources of this kingdom were unequal to a contest with the naval forces France, when the chose to exert them to the utmost. For what purpose then, except their own base and selfish purposes, could they, who held fuch doctrines, call on parliament to support an establishment, confessedly, under their management, inadequate to its end? The diffunding of the land forces would certainly be the confequence of an absolute refutal to raile supplies: but even if this were the cafe, would the houfs chuse rather that the third secretary of thate should fend them across the Atlantic, in order that General Washington might receive, at their expence, a third army prifoners of war.

With respect to the pledge required, the difficulties that had been thated were rather affected than real. If parliament retained a proper feale of its duty, and was zealous and fincere in the

performance $[I]_{+}$

performance of it, the talk proposed would not require an hour's debate.

on opposition to this weight of argument, it was, on the other fide, alledged, that the removal of the present ministers, being evidently the chief object proposed by those who wished to negative the motion before the house, there were many other less objectionable methods of obtaining the same end. That in whatever hands his majefly might chufe to trust the administration of affairs, a supply would be absolurely and equally recessary. That the delay proposed would be therefore a fruitless loss of time, as the house might, if they thought fit, adopt other measures equally effectual, and not attended with the fame danger or inconvenience to the state. On the division, the motion for going into a committee of tupply was carried in the assirmative; there being 172 ayes, and 77 noes.

We have heretofore observed, that the motion made by Mr. Burke, during the courfe of the last fession, for an enquiry into the conduct of the captors of the island of St. Eustatius, was negatived, chiefly on the ground of the absence of the two commanders, who were fo deeply interested in the subject. Both these gentlemen being at this time attendant on their duty in parlia-Dec. 4th. ment, Mr, Burke, pur-fuant to the previous notice he had given, moved, "That the house resolve itself " into a committee of the whole " house, in order to enquire into " the confifcation of the effects, " wares and merchandize, be"longing to his majesty's new fubjects on the island of St. Eustatius; and farther, to enquire into the fale, distribution and mode of conveyance of a great part of the said effects, wares and inerchandize, to the islands belonging to France, and to other parts of the dominions of his majesty's enemies."

He prefaced this motion by obferving, that he should not at that time enter into a detail of the facts he had to produce, nor of the evidence by which he meant to fupport them, provided he understood from his majesty's minifters that no opposition would be made to the inflitution of full, open, and dispassionate enquiry. But the secretary of state for the plantations declaring, that could not possibly give his vote for the motion as it then stood, on account of the actions that were depending in the courts below, Mr. Burke was called on by the house to enter into the subject at

He began with reprobating the narrow, miserable doctrine he had just heard, by which a great legislative body, the grand inquest of the British empire, was taught to lay aside its wisdom, policy and justice, and dance attendance, like a fervile, cringing valet, upon the petty disputes of the courts below. He called on the house to reject, with detestation, counfels fo full of infamy and injustice, and to think they could not rescue too speedily the reputation of the country from the difgraceful imputations under which it lay. Abject thefts, atrocious rapine, and every species of uncivilized

barbarity,

HISTORY OF EUROPE. 137

barbarity, had been charged, in the face of all Europe, on British commanders. From that house all Europe would expect the most decisive proofs, that Great Britain neither felt the inclination, nor had so far forgot her ancient character, as to countenance the commission of injustice; but was always prepared and willing to listen to the complaints of the injured, to punish the authors of violence, and to redress the wrongs committed in her name.

But the policy, not less than the justice of the nation, was concerned in promoting the most speedy and effectual enquiry. the arduous conflict in which we were committed, destitute of alliances, and conscious of the inferiority of our force to that of the enemies combined against us, we should be cautious to the last degree of venturing upon meafures, which might induce the neutral states not barely to regard struggles with indifference, but to rejoice in the destruction they may think we have so justly merited. It was a mistaken opinion, that states and cabinets were mere machines, moved only by interest. Composed of men, they felt as men; were actuated by the same sympathies and pasfions, and naturally inclined to rife up in defence of the weak, when not deterred by the recollection of wanton provocations, and the lawless use of former power.

Having made these observations, Mr. Burke proceeded to state the sacts on which he wished the house to take up the enquiry. After an unsuccessful attempt upon the island of St. Vincent, against which a weak and insufficient force had

been employed, the British commanders, in obedience to directions received from England, turned their arms against St. Eustatius. This island was known to be in a state totally defenceless. A fingle gun, of which the friendly, courteous use, was to falute the ships of the English and other European powers, on their arrival at this free port, remained upon the walls of a neglected, mouldering castle, in which there was a garrifon of twentyfeven foldiers, and about thirty other persons, of various descriptions. The armament employed for the reduction of the settlement, thus defended, and ignorant even of the commencement of hostilities between the two nations, confilled of fifteen fail of the line, a proportionate number of frigates, and near 3,000 chosen troops. On this occafion, faid Mr. Burke, the miracle of Jericho was needless; for at the first sound of the trumpet, and long before the ramparts could have fallen, the governor furrendered the island at discretion.

He next proceeded to investigate the extent of the power ac. quired by conquerors over an enemy furrendering at discretion. proved from the authority of the most celebrated writers on the laws of nations, that it by no means warranted the arbitrary exercise of any species of rapine or cruelty. discretion was universally agreed to be, not arbitrium cujus libet pravi; but, equi bonique viri. He took a view of the history of that branch of laws, and of the contemporary concurrent practice of the most civilized nations; shewing, that the feelings of mankind had at all times gone beyond the theories of jurisprudence, in mitigating

1

mitigating the calamities of war; and arguing from thence the neceility of interpreting the maxims of law, even in the present improved flate of that code, in the most mild and favourable fense. He therefore contended, that from the moment of fubmission, the vanquished parties were entitled to the fecurity of fubjects; that where hostilities end, there protection begins; and that though the inhabitants of St. Eustatius were not absolutely claimants of a privileged protection, yet they should have found, in the equity and compassion of the conquerors, a shelter from all violence and de-

predation. Having established and elucidated this general doctrine, Mr. Burke entered into a detail of the enormities charged on the conquerors of St. Eustatius. As foon as they had got possession of the fettlement, a general confiscation of property took place; every warehouse was locked up; every inhabitant was compelled to give in an account of his plate, jewels, and ready money; even the necessary fupply of provisions was stopped; and in this general order no diftinction was made between friends or foes; no rank, fex, or age was fpared; and finally, to prevent the Poshbility of discriminating their property, and to impede any future attempts for the recovery of its value, the books of all the merchants were feized, and their wares and goods thrown into one common

The next measure was a general prescription of the inhabitants themselves, by which they were obliged, all without exception, English, Dutch, Jews, French,

mais.

and Americans, to quit the island. This order was executed without mercy; the miscrable exiles underwent a strict search before their departure; and the cloaths of some of them were ripped open, in order to come at a few pieces of money which they had concealed as the only means of present sub-sistence.

The confiscation of property being determined on, and the inhabitants removed, the fale of their goods followed next in order. A proclamation was iffued, offering free ingress and regress to every purch fer; fecurity that his money floald not be taken from him; and full permission to transport to any place he chose, whatever merchandise he should purchafe. Seventeen vessels, principally French, were accordingly freighted with stores, and other articles, purchased fifty per cent. under the intrinsic value, for the fervice of our enemies; and left they should become captures to the British privateers, which were hovering round the island, and waiting for the return of the purchasers, they failed under the convoy of an English ship of war.

Three months were fpent by the British commanders in disposing of and securing the plunder of St. Eustatius; the consequences of this conduct, with respect to the events of the campaign, both in the West-Indies and America, were next adverted to by Mr. Burke. The fleet under the command of Sir George Rodney, even after the departure of Commodore Hotham, (who had failed with a small squadron to convoy a part of the treasure found in St. Eustatius to England) amounted

HISTORY OF EUROPE. [139

to 21 fail of the line. The whole French force, previous to the arrival of Mons. de Graffe, confifted only of eight ships of the line, and one fifty. This favourable opportunity of recovering fome of our former possessions, or attacking those of the enemy, was entirely neglected; the whole fleet, and near 3,000 chosen troops, being kept upwards of two months in a state of total inaction, for the important fervice of protesting the fales of St. Eustatius. The second misfortune, that had sprung from the same dif-graceful cause, was the weakness of the detachment fent under the command of Sir Samuel Hood, to prevent the junction of the French fleet in the West-Indies, and that which arrived with De Graffe from Europe. Three fail of the line were detained by the commanders, for the same laudable purpose of securing the plunder of St. Eustatius; and this separation of our naval force, in all human probability, brought on the whole train of calamitous events which followed: the junction of the French fleets; the loss of Tobago; and finally, the dreadful difaster in the Chefapeak.

Having stated these charges, Mr. Burke declared himself ready to support them by evidence at the bar. He trusted the two honourable commanders, would feel their honour too deeply concerned, not to wish to vindicate their conduct in the fullest and most open manner; that the house would feel for the credit and character of the nation, which had suffered in the opinion of all Europe; and that as to himself, the magnitude and

enormity of the charge, the wealth and power of the accused, the wretched and deplorable condition of many of the unhappy sufferers, whose cause he had undertaken to support, would shelter him from that odium which was generally attached to the character of an accuser.

In answer to this weighty and pointed charge, Sir George Rodney, after a virulent investive against the Dutch, declared, that their perfidious attachment to the enemies of Great-Britain, had determined him to adopt the line of conduct he had purfued, in the capture of St. Eustatius; that, in his opinion, it fully juliified the entire confilcation of the property found on the illand. He could not have been actuated by any mercenary views in this determination, as he had avowedly made the feizure for the fole and exclusive benefit of the crown; and had not received intelligence, till long after the confifcation, of his majesty's gracious intentions of relinquishing his right in fayour of the fleet and army, to whom the island had surrendered. With respect to the outrages that were alledged to have been committed, or any wanton and lawlefs exercife of power, he afferted, that as far as the accufation related to himfelf, it was abfolutely groundlefs. He further declared, that if any 2st of inhumanity had been committed, it had never reached his ears. On the contrary, protection and affidance were liberally extended to all who stood in need of them.

In regard to the charge of having fuffered flores and provifions to be purchased for the fer-

9

ANNUAL REGISTER,

vice of the enemy, and transported to the islands in their possession, he declared that the very reverse was the truth; that he had given the strictest orders none of them should be fold, but all fent to his majeity's yard at Antigua. fcrupuloufly exact had he been in this respect, that he had not only examined himfelf the clearance of every ship that went out of the port, but caused them to anchor under his stern, where they were strictly examined by commissioned officers of the navy.

As to the aspersions thrown on his military character, for remaining three months inactive at St. Eustatius, and detaching an inadequate force to prevent the junction of the French fleets, he remarked, that matters of the utmost importance had made his presence there, for some time, abfolutely necessary. That during that period he had planned two expeditions, one against Curacoa, the other against Surinam; and was on the point of putting them into execution, when he received intelligence of the approach of Mons. de Grasse. That this intelligence reported the French fleet to confit of no more than 12 fail of the line; and that, confequently he had thought Samuel Hood a sufficient match for them with 15. That as foon as he heard of the failure of Sir Samuel Hood, he had put to fea with the ships remaining at St. Enstatius, and failed to join the fleet; that he had put St. Lucia into such a posture of defence, as had preserved that island from the subsequent attack of the French

and that he should doubtless have intercepted M. de Grasse him-felf, had not his designs been traitoroufly discovered enemy.

The lofs of Tobago, and the unfortunate conclusion of the campaign in the Chesapeak, were, he faid, laid to his charge with equal injustice. With respect to the former, the transactions relating to it being already in the possession of the public, and no new matter adduced by the admiral, it is unnecessary for us to repeat them; as to the latter, befides the arguments in vindication of his conduct, which have been stated in our last volume *, he affured the house that he had dispatched an account of the defigns of the French to the commander in chief at Jamaica, requesting him to lose no time in fending whatever ships he could possibly spare to reinforce the admiral on the coast of America.

This was the fum of the defence fet up by Sir George Rodney; he was followed by Major General Vaughan, who went nearly over the same ground, denying in the most folemn manner, his having had any share or concern in the depredation and outrages alledged to have been committed. fused to account for his conduct to an individual, but declared himfelf ready to enter into the fullest investigation of it before the house, if they should think fit to call for it; and in proof of the falfity of one of the charges, he read an address he had received from the warden and rulers of the Jews, expressing the fullest fense of the obligations they owed

him for his protection.

Issue being thus joined by the two parties, the motion for a Committee of Enquiry was strongly supported by Lord John Cavendish, General Conway, Mr. Fox, Mr. Barré, and Mr. Sheridan. It was opposed by Lord G. Germaine, the Lord Advocate of Scotland, the Secretary at War, and Lord North. The two last objected principally to that part of the motion, which tended to prejudicate and affect the claims under litigation in the courts below; declaring their readiness to confent to the fullest investigation of the remaining charges; the Lord Advocate objected to the whole, for want of a specific accufation, and because, he faid, the allegations were too indeterminate to be the ground of a parliamentary enquiry.

The motion being at length amended, so as to except "all "wares and merchandise claimed in the courts in Westminster- "Hall," on a division, there appeared for the question, 89; against

it, 163.

The Earl of Lisburne Dec. 5th. having moved, "that " 100,000 feamen be granted for " the fervice of the enfuing year," an amendment was offered by Mr. Hussey, to substitute 110,000, instead of the number proposed. This amendment, though evidently calculated to strengthen the hands of government, yet coming from the opposite side of the house, occafioned at first some hesitation amongst the members in administration, and afterwards produced a long and warm debate.

In support of the original mo-

tion, it was urged, that the number therein fpecified, exceeded by 10,000 the number voted lait year; and that, owing to the great losses we had fustained, the ships of the line now in commission were fix fewer than they were before. That indeed 14 sail, at least, were expected to be ready in the course of the year; but that as 99,845 men had actually been employed lait year, though 90,000 only were voted; fo in the prefent case, the board of admiralty should not think itself bound to limit the fervice to the number granted, but should doubtless make every possible exertion to increase the naval strength of the empire to the utmost.

This alarming account, given by government itself, of the decreasing state of the navy, was received with great indignation by the opposite side of the house. Administration was accused of an improper and dangerous predilection for the army. To this cause the seeble condition of the fleet was attributed; and it was therefore urged as one of the most powerful arguments to induce parliament to impound (as the member who moved the amendment aptly expressed himself) 520,000 l. of the public money, the value of the additional number of feamen proposed, for the fole and exclusive service of the navy.

In corroboration of this charge, feveral members averred from their own knowledge, that the admiralty had not only neglected to employ the public docks in building to the extent of which they were capable, but that they had refused the offers of several pri-

vate builders. That there were four yards in the river Thames, each capable of building four fail of the line; and that the outports could furnish as many more; all of which there could be no doubt might have been engaged for the service of government. The want of money was the only plea that could be alledged in excuse for this conduct; and if they refused the supply now offered them, the public would justly attribute it to some dark and sinister cause.

To these arguments it was replied, that it being allowed on both fides, that the amendment proposed could not add to or take away from the navy a fingle feaman, the question was reduced to a mere point of finance. The committee was called on to vote the first branch of the supplies, the fupply of the navy, which had always, and very deferredly, been the favourite fervice of the nation. In this case, the custom in the last war, and the custom in the present, had invariably been to vote a specific number of seamen; but this number had always been much lefs than the number known to be actually employed. During the last war, the vote of supply had never exceeded 70,000, and yet the number employed had amounted from \$2,000 to \$6,000 men. This had been the constant practice of parliament; and it was certainly much lefs necessary to increase the number specified in the present vote, since, it by some thousands, exceeds the complement requisite to man the prefent lift of the navy. Besides, was it necessary or expedient, at this early stage of the supply, to impound 500,000 l.? Other fervices remained to be provided for and though (notwithflanding the influentions that had been thrown out) no perfors were more ready to allow, than his majefty's prefere fervants, that the navy ought to have the preference, yet gentlement would confider that every other fervice should not be facrificed to the name of a navy; the amendament proposed obviously going no further.

As to the charge of neglect of duty in the board of admiralty; it was either generally denied by the members in the kouse, who belonged to that department, or the blame, if any existed, thrown on the navy office; but though the instances had been particularly specified, none of them were controverted, except in the case of a Mr. Wells, whose proposals for building ships for the service of government had been rejected, on account of their extravagance. At length the amendment was rejected, on a division; there being ayes, 77; noes, 143.

On the day ap-Dec. 12th. pointed for voting the army supplies, (the question alluded to by the Lord Advocate of Scotland, when, he faid, ministers would be under the necessity of coming to fome explicit declar= ation, with respect to the continuance of the American war) the house was early and uncommonly The difficulty with crowded. which it was foreseen the minister would be brought to disclose the intentions of government, and the dexterity he had already shewn in evading the questions with which he had been pressed on that subject, induced the opposition to

bring

bring forward a metion, which, though it would fail in its intended effect, of forcing from him any binding declaration, might at least ferve to discover the number of those in the house, who, without respect to their general political fentiments agreed in opinion with them upon the prosecution of the war.

As the object of this measure was to form a coalition from all parties, for the fole purpose of obliging the crown to put an end to an attempt at once ruinous and impracticable, the motion was drawn without any criminatory retrospect, in terms the most cool and temperate. It was, " to de-" clare, that the war carried on " in the colonies and plantations " of North America, had been " ineffectual to the purpoles for " which it had been undertaken, " of affording protection to his " majesty's loyal subjects there, " and of defeating the hostile in-" tentions of our confederated " enemies."-And fecondly,

"That it was the opinion of the house, that all farther attempts to reduce the Americans to obedience by force, would be ineffectual, and injurious to the true interests of this country, by weakening her powers to resist her ancient and confederated enemies."

The motion was made by Sir James Lowther, and feconded by Mr. Powis, in a long and elequent speech, in which the various topics that had been urged in the repeated discussions this matter had undergone, were placed in many new and striking points of view. As soon as he sat down, L'ord North atose, imagining, he taid,

that the house were in immediate expectation of hearing his opinion, and fensible that the sooner it was given, they would be able with the greater facility and precision to form a proper judgment on the two propositions that had been offered to their confideration.

To the motions, he faid, he had great and weighty objections, but before he stated them to the house, he felt himself bound, especially after what had passed on another occasion, to speak much more explicitly than what was his ufual custom, and indeed, than was wife and politic for a man in a high and responsible office to do, concerning the future mode of profecuting the war. He then declared, that his majesty's fervants had come to a determination. that the mode of profecuting hostilities internally on the continent of America should longer be followed; but that the form of the war should undergo a total change. This declaration, he faid, he should not have thought himself warranted in duty to make, had not the estimates of the army, then on the table, declared nearly as much. By those estimates the house would see, that government had not provided itself with the means of carrying on the war in the manner it had hitherto been conducted; and therefore, the house could not require a furer pledge of the future intentions of administration

Having made this declaration, his lordinip flated the objections to which he conceived the metical before the house was liable. He insisted on its impolicy, as it pointed out to the enemy what

was to be the future fystem of the war, and confequently directed them where to prepare for defence, or to plan their attacks, with the greatest advantage. He objected to the loofe and general terms in which it was expressed; a circumflance, which he thought alone fufficient to induce the house to reject it. It called on them to resolve against all future attempts to reduce the Americans by force. Were the motion to pass, though the American privateers should infult our coafts, or cut our merchantmen out of harbour, no English officer would venture to attack or oppose them. Was New-York and its dependencies, was Charles-Town and Halifax to be evacuated? Defended they could not be, if the motion should pass; at least, added the noble lord, if I had brought forward fuch a motion, and given it a lefs extensive explanation, I should have been accused, without mercy, of shusslings, twistings, and evasions, in order to delude the Was it intended then house. that we should withdraw our armies and our ships, give up to them all our ports, open to them all the seas, and suffer them to give what affiftance they pleafed to the ancient enemies of this country? Was it not known they were bound by treaty to aid the French and Spaniards in the conquest of the West-India islands? And could it be doubted, that this would be the first effect of our totally abandoning the war in America? If it was imagined that fuch a proceeding might facilitate the return of peace, he must again beg leave to be of a totally different opinion. He could not conceive, that the most effectual way to render an adversary tractable, and make him reasonable with respect to terms of peace, would be to declare we would fight him no more.

These were the principal objections made by Lord North, in which he was supported by Mr. Welbore Ellis, and Lord George The latter having Germaine. declared, that he regarded the motion as amounting to a refolution to abandon the American war altogether, faid, he should make no fcruple in affuring the house, that if parliament acceded to it, he should immediately retire; for be the confequence what it might, he would not hold his place on the condition of figning any instrument tending to establish the independence of America. Several of the country gentiemen declared themselves satisfied with the affurances given by ministers, confidering them as tantamount to the propositions before the house, unless those propositions were designed to go a length which they thought neither constitutional, prudent, safe, nor honourable.

In support of the question, it was contended, that the first objection stated by the noble lord, scarcely deserved a serious answer. That to suppose a resolution to abandon the American war, would in any degree discover to the enemy against what part of their extensive dominions, valuerable in a thousand places, the next blow would be aimed, was absurd and ridiculous. It would rather tend to produce a contrary effect; at present, they were sure of meeting us, and that to the greatest advan-

tage, on the continent of North America: whereas the measure now recommended, by fetting our arms at perfect liberty, would increase the apprehensions, embarrafs the councils, and distract the

operations of the enemy.

The objection drawn from the latitude of the terms in which the motion was expressed, was faid to be equally ill-founded. The most general terms had been adopted, in order to prevent the house, as much as possible, from interfering with the executive branch of government. It was the object of the war government was called on to relinquish. It was all further attempts to reduce the colonies to obedience by force, that parlia. ment was defired to reprobate. The general conduct of the war againít Spain, Holland, with America, France, united was still left where the constitution had placed it, in the hands of the king; and it was only defigned to convey to the crown the opinion that house entertained of the fatal effects of continuing to prosecute the American contest as one of the primary objects of the war.

As to the effect which the meafure proposed would have in accelerating or retarding an honourable accommodation, it was argued, that the particular fituation in which the colonists stood, made it necessary for them to avoid, in common prudence, the danger of the jealoufy of their exciting allies, by making to Great Britain the first overtures of reconciliation. That the first advances towards it must therefore be made by us; and that nothing would fo effectually engage America to meet us, Vol. XXV.

as freeing her from all apprehenfions for her own fecurity.

With respect to the assurances given by ministers, which appeared to have fo much weight with feveral members of the house, it was asked to what they amounted, even if they could be depended on, fuch as they were?—It had been faid, that the mode of the war was to be totally changed; that it was not to be conducted on the fame plan and on the fame scale as before.

A war then it was obvious there was still to be; and Gen. Burgoyne faid he was ready, as a professional man, to join issue with those, on the opposite side of the hoafe, on this fingle point, whether the language of the ministers, coupled with their avowed intention of keeping New-York and other posts on the continent of America, did not evince an obstinate adherence in the king's councils to offenfive war. great, if not the only purpole, of keeping places of arms upon an enemy's coast, and especially upon a continent, must, he said, be for offensive operations. But even if the consequence should not be granted, the maintenance of posts upon any other principle would prove, not only a most improvident and preposterous mode of war, but equally ruinous with the present.

At two o'clock in the morning, the house divided on the question for the order of the day, when there appearing ayes, 220; noes, 179; the original question was confequently loft.

The number of those who had ufually fupported the minister, but who voted against him on the

[K]prefent

present occasion, were supposed to have amounted nearly to 20. Though this defection was not in itself of sufficient magnitude to be attended with any immediate bad ϵ ffect to the existence of administration, yet other symptoms appeared, which feemed to threaten it with the most fatal consequences. The total want of union and concert in the cabinet, the great diverfity of opinion which prevailed amongst the servants of the crown, and which they were no longer able to conceal, occasioned, amongst all descriptions of people, a very just and universal alarm. Those who had hitherto acted with government from a coincidence of opinion, either found themselves at a loss where to fix in the general wreck of principle, or chose rather to risk a change of fystem, than expose the country to the inevitable ruin which must have followed the divided and flustuating state of its councils. Others, who looked only at the fortune of ministers, forefaw with great quickness the weakness these divisions would necessarily occasion, and the dangerous advantage this would give to active and powerful opponents. But what feems to have principally contributed to destroy that implicit confidence, which the house had been in the habit for fo long a course of years of reposing in the minister, was the doubtful and undecided manner in which he was, perhaps, under the necessity of expressing himself, upon the important questions now under The minds of men discussion. being by this means, as it were, fet afloat, every one was in some fort obliged to think for himfelf;

and the great advantage attending firong and decided mensures was lost, which impose on the fense of mankind, and often gain support and applause without examination.

It was also remarked in this debate, that the members who, tho' joined to the great body of the Whigs, were supposed to act more immediately in concurrence with the Earl of Shelburne, expressed themselves upon the subject of the continuance of the war in America with great caution and referve. The question of independence having also unavoidably risen in the course of the day, Mr. Dunning declared it to be his opinion, that the person, who should propose an avowal of it in favour of America, would be guilty of a crime little fhort of high treason.

The late hour, to which the debate on the twelfth had been protracted, made it necessary to defer proceeding on the bufiness of the army estimates till the following Friday, when Dec. 14th. the subject of the American war underwent, for the fourth time fince the beginning of the fession, a long and vehement difcussion. The arguments, that had been made use of on former occafions, were again chiefly recurred to; the infecurity and infufficiency of the affurances given by ministers were urged, not without a mixture of personal asperity and invective, on the ground of former delutions, of notorious difunion in the councils, and contradictory language amongst the members of administration: on the fide of the latter, the debate was but weakly supported; and the first lord of the treasury, though called

on, in a manner not less unusual than unbecoming to the dignity of government, by members posfessing high offices under the crown, to state the differences which subsided in the cabinet to the house, contented himself with repeating his former declarations.

A division again took place on a motion, that the chairman should quit the chair, and report a progress, which was negatived by 166 to 84; after which, the several motions made by the secretary at war were carried without debate.

Mr. Burke gave no-Dec. 17th. tice of his intentions to move, foon after the expiration of the recess, for leave to bring in a bill to regulate the mode of exchanging prisoners with America. The law as it then stood, he said, was not only unjust and oppressive in its principle, but liable to the most enormous abuses. Its operation, instead of being directed by the nature of the offences it was intended to affect, was confined to diftinctions purely geographical. Thus it depended, not on the imputed criminality of a prisoner, but on the place where he was taken, or the place to which he was conveyed, whether he should be considered as a traitor, a pirate, or a prisoner of war.

Amongst the abuses, which had arisen from the exercise of the power given to government by the act alluded to, he adverted particularly to the situation of Mr. Laurens and Lieut. Gen. Burgoyne. With respect to the former, he reprehended with great severity the cruelty, the injustice, and the impolicy of the treatment that dillinguished person had met with. He meant at the

proper time to contend, that he was entitled to his freedom on parole, as a prisoner of war; but whether the house should coincide with him in that opinion or not, the unexampled rigour and feverity of his confinement admitted of no ex-He had called the attention of the house to this very serious business at the beginning of the fession, and had proposed that the lieutenant of the Tower should be examined on the fubject at the bar of the house. But from some appearance of difinclination in government to this step, and the fear of injuring, by any hafty proceeding, the person whose situation he wished to relieve, and partly from a persuasion that ministers would themselves be desirous of preventing any further discussion, by redressing the grievance complained of; he had declined mak-

ing any motion on the subject.
The case of Lieut. Gen. Burgoyne was not less cruel and oppressive, his exchange having been prevented by a manœuvre, that was likely to doom him to perpetual captivity. A party of the Americans having been cut off by a detachment of British troops, joined by a large party of Indians, the commander, in order to fave the lives of his prisoners from the barbarity of his allies, was obliged to connive at their escape, having however first stipulated with one of the American generals, that the men thus fuffered to escape should be accounted for in the next ex-This slipulation change. gress had refused to ratify; and accordingly, thefe men (who from the name of the post where they were taken, were called Cedar men)

[K] 2 though

though generally claimed, had always been tacitly allowed to be fet afide in the subsequent cartels. But when the American commissioners had agreed to accept of 1040 prisoners in exchange for Lieut. Gen. Burgoyne, ministers had for the first time insisted on their taking the Cedar men as a part of that number; and the Americans being equally determined in resusing them, his exchange, under such circumstances, became a matter of absolute impossibility.

As a farther proof of the partial and oppressive conduct of government towards the lieutenant-general, Mr. Burke informed the house that he had received a letter from Dr. Franklin, inclosing a refolution of Congress, by which he was empowered to treat with the British ministry for the purpose of exchanging General Burgovne for Mr. Laurens. This negociation Dr. Franklin had requested Mr. Burke to undertake; and he had accordingly made the proper official applications, but hitherto without effect.

In the conversation which afterwards took place on this subject, the charge of Mr. Laurens's having been treated with any unusual rigour was positively denied. In proof of this affertion, a letter was read from the lieutenant-governor of the Tower, dated Nov. 1780, in which he acquaints one of the fecretaries of state, that he had waited on Mr. Laurens, for the express purpose of satisfying himself with respect to the treatment he received, and that he

had learned from his own mouth, that he had met with every civility and kindness that he could possibly hope for. A member also got up and declared, that the lieutenant-governor had again visited his prisoner, within the last three days, and that he had not heard there was the smallest ground of complaint.

Between these contradictory asfertions, the matter remained fufpended till the day of the adjournment of the house, when Mr. Burke brought up a representation and prayer, addressed to the House of Commons, by Mr. Laurens himself, which was, on a motion, laid on the table. It was remarkable that this petition * was written by Mr. Laurens himfelf, with a black-lead pencil; he having, as is supposed, refused to accept of fome indulgences that had been lately offered him, and amongst the rest, that of pen and ink, the use of which had been, during the greatest part of his confinement, firictly forbidden him.

It may not be improper in this place to add, that the admission of Mr. Laurens to bail, and the exchange of General Burgoyne, which soon after took place, together with the subsequent alterations in the political government of the country, made it unnecessary for Mr. Burke to proceed with his intended bill of regulation.

In the House of Lords, the ordinary business of government was suffered to proceed without any opposition till the day appointed for passing the malt and land-tax bills, when

the Marquis of Rockingham moved, that the third reading of the bills should be deferred till the first Wednesday after the recess.

He prefaced this motion by declaring, that a recent public calamity, the retreat of the ficet under Admiral Kempenfelt, had brought him down that day to the house; that he came without confultation with any person whatever, and with the expectation that he should probably not meet with a fingle peer who would unite in opinion with him; but that he was neither to be deterred from the faithful discharge of his duty, by superiority of numbers, nor disheartened by the thin attendance of his friends,

He then entered into a concife but comprehensive detail of the state of the nation, and urged from thence the necessity of coming to some immediate and decitive measures, for saving what remained of the empire from the irretrievable ruin, towards which it was rapidly verging. If the difficulties under which the country laboured, had arisen from the ordinary viciflitudes of fortune, royal affent was given to the he knew, he faid, that the pride, money bills, and the speaker had the spirit, the perseverance, the unconquerable refolution of Englishmen, would still be able to furmount them; but whilit he traced them to their real cause, to the existence of a ruinous fishem of politics, which had blafted the vigour and energy of the country, had driven every man of nonour and ability from the fervice of the crown, and was founded on a principle of weakness and disunion for its bails, he confesied that he felt himself overwhelmed with defpair.

After a speech of considerable length, which was delivered with an unufual exertion of voice, and a flow of genuine eloquence, he concluded with caling on the noble lords present, to join him in delaying for a few days the granting of the proposed supplies, in order that in a fuller affembly, and after a more mature deliberation, they might be better able to judge how far it was prudent, to entruit any longer the expenditure of the public money to persons, whose gross misconduct was every day the cause of accumulating fresh misfortunes on the country.

The objections made to the propositions of the Marquis, were founded on the mischiefs that would arise from any delay in granting the current supplies of the year, and were nearly the fame with those that had been urged before on the like occasion in the other house. The question, as amended, being put, was carried in the negative, and the bills

paffed without a division.

Cn the 20th, as foon as the returned to the House of Commons, one of the fecretaries of the treasury rose, and moved, that the house at its rifing flould adjourn to the 22d day of

January.

This motion gave rive to a warm and animated debate, in which the recent inflance of mifconduct in the first lord of the admiralty was firengly insided on, as an additional proof of the neceffity of proceeding, without delay, into an investigation of the canfes of the difgraceful and rui-

 $[K]_3$ nous

nous events that had attended all our naval operations. The house was reminded, that four years before, an adjournment of fix weeks had cost the nation thirteen provinces; and they were now cautioned, as they had lost America by one recess, not to risk the losing of the West Indies by another.

The conduct of the Earl of Sandwich was defended in a long and able speech by Lord Mulgrave; but his doctrines relative to the responsibility of official ministers, was strongly reprobated. He had argued that the noble Earl, against whom the members on the other fide had been fo liberal in their charges, acted in two diffinct capacities, that of a cabinet minister, and of a first lord of the admiralty; and therefore, that it was unfair to make him folely responsible in his official character for faults, which might have originated in the cabinet council of which he was only one Thus, he faid, with member. respect to the blame imputed to the noble earl for fending out Admiral Kempenfelt, with only 12 fail of the line, the charge ought in justice to have confisted of two branches: the first question should have been, whether the cabinet had acted right in ordering out 12 fail of the line, to watch the motions of 19; and the fecond, whether the board had been negligent in equipping and getting this force ready. For the first, he contended Lord Sandwich was not more responsible than any other lord who fat at the council; for the second, he was, in conjunction with the rest of his colleagues at the board, undoubtedly responsible.

This doctrine was condemned, as being of a most dangerous and novel kind, and totally incompatible with the principles of the British constitution. The constitution, it was faid, knew no cabinet council; but in whatever department cause of complaint should exist, the minister at the head of that department was specially accountable to the public, whether he acted on his own judgment, or by the directions of others. It was not merely for the equipment of fleets, but for their arrangement and destination, and, in short, for every thing that related to the management of the naval forces of the country, that the first lord of the admiralty was by the constitution responsible.

A compromise at length took place on the question before the house, by which the day of adjournment was altered to the 21st of January, and the call of the house, which had been 'ordered for the 31st, altered for the same day.

HISTORY OF EUROPE: [151

C H A P. VII.

Motion of Mr. Fox, for a committee of the whole house, to enquire into the causes of the want of success of his Majesty's naval forces during the war, and more particularly in the year 1781. Debate on the ordnance estimates. Motions by Mr. Barré and Mr. Burke. Motion for the re-commitment of the report negatived. Motion and debate in the House of Lords relative to the execution of Colonel Haynes. Committee on naval affairs. Refolution of centure rejested by a small majority. Mation and debate in the House of Lords on the intended advancement of lord George Sackwille Germaine to the peerage. Motion on the same subject, after bis creation. An address to the king, to put an end to the American war, moved by General Conway, and rejected by a majority of one. Committee of the lords, on the lojs of the army at York Town. Resolution against the American war carried in the House of Commons. Address to the king. The king's anfaver, and address of thanks. Second resolution against the American war. Resolutions of consure on his majesty's ministers moved by Lord John Cavendish, and rejected by a majority of ten. Motion by Sir John Rous, for withdrawing the confidence of parliament from his majefty's minister, left by a majority of nine. Intimation, by Lord North, to the house, of his majesty's intentions to change his ministers.

Jan. 23d, THE first object that engaged the 1782. attention of parliament, after the recess, was the long meditated enquiry into the conduct of the first lord of the admiralty. The lead in this business was taken on the fide of opposition, by Mr. Fox, who opened his motion, for a committee of enquiry, in a very long and able speech.

He began with acknowledging the inconfishency of the part he was about to act, with opinions that he had delivered frequently, and without referve, both in that house, and elsewhere; namely, that enquiries of the kind he meant to inflitute ought ever to be the fecend (and not the first) step taken by parliament, in their proceeding against a minister, into

whose conduct circumstances warranted an enquiry. This opinion arofe, he faid, from a conviction of the impossibility of procuring a fair and impartial body of evidence, whilst tuch a minister remained possessed of his employ-An address, therefore, to the throne, for his removal, was, in his judgment, the first step necessary; and this, not only from a regard to public justice, but to the character and reputation of the minister himself, which, he contended, could not, on any other ground, Rand honourably acquitted.

Mr. Fox here adverted to a doctrine, which he did not wonder to find zealously propagated by the adherents of the propagated by the propagated

fore any proof of misconduct was fubstantiated, was to condemn a fervant of the public unheard, and to proceed to pals fentence, without allowing him the liberty of entering on his defence. Against fuch opinions, he begged leave most folemnly to protest. Parliament, he contended, had a right to advise the crown to dismiss any of the public fervants, with or without ait.gning a specific charge; with or without intending to proceed to any farther measures against them. But when great national calamities called for an enquiry into the causes that produced them, parliament, which was bound to fee justice done to the public, was necessarily competent to take fuch previous steps as should lead to a full and impartial inveftiga-

The pretended injustice of requiring the difmission of a minister, without assigning any cause, or of removing him, previous to enquiry into his conduct, must, he faid, be founded on an opinion, as false, as it was absurd and ridiculous; that ministers held their offices as a fort of estates, or franchifes, of which they ought not to be dispossessed, but by due course of law. He knew that no member could venture to avow, in terms, fuch an opinion; and yet the house had so long been in the habit of acting upon it, that he found himself under the necessity of given way to the prejudice of the times; and, confequently, of proceeding in a manner totally contrary to his own decided judgment.

He next proceeded to state the distinculties which he would unavoidably have to encounter in the

profecution of the intended enquiry. The influence arising from the official fituation of the first lord of the admiralty, was, he faid fuperior to that of any other minister whatever; and besides this, the noble earl was supposed to enjoy, in the highest degree, the favour and confidence of his fovereign. From these, it was also well known, he had acquired a third and no contemptible acceffion of influence; a predominant and irrefistible weight in the direction of the affairs of the East India Company.

The length and complexity of the investigation, if carried to its full extent, he was apprehenfive would also prove a very serious difficulty. He knew that the zeal and industry of the House of Commons, collectively confidered, was too feeble to fuffer him to entertain a hope, that they would attend to the dry detail of official evidence; that they would examine into a variety of tedious documents, and acquire that full knowledge of their contents, which might enable them to pronounce with justice on the merits of the question before them.

The fubject matter of the enquiry, he faid, naturally refolved itself into two heads; the first, whether the first lord of the admiralty had availed himself of the means in his power of procuring a navy adequate to the occasions of the state?—The second, whether he had employed the force, he actually had, to the best advantage?

With respect to the first of these questions, though he was most firmly convinced that the noble earl would be found not less cri-

minal

minal on that ground than on the latter, yet, for the re. sons he had already stated, he did not mean to enter, at that time, into the investigation of it. It would require a long detail of parole evidence; all the witnesses to be examined would com from under the noble earl's immediate patronage; the points to be difcuffed, being many of them ma:ters of opinion, would affird occasion for the undue exertion of that influence, which he was known to posses; and lastly, the length of time it would necessarily require, left him little room to hope that gentlemen would give it a proper attention. He should content nimfelf with making a few

general observations.

That the navy was inadequate to the occasions of the state, was a fact allowed and confessed on all fides. In excuse of the admiralty, it had been afferted, that it was superior to that which Lord Hawke left, when he went cut of office. But this, he faid, even if true, which, nevertheless, he would undertake to prove was false; could not be admitted as an exculpation of the prefent board of admiralty. It was with the state of the French and Spanish navy, that the comparison ought to have been made. It was the duty of the first lori to keep he fleet in a condition to meet that if the enemy, whotever it might be; and when he faw the arminents preparing in the Preach and spanish ports, it was his indiffenfable duty to have talten the alarm, and to have exerted every name of the country, in order to keep pace with them. Would any man verture to fay, that the means had

been denied him? Wou'd any man venture to flander the House of Commons with the charge of parfimony? He believed no one would.

After making several other pointed observations on this subject, Mr. Fen proceeded to the fecund branch of the enduiry. He enumerated in their order, the feveral instances of missanduct with which he meant to charge the noble earl in the committee, as the grounds of a firing of motions, which he afterwards brought forwards, for the production of the papers and documents necessary to lubifantiate his criminality. thefe flets were afterwards urged more at large in the committee, where the advocates of the noble earl a fo made their principal defence, we mail, in order to avoid unneculiary repetition, referve both till we come to freak of the debate which then took place. It is only necessary, on the present occasion, to add, that the Earl of Malgrane and Lord North, after having replied to feveral of box, expressed their chearful concurre ce in the motion he nad made, not without some severe finitures on his having narrowed the ground of his enquiry, and omitted one of its mod enential objects.

The ordnance effi-mates, for the current Feb. 13. year, amounting to the chormous fein of 1,644/2421 underent a fisict and flivory examination. The parts principally objected to, were the audicipation of the annual furply of falt-petre, furnithed by the East-India Company; the contract with Mr.

Tewation;

Townson; the transport service; and the charges for building fortresses and fortifications.

With regard to the first and second articles, which were chiefly adverted to in the debate, it appeared, that the East-India Company were bound by their charter, to furnish the board of ordnance with 500 tons of fait-petre annually, in time of peace, at 45% per ton; in time of war, at 53 % But government having had occasion, during the war, for a larger quantity than the company were bound to fupply, had, at the end of the year 1781, received 3,100 tons, or fix years in advance of the annual supply. For two of the anticipated years, up to 1783, the board had agreed to pay 73%. without interest, the prime cost, to the company; and as their charter would then expire, the company had demanded 1181. also without interest, being their fale price, for the additional four years advance. The price at the merchants market was at this time about 1521. a ton. On a further application to the company, they declared they could not furnish any more on credit, and demanded the market price. With this the board did not think proper to comply, but contracted with Mr. Townson, a member of the house, and a director of the East-India Company, for 400 tons, at that time lying at Oftend, for 120 l. per ton, duty free.

On the ground of these sasts, the board of ordnance was charged with having suffered a debt of 242,000 h to the East-India Company, to accrue without the knowledge of parliament; and with

having counteracted the wifdom of parliament in providing an annual supply of falt-petre, by an improvident : anticipation, thereby left government at the discretion of the company. contract with Mr. Townson was also severely reprobated. It was afferted, that the average price of falt-petre, at Oftend, was only 831. and, confequently, that a profit of 37 l. a ton, ready money, was fecured to the contractor. At the time that this enormous advantage was given to a private individual, the proposals of the East India Company, who had been supplying government on credit, and at a confiderable loss, were rejected, though the market price, at which it was offered, had then fallen to 1101. a ton; fo that deducting from this 7 l. 3 s. the discount remitted, and 61. 10s. the duty paid, by the company, their price was 231. 135. lower than that of the contractor.

On the part of the board of ordnance, it was urged, in reply to the first charge, that they had delivered in a statement of the debt to parliament, as foon as ever the payment of it had been demanded; and that as to the improvidence of the anticipation, they thought it more than counterbalanced, by the faving it had brought to government. respect to the contract, it was alledged, that the board could not fafely inform themselves of the market price at Oftend, because any report, that the English government was about to purchase, would have immediately raised it. It had therefore been necessary to make the contract with fecrecy,

and

and the profits of the contractor had been regulated by the market

price in England.

These explanations not appearing sufficiently full and satisfactory, Col. Barré moved (the house being in a committee) "that the chair-"man leave the chair, and report a progress." This motion was rejected, on a division, by a majority

of 113 to 60,

Mr. Burke next moved, "that " the fuffering a debt of 242,000 %. " to the East-India Company, for " 3,000 tons of falt-petre, to ac-" crue without the knowledge of " parliament, in order that it might " either prevent the growth of f' fuch a debt, or make timely pro-" vision for it, was a blameable " proceeding, and tended to im-" pose upon the house." To get rid of this motion, thinking, perhaps, it would require an extraordinary exertion of parliamentary complaifance to negative it, Lord North moved for the order of the day. But Mr. Burke affuring him he would, in that case, repeat it on Monday, the noble Lord confented to withdraw his motion, and Mr. Burke's was then put, and negatived.

Feb. 4th. On bringing up the report of the ordnance estimate, no further explanation being given of the articles objected to, it was moved to re-commit the report; and the question being put, there appeared for it, 92; against it, 122.

The fame day, the Duke of Richmond brought forward, in the House of Lords, a motion of which he had given previous notice, relative to the execution of Colonel Isaac Haynes, an officer in the ser-

vice of Congress. The sact, as stated by the noble duke, on the authority of letters transmitted to him from America, by a person to whom he was an entire stranger, was as sollows:

On the morning of the 26th of July, 1781, Colonel Haynes, at that time a prisoner in Charles-Town, was informed, by letter. from the town-major, "that a coun-" cil of general officers would af-" femble the next day, at ten o'clock, to try him." In the evening, the fame day, he received another letter, from the same officer, acquainting him, "that instead " of a council of general officers, a " court of enquiry would fit at the " hour before-mentioned, for the " purpose of determining under " what point of view he ought to be " considered." In the same letter it was added, "that pen, ink " and paper, would immediately be " allowed him; and that any person " he chose to appoint might attend " him as council." On Sunday the 29th, a memorandum was delivered to him by the adjutant, informing him, "that in consequence of the " court of enquiry held the day " before, on his account, Lord " Rawdon, and the commandant, " Lieutenant-colonel Balfour, had " resolved upon his execution on " the Tuefday following, for hav-" ing been found under arms, and " employed in raising a regiment, " to oppose the British govern-" ment, though he had become " a subject, and had accepted the " protection of that government, " after the reduction of Charles-" Town."

In confequence of this intimation, Colonel Haynes addressed x himself

156] ANNUAL REGISTER, 1782

himself to the two commanders in a letter, in which he states, that he had been drawn, by surprize, into a procedure tending to judgment, without knowing it to be fuch; that when he appeared before the court of enquiry, he did not imagine it was for any other purpose than to determine whether he ought to be looked on as a British subject, or an American, in order, on that decision, to ground the future proceedings; that the counsel he had named had not been found; that he had neglected to fummon any witnesses, and, by that means, had been deprived of the ability of making a legal defence, which he could easily have done, founded both in law and fact, if he had imagined the trial he was then upon was to be final. He therefore defires a regular trial; and if that was not granted, he in-treats a respite of the sentence of execution. This application, aided by the folicitations of Governor Bull, and other inhabitants of Charles-Town, procured a respite of eight-and-forty hours; but with this condition, that if General Green made any application whatfoever in his favour, he should that moment be led to execution. On the day appointed, Colonel Haynes was executed.

Such was the frate of the fact. The illegality, the barbarity, and the impolicy of the proceeding, were flrengly and powerfully urged by the Dake of Richmond. He read to the house an extract from a proclamation of General Green's, in which this execution was represented as a cruel and unjustifiable murder, and a severe retablistion threatened on the persons

of British officers; and he called on the house to institute an immediate and effectual enquiry, as the only means of securing their own officers from the danger which hung over them, and of rescuing the British nation from the opprobrious charges of cruelty and barbarity, under which it was labouring, in the opinion of all the states of Europe.

The Duke concluded with moving an address to his majesty, that directions might be given for laying before the house the several papers therein specified, relative to the execution of Col. Haynes. This motion was throngly opposed by Lord Walfingham, Lord Stormont, and the Chancellor. It was argued, that his majesty's ministers having declared that they had received no information whatever, relative to the facts alluded to, it was beneath the dignity and gravity of the house, to proceed to a solemn enquiry on fuch vague and uncertain furmiles, as those contained in the letters produced by the noble dake: that it was fill less candid and less equitable to attempt, on fuch flight grounds, to call in question the characters of brave, deferving, and abient officers.

But allowing the facts, as stated, to be true, and fully authenticated, to the fatisfaction of the house, it was contended by the two last-mentioned lords; by the former, on the ground of modern practice; and by the latter, on that of ancient authority; that Colonel Haynes, having been taken in arms, after admission to his parole, was liable to be hanged up infraster, without any other form of trial than what was negative.

ceffary

ceffary to identify the person. The Earl of Huntingdon also acquainted the house, that he had authority, from Earl Cornwallis, to declare, that this had been the practice, in several instances, under his command, in North-America.

This doctrine was denied, on both grounds, with equal confidence, by the Earls of Shelburne and Effingham. It was afferted, by the former, from circumstances within his own recollection, that the practice in the last war had been totally different. A great degree of ignominy, perhaps a stricter confinement, was the confequence of such an action: the persons guilty of it were shunned by gentlemen, but it had never before entered into the mind of a commander to hang them.

In answer to the written authority, produced by the learned lord, it was remarked, by the Earl of Effingham, that the quotation he had brought from Grotius related to spies, and not to prisoners who had broken their parole. That this was the case, could not be disputed, fince Grotius could never have heard of a prisoner on parole; it was a modern civility of a very late date, and even not yet prevailing in all countries. rcply to this observation, it was argued by the chancellor, that all the reasoning used by the great author he had quoted, in the cafe of spies, applied, a fortiori, to that of persons who had broke their parole.

At length, the question being put, and the house having divided; there appeared for the address, 25; against it, 73.

The House of Com-mons having resolved itself into a committee, to enquire into the milmanagement of naval affairs, as foon as the papers which had been laid before the house were read by the clerks, Mr. Fox rofe, to move a refolution of cenfure, founded on the facts contained in them. This censure, he faid, he meant to confine, for reafons he had before stated to the house, to the conduct of the navy in the year 1781; but he should beg leave to thate to the committee a few instances of gross and criminal neglect in the first lord of the admiralty, previous to that period, in order to strengthen and advance the great purpose of the invefligation.

In the year 1777, the defigns of the French, to aid the revolted colonies, became fo very apparent, as to make a speedy rupture with that court almost inevitable. preparations carrying on in the ports of France were fufficiently declaratory of their intentions, and ought to have given an immediate alarm to government. But in what manner did the first lord of the admiralty prepare to counteract the defigns of the enemy? In that year, almost every frigate we posfessed was sent to carry on a predatory war on the coasts of America; and in consequence of this measure, the two-deckers and line. of-battle thips were employed, during the winter, in cruizing in the channel. So pernicious was the refult of these measures, that when Mr. Keppel arrived at Portsmouth. the following spring, to take the command of the fleet, which he was affured would amount to 26 fail of

the line, he found only fix ready for fervice. Before the crippled ships were in a condition to fail, the French had a fleet of 27 sail of the line at sea; and thus an opportunity was lost of crushing the naval power of France, in the infancy of the war.

This plan of cruizing in the winter, and making a vain parade, whilst the enemy were busy in port, equipping for the next campaign, had been the favourite meafure of the first lord of the admiralty, and had contributed, more than any thing elfe, to the lateness of our expeditions, in which we had always been behind hand with the enemy. Our fleets had uniformly been fent after those of France, and to the place of their deflination, for the purpose of contending with them there, instead of attempting to intercept or attack them at home.

The intelligence of the equipment of a squadron at Toulon, under M. d'Estaign, and of its destination for North America, had been received at the Admiralty feveral months before that fquadron was ready to fail. Yet no attempt was made to dispute its passage out of the Mediterrancan; but Admiral Byron, as usual, was sent out to follow it to the coast of America; and the Admiralty, equally dilatory in instructing their officers abroad, as they were in fitting out ships at home, had not apprized Lord Howe of the danger, to which he might be exposed, till the month of June, though the defigns of the enemy had been publicly and notoriously known so early as in February.

The year 1779 presented a re-

petition of the plan and misconduct of 1778. But what distinguithed it above the former, was the unaccountable neglect of not preventing the junction of the French and Spanish sleets. instructions given to Sir Charles Hardy, it was true, were not before the house; the Admiralty, for political reasons, as they alledged, had refused to produce them; but as no attempt was made by that admiral to prevent their junction, he was warranted in concluding that his infiructions contained no fuch orders.

Towards the close of that year. a powerful squadron was sitting out at Brest, under the Comte de Guichen, destined, as was generally believed, for the West-Indies. The most alarming confequences to our possessions in that quarter, were to be apprehended from the junction of this force with the fleets under M. d'Estaign and Don Solano, and an univerfal expectation prevailed, that Sir George Rodney, who was at that time ready to fail, would have been dispatched immediately, either to intercept the Brest squadron, in the Bay, or by proceeding, without delay, to the West-Indies, to prevent its junction with the fleets in that quarter. That this was practicable, had clearly appeared, fince the fingle ships, which failed at the same time with him, and proceeded directly to the West-Indies, arrived there before M. de Guichen. Instead of adopting either of these meafures, Admiral Rodney was ordered to convoy the storeships to Gibraltar in his way; in confequence of which step, he found a force force to contend with, on his arrival in the West-Indies, from which nothing but providence, and the infatuation of the enemy, could have faved us. The victory gained over the Spaniards, important as he acknowledged it to be, he contended was merely accidental, and in which the noble earl could not claim the least merit.

In the year 1780, it appeared, indeed, that inftructions had been given to Admiral Geary, to prevent the junction of the French and Spanish fleets; but such were the active efforts of the first lord of the admiralty, such his eager vigilance, and indefatigable attention to the interests of his country, that the directions to the British commander, that he should keep as funder the naval armaments of France and Spain, did not reach him until they were actually joined.

From the fame criminal negligence, the Chev. de Ternay was permitted to fail unmoleited with his fquadron to North America, when he transported thither those numerous military forces, which had fince captured the army of Lord Cornwallis.

It was at this difgraceful period that Captain Moutray, with the valuable and important convoys for the East and West-Indies, was betrayed (he could not use a gentler expression) into the hands of the enemy. At least, if the noble earl had been in the pay of the House of Bourbon, he could not have acted with greater zeal and ability in their service, than he had done in that business. For at the very moment when he knew that the enemy's seet was cruizing

off the coast of Spain, he ordered Capt. Moutray to touch at Madeira; that is, to go in the very track where he was fare of falling in with them.

To thefe, he faid, might be added another inflance of the most association as a degree of negligence, indeed, that could only be attributed to treachery, or infatuation; that from the commencement of the year 1779, to the close of the month of February, 1781, the board of admiralty did not station even a single frigate of Brest harbour, for the purpose of watching and giving notice of the motions of the enemy.

Having brought the history of our naval transactions down to 1781, the period to which he should particularly call the attention of the committee, Mr. Fox proceeded to state five distinct charges of gross misconduct, which he contended were proved and brought home to the board of admiralty, by the papers on the table.

The first was the suffering M. de Grasse to fail for the West-Indies, without making a fingle effort to intercept him. It appeared, that government had received the minutest intelligence of the equipment, flrength and destination, of the force under that officer; it was equally clear, that they know almost precisely the time when it was to fail. circumstances rendered this conduct in the fift lord of the admiralty criminal in the highest degree; one was, that the object of the Comte de Graffe's expedition was known to be of the most dangerous nature to this country: the

fuccess of a well-concerned plan for destroying our empire in the West, and even extirpating the British name out of that part of the world, in all human probability, ultimately depending on it. The other was, that we had, at the very time, a force at fea more than equal to the complete destruction of M. de Grasse, and his That officer failed from Brest on the 22d of March, with 25 thips of the line. Admiral D rby had put to fea on the 13th of he same month, with a flect of 30 rail of the line, intended for the relief of Gibraltar. Had the English fleet, therefore, been ordered to proceed immediately in quest of the enemy, nay, if it had not actually been fent out of the way, it would have been almost impossible for the French to have escaped. But the noble earl, as if apprehengive of this event, ordered Admiral Darby to take his station on the coast of Ireland, and wait there for the store-ships that were to join him from Corke. Here he cruized till the 27th of March; that is, till M. de Grasse was fafe on his way to America. The circumstances of this misconduct Mr. Fox contended were of to palpable and glaring a kind, as to warrant the suspicion of treachery in some quarter other.

The fecond charge was the lofs of the St. Eustatius convoy. The papers on the table proved, that the Admiralty had received an account, from Sir George Rodney, of the failing of the convoy, on the 25th of March. He had also acquainted them, that it was perhaps the richest fleet that had ever failed for England; he gave

them the minutest description of the courie it was to take; and even put them in mind of fending out some force for its protection. At this time, a fquadron of only fix fail of the line, under M. de la Motte Piquet, was known to be on the point of failing from Brest. Admiral Darby, as before-mentioned, was, at this time, cruizing off the coast of Ireland, with what is called the grand fleet, and there were besides 12 sail of the line, fit for fervice, in our harbours at home. Yet no meafure whatever was taken for the fecurity of the expected convoy, except an attempt to advertize them of their danger. La Motte Piquet sailed out of Brest on the 26th of April, fell in with the convoy on the 2d of May, and captured the greatest part of it; and on the 1 th of the same month, orders were fent to Admiral Darby to detach eight fail. for the protection of this fleet, which orders he received about three weeks after it was taken.

The third was the letter written by order of the board of admiralty, to the Mayor of Briftol. The circumftances which occasioned this letter were as follow: Admiral Darby having been informed at fea, by the mafter of a Swedish brig, an Englishman, that he had fallen in with the combined fleets, at the mouth of the channel, and his journal, upon examination. corroborating the relation, returned to Torbay, and fent an account of this intelligence to the Admiralty. The merchants Bristol having heard this report, the Mayor requested, by letter to the fecretary of the Admiralty, to be informed of the truth of it. In

anfwer

answer to this letter, Mr. Stephens, by order of the board, acquaints them, that the whole was without foundation, and that Admiral Darby had put into Torbay, for the purpose of taking on board refreshments. It was said, that this last circumstance, which the board knew to be an absolute falsehood. feemed to have been invented for the express purpose of deceiving the Bristol merchants, and inducing them to fend out their trading ships, a sure prey to the furrounding enemy. This tranfaction was compared, by Mr. Fox, with that of the convoys under Captain Moutray; the ftrong marks of treachery, which appeared on the face of it, were infilted on; and, as an additional confirmation, a letter was read from Lord Stormont to the fecretary in Ireland, of the fame date with that of Mr. Stephens to the Mayor of Bristol, in which he acquaints him, that the combined fleets were undoubtedly in the channel.

The fourth charge related to the measures of the Admiralty in the Dutch war. Mr. Fox, on entering into this article, observed that the conduct of government had explained to him the meaning of the apology which the noble lord in the blue ribbon had made, on another occasion, in excuse for that war. He had faid, " that " we should suffer less from the " Dutch as open enemies than as " infidious friends." As an exemplification of the truth of this affertion, the Admiralty had difpatched, before the war broke out, and whilst the Dutch were only infidious friends, fix fail of the line, under Commodore Fielding, to intercept Admiral Byland with Vot. XXV.

one: but now that they were become epen enemies, we had fent but five ships to fight eight.

He remarked, that if government had really aimed at the destruction of the naval power of Holland, they should have sent, at the commencement of the war a force sufficient to have entered and kept possession of the Texel. This, he faid, was the opinion of every perion, who had turned his thoughts for a moment to that subject; at the same time, he could not help confidering it as a most fortunate circumstance, that the ministry of Great Britain, though the means were in their hands, had not possessed wildom and ability fufficient to crush a power, so necessary to the present system of Europe.

He next adverted to the action between the Admirals Parker and Zoutman, and infifted particularly on the criminal neglect of not sending the Sampon man of war to the affiftance of the former. He closed this article with observing, that a squadron had since been stationed in the Downs for the purpose of defeating the naval enterprizes of the Dutch; and as a proof that this measure was concerted with wifdom equal to the rest, Admiral Byland had just returned home, with his convoy, iecure and unmolefted.

Mr. Fox now called the attention of the committee to the fifth and last charge; the recent failure of the expedition under Admiral Kempenselt. It appeared from the papers on the table, that for several weeks before the failing of the French fleet, the board of Admiralty had been in the course of receiving regular intelligence

[L]

of its equipment; and though its force was variously represented, at different times, yet it was evident, that 18 or 20 fail of the line were in readiness to put to sea. convoy, which confifted chiefly of transports, with troops and military flores, was faid to be one of the most valuable and important that had ever left France; and it was therefore natural to suppose, that they would exert their utmost itrength for its fecurity.

To intercept this armament was an object, the successful accomplishment of which, undoubtedly, stood the foremost of any that had been attempted fince the commencement of the war. Not only the dominion of the fea at home, but the very existence of the fleets and armies of the enemy abroad, depended on it. Mr. Fox, therefore, declared, that he confidered expedition under Admiral Kempenfelt as the only judicious measure that had been adopted during the war; and he should have thought it justifiable, even if he had been obliged to fail with a imaller force; but he had scarcely fusiered his mind to entertain a doubt, that the Admiralty had not fent out every ship that could possibly be spared for that service. With what aftonishment then and indignation would the committee learn, that at the time when Admiral Kempenfelt failed with only 12 ships of the line, under circumflances of the greatest probability that he would have to encounter at least 18, above 20 British ships (including the squadron in the Downs, which was kept for the paltry purpose of distressing the Dutch trade) were absolutely unemployed, and yet in every

respect fit for the service required. Such conduct, he must again repeat, bore an air of treachery and

premeditated neglect.

After a few general observations on the nature of the charges he had brought forward, and the irrefragable evidence by which they were supported, Mr. Fox concluded with moving the following resolution: "That it is the " opinion of this committee, that " there has been gross mismanage-" ment in the administration of " the naval affairs of Great Britain, " during the course of the year " 17S1."

The defence of the Earl of Sandwich was undertaken by Lord Mulgrave, who began with cautioning the committee against the effects of hasty prejudices, and party spirit. The character, the honour, and perhaps the fortune of an individual, were at stake; an old and faithful fervant of the crown was accused of negligence, incapacity, and even treachery; he had, therefore, a right to claim the impartial judgment of every member of the committee, unbiaffed by any political confideration whatever.

He faid, the committee would not expect that he should follow the honourable gentleman through the various charges of misconduct imputed to the board of admiralty, previous to the year 1781; (charges so frequently discussed in that house, and, in his opinion, fo fully refuted) and the more especially, as he had voluntarily choten to exempt that period of the noble earl's administration from the vote of censure, which he had just proposed for their consideration: whether this had arisen

from

from the tender mercy of the honourable gentleman, or his conviction that the charges were weak and groundless, he left the committee to determine.

Lord Mulgrave then proceeded to answer the several charges in the order in which they had been made, having first remarked, that with respect to stationing frigates off Brest, little or no information of any consequence could be obtained by that means. It would be necessary for the frigates ordered on that service to pass by Ushant, in which case, signals would immediately be made along the coast, and ships would, confequently, be fent out to drive them

away.

In answer to the first charge, he observed, that the relief of Gibraltar was eagerly looked for by the whole nation, and that it appeared from the papers on the table, to have been the intention of the Spaniards to meet and fight us The Spanish fleet was described as amounting from 30 to 36 fail of the line, exclusive of a great number of frigates, and 18 fireships; and it was therefore necessary, either to keep together a force sufficient to refift this formidable armament, or to risk the loss of Gibraltar. The chance of intercepting M. de Grasse, was at best very uncertain; but even if the attempt had been crowned with all the fuccess that could have been expected from it, our fleet would most probably have suffered so much in the action, as might have rendered it unable to effect the relief of Gibraltar. On the one hand. therefore, a great national object must, at all events, have been sacrificed, whilst the mere probability of falling in with the French fleet was opposed to it on the other.

In answer to the second charge, the loss of the St. Eustatius convoy, Lord Mulgrave observed, that it clearly appeared, from the intelligence contained in the papers on the table, that there were ilronger reasons for imagining M. de la Motte Piquet was bound for America, than for the cruize, in which he had been but too successful. He denied that there were any ships fit for fervice, that could have been fpared for the protection of the convoy; and to the ridicule that had been thrown on the meafure of fending to Admiral Darby, a week after the capture, he defired the committee to recolled that, in confequence of this step, the admiral had very nearly recaptured the convoy; a ship of each squadron having had, one night, a tharp engagement.

The third article, under which a criminal charge of treachery had been fo strongly imputed, related to the letter fent to the Mayor of Briftol. A plain state of the grounds on which the admiralty proceeded in that business, would, he trusted, be a full vindication of their conduct. In the first place, the intelligence given by the Swedith veilel, was directly contradicted by the whole tenor of the information they had received from Spain; this, therefore, was a fufficient reason for their not giving implicit credit to that flory. But, in the next place, on a supposition that the master of the brig had not defigned to impose upon Admiral Darby, the admiralty could readily account for the fltips he had feen, without concluding them to be the com-

bined [4] 2

bined fleet: a large convoy of 100 fail of transports, were about that time to fail from the Isle of Rhé, and might, very probably, have been in the latitude, mentioned in the journal of the Swede. respect to a circumstance mentioned in the letter, that Admiral Darby had put into Torbay, to water, the admiralty, in his opinion, deferved no blame on t'ant account; because, in the first place, he did not think it necessary that the Mayor of Bristol should be made acquainted with the reasons of our manœuvres at fea; and fecondly, because Admiral Darby had faid in one of his letters, that he meant to put to fea again, with the first fair wind.

In answer to the fourth charge, the reafon affigued, why Admiral Parker was not flationed off the Texel, in order to prevent the Dutch from flanding out to fea, was this; that he was obliged to protect two large and valuable convoys, the one outward, and the other homeward bound. With refpect to the Sampson, the impossibility of fending her instantly to join Admiral Parker, without knowing exactly where that officer at the time was cruizing, would, he trufted, be thought a fufficient anfwer to all the bitter invectives that had been so liberally dealt out, on that subject, by the honourable gentleman.

With respect to the fifth charge, it was urged, that the board of admiralty had the strongest reason to suppose, that the French sleet, desired for the West-Indies, under the command of M. de Guichen, would not have exceeded 13 fail of the line; nay, it was

highly probable, that this had actually been the case, and that the rest had been dispatched after them, in consequence of intelligence that Admiral Kempenselt was out at sea. It was denied that we had at this time any other ships ready for service, except those that were under orders to fail with Sir George Rodney; and Lord Mulgrave gave it as his decided opinion, that to have detached this squadron in pursuit of the Brest sleet, would have been a dangerous, and might have proved a fatal measure.

As foon as Lord Mulgrave had concluded his defence of the board of admiralty, Lord Howe got up, and, in a long speech, expressed his concurrence in most of the opinions adopted by the honourable member who had opened the He infifted ftrongly on debate. the important advantages to be derived from having frigates stationed off Brest; he agreed with Mr. Fox, that the taking possession of the Texel, would have proved a master-stroke, had it been carried into execution, at the commencement of hostilities; and condemed, in the strongest terms, the conduct of the admiralty, throughout the whole affair of Admiral Kempenfelt's expedition. He declared it to be his opinion, that the early intelligence they had received of the defigns of the enemy, left them without excuse, for not having prepared a force fufficient to counteract them. He affeed, why Sir George Rodney had not been sent out along with Admiral Kempenfelt? His fqu2. dron was allowed to have been fit for service; and he might undoubtedly have ferved his country

as effectually off Brest, as in the West Indies. Not only the fate of the West-India islands, but, perhaps, the whole future fortune of the war might have been decided, almost without a risk, in the Bay of Biscay.

After a long debate, which was concluded by Mr. Fox, in a fecond speech of great length, the committee divided, when there appeared for the question, 183;

against it, 205.

Whilst the conduct of the first lord of the admiralty was undergoing this fevere forutiny in the House of Commons, a more perfonal attack was made in the House of Lords, upon another of his majesty's ministers. A strong report had, for some days pail, prevailed, that in confequence, as was generally supposed, of some difference in opinion with the rest of the cabinet, relative to the change of measures, which the court found itself under the neceffity of adopting, with respect to the American war, the fecretary of state for the Plantations, was to refign his employment, and, as a mark of the royal approbation of his ministerial conduct, to be advanced to the peerage.

On the ground of this report, the Marquis of Carmarthen, after a short speech, in which he endeavoured to obviate the objections, to which he foresaw his motion would be liable, from its appearing to trench on the prerogative of the crown, and to clear himself from the imputation of acting on any political, or from any personal or invidious motive whatever, moved the following

resolution:

"That it is derogatory to the

"honour of this house, that any person labouring under the cen"fure of a court-martial, as con"tained in the following sentence, [Here the sentence on Lord Geo. Sackville was recited] "which fentence his Majesty was pleased to confirm, and the following public orders were given out, "in consequence thereof, [Here the public orders were likewise recited] "should be recommended to the crown, to be raised to the dignity of a peerage."

The debate was neither long nor interesting: the motion was objected to, as a violent encroachment on the rights of the crown, and, on that ground, the question of adjournment was put, and carried, by 75 contents, including 14 proxies, against 28 not con-

tents, including 2 proxies.

On the 18th, the Lord Viscount Sackville having, in the mean time, taken his feat amongst the peers, the Marquis of Carmar-then brought the fame question again before the house, in a motion expressed nearly in the same words with the former. The misconstruction that had been put on the motion for adjourning on the former day, was given by ministers as the reason for their resolving to meet the question on its own proper merits, and giving it a direct negative. The debate, notwithstanding the singular delicacy of the circumstances which attended it, was carried on with great temper, and yet with no less freedom. The noble person, who was the fubject of it, flood forward the first in his own defence. After calling on the house for their candid and indulgent attention, he fuid, he felt himself in a [L] 3 particular

particular manner bound, in duty, to defend the rights of the crown, by which he had obtained the high privilege of a voice in their deliberations, from the unprecedented attack that was made upon them. To bestow honours was the peculiar and indisputable prerogative of the crown, where the persons upon whom those honours were bestowed, were competent to re-Would any noble ceive them. lord venture to maintain, that the sentence of a court-martial could amount to a legal disqualification, from acquiring any civil capacity whatever? This would be to make the fword superior to the law, and military rule to supersede the civil jurisdiction. But in the instance before the house, the attempt was not more unconstitutional than it was oppressive and unjust. His lordship reminded the house, that the fentence referred to in the motion, had passed three-andtwenty years ago, under circumstances not very favourable to the impartiality, or the equity, of the court that fat upon him. As a proof of the just opinion that was entertained of the violence of the proceedings against him, he had been brought into office five years afterwards, and called to the privy council. This he considered as a virtual repeal of the fentence of the court-martial. And would their lordships, under fuch circumstances, at this distance of time, and without having the whole of the case before them, proceed to annex to the judgment of a military court, the feverest censure of a civil court of judicature? Another material objection he had to the motion, was, its joining with the femence of the court-martial, the comment which the executive power had taken upon itself to superadd, as an additional ground of censure. To the sentence he was bound, by military law, to submit, and he had submitted; but would any man contend that he ought to be judged by an arbitrary comment, which, he would venture to say, went infinitely beyond the sentence?

In support of the motion, it

was argued, that allowing, in its fullest extent, the prerogative of the crown, the house was, neverthelefs. competent to cenfure those who advised his Majesty in any exercise of it, that was derogatory to their own honour and dignity, or injurious to the commonweal. That the character of the house would fuffer from the admission of a person labouring under a censure so public and notorious, would not admit of a ferious doubt. Whether the fentence of the court be just or unjust, was nothing to the question, fo long as it remained on record, unimpeached by any revision. The dangerous confequences of the measure to the public, was proved from the mischievous effects it might produce on the difcipline of the army; from the impolicy of rewarding, in the present conjuncture of affairs, a person so deeply concerned in the American war; and lastly, from

the severest punishment.

In reply to the first of these arguments, it was said, that the creation of a peerage was not always a question of state; and that

its tendency to defeat the purposes of a great and solemn enquiry, in

which the conduct of that noble

person might appear to deserve

the

the motion, prefuming it to be fuch, encroached fo far on the prerogative of the crown. It was well known, that fome peerages then existing, had not originally been created by the advice of any ministers, but were mere acts of the fovereign. In answer to the other arguments, it was observed, that it would be equally dangerous for that house to break through the limits of the constitution, and to transgress the rules of justice and equity, merely to prevent those misconstructions, which weak or ill-disposed persons might put on any measure whatever.

On the division, there appeared contents 28; not contents, 93, including proxies. A protest was entered the same day, and signed by nine lords, in which the measure, that had been the subject of the debate, was reprobated in the strongest

and most pointed terms.

Mr. Fox now brought Feb. 20th. the same question before the house, which he had already moved in a committee, relative to the administration of naval affairs. This step, he said, he had been induced to take, partly for the purpose of placing on the journals of the house, the attempt that had been made to rescue the nation from the fatal councils of a negligent and incapable minister, and the great and respectable minority by which it had been supported; and partly by the strong hopes of better success, which he could not avoid entertaining, from the more numerous attendance he faw that day in the house. He then signified his intentions, in case the motion should pass, of following it by another, for an address to the king, to remove the Earl of Sandwich from his councils for ever.

The debate was protracted to a late hour; most of the old ground being fought over again by the members who had not had an opportunity of delivering their fentiments on the former day. William Dolben, who had supported Mr. Fox in the committee, and was supposed to have weight with those members, who were called country gentlemen, declared his resolution of voting against him, on the prefent occasion, on account of the intimation he had given of his defign to move an address for the dismission of the first lord of the admiralty. This he thought by far too hasty and precipitate a proceeding. Lord Howe also declared, that though he could not, in honour, avoid voting for the refolution before the house, yet he should certainly be against the next step proposed. He asked, if gentlemen were provided with a proper fuccessor, who would act with the present servants of the crown? The plan of the enfuing campaign was also, he faid, certainly arranged, and he doubted whether at fuch a moment it would be fafe to overturn the actual administration of the marine. On the division, the numbers for the motion were 217; against it 236.

The appointment of Mr. Welbore Ellis to the office of fecretary of state for the plantation department, vacant by the refignation of Lord Viscount Sackville, and of Lieutenant General Sir Guy Carleton, to succeed the Commander in Chief of the Forces in

[L] 4 North

North America, having occasioned a general alarm amongst those, who were perfuaded that there ftill existed a secret and obstinate attachment in the court to the profecution of the war against the co-Ionies, it was resolved to make another attempt in the House of Commons, to bind up the hands of the executive government by a strong and explicit declaration of the opinion of parliament. With this view, General Conway moved, that an address should be pre-Sented to his majesty, to implore his majesty to listen to the advice of his commons, that the war in America might no longer be purfued, for the impracticable purpose of reducing the inhabitants of that country to obedience, by force; and to express their hopes, that his majesty's desire to restore the public tranquillity might be forwarded, and made effectual, by a happy reconciliation with the revolted colonies.

The debate on this motion, lasted till two o'clock in the morning. All the arguments used on former occasions, were recurred to on both fides the house; the minifters continued to hold the fame vague and undetermined language as before; and, on the division, there appeared for the address, 193; against it, 194.

The event of this division was confidered, by opposition, as a complete victory over the minister, on the subject of the American war; and as a majority of the abfent members were supposed to coincide in opinion with the former, it was resolved to bring the question before the house again, the first opportunity. Accordingly, on the 27th, Feb. 27th. General Conway moved a resolution, the same in substance with that which had been lost before the holidays, and only altered in the mode of expression, in compliance with the orders of the house.

He introduced his motion by a most eloquent and animated fpeech, in which he combated all the objections, that had been urged on former occasions, by the other fide of the house.

It had been afferted, that it was unconstitutional for that house to interfere with its advice in matters which specially belong to the executive branch of government. This position he positively condemned both as repugnant to the spirit of the constitution, and totally unfupported by fact. proved, from a regular feries of precedents, down from the reign of Edward the Third, to the accession of his present majesty, that parliament had always been in the practice of interpoling, with its advice, in matters of peace and war, of treaties and alliances, and even in the marriages of the royal Such interference had, family. indeed, fometimes been reprehended from the throne, as an improper intermeddling in state affairs; but parliament, and particularly that house, had generally made its voice to be heard with authority and effect,

Another objection that had been made to the motion, was its being vague, and obscurely worded. That it nearly concerned the dignity of the house, that its orders frould be firictly and punctually obeyed; and therefore, it was re-

quifite

HISTORY OF EUROPE. [169

quisite they should be expressed in tae most clear and intelligible manner. It had likewise been afferted, that it could not yet be decidedly collected, from any of the propositions that had been submitted to the house, whether all hostilities, in America, on our side, were to cease; or, if war was still to exist, what kind of military operations were intended to be allowed.

In answer to these remarks, General Conway observed, that the words he had adopted in the present motion, " offensive war," were, to military perfons, least, sufficiently descriptive of the species of hostilities, to which the motion was defigued to put an end. The war was to be firifly defensive, and none other; such a war as General Elliot was then waging in Gibraltar; such a war as General Murray had lately carried on in Fort St. Philip. 'The necessity of tying up the hands of government thus closely, was evident, from the ingenuity they had shewn in cluding every attempt that had been made to bind them, by fome explicit declaration of their own. As foon as it was perceived that the war was in bad odour in the house, and that it was necessary to quiet the alarm which the speech from the throne had excited, they were brought, with fome difficulty, to intimate, that hostilities should not be carried on to the fame extent as for-This not being deemed merly. fatisfactory, it was declared, that there should be no internal, contineutal war. The apprehensions of the public being rather increafed than diminished, by these extorted and ambiguous declarations, recourse was next had to a

war of pefts: it is allowed, on all hands, fay they, that we should keep what we still posses; and, certainly, no one would object to the changing of our fituation, if another should be thought more advantageous, or more tenable. When it was urged, that a war of this kind would fubject us to all the expence, and all the rift of offenfive operations, a new and curious device was recurred to, that of a French war in America; the invention, as it feemed, of the newly appointed fecretary of state. The Americans, that gentleman had faid, with a fort of triumph, are fed, cloathed, and paid by France; they are led on by French officers; the French and the American armies are incorporated in one; it was not mere locality that should give a name to a war. France had formerly been fought, with success, in Germany, and he faw no folid objection to fighting her now in America. The folly and madness of such an attempt, General Conway argued, would instantly appear, from what had already France, with happened. troops, which did not cost her more than 401. a man, a year, was carrying on the war against us, and even with success, who paid for 73,000, at 100 l. a man expence in the year.

There was, he faid, a fifth kind of war, which rumour had bruited to be in the contemplation of government, a war, at the very mention of which nature fluddered; he meant an *Indian awar*. A new officer, under the title of Inspector of Indian affairs, had, he was affured, been lately appointed; he could not acquait the house for what purpose, but

in times like the present, he could hardly think it was meant as a sinecure. This circumstance, added to a declaration he had heard from one of his majesty's fervants, in the former debate, that we must make the Americans feel the calamities of war, in order to make them wish for peace," had, he must confess, given him the most ferious and dreadful apprehensions.

He, lastly, cautioned the house against the fallacy of an argument that had been urged, with great confidence, from the other fide: Look, say they, at the army estimates, and you will find unqualtionable fecurity, that government does not mean to carry on offenfive war in America. General Conway reminded the house, that though 73,000 men were voted and paid for, we had never above half that number in actual fervice. Government had, therefore, only to complete the regiments, and they would have more men in America than ever they had before.

The motion was feconded by Lord Viscount Althorpe, and opposed by Lord North, in a long and able reply. He objected to it as unnecessary, after the affurances that had been given by government; as dangerous, on account of the information it conveyed to our enemies; as impolitic, because it entirely took away from the executive government the use of its discretion; as tending to retard rather than to advance the attainment of peace, the great object in view by both fides of the house. He, therefore, could only confider the motion as a party measure, and, in that light, he thought it not less ex-

ceptionable. If, faid he, the house suspects the fincerity of the servants of the crown, if they have any doubts of their ability or integrity, it is not by fuch a motion as the present that they ought to express their fentiments; they ought to address the crown to remove those ministers in whom they could not place confidence, and to appoint others in whom they could confide. A minister, he faid, ought no longer to continue a minister, after he was suspected by that house. He should be like Cæsar's wife, not only free from guilt, but even from fuspicion. If, indeed, the house should shew that they had withdrawn their confidence from him, it would be his duty, without waiting for an address for his removal, to wait upon his fovereign, and, delivering up the feals of his office, fay to him, " Sir, I have long ferved you " with diligence, with zeal, and " with fidelity, but success has " not crowned my endeavours; "your parliament have with-" drawn from me their confi-" dence; all my declarations to " them are suspected; therefore, " Sir, let me refign to you those " employments, which I ought " not to keep longer than I can " be ferviceable to your Majesty, " and your fubjects."

Lord North was followed by the Attorney-General, who observed, that there were many more obstacles to be removed, in order to treat of peace with the Americans, than the house seemed to be aware of. At that moment, several acts of parliament were in existence, which would prove insuperable bars to such an attempt. He therefore should recommend,

HISTORY OF EUROPE. [171

as the first necessary step, a truce; during the continuance of which, the enmity, occasioned by the violence of the contest, might subfide; and each party, being at leifure to confult their real interests, might accede to terms of peace, which, having undergone a flow and temperate discussion, might prove more honourable and advantageous, as well as more likely to fecure a permanent union, than those resulting from sudden overtures, and fudden acquiescence. He declared his intentions of bringing in a bill, with the permission of the house, for these purposes, and he should therefore move, " that the " present debate be adjourned, " until Wednesday, the thirteenth " of the enfuing month " March."

Several other members took a part in the debate, which again continued till near two o'clock, when, though the proposition of the Attorney was supposed to have brought over a few irresolute votes to the fide of the minister, there appeared, for the adjournment, only 215; against it, 234; exclusive of the two tellers on each fide. The number of those who were prefent at the beginning of the debate, but had paired off in the course of the evening, were faid to have amounted to 14. The original question, and an address to the king, formed upon the resolution, were then carried without a division, and the address was ordered to be presented by the whole house.

On the Monday following, his majefly's answer was reported to the house; in which he assures them, "that in pursuance of their advice, he should take such

"measures as should appear to him to be most conducive to the restoration of harmony, between Great-Britain and the revolted colonies; and that his efforts should be directed, in the most effectual manner, against our European enemies, till such a peace could be obtained, as should confust with the interest and permanent welfare of his kingdoms."

The thanks of the house being unanimously voted to the king, for his gracious answer, General Conway rose again, and, after expressing his concern at having been reduced to the necessity of trespassing so frequently, of late, on the patience of the house, moved another refolution, to the following effect; " that the house " would consider as enemies to " his majesty, and the country, " all those who should advise, or " by any means attempt, the fur-" ther profecution of offenfive war, " on the continent of North Ame-" rica, for the purpose of reducing " the revolted colonies to obedience " by force."

The necessity of this measure, in order to secure and render permanent to the nation, the beneficial consequences of their former resolution, had arisen, he said from two circumstances. first was, that ministers had declared, that though they should think themselves bound to comply with the fense of the majority of that house, yet they still retained their former fentiments, respecting the want of wildom and policy in the measures recommended. The unwilling obedience of perfons, who could bring themtelves to act in direct opposition to their

ANNUAL REGISTER, 1782.

own judgment, he thought could not be too strongly fecured. The artiver they had advised his majefty to return to the address of that house, was another circumfrance, affording just ground of jealoufy and diffruit. In that answer, all reference to the profecution of offenfive war was cautiously avoided; the house was informed, in general terms, that he should take such measures, as might appear to him most condrive to the refloration of peace; but the house had no reason to fuppoie, but that a more vigorous profession of the war might be dramed one of these conducive meafores. The motion, after a feeble apposition from government, was at length fuffered to pals, without a division.

These resolutions were received by the public with general demonfirations of joy; in the midft of which, the rare fortune of the right honourable gentleman, who took the lead in this business, was much envied and admired, in having thus, a fecond time, given peace to America, and happily put a flop to the alarming progress of those dreadful calamities, which he had before, but unfortunately in vain, shown the way to pre-'vent.

Whilst these great March 6th. and important questions were agitating in the Com-. mons House, the conduct of government, with respect to the late campaign in North-America, underwent a ilrict and fevere forutiny, in a committee of the lords. After several intermediate debates, which chiefly turned on the propriety of producing certain papers and documents from the

public offices, the business was, at length, brought to a conclusion, on a motion by the Duke of Chandos, " that it was the opinion of " the committee, that the imme-" diate cause of the capture of the " army under Earl Cornwallis, in " Virginia, appeared to be the " want of a fufficient naval force, " to cover and protect the fame." This motion was negatived, by a

majority of 72 to 37.

The manly and public-spirited language held by the minister in the debate of the 27th of February, had raised a general expectation, that the loss of the question on that day, and the fubfequent measures of the 4th of March, would have been followed by his immediate refignation. It can scarcely be doubted, from the daily mortifications to which his continuance in office exposed him. and the extreme improbability of his being able to regain the ground he had loft, but that this would have been the cafe, had he not been induced, by other causes, to act contrary both to his principle and inclination. The crisis was doubtless, in the utmost degree, alarming to the court. Had a mere personal change of ministers been the point at iffue, it is probable, that little ceremony would have been used in gratifying the wishes of parliament. But it was well understood, that a commete revolution in the internal policy of government, would be the inevitable consequence of their removal; a revolution not less important in its effects, nor less dreaded by the court, than any other which the nation had before experienced.

It was therefore very generally Jupposed,

supposed, that the noble lord at the head of the Treasury was prevailed on to continue in a fituation, that was neither honourable to himself, nor without injury to the country, till every means were tried, of averting what was confidered as the most dreadful of The obscure language which he held, when pressed on that ground in the House of Commons, afforded a ftrong prefumption of the truth of this fuppolition. He declared, at different times, that he kept his poll from a principle of gratitude, and not from inclination; that he remained in his employment to prevent confusion; that he should quit it as foon as he could retire with honour; but that particular circumstances stood in the way at present, which he could not farther explain. It was to no purpose, that the indecency of his clinging to office, under the circumitances in which he then flood, and after the declaration he had himself made, was, day after day, urged by opposition with an unusual degree of acrimony; he contented himself with retorting on his adversaries their indecent impatience to get possession of his employments; and with defending himself on the latter part of the charge, by faying, that though parliament had interfered by its advice, and had taken a stronger measure, than he thought necesfary, for fecuring obedience to it, yet it did not appear, from any vote or refolution they had yet passed, that the house had totally withdrawn its confidence from the present administration.

March 8th. To bring the matter to this iffue, the following refolutions were moved by

Lord John Cavendith, and feconded by Mr. Powys.

"That it appears to this house, that fince the year 1775, upwards of one hundred millions of money have been expended, on the army and navy, in a fruitless war.

"That it appears to this "house, that during the above period, we have lost the thirteen colonies of America, which anciently beionged to the crown of Great-Britain, (except the posts of New-York, "Charles-Town, and Savannah) the newly acquired colony of Florida, many of our valuable West-India and other islands, and those that remain are in the most imminent danger.

"That it appears to this "house, that Great-Britain is at "prefent engaged in an expensive war with America, France, "Spain, and Holland, without a single ally."

"That it appears to this "house, that the chief cause of all these missortunes, has been the want of foresight and abi"lity in his majesty's ministers."

The debate, as far as related to the merits of the queition, lay within a fmall compair. In fupport of the conclusion drawn in the last resolution, (for the facts contained in the three first, were admitted on all fides) it was argued, in the first place, that a long and uninterrupted feries of misfortune and diffrace was in itself a sufficient proof of missionduct; and fecondly, that the deparate measures of administration were so strongly marked with weakness and folly, as so carry their own condemnation on the face of thom. On the other fide.

174] ANNUAL REGISTER, 1782.

it was contended, that misfortune could not be allowed to infer mifcenduct; and that even granting this, those who planned measures were not folely responsible for them. The fault might be in the execution; and therefore, it would ill become the justice of the house, to proceed to a partial censure, without any previous hearing, or enquiry.

This ground, however, appeared fo weak, even to the friends of administration, that it was almost entirely deferted, except by the ministers themselves, and the question was taken up with great art and ingenuity on other topics. It was faid, that the motion being intended to operate as a vote for the removal of the present miniftry, the house would do well, before it adopted fo ferious a meafure, to take a view of the principles and opinions of those, who most probably would be their succeffors. It was asked, if the house was ready to vote the Independence of America? If it was prepared to new-model the constitution; to alter the duration of parliaments, and the rights of election? Would it be willing to give up its exclusive privilege of framing money-bills; or was it curious to fee the effects of those latent powers, which a noble earl had, in the course of his reading, discovered to exist in the House of Peers? Would it confent to a

lift expenditure?

It was then demanded, whether that harmony and concord sub-fished amongst the new candidates for power, the want of which had

violation of the national faith with the crown, by adopting a cele-

brated bill of reform in the civil

been so often and so vehemently urged against the present adminittration? How would the inflexible spirit of a noble earl, who had pledged his word in the other house, that he would under no circumstances confent to the independence of the colonies, be brought to bend to the opinion of those who seemed so ready to acknowledge it? The fame noble person had declared, that he should always wish to fee the king his own minister; a doctrine of no trifling political importance, and yet, which would found very heretical in the ears of most of his friends, on the opposite side of the house. With respect to the different sects of political reformers, they were equally numerous, and more at variance with each other, than those of religion.

These topics were urged with great eloquence and ability, by Mr. Adam and the Lord Advocate of Scotland; the latter of whom called particularly on the member for Westminster to declare, whether, in cafe he should find himfelf, when minister, in a minority, he would pay that deference to the opinion of the house, which he had fo loudly called for from the noble lord; or whether he would not appeal to his other parliament out of doors, and tell them they were betrayed by their representatives. It nearly concerned the house, he faid, to have these various matters well and thoroughly understood, before they proceeded to discharge the prefent ministers from their offices, and throw the whole government of the country into the hands of their opponents.

In defence of his principles and

conduct against this personal attack, Mr. Fox observed, that there was a material difference between a private member appealing to his constituents, or to the nation at large, whose agent he was in parliament, and a fervant of the crown, holding an office at the will of the king, attempting to appeal to them, in that capacity, against parliament. The former he should still contend was in the true spirit of the constitution; the latter, he should as explicitly condemn as subversive of the whole order of it.

The debate lasted till past two o'clock in the morning, when the house divided on the order of the day, which had been moved by the secretary at war, and which was carried by a majority of 10.

The interval be-March 15th. tween the eighth and the fifteenth was generally supposed to have been employed in various unsuccessful attempts to divide the party in opposition. On the latter day, a motion was made by Sir John Rous, and feconded by the younger Lord Geo. Cavendish, in which, after reciting the facts contained in the resolutions moved on the eighth, it was proposed to resolve, that, on consideration thereof, the house could have no farther confidence in the ministers, who had the direction of public affairs.

In the debate, the necessity of fome new arrangement in the administration of public affairs was no longer denied; but the impolicy, and even the danger of throwing the country entirely into the nands of any party, was still strongly contended. A coalition was loudly called for by many mo-

derate and independent members. and the propriety of leaving the noble lord at the head of the treafury, in possession of his office, till fuch a measure could be accomplished, was much insisted on. The noble lord himfelf was observed to fpeak with confiderable emotion and embarrassment, to which the peculiarity of his fituation, and the violent perional attacks to which it exposed him, must, doubtless, have much contributed. He entered into a long and able defence of his own conduct, after which, he folemnly declared to the house, " that he neither was, nor would " be any obstacle to a coalition " of parties, or to the formation " of any new administration, from " which he might be totally ex-" cluded."

On the other fide, it was urged, that the bait of a coalition had been thrown out by the court merely for the purpose of delay, and giving room for intrigue and cabal; and that, in order to secure to the nation the advantages, which it was now universally admitted, would arise from a total change in the public councils, it was necessary not to relax, for a moment, the vigorous pursuit of such measures, as could not fail of being speedily crowned with success.

On this occasion, the whole strength of both parties was mustered. Near four hundred and eighty members were said to have been present in the house; and on the division, the question was negatived by a majority of only 9.

After the division, notice was given, that a motion, to the same effect, would be made, on the Wednesday following.

1767 ANNUAL REGISTER, 1782.

On that day, the March 20th. house being again uncommonly crowded, the Earl of Surrey got up to make the promifed motion; but Lord North rifing, at the same time, for the purpore of communicating to the house some information, which, he faid, might make any farther proceeding in the intended business unnecellary, and would require an adjournment, great diforder and confusion enfued, the members in opposition calling cut violently for "Lord Surrey," and "No ad-"journment." As foon as the house was reduced to order, it was moved, " that the Earl of Surrey " be now heard," when Lord North, having now obtained a right to freak to the question, observed, that had he been suffered to proceed before, he believed much unnecessary heat and disorder would have been prevented. He meant no difrespect to the noble earl; but as notice had been given, that the object of the intended motion was the removal of his majesty's ministers, he meant to have acquainted the house, that such a motion was become unnecessarv. He could affure the house, with : uthority, that the prefent admi. fi ation avas no more, and that his majelly had come to a full determination of changing his ministers; and

it was for the purpose of giving the necessary time for new arrangements, that he meant to have moved for an adjournment.

for an adjournment.

The noble lord then took his leave of the house as minister, by thanking them for the honourable fupport they had given him, during so long a course of years, and in so many trying situations. He expressed his grateful sense of their great partiality towards him on all, and their forbearance on many occasions. A successor of greater abilities, of better judgment, and more qualified for his fituation, he faid, was eafy to be found; a fucceifor more zealoufly attached to the interests of his country, more anxious to promote them, more loyal to his fovereign, and more defirous of preferving the constitution whole and entire, he might be allowed to fay, could not so easily be found. He concluded his speech, after declaring that he did not mean to shrink from trial, that he should always be prepared to meet it, that he even demanded it from his adverfaries, with moving the question of adjournment.

After a little hefitation on the part of opposition, it was agreed to withdraw the first motion, and to adjourn to the Monday fol-

lowing.

HISTORY OF EUROPE. [177

C H A P. VIII.

New Administration formed under the Marquis of Rockingham. Public measures stipulated for. Recess of parliament during the Easter holidays. Debate on the affairs of Ircland. Message from the king, and address. Address from the Parliament of Ircland. Repeal of the act of the 6th of Geo. I. Address of thanks from the Irish House of Commons, and vote of scamen. Revoard voted for Mr. Grattan. Farther proceedings in the English parliament. Revenue Officers and Contractors Bills pass both houses. Bill of reform in the civil list expenditure. Bill for regulating the office of Paymaster-General of the Forces. Motion for respecting the resolution relative to the Middlese election carried. Motion by Mr. William Pitt, for a committee to enquire into the state of the representation in parliament, rejected, upon a division. Resolutions respecting Exchequer, and other offices. Death of the Marquis of Rockingham. Changes in the ministry. Debates on the subject, in both houses. Short state of the proceedings on the Reports of the India Committee. King's speech.

URING the adjournment of the House of Commons, the new administration was formed under the auspices of the Marquis of Rockingham; on whose public principles, and private honour and virtue, the nation feemed to repofe, after the violent struggle by which it had been agitated, with the fecurest and most implicit con-The cabinet, including fidence. kimfelf, as first commissioner of the treasury, was composed of the Earl of Shelburne and Mr. Fox, who were appointed fecretaries of state; Lord Camden, president of the council; Duke of Grafton, privy-seal; Lord John Cavendish, chancellor of the exchequer; Admiral Keppel, who was also created a Viscount, first commissioner of the admiralty; General Conway, commander in chief of the forces; Duke of Richmond, mafter-general of the ordnance; Lord Thurlow, who was continued in his office of lord high chancellor; Vel. XXV.

and Mr. Dunning, created Baron Ashburton, and made chancellor of

the dutchy of Lancaster.

The public measures, for which the new minister was said to have stipulated with the court, before he would confent to enter into any negociation for office, were these; 1. Peace with the Americans, and the acknowledgment of their independence not to be a bar to the attainment of that object;-2. A fubstantial reform in the several branches of the civil lift expenditure, on the plan proposed by Mr. Burke; - 3. The diminution of the influence of the crown, under which article the bills for excluding contractors from feats in parliament, and disqualifying the revenue officers from voting in the election of members, were included.

The new arrange- March 28th, ment having been announced to the house, and the writs moved for such gentlemen [M]

178] ANNUAL REGISTER, 1782.

as had vacated their feats, by accepting offices, the house adjourned, on account of the ensuing holidays, without proceeding to any other business.

On the first day of April Sth. liament, after the receis, as foon as the re-elected members were fworn in, the affairs of Ireland were unexpectedly brought before the house, by Mr. Eden, who, having been fecretary to the Earl of Carlifle, Lord-Lieutenant of that country, was just arrived from thence, with his refignation of the Vice-royalty. This gentleman, after taking a view of the political history of Ireland, during the two last years, acquainted the house with the meafures which (he faid) were then forming, for rendering it totally independent of the British legislature; and concluded, with moving for leave to bring in a bill to repeal so much of the act of the 6th of Geo. I. as afferted a right in the king and parliament of Great Britain, to make laws to bind the kingdom of Ireland.

The precipitation with which a business of such magnitude and importance was thus attempted to be forced on the house, without precious communication with any of his majesty's ministers, or knowledge of their intentions, was feverely censured, and the more especially, as it appeared that the right honourable gentleman had refused to give any official information to government, relative to the state of the country he had Mr. Eden, just left. though loudly called on to withdraw his motion, perfifted in urging its necessity, and, in vindication of

his own conduct, stated, that the reason of his refusing to have any communication with his majesty's present servants, was the great want of attention to the Earl of Carlisle, which they had shewn in the mode of appointing his fuccessor, and in his removal from the lord-lieutenancy of the Eastriding of Yorkshire. This apology ferved rather to increase the displeasure of the house; a motion of censure on his conduct was threatened, and it was with great difficulty he was at last brought to comply with the general wish of the house, in withdrawing his motion.

Mr. Fox informed the house,

in the course of this debate, that

the ministers of the crown, during

the thort time they had been in

office, had actually held three or

four councils, folely on the affairs

of Ireland, and that he hoped very foon, perhaps within the next four-and-twenty hours, to lay fome preparatory measure before them.—Accordingly, on the next day, he brought April 9th. a message from his majesty, to inform the house, "that being concerned to find discontents and jealousies pre-" vailing amongst his loyal sub-" jects in Ireland, on matters of great weight and importance, "he earnestly recommended to " the house to take the same into " their most ferious consideration, " in order to fuch a final adjust-" ment, as might give mutual " fatisfaction to both kingdoms." A message to the same effect, was delivered to the lords, the first day of their meeting, and addresses were unanimously voted by both houses.

Ιţ

HISTORY OF EUROPE. [179

It being the declared intention of administration to proceed in this arduous business, in concert with the parliament of Ireland, a message, conceived in the same terms with those presented to the English houses, was sent by the Duke of Portland (who was appointed to succeed Lord Carlisse) to the commons of that kingdom, immediately after his arrival to take upon him the government.

The address to the King, in consequence of this message from the lord-lieutenant, was moved by Mr. Grattan, the great and eloquent leader of the popular party. This address, after a full and explicit affertion of the independent rights of the kingdom of Ireland, proceeded to state the causes of those jealousies and difcontents which had arisen in that country; viz. the act of the fixth of George the First; the power of suppressing or altering bills in the privy council; and the perpetual mutiny bill. It concluded with expressing their most sanguine expectations from his majesty's virtuous choice of a chief governor, and their great confidence in the wife, auspicious and constitutional counsels which they had the fatisfaction to fee his majesty had adopted.

On the ground of this address, the repeal of the act complained of, was moved by the two sccretaries of state, on the same day, (May the 17th) in both houses of the British parliament. The other two points lying between the parliament of Ireland and the king, it was only resolved, in the House of Commons, "that it was essentially necessary to the mutual happiness of the two countries,

"that a firm and folid connection "fhould be forthwith established, by the consent of both, and that his majesty should be re"quested to give the proper direc"tions for promoting the same."

These motions passed, after a fhort conversation, without any opposition; and, on the 27th of the fame month, the Dake of Portland went in state to the Irish. House of Peers, and, in a speech to both houses of parliament, acquainted them with the steps that had been taken by the British legislature, in compliance with their demands, and with his majesty's gracious intentions to give his affent to acts for preventing the fuppression or alteration of bills in the privy council, and for limiting the duration of the mutiny act to the term of two years. In answer to this speech, a second address to the king was agreed on, by both houses, expressing their perfect fatisfaction in the meafures proposed, and their assurances, that as soon as they should be carried into effect, no constitutional question between the two countries would any longer exist.

In return for this liberal procedure of the British government, in relinquishing its claims without any flipulation or condition whatever, the parliament of Ireland immediately voted 100,000l. for the purpose of raising 20,000 Irish feamen, for the fervice of his majesty's navy. The fum of 50,000l. was also voted, " for " purchasing an estate, and erect-" ing a mansion thereon, to be " settled on Henry Grattan, Esq; and the heirs of his body, as a " testimony of their gratitude, " for the unequalled benefits con-[M] z

180] ANNUAL REGISTER, 1782.

"ferred by him on that king."

Whilst measures were thus happily pursuing, for restoring order and tranquillity in the fifter kingdom, administration was not less anxiously intent on maturing and bringing forward those plans of economy and reformation at home, for the execution of which they flood pledged to the public. bills for disqualifying revenue officers from voting in the election of members of parliament, and for rendering contractors incapable of fitting in the House of Commons, paffed the lower house, after a feeble opposition. In the House of Lords they were more strenuously combated, by the Lord Chancellor, the Earl of Mansfield, and other lords; but at length were carried by very large majorities, and received the royal affent.

At the fame time that thefe bills were in their progress, the great plan of reform in the civil list expenditure was again brought forwards by Mr. Burke, who, upon the recent change of administration, had been appointed Pay-Master-General of the Forces. This important object, in which the principles of future economy were combined with the abolition of an enormous weight of influence, in both houses of parliament, was introduced by a mef-April 15th. fage from the king, in which he recommends to the house, " the confideration of an " effectual plan of economy, "through all the branches of " the public expenditure; and ac-" quaints them, that he had taken " into his actual confideration, a " reform and regulation in his

" civil establishment, which he "would shortly cause to be laid before the house, and desiring their assistance towards carry-"ing the same more fully into execution. He declares he has "no reserve with his people, on whose assections he rests with a store reliance, as the best sup-"port of the true honour and dignity of his crown and go-"vernment."

The address was moved by Mr. Burke, and feconded by Mr. Powys, who both spoke with signs of great emotion, declaring themselves unable to give ut-terance to the feelings, which so happy and glorious an event had excited. The papers mentioned in the message, were not laid before the house until the beginning of May, when Mr. Burke was called to the chair of the committee, appointed to take them into confideration, and was directed to move the house for leave to bring in a bill, to enable his majesty to pay off the debt on his civil list, to prevent the like in future, and to carry into a law the retrenchments which his majestv had graciously proposed to make in his household.

This bill being a part of that large and comprehensive plan of regulation, which had been submitted to parliament, by Mr. Burke, two years before, it is unnecessary to enter into a detail of it, on the present occasion. It shall suffice to remark, that a number of offices, usually held by members of parliament, were now abolished; and that the annual saving arising from this retrenchment, and which would be yearly increasing, amounted to 72,368 l.

Ιţ

It being made a subject of complaint by some members, but especially by those who had formerly opposed the bill in toto, that it was not so extensive as it had been originally framed, Mr. Burke entered into the grounds of those omissions, which had been made either from a compliance with the opinions of others, or from a fuller confideration of the particular cases. At the same time he pledged himfelf, that he fhould at all times be ready to obey their call, whenever it appeared to be the general fense of the house, and of the people, to undertake, and go through with, a more complete system of re-

This bill was followed by another, for the regulation of his own office. The principal object of the latter act, was to prevent the possibility of any balance accumulating in the hands of the paymaster - general. These, he faid, had fometimes amounted to the enormous fum of 1,000,000 l. the interest of which would be annually faved to the public. He also stated, that as Treasurer of Chelsea Hospital, he enjoyed the profits arifing from the cloathing of the pensioners. The profit of this contract had usually amounted to 700 l. a year; but by the bargain he had made with a contractor, who was not a member of parliament, it would amount to 6001. more. This fum of 13001. a year, he meant to resign his claim to, and to appropriate it to fome public fervice.

May 3d. A motion was made by Mr. Wilkes, for expunging from the journals of the house, the famous resolution of the 17th of Feb. 1769, relative to the Middlefex election. Mr. Wilkes, after fo long a fuccession of annual defeats, now triumphed at last; there being, on the division, ages 115; noes 47. Both Mr. Fox and Lord North spoke and voted against the question.

On the feventh, Mr. May 7th. William Pitt brought the subject of a reform in the conftitution of parliament again before the house. The insuperable difficulties that had occurred in bringing the friends of fach reformation to agree in any specific proposition, induced him on the present occasion to vary the mode of proceeding, and to move, " that a committee be appointed " to inquire into the state of the " representation in parliament, " and to report to the house their " fentiments thereon." The debate was long, and ably supported, by the mover, Mr. Sawbridge, Sir George Saville, Mr. Fox, and others, on the fide of a reform; by Mr. Powys, Mr. Thomas Pitt, and the Lord-Advocate of Scotland, against it. On a division, the motion was rejected by a majority of 161 to 141.

The lateness of the June 18th. feason not affording time for the completion and perfection of all the plans of reform and regulation, which were in the contemplation of the new ministry, in order to prevent their being neglected or forgotten in any subsequent change of circumstances, Lord John Cavendish moved, in a committee of the whole house, ten resolutions, the grounds of which, as well as the intentions with which he acted, will best appear from the following, by which they were closed. " That

[M] ; " i

182] ANNUAL REGISTER, 1782.

" it appears to this committee, " that it is too late in the present " fession of parliament, to carry " into effect a well confidered and " permanent regulation in the " feveral offices mentioned in the " foregoing refolutions; but that " it will be highly necessary, for " the advantage of the public, " for the increase of the revenue, " and for the honour of this " house, that early in the next " fession of parliament, this house " fhould enter upon the confider-" ation of these subjects, and " should adopt such measures in " the reduction or regulation of " useless or expensive offices, as fhall appear most consistent with " that plan of economy recomer mended to this house by his " majesty, in his message of the 15th of April last, and which " has been fo graciously adopted 66 by his majesty, in the reform and regulation of his civil " establishment."

The first of these resolutions related to the collection of the land, house, and window taxes. The fecond, to the confolidation of various tax offices. The four following, to the offices of the paymaster-general, and the treasurer of the navy. The feventh and eighth, to the regulation or abolishing of fundry offices in the Exchequer. 'The last, was a felf-denying resolution, by which the minister bound himself, in case of a vacancy in any of the afore-recited offices, during the enfuing prorogation of parliament, not to difpose of the same, without subjecting them to the future regulations of ti at house.

Whilst parliament was thus successfully engaged in prosecuting the most effectual measures, for the fecurity of its own independence, for healing the breaches of the constitution, and relieving the burdens of the people, an heavy calamity was approaching, which again darkened the prospect, that had fo happily opened to the natien. This was the lofs of the Marquis of Rockingham; whose health had been for fome time gradually declining, and, length, funk under the increasing weight of public cares and bufiness.

The first step taken by the Court, after his death, which happened on the 1st of July, was the appointment of the Earl of Shelburne to be his fuccessor in the Treasury: Lord John Cavendish and Mr. Fox soon afterwards refigned their offices, and were followed by the Duke of Portland; by Mr. Montagu and Lord Althorpe, from the Board of Treafury; by Lord Duncannon and Mr. J. Townshend, from the Admiralty; by Mr. Burke, and by Mr. Lee the Solicitor-General. Mr. William Pitt was made Chancellor of the Exchequer; Mr. T. Townshend and Lord Grantham, Secretaries of State; Mr. Pepper Arden fucceeded Mr. Lee; the Lord Advocate of Scotland fucceeded Mr. Barré, who was removed to the Pay-office; and the Earl of Temple was appointed to the Lord-Lieutenancy of Ireland.

The fecession of such a weight of talents and integrity from the service of government, could not be regarded with indifference. The motives, which were supposed to have actuated them, were variously represented; and some infinuations being thrown out,

highly

highly injurious to the public character of the persons concerned, the first opportunity was taken of bringing the subject to an open discussion in the House of Commons.

Accordingly, a debate July 9th. having arisen on a motion relative to the penfion granted to Mr. Barré, the divisions that had prevailed amongst his majesty's servants were strongly retorted on those who had formed the last, by a member of the old administration, and this discord was alledged to be the more culpable at present, on account of the very critical and alarming fituation of the country. On this occasion, Mr. Fox faid, that he had undoubtedly been amongst those, who condemned, in the strongest terms, the want of unanimity and mutual confidence amongst the members of that cabinet. But, it was not for their having entertained different opinions from each other, that he blamed them. He had condemned the noble lord in the blue ribbon, for remaining in place when he found himself at the head of distracted councils, and for becoming responsible for meafures, of which he did not approve.

After having thus censured that minister for continuing in office, under such circumstances; after having so often, he said, charged him with the baseness and criminality of his conduct, he asked, what remained for him to do, when he found himself in a similar situation? He could not, for obvious reasons, enter into a detail of the matters, on which a difference of opinion had arisen between himself and others, who had retired from,

and those who remained in the king's councils. He could only say, that they were points of the first and most effential importance; and that he should confider himself as guilty of the most direct treachery to his country, if he had lent his name and support to an administration, that had abandoned the principles on which it was formed.

Mr. Fox was followed by Gen. Conway, who, after lamenting the fatal event that had deprived the country of the benefit of the fplendid abilities of his right honourable friend, at a time when their value and confequence were beginning to be felt, observed, that he could not, however, concur in opinion with him; that there was fuch a disagreement in the cabinet, as to justify him in withdrawing himfelf from When eleven ministers were asfembled in council, it was impossible but that some shades of difference in opinion should exist; but he denied that any of the fundamental principles, which that administration been formed, by the virtuous and incomparable person, now no more, had been in any degree departed from. After enumerating thefe principles, and averring that he should rest satisfied, to be pronounced the most infamous of mankind, if he should continue to act a moment with a minister, who should depart from any one of them; he concluded with remarking, that, for his part, he looked at measures only, and not men; and that he would never take a part in, or feramble or quarrel for, places, or for power.

This called up Mr. Fox again, who begged the house would ex-

184] ANNUAL REGISTER, 1782,

cufe him for rifing a fecond time, to exculpate himfelf, not only from the heavy charge of having quitted the fervice of the public, without cause, but against an infinuation of having done it upon pique, and from disappointment in a contest for place and power. He faid, he was happy in being able to answer the latter charge effectually, and to appeal to the right honourable general himfelf, for the truth of his affertions. then declared, that before the death of the noble marquis, and at a time when his recovery was hoped for with great confidence, he had in a full cabinet declared his intention of refigning, if certain measures were not adopted. He was out-voted in that council; different measures were adopted; and as he looked upon those meafures to be to the last degree dangerous, he owed it to himself and to his country, not to remain any longer in a fituation, in which he could not act, without renouncing his principles, or betraying his trust with the public.

With respect to the principles which his right honourable friend had enumerated, as the political creed of the prefent cabinet, he could only fay, that was the first time of his having ever heard that the Earl of Shelburne had fubscribed to those articles of faith. On the contrary, the first had been the very point, on which the difference of opinion alluded to fubfifted. If the noble earl and the cabinet had fince that time been induced to adopt a different fustem of measures, he was happy to find that he had much more weight in the cabinet when out of office, than he ever had in it.

He was also unhappy to say, that there were other most material points on which he and his friends differed with the Earl of Shelburne. That noble person was inclined to skreen from justice and punishment those delinquents, who had destroyed our possessions in the East, and who had involved us in those calamities, which that house was labouring so earnestly to remedy. He had been described as a friend to the reduction of the influence of the crown; but had he not at the fame time threatened parliament with the exercise of the prerogative of its negative. With respect to the objects of Mr. Burke's bill, who that had heard the noble person's loud speeches, did not know, that he professed to treat that bill with the utmost contempt, and called it trifling and infignificant? It was indeed an infant, a pigmy, in comparison of the promises of that noble earl; but he was convinced it would be a giant in comparison of his performances.

This brought him to state another reason for his retiring, which, he faid, he fhould not difguife; and that was the appointment of the Earl of Shelburne to the office of First Lord of the Treasury. was naturally to have been expected, in an administration formed on the principles, on which that great body of Whigs, who had attached themselves to the Marquis of Rockingham, had uniformly acted, that on the decease of that great person, whose virtues had kept them so long bound together, the man would be fought and appointed to fucceed him, who most resembled him in character, in influence, in popularity; fuch at

leaf

least were his ideas; and the eyes, he believed, of all men, were naturally turned to the Duke of Port-Instead of this noble perfon, the Earl of Shelburne was felected, of whom he could not truly fay that he bore any refemblance to his predecessor; perhaps the exact reverse might come near the picture. He did not mean to difpute the right of the King to nominate his own minister; but he contended that those who went into office on public principles, not only had a right, but that it was their duty, to be satisfied, that none were introduced into the cabinet who were hostile to those principles. If the court chose to revert to other principles, it was certainly competent fo to do: but it could not be expected that those persons should suffer themselves to be made accessaries in reviving a fystem, which it had been the labour of their whole lives to deftrov.

It would naturally be asked, why then, thinking as he did of the Earl of Shelburne, he had ever come with him into office at all? To this he should answer, that he had strongly objected to it; that he had made the same objection to another noble person (the Lord Chancellor); that he had been induced to submit by the general cry that prevailed of forming the administration on as broad a basis as possible; but at the same time, he had a satisfactory pledge for the integrity of that administration in the noble marquis at the head of The right honourable gentleman might, but he could not, regard with indifference, who took the lead in his Majesty's councils. He deemed it a great and national

object, of infinite moment to every individual, but much more to those who were in the service of the crown, and still more so to one of his Majesty's cabinet ministers. The person now presiding at the treasury board was not of a description to demand that confidence from his colleagues, which in such a situation was indispensable.

These, and a variety of other arguments of a fimilar kind, were strongly urged by Mr. Fox in justification of the part he had acted. He concluded with observing, that in the particular fituation in which he stood, several circumitances opposed themselves to a full vindication of his conduct. It was none of the least, that he did not think himself at liberty to speak so freely and fully as he had accustomed himself to do on other occasions. Details would in this case be improper; and yet, without a very circumstantial devail of facts, fuch as he did not think it became him at that time to give, he was fenfible his defence would not be fo strong and complete, as otherwife it was eafy to have made it.

After Mr. Fex, Lord John Cavendish got up and contented himfelf with declaring in general terms, that finding a different system was meant to be pursued from that on which the late adminishation had been formed, and finding it impossible by his presence to prevent it, he had determined to withdraw, that he might not divide the cabinet, and render it the seene of consumon it had been in the time of their predecessors.

Mr. William Pitt arraigned the conduct of the late fecretary of flate in the feverest terms. It was evi-

dent,

dent, he faid, from the whole tenour of the right honourable gentleman's speeches, that he was more at variance with men than He denied that their measures. he had adduced any public ground on which his refignation was juftifiable. He deprecated the fatal confequences of differtion. conjured the people to give the ministers their confidence till they had shewn they did not deserve it; and he pledged himself, in the most folemn manner, that, whenever he faw things going wrong,

he should first endeavour to set

them right; but failing in that

effort, he should be the first to re-

linquish his present political con-

nections. This conversation, which continued to a late hour in the night, was closed by Mr. Lee. He faid, he held it to be the duty of every honest man to refign his office the moment he found public measures were carrying on of which he could not approve. The appointment of a minister unqualified for his fituation was undoubtedly a meafure of that kind. He had heard much of diffention, but he had not seen one person step sorward to fay the Earl of Shelburne was a fit and proper person for the high office he held. If there was any fuch person, he wished to hear him.

The noble earl to be fure poffessed fplendid talents, had some friends, and was now in a way to make more. But the minister of this country should have other endowments. He should join to a found head, a purity of mind, a Readiness of principle, and an unsuspected integrity. Were these, he demanded, the reputed charac-

terificks of the nobleman just exalted to the principal department of the state? To put him at the head of affairs in this plain and open-hearted country, was to put him our of his element. people of England were incapable of finesse, and not fond of submitting to the government of those who practifed it. The treasury too required a fober, honest, industrious, steady commissioner at its head. It was not an oftentatious affectation of uniting the man of science and the fine gentleman; the technical jargon of arts, and the gibberish of courts; the pedantry of scholastick nostrums, and the abstruse theorems of mechanism, that would create respect and consequence in that Who knows not, high office. fays he, how eafily a head filled with fuch materials may be turned upfide down? He concluded with fome obfervations on the youth and inexperience of the new chancellor of the exchequer, to whose extraordinary abilities he, nevertheless, paid the highest compliments. He faid, there was an obvious intention of trifling with the people by bringing forward one of their favourites as a compensation for infulting another; but though the honourable gentleman would adorn any fcene in which his part was properly cast, yet he did not think the confidence of the people would be much increased, by putting the complicated business of our finances into the hands of a boy.

Next day the fame interesting subject was discussed in the House of Lords. The Duke of Richmond followed General Conway in declaring, that folong as the great principles on

which

HISTORY OF EUROPE. 187

which the late administration had been formed was adhered to, (and he had no reason to imagine they would be abandoned) he should continue to act with and support the noble earl.

The Earl of Shelburne rose next, and made a copious defence of himself and the late proceedings. He declared, that his being placed in the high office he then held, had not been the confequence of personal ambition or the love of power; on the contrary, he affirmed that three months ago, the same fitua ion was most certainly within his reach, but that he had exerted his utmost efforts to place the noble marquis there. To the principles on which that administration was formed, he folemnly professed the most inviolable attachment. was true, he faid, that he differed in opinion on other points with fome of his then colleagues; but it would not be expected that he fhould lightly give up all those constitutional ideas, which for seventeen years he had imbibed from his master in politicks, the late Earl of Chatham. That earl had al-ways declared, that this country ought not to be governed by a party or faction. If the power which others wished to assume, of vesting in the cabinet the right of appointing to all places, and filling up all vacancies, should once be established, the King must then refemble the King of the Marrattas, who had nothing of fovereignty but the name.

He lamented the loss of the two respectable characters, that had withdrawn themselves from the distinguished for the purity and chastity of his mind, and for his unimpeached integrity, had at first been brought with difficulty into the public fervice. His love of retirement rendered him extremely averse from office, and on the death of his lamented friend, he could no longer endure to remain in an active scene. With respect to the other right honourable gentleman, he declared, that in his opinion there was no other reason for his fecession, than his Majesty's having been pleafed to appoint him (the Earl of Shelburne) first lord of the treasury.

On the fulject of the independence of America, his opinions were still the same; but circumstances had changed; and he now faw it was become a necessary evil, to which this country must submit, to

avoid a greater.

With respect to the pension granted to Mr. Barré, he could only fav that it originated with the noble marquis, now no more, and that it had been bestowed on his right honourable friend as a compenfation for giving up his pretensions to the pay-office. As a proof of this, he had a letter in his possession from that noble perfon, in which the proposal was contained.

The day following, July 11th. before his Majerly came to the House of Lords, the Earl of Derby got up, and faid, that in confequence of what had fallen from a noble earl the day before, respecting the resignation of one of the secretaries of state, he had been authorifed by the right hocabinet, but imputed their conduct . nourable gentleman to declare, to very different motives. One that the affertion then made was of them, he faid, a noble lord not founded in fact, but on the

contrary

contrary was a direct deviation from the truth.

Having called on the other members of the cabinet to confirm or contradict these affertions, the D. of Richmond and Lord Keppel, declared, that the right honourable gentleman alluded to, had undoubtedly differed in opinion from other members of his Majesty's council, on subjects of the utmost importance; and that finding himfelf in a minority, he had openly avowed his intention to refign on that account, at a time when the health of the Marquis of Rockingham was in fo flattering a state, as to make the event, which was supposed to have given rise to the contest for power, not at all to be apprehended.

The fame day, in the House of Commons, Mr. Burke and Lord John Cavendish denied, in the most direct terms, the truth of the circumstances relative to the grant of Mr. Barré's pension, as well as their belief of the existence of the

letter . "luded to.

The limits within which it is necessary to confine this volume, have not permitted us to enter into a detail of the proceedings of the House of Commons relative to the affairs of the East-India Company. The two committees continued to fit during the whole fession with unremitted diligence and applica-Their reports were voluminous beyond example, and univerfully allowed to be drawn up with the greatost ability and judgment.

On the ground of the reports brought up from the fecret committee, the Lord Advocate of Scotland, their chairman, moved 111 resolutions. These were divided

into classes, each of which consisted of three diffinct heads; the two first, of a public and general nature; the third, of personal culpability. The first class regarded the general system of our government in the East, and concluded with a fevere centure on the conduct of Mr. Hastings and Mr. Hornsby, and a declaration that it was the duty of the directors to take the neceffary legal steps for recalling them. The reports of the felect committee had not advanced to the fame state of forwardness. refolutions moved by their chairman, General Smith, were only The three first ten in number. were to censure the conduct of Mr. Sullivan the chairman of the court of directors, by whose neglect of duty in delaying to transmit the act for the regulation of the company, to their fervants in India, the good purposes of the said act for regulating the judicature, and relieving the three unhappy native judges confined in prison at Calcutta, might be fruitrated. two following were censures on the fame Mr. Sullivan, for adminiftering an oath of fecrecy to one of the fecretaries of the company, restraining him from giving information to the committee. next three related to the appointment of Sir Elijah Impey, by Mr. Hastings, to an office held at the will of the governor-general, contrary to the intent of the act of the 13th of his prefent Majesty, for the regulation of the East-India Company.

HISTORY OF EUROPE. [189

Company. On these resolutions, an address to his Majesty was agreed to by the house, to recall the said Sir Elijah Impey. The two last were for the purpose of bringing in a new act to ascertain the power of the governor-general and council of Bengal; and to reduce into one act the several acts

made for the regulation of the company, and to amend and explain the fame.

The King's speech, at the prorogation, which took place on the 11th of July, turned on the usual topicks, and kept entirely free from any allusion to the politicks of the time.

C H A P. IX.

Retrospective view of affairs in North America and the West-Indics, in the year 1781. South Carolina. Battle at the Eutaw Springs. Col. Stuart, with the British forces, retires to Charles Town. Island of St. Eustatius surprized and taken by the Marquis de Bouille. Dutch settlements of Demerary and Essequibo recovered by France. Marquis de Bouille invades the Island of St. Christopher's, with 8,000 men, in the beginning of the year 1782, and is supported by the Count de Grasse. with a great fleet. Gen. Fraser and the Governor, with the few troops on the island, retire to Brimstone Hill. Gallant attempt made by Admiral Sir Samuel Hood, with a very inferior force, to save the island: draws the enemy out to fea, and then feizes the anchorage ground in Baffeterre Road, which they had just quitted. French fleet repeatedly attack the English squadren, and are repulsed with loss. Works on Brimstone Hill in no degree answerable to the strength of the situation. Gallant defence made by the garrison. All the attempts made by the Admiral, and by Gen. Prescot, for the relief of the place, prove inessectual. The works and buildings on the top of the hill being almost entirely desired, Gen. Fraser and Gov. Shirley are obliged to capitulate, and obtain conditions highly honourable to the garrifon, and advantageous to the island. English squadron slip their cables, and return to Barbadoes. News and Montferrat fellow the fortune of St. Christopher's. Formidable preparations by France and Spain for the invasion of Jamaica. Admiral Sir George Rodney arrives with a strong reinforcement from England, and takes the command of the sleet. Fails in his design of intercepting the French convoy from Brest. Puts into St. Lucia to resit, and to watch the motions of the enemy. Objects, and respective force, of the commanders on both sides. Perilous state of the English affairs in the lings-Indies. M. de Graffe proceeds with his fleet and a great convoy from Fort-Royal, in order to form a junction with the French and Spanish forces at Hispaniola. Is immediately pursued by Sir George Rodney. Partial engagement between the French fleet and the wan of the English, on the 9th of April. Great fra-fight on the 12th, which lasts from fun-rife to fun-fet. Gallantry difflayed on both fides. French ficet ontirely routed. The Count de Grafie taken in the Ville de Paris. Four other ships of the line taken, and one fants. Forten particulars of the ustion

ANNUAL REGISTER, 1782.

action. Cefar, one of the French prizes, blown up on the night of the battle. Admiral Sir Samuel Hood detached with a squaaron, in purfuit of the eveny. Takes two French ships of the line, and two prigates, in the Mona reffige. Sir George Roaney proceeds with the Count de Graffe and the prizes to Jamaica. Confequences of the late willows. Honours to the fuccessful commanders. Lora Rodne; returns to England, and is succeeded by Admiral Pigot. Inactivity of the opposite armies in North-America, confirmed by the refolutions of Parliament, and by the fubfequent negociations for peace.

HE natural boundaries which ferved in some degree to restrain hostility, and to throw South Carolina into two great allotments, which were respectively held by the Poyal and the American forces, could no longer produce their effect, than while equal strength or mutual weakness prevented the operation of either party. The calm which attended and fucceeded the new partition arrangement made by Lord Rawdon a little before his departure from that province, accordingly lasted no longer, than until Gen. Greene had received fach reinforcements from without, and had used such internal means in forming and disciplining the flate troops and militia of the two Carolinas, as he supposed would enable him to act with effect. As foon as these ends were attained, he marched with his forces from the high hills of Santce, in order to pass the Congaree River, and to attack Col. Stewart, who commanded the British forces then in the field.

That officer was posted at a Col. Thompson's, near M'Cord's Ferry, on the Congaree; his troops were fickly, bread was fearce, and a supply of provision was then on its way to join him. Upon this movement of the enemy, he judged it necessary, for the fecurity of his convoy, and probably other reasons, to fall back about 40 miles, to a place called the Eutaw Springs, which lie about 60 miles north of Charles Greene, however, still purfued his defign of attacking him, to which he was now farther filmulated, by understanding that Col. Stewart intended to establish a strong and permanent post at the Eutaws, (for which the place was admirably qualified) to ferve as a rampart on that fide, to a new and more contracted line of frontier. The former had paffed the river at Howel's Ferry; and upon coming to this determination, he fent back his baggage and stores to that place, and purfuing his march until he arrived within feven miles of the Eutaws, encamped in the evening at a plantation called Bardwell's ; from whence he proceeded early the next morning to attack the royal forces.

Gen. Greene's order of battle feems to have been rather peculiar; an observation by no means intended to arraign his judgment; His first line confisted only of two battalions of South Carolina, and two battalions of North Carolina militia; whilft his great strength was placed in the fecond, which was composed of three brigades of Continental troops, including two

battalions

HISTORY OF EUROPE. figt

battalions of Virginians, two of Marylanders, and three of North Carolinians. Col. Lee, with his legion, covered one flank, and Henderson, with the state troops of South Carolina, the other. Col. Washington, with his cavalry, and the state troops of Delaware, under a captain, formed a corps de reserve. Brig. Gen. Marion commanded the first line; and Sumner the North Carolina troops. No certain estimate can be formed of the amount of the American forces. The English accounts state them at about 4,000. Greene himself gives no clue; but loofely observes, that they were much inferior to the enemy in number; and in his published letter, feems studiously to reprefent the battalions in general as being " very small." The first line advanced with two threepounders, and the second with two fix-pounders.

In the merning Sept. 8th, march, Col. Wash-1781. ington, with the troops that covered the flanks, formed an advanced guard, and about four miles from the Eutaws, fell in with Major Coffin, with a detached party of horse and light infantry, who, after some string, fell back to the British main body; which, by the American accounts, was drawn up to re-ceive them, between two and three miles in the front of their camp. The action commenced at nine in the morning, and lasted four hours, without intermission. As the battle was fought in the woods, and the conflict obflinately maintained on both fides, it was subject to much vicissitude; so that different wings and parties

on each, were victors and vanquished by turns; chance, and accidental conjunction, frequently varying the fortune of the fight. It is impossible to reconcile the English and American accounts, they differ fo totally in almost every part of the relation. Both fides claimed the victory, and both had some ground for the claim; both fides held out the highest praises to their officers and men. for the eminent fervices which they performed, and the extraordinary valour they displayed, and the praise was undoubtedly, in the highest degree, merited on both. The contradictions which appear in the opposite accounts. are not to be entirely attributed to defigned mifrepresentation on either fide. The nature of the ground, contracted the sphere of observation within a very narrow compass: and report is seldom to be relied on as the basis of truth. The consequences must therefore be confidered as the best explanation of the action.

It admits of no doubt, that the conflict was exceedingly fevere, and abounded with inflances of the highest gallantry on both sides, The Americans were now inured to arms and danger; and the provincial militia, who alone led on the attack in the first line, not only fought with all the spirit, but with all the perfeverance of old and well tried foldiers. The bayonet, which had fo long been dreadful to the Americans, feems now to have become their favourite weapon. Gen. Greene particularly atributes the victory (which he claims as indisputable) to the fierce and irrelistible attack of the Virginia and Maryland

192] ANNUAL REGISTER, 1782.

troops, who, he fays, rushed on through a hot cannonade and a shower of bullets to charge the

enemy with the bayonet.

It would feem upon the whole, though not acknowledged on our fide, that the royal troops were driven back, through a continued feries of hard fighting, and with the loss of two pieces of cannon, as far as their camp. That there, as brave and experienced foldiers, still possessing their judgment and faculties, in the height of tumult, and the extremity of danger, they at once perceived, and as initantly feized, the advantages, which the strong ground they were then on afforded. A large and firong brick house, of three itories, with its adjoining offices and enclosures, was immediately occupied by a large party; another lodged themselves in an almost impenetrable coppice of rugged underwood, called in that country Black Jack; while a third took possession of a pallifadoed garden. Thus covered in front, their flanks were well fecured by a deep ravine, and other difficulties of ground.

Here then the engagement was renewed, with fresh vigour, and with greater feverity than before. The Americans brought up the two pieces of cannon they had taken, along with their own fixpounders, to attack the brick house; while Col. Washington, with the greatest gallantry, made repeated attempts to fform the All their efforts on both coppice. fides were ineffectual. The fire from the one was too fevere to be long endured; and Washington was wounded and taken prisoner, in his last attack upon the coppice. The Americans, after a fore lofs, were obliged to retreat; and having, in the eagerness of attack, pushed their guns too close to the brick house, their artillery men and officers were not only destroyed, but the fire was fo intolerable, that they could neither bring off the cannon, nor the wounded, which were within its command. Gen. Greene acknowledges, that he found it neceffary, in order to spare the effusion of blood, to draw his troops out of the reach of the English fire; but his subsequent retreat of feven miles, to his camp at Bardwell's, he attributes entirely to the want of water; a want (if real) undoubtedly of fuch a nature, as could not but be feverely felt through the course of fo long a march, fo hot a day, and so severe an action.

These circumstances afforded fair ground to the British commander, whereon to rest his claim of victory. But others were not equally concurrent; and his fituation and force did not admit, that the consequences of the action fhould support the claim with effect. It was certainly a great and most gallant recovery; fuch as is not often equalled in fimilar circumstances; and in which the officers and troops had a higher claim to honour, than the most complete victory might have afforded in other instances. Greene boasts that he took 500 prisoners; (including in that number 70 wounded, who, he fays, the royal forces left behind them on their retreat the following day) that he left a strong picket on the field of battle; that he collected all his wounded, excepting those who

lay

HISTORY OF EUROPE. [*193

lay under the fire of the Brick House; that, early on the following morning, he detached Lee and Marion on the way to Charles Town, as well to prevent fuccours from thence, as to embarrafs the retreat of the main body whilst he pursued them; and, that the fugitives from the field of battle had foread fuch an alarm, that the English burnt their stores at Dorchester, and abandoned their post at Fair Lawn. He acknowledges the loss of two pieces of cannon, but fays he brought off one of theirs.

We are left as much in the dark as to the numbers on the royal fide, as we are with respect to the American. Col. Stewart seems apprehensive, as well as Greene, that it might be imagined from the various corps stated to be under his command, that his force was considerably greater than it really was. It may well be supposed, that from the climate, as well as from other causes, they were respectively very thin. Letters from Charles Town, at the time, loosely stated Stewart's force, as being about 2,000.

The loss on the American side, in killed and wounded, by their own account, amounted to between five and fix hundred. That of officers, which could not be concealed, was very confiderable. One lieutenant-colonel, one major, fix captains, and eight other commisfioned officers, were killed. Five lieutenant - colonels, thirteen captains, and twenty-five lieutenants, were wounded. On our fide, only three commissioned officers were killed on the spot, but several died of their wounds. The whole Vol. XXV.

number of men flain is rated only at eighty-five; the wounded at 351, of which fixteen were commissioned officers; and the missing at 257; of these were ten commissioned officers, fifteen ferjeants, and eight drummers. We mention these little particulars, as they ferve in fome fort to shew the diversity and various fortune of the action. No notice is taken in Col. Stewart's account or return, of fifteen commissioned officers, who, Greene particularly specifies, to have been admitted to their paroles on the field of battle. As this return was dated before the retreat from the Eutaws. it could not include the feventy wounded, who were faid to have been left behind on that occa-These, though it was made a matter of boath, could only have been left behind, from their wounds being in too bad a state to admit of a removal. Col. Stewart was himself wounded, and is said to have been taken prisoner, and afterwards re-taken. Every royal officer, who had the smallest command, even to that of a company, had an opportunity of diffinguishing himself in fome marked degree, which, in more fortunate feafons, and circumstances of less general exertion, would have been deemed an object of public notice and applaufe.

The royal forces decamped on the following evening, Greene pretends that they flaved a quantity of rum, and deftroyed many flores, through the want of carriages; but what feems utterly improbable, he farther advances, that above 1,000 fmall arms were found, which they had broken, and hidden in the Eutaw Springs. In the mean time, Major McAithur was dispatched $\{N\}$

194*] ANNUAL REGISTER, 1782.

with so strong a detachment from Charles-Town, to meet the returning forces, that Marion and Lee could not hazard the smallest attempt to interrupt his purpose; and Greene's pursuit as far as Harrison's Swamp, was probably a mere matter of parade, without the smallest hope of being at all able to diffurb the retreat. From that time, the country in the vicinity of Charles Town, and of the neighbouring great rivers, became the scene of a fmall, cruel, and defultory war, in which, excepting the defign of straitening the capital and its garrison on the one side, provisions, plunder, and the gratification of mutual animofity, were the only objects.

The loss of the Dutch Island of Eustatius, marked the conclusion of the year in the West Indies. The Marquis de Bouille, of whose activity and generosity as an enemy we have had frequent occasion to take notice, learning the fecurity and negligence of the governor and garrifon, was thereby induced to undertake the otherwife hopeless task, of surprizing and reducing the Island. He embarked about 2,000 men for this purpose, in a number of small vessels at Martinique, and knowing that the only practicable landing place in the island was left open and unguarded, he took his measures in such a manner, as to arrive before it betimes in the night. The landing was however fo bad, the furf fo high, and the funken rocks fo numerous and dangerous, that he lost his boats, and had many of his men drowned in the attempt. By the utmost perfeverance and courage he could

only land 400 men by day-break, and the means of landing more were then at an end. He faw at once the danger of his fituation, that all affiftance from his fhips, and means of retreat, were equally cut off; and confidering the garrison to be nearly double his own number, that nothing but the fuccess of a vigorous push and bold adventure, could possibly save himfelf and his troops, from being either made prisoners or cut to pieces.

The landing place was about two leagues distant from the town and fort; and the way was not only extremely difficult in all its parts, but was interfected by a defile in the hills, where a handful of men could have stopped the approach of an army. The garrison consisted of the thirteenth and fifteenth regiments, excepting their light infantry and grenadier companies, which had been called away upon fome other fervice; but the remaining number was not much less than 700 men; a force, which in less unfortunate times, could not have been fafely approached by an equal, much less an inferior enemy, The Marquis de Bouille, instead of despairing in his untoward fituation, boldly and wifely placed a full truft and confidence in the negligence of his enemy, and the consequent probability of a furprize. The troops landed were likewife among the best in France, being principally composed of Count Dillon's regiment; a part of that Irish brigade, which has been fo long and fo highly distinguished for its valour, and the excellency of the troops, and which the ill policy

beth

both of England and Ireland has driven into the French fervice. The red uniform of these troops, being the same as the English, contributed greatly to facilitate and give effect to the enterprize.

A division of the Nov. 26th. garrison were going through their exercises in a field at fome distance from the fort; but the greater part were dispersed in quarters in the houses of the town, and as it was only about fun-rise, many were possibly in bed. A volley of small arms, fired almost at their breasts, and which killed feveral men, was the first knowledge which the foldiers at exercise had of their danger. It was an instance, perhaps, without parallel by day-light. They were incapable of refistance. Those in quarters hurried headlong to the fort, and clogged the drawbridge in fuch a manner that it could not be raised, until the enemy entered pell-mell with them. Lieut. Col. Cockburne, commandant or governor, who had been taking an early ride, returned just at the instant of the furprize, and was made prisoner on horseback. The island was lost in a few minutes, and without the expence of a man to the enemy. It has not often happened that English troops have met with so fignal a disgrace.

The Marquis de Bouille behaved with his usual magnanimity. A confiderable fum of Governor which the claimed as his property, was, with the generous confent of the officers and troops, reffored to him. But a very large fum, being a remainder of the produce of the late fales, and faid to be

property of Admiral Rodney and General Vaughan, became a prize to the victors. Their whole spoil was estimated at two millions of livres. Such was the conclusion of the unfortunate circumstances which attended the capture of the

Island of St. Enstatius.

The loss of that island was only a prelude to farther misfortune in the West Indies. The superiority of the French by fea and land, enabled them to attempt and to execute whatever they liked. The Dutch fettlements of Demerary and Essequibo, were retaken by them in the first month of the year 1782; and France, by their recovery and restoration to Holland, as well as by the prefervation of the Cape of Good Hope, had a happy opportunity of displaying to her new ally and to the world, a fidelity, and an appearance of difinterestedness in her conduct, which has peculiarly marked the present reign, and which was by no means confidered as her political characteristic in other times.

The old and valuable English Island of St. Christopher's was doomed to be the next vistim to the calamity of the times. The people had been much distatisfied with the American war, and with many other measures of government. We have already observed that they had been confiderable fufferers by, and had greatly complained of, the indifcriminate fpoil made at the capture of the island of St. Enstatius. It cannot be supposed that a discontented people should ever make a hearty

and vigorous defence.

who feemed Jan. 11th, The Marquis Bouille, hitherto decreed

[* N] 2 reap

196*] ANNUAL REGISTER, 1782.

reap all the laurels which the West Indies could produce, landed 8,000 men on the island, and was supported by the Count de Grasse, with thirty-two ships of the line. The garrison, under Gen. Frazer, did not exceed 600 effective men; and the great force of the enemy by fea and land, notwithstanding the dangerous furf, and other circumstances, which render a communication with that island at all times difficult, prevented all refistance to their landing. Gen. Frazer, with his handful of men, retired to Brimstone Hlll, which, besides some newly erected fortisications, was, from its height, and almost inaccessible situation, considered as one of the strongest posts in the West India islands. the number of troops was not fufficient for its defence through any thing of a long fiege. It was fupposed that a garrison of 2,000 men, would have rendered it impregnable for any time that their provisions lasted.

The English fleet under Sir Samuel Hood, was then at Barbadoes, and confifted only of twenty-two ships of the line. That island was the original object of the French commanders, who, depending on the great superiority of their force both by sea and land, hoped by a joint cannonade and bombardment from the shore and the ships, to destroy the English fleet in Carlifle Bay. However this defign might have fucceeded in the experiment, it was fruffrated by adverse winds, which drove the enemy fo far to lecward, that they found it necessary to change their object, and direct their attack against the Island of St.

Kitt's.

The English commander, difdaining to be tied down by the fuperiority of his enemy, most gallantly determined upon an unusually bold stroke for the prefervation of that valuable island, if it was still possibly to be done; and instead of waiting to be attacked, to aftonish and confound them at once, by becoming himfelf the aggressor, and attacking them at anchor.

accordingly failed Carlisse Bay to Antigua, where he took Gen. Prescot, and the few troops that could be afforded, on board, and from thence proceeding in the evening for Baffe-Terre Road, where the enemy lay at anchor, began at day-break to form his line of battle, for the purpose of bearing down upon and

attacking them.

The accident of two ships running foul of each other, interrupted the profecution of this bold defign; and the fleet was obliged to lie to for a day, during the repair of the damage done to the Alfred. A French frigate from Martinique, full of shells and ordnance flores for the flege of Brimstone-Hill, which fell into their hands at this time, feemed in some measure to atone for this The Count de Graffe, delay. who could not but be furprized at this unlooked for vifit, and perhaps rejoiced at the apparent temerity of his enemy, thought it necessary to quit his anchorage, that by putting out to fea, and gaining a good offing, his ships might have full room to act, and thereby secure all the advantages of their superiority in number.

Sir Samuel Hood Jan. 25th. instantly perceived the

advantage

HISTORY OF EUROPE. [*197

advantage to be derived from this movement. The enemy were, at day-light, full in view, and formed in a line of battle a-head. He carried on every demonstration of an immediate and determined attack; and having thereby drawn them fomething farther from the shore, he then pushed on directly for Basse-Terre Road, and took possession of that anchorge ground which they had quitted on the preceding evening. If the fuperior judgment and seamanship displayed in this masterly movement, excited the assonishment and chagrin of the enemy, a sense of its possible consequences, in cutting them off from all communication with their army on shore, afforded no less room for the most ferious apprehensions. Impelled, therefore by every motive, whether of defeating the defign, or of avenging the deception, they fell with the utmost fury upon Commodore Affleck, who commanded and closed the rear of the British squadron, and with no small hope of entirely cutting off that division. that gallant officer, and his two brave seconds, Lord Robert Manners, and Captain Cornwallis, kept up fo noble and unceasing a sire, that with little loss or damage to themselves, they in a great meafure covered the other thips of the division, while they were getting into their stations; and after a tharp conflict, the French were obliged to bear off.

The next morning, by eight o'clock, the British line was attacked from van to rear, by the whole force of the enemy; who, after an action of two hours, in which they were not capable of

making the smallest visible impression, stood off again to sea. Count de Grasse, not yet discouraged, renewed the engagement in the afternoon, directing his attack principally against the centre and rear divisions, which he hoped to overwhelm by the great superiority of his force; but he was again repulsed with greater loss and damage than before. His own ship, the Ville de Paris, suffered feverely, and received no less than eighty-four shot in her hull. Her damage was so great, that on the fucceeding days she was obliged, in the seaman's phrase, to be beeled; that is, laid partly on her fide, and that in the view of the English, in order to plug and cover the shot-holes. It was faid, that the French fent a thousand wounded to St. Eustatius. The loss in the English squadron, in all the attacks, amounted to 72 killed, and 244 wounded. From that time, the enemy kept at a guarded diftance, but still continued constantly in fight.

The fuccess of this bold adventure opened very flattering prof-The preservation of the island was not only in view, but it was to he hoped that the invading foe would have met with difficulties in getting forces clear off, as might have afforded him sufficient cause to repent his temerity. No doubt was entertained, that Brimslone-Hill was capable of making a long defence, and the ifland was incapable of long maintaining the French army. Sir George Rodney was every hour expected with fuch a reinforcement from England, as would have afforded a superiority

 $[N]_3$ to

198*] ANNUAL REGISTER, 1782.

to the British sleet; and under fuch circumstances, the Marquis de Bouille's situation would have been not a little critical.

We are to fee how affairs in the island corresponded with these hopes. Besides the effects incident to that dissatisfaction of the people which we have mentioned, they had a melancholy example before their eyes of the ruin, which a brave and generous, but ineffectual defence, had brought upon their neighbours in the island of Tobago. The justice, humanity, generofity, and other eminent qualities, displayed by the Marquis de Bouille in the conquered islands, ferved much to lessen the horrors of a French government, with those who were far from being fatisfied with the proceedings of their own; while the losses and untoward events of the war, as they damped hope, necessarily repressed exertion. A real, or tacit and understood neutrality, feemed accordingly to operate on the fide of the inhabitants from the first arrival of the enemy.

About 350 of the militia were, however, led by Gov. Shirley, to reinforce Brig. Gen. Fraser's small garrison at Brimstone - Hill, and continued to the last, bravely to encounter all the dangers, and patiently to endure all the hard. thips of the flege. That hill rifes on the fea-shore, within a small diffance of Sandy - Point, the fecond town of the island, and about four leagues from Baffe - Terre, where the enemy landed, which is confidered as the capital. On the night of their landing, and the following morning, the French closei; invested Brimstone - Hill on all

fides. The powerful artillery which had been destined to the attack on Barbadoes, was now attempted to be difembarked at Sandy-Hook, as they had no means of conveying it by land from Baffe-Terre. The ship which conveyed the most heavy and effective part of it, together with a prodigious quantity of shells, balls and ordnance stores, struck upon the rocks, and went to the bottom. This lofs, with the subsequent capture by the British squadron, of the frigate which was bringing a fresh fupply from Martinique, feemed to augur fabourably to the garrison. But the enemy were not to be difcouraged by common accidents or disappointments. They fished up, with great perseverance and induftry, no small part of the artillery, shells and stores that had been funk; the men of war brought more heavy artillery from Martinique, which they landed at Sandy-Point; and the means provided for the protection and defence of the garrison, were, by a strange fatality. most lamentably perverted to their destruction.

For, eight brass twenty - four pounders, with 6,000 balls of that calibre, together with two thirteen inch brass mortars, and 1,500 shells, all which had been sent out by government to the supply of that fortress, had not, through some strange circumstance, of which we are not perfectly informed, been carried up to the works; and were all found by the enemy at the foot of the hill, and proved a most seasonable and necessary supply to them in the prosecution of the siege.

The hill is naturally very ftrong;

HISTORY OF EUROPE. [*199

strong; the approaches to it are difficult, and the ascent to it so steep, as not to require much artificial aid, to enable a few men to repel any fudden affault. But the works and buildings at the top were in no degree answerable to the strength of the situation; and were little calculated to withthand the batteries of heavy cannon and mortars, which the undisturbed possession of the adjoining country, and the weakness of the garrison, enabled the enemy to establish, at the most convenient distances, and in the most advantageous positions. It cannot but appear furprizing, that after so long a war, and so much neighbouring and expected danger, the garrison should be totally destitute of entrenching tools; a proper supply of which, in so peculiar a fituation, would have afforded abundant resources, even to the very last extremity.

The Marquis de Bouille, however, found the adventure attended with fo much difficulty, that he carried on his approaches, and opened trenches, under all the formalities of the most regular siege. He had established his head quarters at Sandy-Point; but the garrison soon set the town on fire; and then played their heavy cannon and mortars with fuch effect from the hill that the French could not attempt to extinguish the flame, until it was entirely confumed. They likewise continued a most vigorous fire, which greatly incommoded the enemy in all their approaches, through the whole fiege; and had the fortune in its progress to blow up a powder magazine, which was attended with the loss of several men. As the

French had no fubflitute for human labour and strength in the removal of their artillery and heavy stores from the shore to the respective batteries, which were constructed all round the hill, the toil and fatigue of the troops, in such a climate, could not but have been excessive. The trenches were opened in the night between the 16th and 17th of January.

As foon as the English admiral had gained possession of the anchorage, one of the first objects with him and Gen. Prescot, was to convey an officer, with an account of their fituation and circumstances, to the commanders at This was fuc-Brimstone-Hill. cessfully performed, and the officer returned as fafely. Both the governor and brigadier - general feem at that time to have placed a greater reliance in the strength of the place than the event fully justified. They, however, quested, that an able naval officer, with a few feamen, might, if possible, be conveyed to the garrison, for the better management of their artillery.

The general had brought the 28th regiment, and two companies of the 13th, with him, from Antigua; and the 69th had come with the fleet from Barbadoes. Upon receiving information of the confidence and spirit which prevailed in the garrison, the admiral proposed to him, that if he thought a post could be maintained on shore, he would land two battalions of marines, of 700 rank and file each, which, with the regimental troops, would compose a body of about 2,400 men. Gen. Prescot did not think it practicable to maintain fuch $[^*N]_A$ post;

200*] ANNUAL REGISTER, 1782.

post; but was sanguine in his defire of being put on shore, with the Antigua troops, and the 69th regiment. This was Jan. 28th. accordingly done, and a fmort fkirmish immediately took place, with a part of the Irish brigade, who were stationed at Basse-Terre. Our troops drove the enemy before them with confiderable lofs. About forty of our troops were killed or wounded; and a loss of double the number was acknowledged on the other fide. This brought the Marquis de Bouille on the following morning, with 4,000 men, from Sandy-Point. But he found Gen. Prescot so advantageously posted on a hill close to the sea, that he did not venture the attack, and led his troops back to the fiege. As no object was to be gained by continuing on shore, Gen. Prescot re-embarked on the fame evening.

The vigilance of the enemy was now fo extreme, that all communication with the garrifon of Brimtone-Hill was totally cut off. Capt. Curgenven, with a few brave volunteer feamen, who boldly attempted to reinforce the garrifon, were not only foiled in the attempt, but exposed to imminent danger; and a number of officers, who knew all the private roads and paths of the island, and who adventured singly the task of attempting to convey letters or mossages, were all detected and

taken prisoners.

Their vigilance was equalled by the unremitting industry and labour with which they profecuted their works, and the incessant fury of their attack. Batteries were multiplied upon batteries all round the hill; and for the last three

weeks of the fiege, they were conftantly, night and day, cannonading and bombarding the garrison. During the greater part of that time, all the force and effect of 23 pieces of heavy cannon, and of 24 large mortars, was directed against a spot of ground, whose greatest diameter did not exceed 200 yards; and new batteries were ready to be opened at the end. All the houses and cover on the top of the hill, were confumed or blown to pieces early in the fiege, and the works were every where crumbling to their base in its progress. The garrison, though every day thinned by the number killed and wounded, yet far from finking under their growing weaknefs, bore the incessant fatigue of being under arms night and day, and the increasing danger, with wonderful patience and fortitude. Only one man deferted through the whole fiege.

The admiral under- Feb. 8th. went the painful mortification of understanding their diffress and danger by signals from the garrison, without having it in his power to administer relief, or even to convey information or counsel to the commanders. length, the works on one fide being fo destroyed as to form an entire and perfect breach, almost all the guns being dismounted or disabled, and there not being much above 500 men left who were able to go through duty, both the governor and brigadier - general, thought it would be highly ungrateful as well as imprudent, to stake the lives of so brave and deferving a garrifon, upon the hazardous issue of an assault; and wherein, the greated fuccess that

contr

HISTORY OF EUROPE. [#201

could be hoped, would not by any means extricate them from the difficulties of their fituation.

They had been before fummoned by the Marquis de Bouille, upon the ground, that the retreat of Gen. Prescot's detachment, had lest them no farther room to hope for fuccour; and he now eagerly embraced the proposal of a capitulation. Every condition they proposed, whether in favour of the garrison or the island, was agreed to. The former were allowed all the honours of war in the fullest sense. The regular troops, confishing of the IR battalion of the Royal Scotch, and the flank companies of the 15th regiment, were transmitted to England, until their exchange. island was upon the best footing that it could be under a capitulation. And the Marquis de Bouille, with his wonted magnanimity, discharged, by a particular article, as an avowed acknowledgement of their gallantry, Gov. Shirley, and Brig. Gen. Fraser, from the condition of being confidered as prifoners of war, declaring that the first might return to his government of Antigua, and the latter continue in the service of his coun-

The furrender of Brimstone-Hill, and capitulation of the island, rendered the longer stay of the English squadron on the anchorage ground at Basse-Terre, equally useless and dangerous; for the enemy were preparing to erest gun and mortar batteries upon some neighbouring eminences, which would have commanded, at least, a part of the shipping. Sir Samuel Hood therefore determined upon quitting

his fituation; but the means of carrying the defign into execution, were not a little difficult. French had been just joined by two ships of the line from France; so that M. de Grasse now possessed the decided superiority of 34 to 22 line of battle ships. It was likewife, independent of this inequality of force, the great object of the English admiral, now that the prefervation of the island was no longer in view, to preferve his fauadron as whole, and in as perfect condition, for the junction with Sir George Rodney, as it was possible to be done; well knowing, that even the ordinary effects of a partial engagement, might prove the means of crippling the further operations of the fleet, in a featon, perhaps, the most critical that could posiibly be imagined. It was likewife necchary, if an engagement should become inevitable on leaving the island, that the squadron should form as compact a body as possible, in order the more esticatually to relift the valt superiority of force against them; and this purpose could only be attained, by all the fhips being, as nearly as it could be done, under fail at the fame moment. Upon all these accounts, on the night after the capitulation, the enemy's fleet lving within five miles, and their lights full in view, the English squadron flipped their cables, and put out to fea, without obstruction or purfuit.

The islands of Nevis and Montferrat followed the fortune of St. Christopher's; so that of all our former numerous possessions in the West-Indies, Jamaica. Barbadoes, and Amigua, now only remained.

202*] ANNUAL REGISTER, 1782.

It was faid, that the reduction of Brimstone-Hill, cost the French a thousand men.

The design against Jamaica, which had been so often adopted, and, through a feemingly peculiar fortune, so often laid aside or deferred, was now revived with more vigour, under a greater preparation, and with a more affored confidence of fuccess, than ever. The Spaniards had a powerful fleet, and a great body of land forces, in the islands of Hispaniola and Cuba, who were amply furnished with abundant provision for war, and in readiness to join the Count de Graffe in the attack upon that island. The naval force of the two crowns in the West-Indies, soon after the reduction of St. Kitt's. amounted to not less than fixty ships of the line; and their land forces, if joined, would have formed a confiderable army. Jamaica had nothing to oppose to this mighty force, but fix battalions of regular troops, (which must always be considered on West-India service, as having a numerous train of ineffectives) and the militia of the island. The high spirit of the inhabitants, with the goodness of the troops, and the great natural frength of the country, joined to the effects of the climate operating upon the most fevere and continual duty, would, however, have rendered the conquest a matter of the greatest doubt and difficulty, and the war exceedingly tedious But in all events, and bloody. the ruin of the island, and the annihilation of its immense property, must have been the immediate confequence of fo arduous a conflict.

The arrival of Sir George Rodney with twelve fail of the line at Barbadoes, on the 19th of February, and his subsequent junction with Sir Samuel Hood's squadron, though later than was hoped and expected, and too late for the prefervation of the island of St. Kitt's, or for the attainment of those great objects which might possibly have been within reach, had it taken place during the refistance of Brimstone-Hill, was, however, most fortunately decreed, to break in upon the thread of this defign against Jamaica. A similar piece of good fortune, and tending to the same object, was the disaster which befel M. de Guichen's fleet and convoy, after the fuccessful attack made upon the latter by Admiral Kempenfeldt. For they were fo shattered and disabled, almost immediately after that first misadventure, by a continued fuccession of tempests and foul weather, that only two of the men of war, with a very small proportion, if any, of the convoy, could hold on their course to join M. de Grasse; and the remainder of the fleet were obliged to return in very bad condition to France. It seemed indeed, under the eagerness and violence of the present war, that both France and England would fet even the feafons at defiance in their naval enterprize and hostility; but both nations, upon feveral occasions, paid severely for their temerity.

In a few days after the junction of the fquadrons under Sir George Rodney and Admiral Hood, the flect was farther reinforced by the arrival of three ships of the line from England. The first object

with

HISTORY OF EUROPE. [*203

with the English Admiral, was to intercept a fecond convoy from Brest, which sailed from that place on the 11th of February, in order to supply the failure of the former, and was conveying naval stores, artillery, ammunition, and all other supplies to the Count de Graffe, which were either necessary for the prefent repair and fitting out of his reet, or for the further fupport and execution of the great object he had in view. For this purpose he disposed of his fleet in a line to windward of the French islands, stretching from the latitude of Deseada to that of St. Vincent; with a line of frigates still farther to windward; thus covering the course from Europe in fuch a manner, that it was thought impossible for any number of thips in company to avoid being entangled in the barrier. The French convoy had, however, the address, by making the illand of Defeada to the northward, getting to leeward of our fleet, and creeping close in under the land of Guadaloupe and Dominique, to escape March 20th. the danger, and to arrive safe in Fort-Royal Bay where they found the Count de Graffe bufy in repairing his ships, and brought him the means of speedily equipping his fleet for the new intended fervice. This unlooked-for disappointment was a fevere check to the hopes of the British admiral, and left him nothing farther for the present to do, than to return to Gros Islet Bay, in St. Lucia, there to refit his ships, to take in fuch a fupply of water, flores and provisions, as would qualify the fleet for long fervice, and to keep a strict waten, by the

means of his frigates, upon the preparation and movements of the enemy in Fort-Royal Bay; taking care, above all things, to be ready to put to fea at the instant that he should receive notice of their making a similar disposition.

The objects of the hostile commanders were not less opposite than their interests. It was the business and design of the Count de Grasse to avoid sighting by all possible means, until he had formed a junction with the French and Spanish sleets at Hispaniola; when their combined force would have been fo vailly fuperior, as to forbid every attempt on the fide of England by fea, to obstruct their defigns during the campaign. On the other side, the salvation of the West-Indies, with the whole fortune and hope of the war, depended upon the British commanders preventing the junction, or at least their bringing on a close and decisive engagement with the Count de Graffe, before it took place. Such were the flakes depending upon a shift of wind, upon other the most usual cafualties of weather, and upon the numerous accidents and difappointments to which all naval movements and operations peculiarly liable. Nothing could be more periloufly critical.

The British fleet at St. Lucia amounted to 36 ships of the line. The force under M. de Grasse at Martinique, only to 34. We except from the latter account, two ships of the line armed en slute, and two sister-fours; the former not being in either engagement, and the last, if present, acting only as frigues. The accounts

204*] ANNUAL REGISTER, 1782.

vary greatly as to the number actually engaged. We here adhere to the written order for the line of battle, figued by M: de Graffe himfelf, and which feems confirmed upon an estimate of the general testimony. The French Reet feems to have been rather over-manned, (though if it be an error, it is a general and national one) and bendes a full complement of feamen, had near 6,000 land forces on board. The Ville de Paris, of 110 guns, De Graffe's own ship, had not less than 1,300 men, including foldiers, on board; and the French feventy-fours carried goo men each. Their metal is always heavier than that of the English, in equal rates; but several of their ships were only in indifferent condition. The Erglish had five ninety-gun ships, which was their highest rate; and the French had eight of 80 and 84 guns each, befides the Ville de Paris, which was confidered as the pride and bulwark of their fleet. So that upon the whole, if an exact estimate were made of the force on both fides, opposing superior weight of metal in larger fhips, and a much greater number of men, on the one, to the advantages of better condition, two thips more in number, and a somewhat greater number of guns, on the other, the comparative balance would probably be found tolerably even, and it would appear, that contending fleets do not often happen to meet upon more equal terms.

The van of the English was commanded by Sir Samuel Hood, the centre by Sir George Rodney, and the rear by Admiral Francis Drake. The ships were in good

condition; and perhaps a fet of more brave and able officers were never joined in the command of an equal number, in any conflict. The three divisions of the French fleet were commanded by the Count de Grasse, M. de Vaudrevil, and M. de Bougainville, who were all distinguished commanders.

The French fleet began to turn out of the harbour at Fort-Royal, by the break of day on the 8th of April, with a great convoy under their protection, all bound to leeward, and intending to fall down to the French or Spanish ports in Hispaniola. But as M. de Grasse had every reason for wishing to avoid any encounter on his passage, instead of pushing, as his course was, directly to leeward, which would have laid him open to the fair and unremitted chace of his pursuers, and which it would have been impossible to evade in an open fea, with so constant a wind, he thought it more adviseable to keep close in under the islands, until he had eluded the pursuit. The adoption of this course seemed to promise many advantages. The French being better acquainted with the coaits, could keep much closer to the land than the English would dare to adventure, and keeping the convoy between him and the shore, he hoped to throw them off entirely to leeward; the feveral channels between the islands were likewise better known to the French; and these, with the great diversity of winds and passages which they afforded, feemed to hold out inexhaustible means of baffling the purfuit of an ene-

His conduct, however, in this business

HISTORY OF EUROPE. [*205

business has been questioned, and probably without due confideration, on two grounds; first, for putting to sea at all, and again, for encumbering himself with the convoy. With respect to the first, the great object he had in view, not only warranted fome hazard, but perhaps any thing short of decision; nor could his inactivity at that time, when fo great a force was waiting for him to leeward, and the hopes of both nations were fo highly raised, ever be justified, either to his country or to the The arduous fituation of a commander in chief, obliges him to look to his own character, and to the public opinion, as well as to the public fervice. Those who know danger only in theory, and who are little informed as to circumstances, are seldom merciful in their censure or opinion of a commander, who is supposed to miss any favourite object through the want of fighting. Neither was he without reasons for hoping, that if an action should take place, it might have been rendered partial and indecifive. As to the convoy, it does not feem that the French commander could have been at all warranted, in leaving it locked up in Fort-Royal Bay.

The movements of the enemy, and their departure from that bay, were so speedily communicated by fignals from the frigates upon the watch, and the English fleet were in such excellent preparation, that the whole were clear of Gross-Islet-Bay by noon, and pursued them with the utmost expedition; so that the French gained only a few hours, by being masters of the time of departure. This unequalled diligence,

and the general ardour, which it might be faid added wings to the fleet, brought them within fight of the enemy, under Dominique, on that very night; and they afterwards regulated the purfuit by their fignals.

So fudden a preffure could not have been expected by M. de Graffe. He, however, like a prepared and accomplified commander, immediately fuited himself to the emergency, and though fighting was by no means his object, he formed the line of battle to windward betimes in the morning, thereby affording an opportunity to his convoy to proceed on their course, whilst he stood to abide the consequences. On the other side, Sir George Rodney had thrown out fignals foon after five in the morning to prepare for battle, to form the line at two cable lengths dittance afunder, and for the thips to fill and fland on. But the English sleet lay becalmed for a confiderable time under the high lands of Dominique, while the enemy, who were farther advanced towards Gaudaloupe, had wind enough to enable them to make the movements we have flated.

The breeze at length reached the van of the English sleet, and they began to close with the French centre, whilst their own centre and rear were still becalmed. It is said, that the Count de Grasse might still have avoided an engagement; but the temptation held out of falling with his whole weight upon and entirely crushing one third of his enemy's force, while thus separated, was too strong to be well resisted. The action commenced about 9'clock.

The attack was led by the Royal Oak,

206* ANNUAL REGISTER, 1782.

Oak, Captain Burnet, and feconded by the Alfred and the Montague, with the most impetuous bravery. The whole division were in a few minutes closely engaged, and for more than an hour were exceedingly pressed by the great fuperiority of the enemy. Barfleur, Sir Samuel Hood's own ship, had at one time seven, and generally three ships siring upon her; and none of the division escaped the encounter of a very disproportionate force. Nothing could be more glorious than the firm and effective refistance with which, and without once shrinking, they suftained all the efforts of fo great a Superiority.

At length, and by degrees, the leading ships of the centre were enabled to come up to the affiftance of the van. These were soon followed by Sir George Rodney in the Formidable, with his two feconds the Namur and Duke, all of 90 guns; who made and fupported a most tremendous fire. The gallantry of a French captain of a 74 gun ship in the rear, who, opposite to Prince Rupert's Bay, having backed his main-top-fail, fleadily received and bravely returned the fire of thefe three great ships in succession, without in the least flinching from his station, excited the highest applause and admiration of his enemies; and one of our officers could not refrain, under the immediate impulse of his enthusiasm, from calling him a " Godlike Frenchman" in a letter which he wrote home upon the occasion.

The coming up of the admiral, with a part of the centre division, rendered the fight less unequal;

and M. de Graffe, notwithstanding his still great superiority, finding that his purpose had failed while the van was engaged fingly, determined, by changing the nature of the action, to prevent its now becoming decisive. The command of the wind, and the connected state of his fleet, enabled him to execute this defign, and to keep fuch a cautious distance during the remainder of the engagement, as was evidently intended to difable our ships as much as it could be done, without any confiderable hazard on his own fide. This fort of firing, which was extremely well supported on both fides, and produced as much effect as the distance would admit, was continued for an hour and three quarters longer; during all which time, the rest of the fleet was held back by the calms and baffling winds under Dominique. Several of our officers have condemned the failure of enterprize which appeared on the fide of the enemy, in not exerting their superiority with greater effect during this interval; but it is possible, that the motives which operated with the French commander did not come within their confideration.

The morification of the fixteen brave officers who commanded the ships in the rear, and who were doomed to be the spectators of so unequal a combat, without having it in their power to support their admiral and sellows, is much more easily to be conceived than described. About twelve o'clock, the remaining ships of the centre came up, and the rear was closing the line; upon which M. de Grasse withdrew his sleet from the action, and evaded all the essorts of the English

English commanders for its renewal. No sea battle could be better fought than this was on both fides, so far, at least, as it suited the views of the commander on one side to admit of close action; nor has a more tremendous cannonade been known between any equal number of ships. The French commander, notwithstanding his great superiority at all times, but particularly in his first action with the van, failed entirely in his object; and his ships received much more damage, than their fire produced on the other side. Two of them were fo much difabled, that they were obliged to quit the fleet, and put into Guadaloupe, which his line was reduced to thirty-two ships; and the damage fustained by others, led to the subsequent action, and to all its decifive confequences. On fide the Royal Oak and Montague suffered extremely; but were still capable of being so far repaired at sea, as not to be under a necessity of quitting the fleet. Captain | Bayne of the Alfred gallantly fell in this action.

The fleet lay to, on the night of the 9th, to repair their damages; and the following day was principally spent in refitting, in keeping the wind, and in transposing the rear and the van, the former of which not having been in the late action, was necessarily fitter for the active fervice of that division. Both fleets kept turning up to windward, in the channel which separates the islands of Dominique It was conand Guadaloupe. stantly in the power of the enemy to come to action whenever they pleased, as they were always to windward; while it was impossible

for the English admiral to force them, entangled as his fleet was between those islands, and a little cluster of small ones, called the Saints, with the wind against him.

On the 11th the enemy had got fo far to windward as to weather Guadaloupe, and had gained fuch a distance, that the body of their sleet could only be described from the mass heads of our centre. All hope of being able to come up with them seemed now at an end; and it was faid to have become a question of deliberation on our side, whether to continue a chace, which appeared to be hopeless, or at once to push to leeward, and endeavour to get before them at their rendezvous?

In this critical state of things, fo highly interesting to both sides, two of the French thips, which had received damage in the late action, were perceived, about noon, to fall off confiderably from the rest of their sleet to leeward. welcome fight, immediately produced figuals for a general chace from the British admiral, again renewed, throughout the fleet, the hope of coming up with The purfuit was fo the enemy. vigorous, that the Agamemnon, and fome others of the headmost of the British line, were coming up so fast with these ships, that they would have been affuredly cut off before evening, if their fignals for affiftance, and evident danger, had not induced M. de Grasse, to bear down with his whole fleet to their affithance.

This spirited movement brought things precisely to that situation, which our commanders had so ardently sought, and so little expected.

pected. It was now impossible for the enemy to avoid fighting; but the evening being too far advanced, that final decision was postponed to the morning The purfuing thips fell back into their itations; a close line was immediately formed, and a most masterly disposition of the British fleet exhibited; while fuch manœuvres were practifed in the night, as were necessary, at least, to preferve things in their present state, and might possibly produce casual advantage. The wind generally hawls to the northwards towards evening in the West-India islands, and to make the most of this circumstance, our fleet stood to the fouthward until two in the morning, and then tacked with their heads to the northward. On the other fide, the enemy being fenfible that the die was now cast, prepared with the greatest resolution for battle, and only confidered how to abide the iffue with the best grace and countenance possible.

The scene of action may be con-Adered as a moderately large bason of water, lying between the islands of Guadaloupe, Dominique, the Saints, and Marigalante; and bounded both to windward and leeward by very dangerous shores. The hostile fleets met upon opposite tacks. The battle commenced about feven o'clock in the morning, and was continued with unremitting fury until near the fame hour in the evening. Admiral Drake, whose division led to action, gained the greatest ap-plause and the highest honour, by the gallantry with which he received, and the effect with which he returned, the fire of the whole

French line. It is leading thin the Marlborough, Captain Penny, was peculiarly diffinguished. She received and returned, at the nearest distances, the first fire of twenty three French ships of war; and had the fortune only to have three men killed, and fixteen wounded.

The fignal for close fighting had from the first been thrown out, and was, without a fingle exception, punctually observed. The line was formed at only a cable length's distance. Our ships, as they came up, ranged flowly and closely along the enemy's line, and close under their lee, where they gave and received a most tremendous fire. They were so near, that every shot took place; and the French ships being so full of men, the carnage in them was prodigious. We may form fome opinion of the havock that was made, from the Formidable, Sir George Rodney's ship, string near fourfcore broadfides; and we may well believe that she was not The French flood and fingular. returned this dreadful fire with the utmost galiantry; and both fides fought, as if the fate and the honour of their respective countries were staked upon the iffue of that fingle day.

About noon, or not long after, Sir George Rodney, in the Formidable, with his feconds the Namur and Duke, and immediately fupported by the Canada, bore directly, with full fail, athwart the enemy's line, and fuccefsfully broke through it, about three fhips fhort of the centre, where M. de Graffe commanded in the Ville de Paris. Being followed and nobly supported by the ships aftern of his division, he wore

round

round upon his heel, and thus doubling upon the enemy, and clofing up with their centre, completed the separation of their line, and threw them into inextricable confusion. This bold push decided the fortune of the day. The French, however, continued still to sight with the utmost bravery, and the battle lasted till sunset; which in those latitudes is almost immediately succeeded by darkness.

The instant that the admiral wore, after breaking through the enemy's line, he threw out a fignal for the van to tack; and this being as immediately complied with by Admiral Drake, our fleet thereby got to windward of the enemy, and completed the general confusion. The French van bore away to leeward, in an endeavour to reform their broken line; but this they were never able to accomplish; the dismay and disorder in that part of their line astern, was irretrievable. Sir Samuel Hood's division had been long becalmed, and thereby kept out of action; the coming up now of his leading ships, and a part of his centre, as far at least as the Barfleur, which he commanded himself, served to render the victory more decifive on the one fide. and the ruin greater on the other.

The broken state of the French sleet, necessarily exposed, in some instances, a few ships to the attacks of a greater number; and the extent of the action, with the darkness and uncertainty occasioned by the smoke, assorded even opportunities, which might have been less expected, for single combat. The Canada of 74 guns, Capt. Cornwallis, took the French Vol. XXV.

Hector, of the fame force, fingle hand. Captain Inglefield, in the Centaur of 74 guns, came up from the rear, to the attack of the Cefar, of 74 likewise. Both ships were yet fresh and unhurt, and a most gallant action took place; but though the French captain had evidently much the worst of the combat, he still disdained to Three other ships came yield. up successively, and he bore to he torn almost to pieces by their fire. His courage was inflexible; he is faid to have nailed his colours to the mast, and his death only could put an end to the contest. When the struck, her mast went overboard, and she had not a foot of canvas without a shot-hole. The Glorieux likewise fought nobly; and did not strike, until her masts. bow-sprit, and ensign were shot away. The English Ardent, of 64 guns, which had been taken by the enemy in the beginning of the war, near Plymouth, was now retaken, either by the Relliqueux, The Diadem, a or the Bedford. French 74 gun ship, went down by a fingle broadfide, which fome accounts attribute to the Formidable; it has also been said, that fhe was loft in a generous exertion to fave her Admiral.

M. de Grasse was nobly supborted, even after the line was broken, and until the diffrder and confusion became irremediable towards evening, by the ships that were near him. His two teconds, Languedoc and Couronne, particularly distinguished; and the former narrowly escaped being taken, in her last efforts to extricate the admiral. The Ville de Paris, after being already much battered, was closely laid along [*0] ûde

fide by the Canada; and in a defperate action of near two hours, was reduced almost to a wreck. Captain Cornwallis was fo intent in his defign upon the French admiral, that without taking possestion of the Hector, he left her to be picked up by a frigate, while he pushed on to the Ville de Paris. It seemed as if M. de Grasse was determined to fink, rather than strike to any thing under a slag; but he likewise undoubtedly considered the fatal effects which the striking of his slag might produce on the rest of the sleet. Other fhips came up in the heel of the action with the Canada; but he At length Sir still held out. Samuel Hood came up in the Barfleur, just almost at funset, and poured in a most tremendous and destructive fire, which is said to have killed fixty men outright; but M. de Grasse, wishing to signalize, as much as possible, the loss of so fine and so favourite a ship, endured the repetitions of this fire for about a quarter of an hour longer. He then struck his flag to the Barfleur, and furrendered himself to Sir Samuel Hood. It was faid, that at the time the Ville de Paris struck, there were but three men left alive and unhurt on the upper deck, and that the Count de Grasse was one of the three.

Upon the whole, the sea has not often exhibited a more noble naval and military contest; and if we were disposed to adopt the sounding language sometimes used on the continent, it might be said, without much extravagance of hyperbole, that miracles and prodigies of valour were performed on both sides. The Cesar, which was

one of the best ships in the French sleet, was unfortunately set on fire, and blew up in the night of the action. This happened thro' the inordinate behaviour of the French prisoners, who throwing off all obedience to their officers from the time she struck, and sinding the English on board too sew in number effectually to restrain their ill conduct, were guilty of the greatest enormities. A lieutenant, and sifty English seamen, perished with about 400 prisoners.

The advantage of close fighting with English ships and seamen, was never more happily exemplified, or more demonstrably shewn, than in this action. The loss of men on the fide of the enemy was prodigious. Three thousand are faid to have perished every way, and double that number to have been wounded. We are far from confidering thefe estimates as entirely accurate, and the latter, in particular, is probably too large: but it is undoubted, that there were more men killed in the Ville de Paris, and in some other single French ships, than in the whole English line. The ships likewise fuffered extremely, and the fleet in general was little less than ruined; while, on the other fide, a fquadron of British ships fresh and fit for action at the close of the day. It is to be observed, that the small superiority as to the number of ships on the English fide, did not contribute any thing to the fuccess of the day; as more fhips of Sir Samuel Hood's divifion, than that difference amounted to, were held back through the want of wind, from coming into action. It would be of little avail, and entirely beside our purpose, to attempt any enquiry into the causes of that superiority which British seamen posses in close fight; but the fact feems to be establithed.

The loss of men in the British fleet was wonderfully fmall, confidering the length and violence of the battle, the prodigiousness of the fire, the nearness of the combatants, and the obstinate bravery of the enemy. The whole number killed and wounded, in the two actions of the 9th and 12th (for no se, arate lists have been given) amounted only to 1050, of which 253 were killed upon the spot. It is observable, that the flain in the Ville de Paris only, was faid to amount, at least, to 400. The brave Captain Blair of the Anion, who, in the preceding year, had most gallantly fought the Dolphin against the Dutch, in the North-Sea action under Admiral Hyde Parker, fell gloriously on this day. The loss of Lord Robert Manners, fon of the late Marquis of Granby, and brother to the Duke of Rutland, was univerfally lamented by the nation as well as the navy. gallant young nobleman, in the command of the Resolution of 74 guns, had been highly distinguished during the war, by a series of the most brilliant actions; and being most grievously wounded in this battle, (though with fair hopes of recovery from the excellency of his constitution) was, to the great loss of his country and the service. carried off by a locked jaw, a few days after, on his passage to Eng-

Thirty-fix chefts of money, deftined to the pay and subfiftence of the troops in the defigned invafion which was but in indifferent con-

land.

of Jamaica, were found in the Ville de Paris. The peculiar circumstances of that ship, with respect to her name and origin, as well as her greatness and beauty, rendered her a prize not a little flattering to the victors. She had been a present from the city of Paris to Lewis the 15th, in that fallen state of the French marine, which prevailed towards the close of the former ruinous war, suftained by that nation against England. No pains or expence were spared, to render the gift worthy of that great city, and of the monarch to whom it was presented; fo that she was said to have cost 176,000 l. sterling, in her building and fitting out for sea. It semed to be a singular sortune, that the whole train of artillery. with the battering cannon, and travelling carriages, intended for the attack on Jamaica, happened to be on board the ships which were now taken.

As it grew dark, the admiral thought it necessary, in order to keep the fleet collected, to secure the prizes, and to afford time for enquiring into the state and condition of the ships that had suffered in the action, to bring to for The routed enamy the night. made off to leeward, in the greatest disorder and confusion; and were totally out of fight in the morning. The rout and dismay had been continued and increased, by the close pursuit of Commodore Affleck in the Bedford, and some other of the British ships, who kept an unceasing sid upon them until it was quite dark. Some ran down for shelter and relief to the Dutch island of Curaçoa;

[*0] 2

ANNUAL REGISTER, 1782. 212*

dition for affording either greater part, bowever, under Monficurs de Bougainville, and de Vaudr. vil, keeping together in a body, made the bell of their way to Cape François It was evident, that a few hours longer day-light would have produced the destruction of the

whole French fleet.

Sir George Rodney attempted to purfue the enemy on the following morning; but the fleet was becalmed under Guadaloupe for three days faccelarcly after the battle, which afforded the most happy opportunity that could happen for the escape of the enemy. The admiral having at length examined the bays and harbours of the neighbouring islands, and being tatisfied that they were gone to leeward, dispatched Sir Samuel Hold, (whose division, as we have alread, observed, being in the rear, and coming up late, had suffered but little in the battl.) to the west end of St. Domingo, or His, aniola, in the hope that he might be able to pick up some of their disabled fhips; he him elt following with the rest of the sleet under an easy fail, in order to rejoin him off Cape Tiberoon.

Successful, glorious, and highly important in its confequences as this action was, yet it did not pass entirely free from a certain degree of criticism and censure. It has been faid, both in the fervice and out, that if the enemy had been instantly pursued, when they ran to leeward in the evening, the fleet would thereby have escaped the calm which detained it so long under Guadaloupe, and that very few, in any, of the French ships could have escaped; whereby, they fay, the battle

would have held a foremost place amongst those the most glorious, and the most happily decisive in their confequences, that are re-corded in history. Without entering into the merits of a queftion, of which we cannot be competent judges, it may in general be observed, that great and signal fervice should be received with gratitude, in whatever way, without dishonour, it is performed; that too strict a ferutiny in such cases seems invidious; for that all human action is liable to fault and to error; but that where the good greatly predominates, it should spread like gold in fully covering over the imperfection. will appear in a very different point of view upon a cool retrospect, and with a full knowledge of all the circumstances on both fides, from what they would to the same persons, under all the circumstances and impressions, the doubt, hurry, uncertainty, and even absolute ignorance as to many effential matters, incident to 2 long-fought, arduous, and extenfive naval battle. The old obfervation, that the lookers on at gamesters, though greatly inferior in knowledge and judgment, will eafily perceive those blots and errors, which pass unnoticed by the parties immediately concerned, will apply with equal justness, to those who fight, and to those who talk or judge of battles.

Sir Samuel Hood proceeded on the execution of his commission with fuch alacrity and dispatch, that on the very day departure April 19th. after his from the fleet, he descried five fail of French vessels, in the Mona passage, which separates the island

of Porto Rico from Hispaniola. A general chace immediately enfued; and after several hours purfuit, the Valiant and Magnificent, of 74 guns each, having far outsailed the rest of the squadron, came up with, and after a short engagement took, the Jason and Caton, French ships of war of 64 guns each, together with two of the frigates which were in their company. The third frigate, when upon the point of being taken, had the fortune to escape, by an unexpected shift of wind in her favour. The two French ships of the line loft a number of men. and fuffered greatly otherwise in this short action; while the loss in the two English ships was very trifling.

Thus the enemy lost eight ships of the line by the late action; six of these were in the possession of the English, one had been sunk, and the Cesar blown up after her capture. Four other of their ships had got into Curaçoa, and the French commanders were for several weeks totally ignorant of their sate; so that no less than twelve sail of their line was missing, and for any thing that was yet known, the whole were either lost or taken.

Sir Samuel Hood joined the fleet off Cape Tiberoon; and the enemy having now no force to windward, Sir George Rodney proceeded with the difabled ships and the prizes to Jamaica; as well for their repair, as for the greater security of the island, if the combined enemy should still venture to make any attempt towards the protecution of their former design. He arrived there by the end of April; and nothing

could be more glorious, or more flattering to human nature, than the real trium; h, though without its antient oftenfive and odious forms, which he enjoyed that occasion. The inhabitants of that island, which had been so long marked out for war and ruin, and menaced by a preparation and force fo vait, as had hitherto been unknown in the new world, not only faw themselves at once freed from the danger, but beheld the principal commander of that armament which had been fo long and fo great an object of their terror, himfelf brought a prisoner into the intended scene of his hostility and conquest, and accompanied by fix of those capital ships, now under English colours and command, which had fo lately been the destined instruments of their destruction.

Indeed the fortune of Sir George Rodney had been peculiarly fingular, as well as highly glorious in the present war. Within a little more than two years, he had given a fevere blow to each of our three powerful and dangerous enemies, the French, Spaniards and Duch. He had taken an admiral of each nation; a circumstance perhaps unequalled. He had, in that time, added twelve line of battle ships, all taken from the enemy, to the British navy; and destroyed five more. And to render the whole ftill more fingularly remarkable, the Ville de Pa is 's faid to be the only first rate man of war that ever was taken, and carried into port, by any commander of any nation. It would not be easy, after such inflances, considered in all their circumflances,

[*0] 3

to deny that fortune has her peculiar tavourites.

The admiral had left Sir Samuel Hood, with about twent; -five ships of the line, to keep the sea, are watch the motions of the combined enemy at Hispaniola. For they ere still formidable both by sea and land, at least with respect to numbers and appearance. Spaniards had 16 thips of the line, and about 8000 troops, at Cape François; several French men of war, of the same description, and on the fame defign, had been through the year upon that station; and the remains of the Count de Grasse's fleet, which were now collected there under Vaudrevil, amounted to twenty-three fail of the line. But the spirit of enterprize was now no more. The ate blow was too levere to be foon forgotten; and the parties who had felt any part of its weight, were neither disposed or in condition for farther exertion. All their defigns upon Jamaica were accordingly given up by both nations. The Spanish fleet and troops returned to the Havanna; a number of the French ships of war came home with convoys; and the Count de Vaudrevil, with the remainder, amounting to thirteen fail of the line, proceeded to North-America; but more to evade the hurricane feafon, to recover his men, and to repair or supply his ships, than with a view to any active fervice.

This happy naval victory, great in itself, and rendered greater by the critical nature of the time, not only secured our remaining possessions, but might be said to close the West-India war; nothing

of consequence being afterwards undertaken on either fide in that quarter. It was of still greater importance in its general effects, from that fudden and unexpected change it produced in our fituation, from the high reputation which fo extraordinary and fuccessful an exertion afforded, at an instant when we seemed to be nearly overwhelmed as well as furrounded by our numerous and powerful enemies, and by the addit onal weight it gave us as a nation, whether for the accomplishment of peac-, or for the further profecution of the war.

Admiral Pigot having arrived from England to succeed George Rodney on the West-India station, that commander failed from Jamaica in the beginning of August, on his way home to the enjoyment of these honours, which were the due renard of his fervices. For he had been created an English peer, by the title of Lord Rodney, immediately upon the first account being received of the late victory. Sir Samuel Hood was likewise honoured with an Irish peerage. Admiral Drake, whole conduct and gallantry had fo admirably feconded the views of his commander in obtaining the late victory, together with Commodore Affleck, who had been highly diffinguished in both action, were honoured with baro-Thus honours, in the netages. present instance, held their due courfe; becoming the prizes of valour, good conduct, and ilgnal fervice.

North-America afforded no military transaction of any confequence during this period. The oppo-

fite

fite armies at New York and in its neighbourhood, were so nearly balanced with respect to sorce, and to the strength of their respective posts and defences, that little room for enterprize was lest on either fide. This state of inactivity was happily confirmed, by the resolutions of the British parliament against the American war, and the subsequent negociations for peace.

C H A P. X.

Minorca. Siege of Fort St. Philip. Fatal progress of the scurvy and other disorders in the garrison. Weakness in point of number. Successful attack on the Duke de Crillon's head-quarters at Capc-Mola. Poquder magazine blown up, bomb battery destroyed, and a ship lank, by the fire from the fortress. Garrison being reduced by sickness, General Murray submits to the necessity of a capitulation. Humanity and tenderness of the enemy to the fick. Coasts of these kingdoms threatened by the enemy. Admiral Barrington fails with a squadron to the Bay, and falls in with a French convoy. Captain Jarvis takes the Pegase of 74 guns. Msf of the convoy taken. L'Actionaire, of 64 guns, taken by Capt. Maitland. Lord Howe fails to the coast of Holland. Dutch fleet returns to the Texel upon his approach. Combined fleets, in their way from Cadez, fall in with the Newfoundland and Quebec convoy, and take several wessels. Combined fleets approach the channel. Lord Howe fuils, with a very inferior force, to protect the great Jamaica convoy. Enemy return to port, without effecting a junction with the Dutch, or being able to intercept the convoy. Preparations for the relief of Gibraltar. Royal George man of war lost at Portsmouth; Admiral Kempenfeldt, several officers, with a great number of people, unfortunately perish. Lord Howe fails for the relief of Gibraltar. State of that fortress. Vast preparations, by sea and land, for its attack, by the combined fleets and armies of France and Spain. Confidence placed in the new constructed battering ships contrived by the Chevalier de Arcon Some account of those formidable machines. Acrival of the French Princes of the blood in the camp before Gibraltar. Letters between the Duke de Crillon and General Elliet. Unexpected and violent cannonade and bombardment from the garrison, by which the enany's works suffer greatly. Violent fire on the fortress. Cembined fleets arrive at Algeziras. Grand attack. Dreadful cannonade and bombardment, from the lines, the battering ships, and the garrison. Admiral's ship and another, at length jet on five, and blow up in the night. General conflagration. Extraordinary exertions of galantry and hamanity, displayed by Captain Curtis, and his seamen in the gun-boats, in Javing the enemy from the flames. Battering joins entirely deflroyed. Storm in the Bay of Gibraltar. Spanish ship of the line driven under the batteries, and taken by the garrison. British fleet arrives in the Straits. Most of the store ships miss the Bay, and pass with the sleet into the Mediterranean. Combined fleets follow, but awoid action. Lord Howe have

[*O] A

ing landed the troops, and fuccessfully relieved Gibraltar, repasses the Straits. Followed by the combined fiects. Distant cannonade, and partial action in the Atlantic.

E shall now return from the new world, to confider the flate or the war, and the pincipal military transactions were took place is the old. I hough A. orca was, of necessity, abandones to its fate by Great-Britain, vet the preparations for the fice of fort St. Philip's, as well from the diftance of the places, which were to supply the vast artiliery, and the immense quantities of mintary Rores and materials deenied recefary for the reduction or that fortrefs, as from the various difficulties and delays incident to their conveyance by fea, could not but occasion some considerable waite of time, before the operations of the fiege were effectually commenced.

The eugerness of Spain to gain possession of this island was fockceffive, that the court feems to have departed, in a me degree, from that dignity of ... which should ever be inaggrant w united with royalty, by an infidious endeavour, through the medium of an immense blibe, to corrupt the fidelity o. the governor. Nor did the Duke de Crillon feem entirely to pay a proper attention to his own rank and reputation, nor to preferve a due recollection of the ho nour and diffinction entailed upon his family, by the peculiar virtue of an illustrious ancellor, when he deteended to become the instrument in such a business. General Murray treated the infult with a mix ture of that haughry diddin, incident to the concroulness of an antient line and illustrious ances-

try, and with the generous indignation and flern resentment of a veteran foldier, who teels himfelf wounded in the tenderest part, by an intidious attempt upon, and consequently suspicion of that honour, which he had set up as the great object and idol of his life.

The fortreis had been closely invelled, and is communications with the country entirely cut off, from the immediate landing of the enemy, which took place about the middle of August. By this means the garrison were deprived of all supplies of vegetables; and that want alone, has not often producta more unfortunate effects. In all other respects they were admirably provided; for the stores and magazines were amply furnished with every kind of excellent talted provisions; with good bread, peate, rice, wine, and other fuitable necessaries, as well for the fick as for those who were in health; and all thefe in such abundance, as would have supported double the number of men, for a longer time than the flege continued. But the fingle want of vegetables was fufficient to destroy all the benefits that were reasonably to be hoped from the general plenty in other respects, and to produce a distemper, as we have formerly observed, that seemed little to be apprehenced, in that climate and foil. The fourty raged among the troops in fuch a degree, as has not often been exceeded in the most soggy and humid northern climates, and even under the worst circumstances of

water

water and provisions; while this inveterate enemy was aided in its course, as usual, by its destructive concomitants, a putrid pestilential fever, and a mortal dysentery.

It is however to be observed, that other causes concurred to the ill effects produced by the immediate want of vegetables. the greater part of the British troops had been eleven years on the island; and the foldiers had lived constant. ly upon falted meats, during the whole of that time. So long a course of living upon falt provifions, although the baneful effects were greatly qualified by the li-beral use of those alimentary or fanative vegetables, of which the island produces such an exuberance, could not but induce a general scorbutic taint among the troops, and pre-dispose, even the best constitutions, to the reception of that fatal diforder, whenever they were deprived of the only corrective to fuch an unwholefome Its progress was likewise diet. much furthered by the close confinement of the troops within the narrow limits of the fortrefs; and still more by the tainted air of the casemates and souterrains, which the intolerable cannonade and bombardment of the enemy rendered their only habitations, and which necessarily became every day more infectious by occupancy.

The combined forces amounted to 16,000 regular troops; and they brought a prodigious artillery, confilling of 109 pieces of the heaviest cannon, and 36 great mortars, to act upon the place. The garrison confisted only of 2692 men of all forts: of these, 2016 were English and Hanoverian regular troops; including,

however, in this number, 400 invalids, who had been fent thither from England to long before as the year 1775. A marine corps, who had been formed on the present occasion, and who, preserving their health much better than the regular troops, were of excellent service in the siege, composed the greater part of the remainder. A handful of Greeks and Corsicans likewise behaved with great bravery.

The fortress was, in some respects, exceedingly strong; the ditch, and all the subterraneous defences, being cut out of the living rock; the great arches which covered the casemates were bombproof; and the defences every where undermined. But the upper works by no means corresponded in strength with the under; and by fome things which have fince come out, from those who had a right to be the best informed on the subject, it would seem, as if through fome negligence, (whether abroad or at home) they had likewife grown out of condition. The works were besides so numerous and extensive, that the present garrison. even in full health, did not amount to half the number, which would have been necessary to their effectual defence.

The knowledge of this weakness probably led the Dake de Crillon to lie more unguardedly in his head quarters at Cape Mola than he might perhaps otherwise have done: while the observation of this negligence induced a vigorous and successful fally from the garrisor, who surprising and routing the enemy, chased the duke from his post, and secured themselves, for the present, so essentially in it,

that

that though he brought up his whole army to dislodge them, he, after much hefitation, at length defisted from the attack. The fuccessful party returned safe to the garrison on the following night, bringing with them about a hundred prisoners, among whom were a lieutenant-colonel, three captains, and four or five subaltern officers. This brifk action was probably intended by General Murray, as a personal military rebuke to the Duke de Crillon; and which the latter had no opportunity of returning, at least in the same manner.

This happened pretty early in the month of November; about which time the enemy having opened their bomb batteries, a shell from the caltle had the fortune to fall upon a powder magazine, which by its explosion destroyed one of them entirely; a number of men were blown up, and a large quantity of loaded fhells either fpent their force in the air, or burft more destructively among the troops. The artillery of the fortrefs was likewife fo well ferved, as foon after to fink a ship in the harbour, which was newly come in loaded with ammunition and stores for the supply of the enemy's batteries. But these small fuccesses, however pleasing and encouraging at the time, could in no degree counterbalance the increafing ravages of these diseases which fo unhappily prevailed in the garrison. Nor could the differences that unfortunately took place between the governor and lieutenantgovernor, tend in any degree to the lessening of evil, or to the removal of difficulty.

Though the enemy kept a most

cautious distance in the construction and progress of their works, and that their troops were fo extremely careful not to expose themfelves, as to be laughed at by our fick and dying foldiers, who faid that they should be fent to school to learn to fland fire; yet, their vast and numerous artillery were fo weighty, powerful, and inceffant in their battery, and such showers of great shells were continually poured into the place, that they foon produced an extraordinary effect in ruining the upper defences of the fortress, and dismounted or rendered useless a greater number of cannon than had been known in any fimilar circum-

Nothing ever exceeded the zeal, valour and constancy displayed by the garrison. The behaviour of the private men, (who were the marked victims to the reigning distempers) through the course, and particularly towards the close of this fiege, was indeed beyond example. Numbers of foldiers died on guard, whose generous eagerness to defend the place, made them conceal their illness to the last, in order to prevent their being fent away to the hospitals from a fervice which held fo firm a poffelfion of their hearts. Such nobleness of mind and conduct deferved a better fortune. The artillery corps, as in every fervice, whether of the former or the prefent war, were in the highest degree diftinguished; so that it has been a question with military men, whether all the other countries in Europe could produce a fet of bombardiers and cannoneers, equal to those who were employed in the defence of Fort St. Philip. It is

almost

almost needless to observe, that the seamen, who composed the marine corps, did every thing that could have been expected, even from that hardy and intrepid order of men.

In the beginning of February the garrison was so much reduced by fickness, that there were only 660 men left who were in any degree fit for duty; and of these, all but one hundred were so far tainted with the scurvy, that the phyficians and furgeons declared, they could hold out only a very few days, before they must of neceffity be fent to the hospital; and as a corroboration of this opinion, no less than 106 had been sent thither in the three preceding days. They likewife declared, that a few days longer obstinacy in desence, must prove the inevitable deftruction of the remains of that brave garrison; as there was no possible remedy for the fick, nor means even of keeping the greater part of them much longer alive, but by a speedy relief of wholesome air, aided by an abundant supply of vegetables. The necessary guards, on the last night of the defence, required 415 men upon daty, fo that there were only 245 left, which was 170 less than the necessary number, for the next relief; and no picket could at all be formed. It was likewife much to be apprehended, that the enemy, fenfible of their weakness, would carry the place by a coup de main, as had been actually done in the former flege, when the fortress was defended by General Blakeney, and the garrison was many degrees stronger than the present.

Under all these cir- Feb. 5th, cumstances, the governor found himself reduced to the necessity of a capitulation, by which he obtained all the honours of war, and every thing else he required, excepting that article only, of freeing the garrison from the condition of prisoners of war, which the Duke de Crillon affured him, his malter, the Spanish King, had particular-Iv tied him down in his instructions from granting; the troops were however to be transmitted to England, but subject to the customary conditions, until were either exchanged, or difcharged by a piece. The Corficans and other foreigners were fecured in their persons, effects, and in the liberty of going where they pleased; and four natives of the island, who were all that had abided the fortune of the garrison, in the possession of their property,

and of their rights as citizens. So tragical a spectacle, and at the fame time fo glorious to the sufferers, has not often been beheld, as the roor remains of the garrison exhibited, in their march through the Spanish and French armies, which were drawn up in op, ofite lines for their paffage, 600 old, emaciated, worn-down, and decrepted fol iers, were followed by 120 of the royal artillery, and by 200 seamen; about 20 Corficans, and a somewhat greater number of Greeks, Moors and Turks, closed the procession. The scene b came still more melancholy and interesting when the battalions arrived at the place appointed for laying down their arms; the foldiers exclaiming, with

with tears in their eyes, that "they furrendered them to God alone;" and at the same time, seeming to derive great consolation from the opinion, that the victors could not boast of their conquest in taking an hospital. This circumstance, of the indignation and grief expressed by the British troops on laying down their arms, was mentioned in terms of admiration, and of the highest homour to the garrison in the Spanish account which were published of this transaction.

The generous fympathy shewn by the enemy upon this occasion, and their noble humanity after, was no lets highly to their honour. It has been affined, by an authority not to be questioned, that several of the common foldiers of both armies, were so moved by the wretched condition of the garrifon, that involuntary tears dropped from them as they passed. The humanity, **f**ublequent kindness and tenderness, shewn by the Duke de Crillon, the Count of the same name and family, and the Baron de Falkinhayn, who commanded the French troops, in their continued supply of all necessaries to the fick, and their unremitted attention to their recovery, was beyond all praise. Such acts," fof-" ten the rugged front of war," and tend to wear away all traces of national enmity.

Such was the fate of the island of Minorca, near fourscore years after its reduction by English arms and valeur to the dominion of this country; and after being long considere as one of the plendid jewels of the British crown, as well as an illustrious monument of our national power and renown.

As the feafon for naval action began to open, great threats were held out, of the mighty effects to be produced by a combination of the whole naval force of France, Spain, and Holland; whose united fleets, it was faid, to the amount of more than fixty ships of the line, would sweep the coasts of Europe from the Straits of Gibraltar to the extremities of Norway, and fpread defolation and ruin along the coasts of Great-Britain and Ireland, in their paffage to and from the northern ocean. Unequal as our home force was to withstand this formidable combination, it became an object of the first importance to lessen the effect by preventing the entire completion of the union, which was only to be done by keeping fuch a watch upon the Dutch fleet as would ditable them from penetrating the Channel, in their way to join our more fouthern enemies at Brest, which was the appointed place of rendezvous.

Necessary and important, however, as the attention to this object was, it could not but greatly restrain and weaken our exertions on the coasts of France and Spain, and particularly increase that security to their convoys, which, through their successes in the war, and general superiority at sea, were now far more frequent and numerous, than they ever had been before in any contest with this country. Under the pressure of this double necessity, of equally providing, with an inferior force, for all the fervices and contingencies which might occur on either fide of the channel, from the Naze of Nerway to the bottom of the Bay of Biscay, it required the most con-

fummate

fummate judgment in the new admiralty, then just formed, as well as all the naval ability, by which our own commanders were that time so highly distinguished, to mete out their attention and strength to either object, with fo steady a hand, and so nice a balance, that no loss might be fultained, or possible advantage missed, on the one fide, through any error or excess in the portion of either allotted to the other.

This plan of operation, though principally defensive, by no means excluded the defign of feizing every favourable opportunity of active fervice and adventure which might come in the way; but so as not to lose fight of the main objects.

It indeed commenced with ex-While the rest of the home fleet was in a flate of more or less preparation, April 13th, Admiral Barrington 1782. failed from Portsmouth for the Bay, with 12 fail of the line, and having arrived fomething less than a day's sail to the fouth-west of Ushant, Capt. Macbride, in the Artois frigate, made the fignal of discovering an The Artois was enemy's fleet. fo far a-head, that although it was about noon, it was with the utmost difficulty the admiral could diffinguish the colour of the flag which she hoisted. The fignal for a general chace being immediately thrown out, the enemy began to be vilible, about three o'clock, from mail-head; and the admiral's ship, the Britannia, was foon left far behind, by feveral of the prime failers. Of these, Capt. Jarvis, in the Foudroyant, so far

outstripped all the rest, that when night came on, with hazy and very blowing weather, he foon lost them entirely; but he kept a full view of the enemy, and purfued them with unremitting vigour.

The chased sleet consisted of 18 fail, laden with stores, provivisions, ammunition, and conveying a confiderable number of troops, for the supply and reinforcement of the French fleet and forces in the East-Indies; being particularly defigned to supply the lofs of that convoy which had been taken by Admiral Kempenfeldt in the preceding winter. They had failed from Brest only the day before, and were under the protection of the Protecteur and Pegafe, of 74 guns each, L'Actionaire, of 64 guns, but armed en flute, and a frigate.

The Foudroyant gaining fo fast upon the chace, that it became evident they could not get off, without an engagement, the convoy was dispersed by signal, and the two French 74 gun thips having confulted, it was determined, that as the Protectour had a large quantity of money on board, she should make the best of her way; and that, if fighting was inevitable, the l'egase should abide the consequences. This determination afforded an opportunity for one of the most figual actions of the pre-

tain Jarvis in the most conspicuous point of view.

The two ships were well matched in point of force and condition. Both were fresh from port; and if a superiority in number of fix guns, in such high rates, could

fent war, and for placing the pre-

fessional skill and gallantry of Car-

be thought any great matter of advantage on the fide of the Foudroyant, it was probably fully compensated by the weight of metal on the other. A little before one in the morning, Captain Tarvis came up with, and closely engaged, the Pegale, commanded by the Chevalier de Sillans. The action was extremely fierce, while it lasted; but within less than an hour from its commencement, Capt. Jarvis laid the French ship aboard on the larboard quarter, and the Pegase was compelled to furrender. Nothing could afford a more striking instance of the decided superiority of seamanship and discipline on the one fide, and of the great effects which they are capable of producing, than the circumstances of this action. The camage in the Pegale was beyond any thing that could have been supposed in so short an action. Above four-score men were killed, and a great number wounded. The damage to the ship was proportioned to the destruction of the men. Hull, masts, and yards, were all materially injured. On the other fide, the damage to the Foudroyant was very trifling; not a man was killed; Capt. Jarvis himtelf, and a few feamen only, were wounded; his wound was flight, and none of the others mortal. It feemed peculiar, that the Protecteur and Pegale, the guard of the present convoy, were witnesses to the loss of the former, under the same destination, when taken by Admiral Kempenfeldt.

The weather was so boisterous, and the sea so extremely rough, that it was with the utmost difficulty, and attended with the loss of two boats, that Capt. Jarvis

could put an officer and 80 men on board the French ship, and bring off about 40 of the pritoners. These circumstances, along with the shattered condition of the prize, and the difficulty of keeping together, began to render her figuation, in more respects than one, critical; but the Queen man of war coming in fight foon after day light, took upon her the charge of the difabled ship; which was the more timely, as the Foudroyant and they foon loft fight of each other, in the hard gale which enfued.

The chace, along with the hard weather, had fo greatly scattered the British squadron, that the Admiral was obliged to bring to, and continue in that position for forty-eight hours, in order to collest the ships. In the mean time, the purfuers were neither flack nor unsuccessful in their chace: about a dozen ships of the convoy, with feveral hundred troops on board, being brought fafe to England. The weather becoming more favourable on the morning of the day after the separation of the Foudroyant, Capt. Maitland, of the Queen, had already taken out about 300 of the prisoners, and fent an officer with a party of men, to reinforce those which Capt. Jarvis had put on hoard the Pegafe, when a large man of war appeared in fight, which the French officers affured him to be their late confort, the Protecteur of 74 guns.

Captain Maitland ordered the Pegale, and a cutter he happened to have in company, to make the best of their way to the first convenient port in England, and, incumbered as he was with prifoners.

soners, immediately pursued the enemy. After a chace of fourteen hours, he came up in the night with the French ship, and after pouring in his broadside, and receiving hers, was much surprised to find that the struck her colours. But instead of the Protecteur, the prize, much to the disappointment of the captain, and his ship's company, proved to be the Actionaire, armed, as we have observed, en flute, but commanded by an officer of rank and reputation, and having 250 seamen, and 550 foldiers on board; of which number nine were killed, and twenty-five wounded, by the fingle broadfide she received. This ship was in all respects, both as an acquisition and a loss to the enemy, a very valuable prize, having a great quantity of naval and ordnance stores on board, besides wine, rum, provisions, and several chests of money. Capt. Maitland now had his hands sufficiently full; for befides the management of two great ships, with the crew only of one, he was involved in the care of no less than 1100 prisoners. The accidental coming up of the Latona frigate, served, in a considerable degree, to lessen this embarrassment.

The continuance of bad weather, obliged Admiral Barrington to finish this short but very successful cruize, by returning to England towards the close of the month. Neither the Queen ship of war, nor the prizes, had joined the squadron, before their return. It was much to the satisfaction of the public, that the order of the Bath was immediately after conferred on the gallant Sir John Jarvis,

The accounts which were received about this time, of Sir George Rodney's decifive victory in the West-Indies, of Sir Eyre Coote's successes in the East, and of the taking of Negapatam and Trincamale, served, along with the confidence founded on the new administration, greatly to raise the spirits and hope of the nation; which indeed had sufficient occasion for despondency, under a feries of such unsortunate events, as are hitherto unequalled in our history.

Environed as we were by powerful enemies, both on the north and the fouth fide of the channel. it was impossible, with so inferior a force, at once to guard against their designs, and to provide, at the same time, for the effectual preservation, in all its parts, of our commerce. Upon the return of Admiral Barrington's fquadron, Admiral Kempenfeldt failed with eight or nine ships of the line, to supply their May 3d. place in the bay; and intelligence being received, that the Dutch were preparing with their whole force to come out of the Texel, with a view, in the first instance, of convoying their great outward-bound fleets of merchantmen out of danger, and then of proceeding theinfelves to fulfil the scheme of joining our fouthern combined enemies, Lord Howe was obliged, in a week after Kempenfeldt's departure, to proceed with a squadron of about a dozen ships of the line, from Portsmouth, to the coast of Holland, in the hope of intercepting, or at least of confining the enemy, and of effectually fruitrating any defigns he might have formed

7

upon our North Sea and Baltic trade.

The Dutch fleet had already failed; but the intelligence of Lord Howe's mo ement obliged them to return hastily to the Texel. After cruiting near a month upon the Dutch coasts, the squadron growing very fickly, being particularly affected by an epidemic disorder, which the extraordinary bad weather of that fummer had rendered generally prevalent, both by fea and land, and finding that the Dutch shewed no manner of disposition to venture out of the Texel, Lord Howe returned to Portfmouth, where being joined by the ships from the Bay, under Admiral Kempenfeldt, every difpatch was used in preparing the fleet to oppose the defigns of the combined enemy, who were foon expected to appear at the mouth of the Channel.

M. de Guichen had been for some time at Cadiz, from whence he and Don Cordova, with about 25 French and Spanish ships of the line, failed in the beginning of June, and in their progress to the northward, while they expected to be joined by the squadrons from Brest, and other ports, they fell in with our outward-bound Newfoundland and Quebec fleets, which were under the convoy of Admiral Campbell, who, in a 50 gun ship, accompanied by fome frigates, was going to his command at the former of these stations, for the protection of the fishery. About 18 of the convoy, laden chiefly, if not entirely, with provisions, were taken; the ships of war, with the remainder, had the good fortune to escape.

The enemy being now entire

masters of the sea, from the mouth of the straits to Ushant, were able to dispatch their great outwardbound convoys, and to receive their homeward, with the utmost facility and safety; while we were under no finall apprehension for the fafety of a rich and great convoy from Jamaica, which was on its way home, under the care of Admiral Sir Peter Parker, with only three ships of the line for its protection. Lord Howe failed from Portsmouth early in July, accompanied by the Admirals, Barrington, Sir J. L. Ross, and Kempenfeldt; but these distinguished commanders had only 22 fhips of the line to support their defigns and adventure, while the combined fleets were cruizing about the chops of the channel. with more than double their force.

Lord Howe kept to the westward of the enemy, in order to protect and receive the Jamaica fleet, and it required all the dexterity and professional skill which eminently diffinguished that nobleman, and the commanders acting along with him, to fecure this object, and at the fame time to avoid being forced into an engagement, where the vast superiority of force against him, could not but produce some degree of its proper effect. Sir Peter Parker arrived fafe with his convoy, by the end of July; the combined enemy derived as little advantage from this as they had from their preceding adventures upon channel; and the Dutch fleet still continued unable to join them.

The return of the fleet to Portfmouth was marked by a calamity of the mest gricyous kind, and

which

which was individually felt by the nation with the deepest concern. The protection of the homewardbound Baltic fleet, the preventing the Dutch from failing to the fouthward, and the relief of Gibraltar, were the great naval objects still in view; and were, each of them fingly, of the very first importance. It was then a most critical juncture, to lose one of the best commanders, the best ships, and a number of the best officers and feamen in the British service. And this loss, not to be sustained in the arduous conflict with a brave enemy, or under the exposure of the more dreadful fury of the elements, but, at home, in the harbour, and in a state of the greatest apparent fecurity.

Several of those ships which were in the best condition for sea; had proceeded to the Downs, under Admiral Milbanke, in order to attend to the motions of the Dutch while the rest of the sleet were in a hasty state of equipment at Portsmouth, and replenishing their stores of water and provisions for the defigned expedition to Gibraltar, which was now become an object of the utmost urgency; and even a general cry rifing through the nation, at the relief being fo long deferred, without regard to the necessities by which it was occasioned.

In this state of things, it was found necessary that the Royal George, of 108 guns, commanded by the gallant Admiral Kempenfeldt, and long held as the first ship in the British navy, should receive a fort of slight careen, which the seamen, in their peculiar phraseology, call a parliament heel: the ship being to be laid in a cervoir. XXV.

tain degree upon her side, while the defects under water, which occasion the examination, are rectified. This feems to be a common operation, in cases where the defects are not so great as to require a thorough careen, or where the delay, as in the prefent instance, of going into dock, cannot be dispensed with; and being usually practifed in still weather and fmooth water, is supposed to be attended with fo little difficulty, or danger, that the admiral, captain, officers and crew, all continued on board, and neither guns, ftores, water, or provisions, were removed.

This business was undertaken betimes Aug. 29th. in the morning, a gang of carpenters from the dock attending to affist her own; and, it is faid, that finding it necessary to strip off more of her sheathing than was at first expected, their eagerness to come at the leak, induced them to heel her a krake more upon her fide, than had been intended, and possibly the commanders than The ship, as is usually knew. the case upon coming into port, was crowded with people from the fhore; particularly women, who were not estimated at less than 300. Among these were many of the wives and children of the feamen, and petty officers, who, knowing the fleet was to fail upon distant and perilous service, cagerly embraced the opportunity of coming to fee their husbands and fathers. Between eight and nine hundred of the crew of the Royal George, including marines, were then on board.

In this fituation, about ten in the morning, the admiral being $[^*P]$ writing

writing in his cabin, and much the greater part of the people happening then to be between decks, a fudden and unexpected fquall of wind threw the ship fatally upon her fide, and her gun-ports being open, and the motion of the cannon probably increasing the violence of the shock, she, almost inflantly, filled with water, and went to the bottom. A viaualler, which lay alongfide the Royal George, was fwallowed up in the whirlpool, which the fudden plunge of fo vast a body in the water occasioned; and several small crast, though at some moderate distance, were in the most imminent dan-

The admiral, with a number of brave officers, and, in general, most of those who were between decks, perished. The guard, including those who happened to be along with them, on the upper deck, were more fortunate; the greater part being saved by the boats of the fleet. About 70 others were likewise saved. The exact number of people on board at the time, could not be ascertained; but it was fupposed, that from 900 to 1000 were loft. Something about three hundred, mostly, if not entirely, of the thip's company, were faved. Capt. Waghorne, whose gallantry in the North Sea battle, under Admiral Parker, had procured him the command of this ship, had the fortune, though feverely battered and bruised, to be faved; but his fon, a lieutenant of the Royal George, happening to be one of those who were unfortunately below, perished.

Such was the fate of the Royal George, which carried the tallest masts, the heaviest metal, and had the greatest number of flags hoisted in her, of any ship in the British navy. She had been repeatedly the feat of command under almost all our great commanders, and upon the greatest occasions, during both the former and the present war; and had been peculiarly diffinguished under Lord Hawke, in the celebrated battle against M. Conflans, when the French fleet was entirely ruined, and she funk the Superbe of 70 guns, by a fingle broadfide, and drove the Soleil Royal, of 84 guns, on shore, where the was burnt. The lofs of the ship, notwithstanding the critical period at which it happened, would not, however, have been much thought of, if it had not been for the brave men who perished so unfortunately in her.

Admiral Kempenfeldt, though near 70 years of age, was peculiarly and univerfally lamented. He was held, both abroad and at home, to be, in point of professional science, knowledge and judgment, one of the first naval officers in the world; particularly in the art of manœuvring a fleet, he was confidered by our greatest commanders as unrivalled; and his excellent qualities as a man at least equalled his professional merits as an officer. His father was a Swedish gentleman, who coming early into the English service, generoully followed the ruined fortunes of his master, James the Second. Being recalled by Queen Anne, after the death of that unfortunate monarch, and ferving with distinction in her wars, he was promoted to the rank of lieutenant-colonel; and was, at the time of his death,

lieutenant-

lieutenant-governor of the island of Jersey. That gentleman's private character was so admirable, as to be depicted and immortalized by Addison, in the Spectators; where it has ever been admired under the well known appellation of Captain Sentry.

A large fum of money, which did honour to the feelings of the public, and was correspondent to that generous benevolence and bounty which so highly distinguish the nation, was immediately raised, by subscription, in London for the relief of the widows, children, and other depending relations, of those who had perished

by this fatal accident.

The Dutch fleet, which had for feveral days been cruizing in the North Sea, having returned to the Texel, and our great convoy from the Baltic fo nearly arrived, as to be out of danger, the fquadron, which had been detached to attend to those services, Admiral Milbanke under Commodore Hotham, returned with the utmost expedition, in order to accompany the fleet in the expedition to Gibral-Sept. 11th. Upon this junctar. tion, Lord Howe failed from Portsmouth, with 34 ships of the line, feveral frigates and fireships, a fleet of transports, victuallers, and store-ships, with a body of troops on board, for the relief of that garrison. He was accompanied by the Admirals Milbanke and Sir R. Hughes as well as by Commodore Hotham and by as brave and able a fet of naval officers, as had ever been joined in any fervice.

Gibraltar was now, indeed, become an object fo conspicuous on

the great theatre of the world, as to attract the attention of all the informed part of mankind; and its fiege and defence began to vie in celebrity with the most famous of those recorded in antient or modern history. Even those nations which we account barbarous, and who have communicated that appellation to fo large and fo fine a portion of the coasts of Africa, were led by that irrefistable sympathy, which the exertions of valour, in its arduous struggles against superior power, produces in the fiercest and most lawless minds to be deeply interested in this event,

The joy of the Spanish king, upon the taking of Fort St. Philip's was manifest and extreme. If it be true, as has been reported, that the plan of that expedition and fiege was entirely laid by himfelf, it is not to be wondered at, that the success of such an essay, should greatly increase the satisfaction, which the recovery of so confiderable an island, and so antient an appendage to his crown, would otherwise have afforded. In fuch a state of temper, it was no less natural, that the immediate instruments in giving effect to the defign should not be forgotten. The Duke de Crillon was accordingly appointed Captain General of the Spanish armies, and Don Joseph Moreno, who commanded the marine in that expedition, was advanced to high naval rank. These rewards, however, looked forward as well as retrospectively: they were intended as the earnest of future fervice; and the conqueror of Minorca was deflined to the recovery of Gibraltar.

No means were neglected, nor [*P] 2 expence

expence spared, to insure the success of this design. Spain found by experience, that all her attempts in the usual forms upon the place, whether by fea or by land, were totally ineffective; and that the cruel measure of destroying the town, odious as it was, went no farther than to the extermination of the inhabitants, without tending, in the smallest degree, to the reduction of the gar-It forely wounded her rison. pride, that the utmost exertions of her power should, in the face of the world, be for fo many years baffled, in the unavailing conflict of a vast and powerful empire, with a handful of men shut up on a barren rock. The court was likewise greatly and particularly irritated, through the difgrace which attended the destruction of their works and batteries in the preceding year by the garrison. So that ambition, honour, pride and revenge, were all concurrent, in urging to the utmost exertions of power and of skill, for the conquest of that place; and as all former exertions had failed, the invention and application of new means became a matter of necessity.

It could not be supposed, that while Gibraltar was so long held out as an object of attention and admiration to the world, that the powerful motives of same and honours, and the strong passion that tends to the exercise and display of talents, should not, among the great number of scientific and ingenious men with which Europe abounds, have excited the genius and industry of some or other to the discovery of means, for evercoming those obstacles of

art and nature, which had hitherto been found infurmountable in all attempts upon the place. Nor could it be doubted, under the circumstances we have feen, that such projects, if at all feasible, would be sedulously attended to.

The Chevalier de Arcon, a French engineer, of high note, however, feemed to be the hero destined to the fall of Gibraltar. His plan was fo highly approved of, that the king himself is said to have taken a part in its modification, or adjustment; hoping to have borne away a royal share of the honour in this instance, as well as in that of Minorca. The plan had been proposed in the latter part of the preceding year; the preparations, though vaft, and exceedingly expensive, were now nearly completed; and the reduction of the place was not only deemed certain, but the powers to be used were so prodigious and terrible, that little less than the annihilation of the fortress was expected to be the confequence of any great obstinacy of defence in the garrison.

In the eagerness which prevailed at Madrid, for the carrying of this point, it had been proposed to bring a whole sleet to the direct battery and attack of the place, on all sides, by sea, while the army was to carry on a surious assault by land; and the facrisce of from ten to twenty ships of war, as the occasion might require, was decreed to be the contented price of success.

The French engineer ridiculed this scheme as wild and incompetent. He shewed that it would be attended with the certain de-

ftruction.

struction of the ships, without producing the fmallest effect upon the fortress. His plan went to the construction of floating batteries, or ships, upon such a principle that they could neither be sunk, nor fired. The first of these properties was to be acquired by the extraordinary thickness of timber, with which their keels and bottoms were to be fortified; and which was to render them proof to all danger in that respect, whether from external or internal violence. The fecond danger was to be opposed, by securing the sides of the ships, wherever they were exposed to shot, with a strong wall, composed of timber and cork, a long time foaked in water, and including between, a large body of wet fand; the whole being of fuch a thickness and density, that no cannon-ball could penetrate within two feet of the inner par-A constant supply of watition. ter was to keep the parts exposed to the action of fire always wet; and the cork was to act as a sponge, in retaining the moisture.

For this purpose, ten great ships, from 600 to 1400 tons burthen (some of them faid to be of 50 or 60 guns) were cut down to the state required by the plan; and 200,000 cubic feet of timber was, with infinite labour, worked into their construction. To protect them from bombs, and the men at the batteries from grape, or descending shot, a hanging roof was contrived, which was to be worked up and down by fprings, with eafe, and at pleafure; the roof was compaled of a ftrong rope-work netting, laid over with a thick covering of wet hides; while its floping position

was calculated to prevent shells from lodging, and to throw them off into the sea before they could take effect. The batteries were covered with new brass cannon, of great weight; and fomething about half the number of spare-guns, of the same kind, were kept ready in each ship, immediately to supply the place of those which might be over-heated. or otherwise disabled in action. To render the fire of these batteries the more rapid and instantanecus, and confequently, more dreadfully effective, the ingenious projector had contrived a kind of match, to be placed on the lights of the guns, of fuch a nature, as to emulate lightning in the quickness of its consumption, and the rapidity of its action; and by which all the guns on the battery were to go off together, as it had been only a fingle shot.

But, as the red-hot shot from the fortress was the enemy most dreaded, the nicest part of this plan feems to have been the contrivance for communicating water in every direction to restrain it's effect. In imitation of the circulation of the blood in a living body, a great variety of pipes and canals perforated all the folid workmanship, in such a manner, that a continual fuccession of water was to be conveyed to every part of the vessels; a number of pumps being adapted to the purpose of an unlimited supply. By this means, it was expected that the red-hot shot would operate to the remedy of its own mischief: as the very action of cutting thro? those pipes would procure its immediate extinction. So that these terrible machines, teening with

[*P] 3 every

every fource of outward destruction, seemed to be themselves invulnerable, and entirely secure

from all danger.

The preparation in other refpects was beyond all example. It was faid, that no lefs than 1200 pieces of heavy ordnance of various kinds had been accumulated before the place, for the almost numberiels intended purpoles of attack by sea and land. quantities of powder, flot, shells, and of every kind of military flore and provision, were so immense as to exceed credibility. The quantity of gunpowder only, was said to exceed \$3,000 barrels. Forty gun-boats, with heavy artillery, as many bomb veffels with twelveinch mort is, besides a floating battery, and five bomb ketches, on the usual construction, were all defined to second the powerful efforts of the great battering thips. Nearly all the frigates, and smaller armed veffels of the kingdom were affembled, to afford fuch aid as they might be found capable of; and 200 large boats were collected from every part of Spain, which with the very great number already in the vicinity, were to minister to the fighting vessels during action, and to land troops in the place, as foon as they had difmantled the fortress. The combined deets of France and Spain, amounting to fomething about 50 thips of the line, were to cover and support the attack; and could not but greatly heighten the terrors as wall as the magnificence of the fcene.

The preparations by land kept pace with those by sea. Twelve thousand French treeps were brought to diffuse their peculiar vivacity and animation through the Spanish army, as well as for the benefit to be derived from the example and exertion of their fuperior discipline and experience. The Duke de Crillon was affisted by a number of the best officers of both countries, and particularly of the best engineers and artillerifts of his own. The length and celebrity of the fiege, now rendered more interesting by the same of the present extraordinary preparation, had drawn volunteers from every part of Europe to the camp before Gibraltar; and not only the nobility of Spain, but many of other countries were affembled, either to display their valour, or to gratify curiofity in beholding fuch a naval-and military spectacle, as, it was probable, had never been before exhibited. The arrival of two princes of the royal blood of France, ferved to increase the splendour and celebrity of the scene. The Count de Artois, the French King's brother, and his cousin the Duke de Bourbon, feemed eager to immortalize their names, by partaking in the glory of so signal and illustrious an enterprize, as the recovery of Gibraltar to the crown of their kinsman and ally.

The arrival of the French princes afforded an opportunity for the display of that politeness, and the exercise of those humanized attentions and civilities, by which the refined manners of modern Europe have tended so much to divest war of many parts of its antient savage barbarity. Some packets, containing a number of letters directed to the officers in Gibraltar, naving, on the way, fallen into

the

the hands of the Spaniards, were, of courfe, transmitted to the court of Madrid, where they lay, at the time that the Count de Artois arrived at that capital. The French prince, in that spirit of generosity, which distinguishes his family as well as his country, considering this circumstance as affording a pleasing opportunity of introduction to a brave and generous enemy, obtained the packets from the king, and condescended to convey them, under his own care, to the camp.

The transmission of the packets to Gibraltar afforded an opportunity to the Duke de Crillon of accompanying them with a letter to General Elliot, in which, befides informing him of the arrival of the French princes in his camp, and of this particular mark of attention shewn by the Count de Artois, he farther acquainted him, that he was charged by them, refpectively, to convey to the general the strongest expressions of their regard and esteem for his person and character. The duke expresfed his own regards for the general in the most flattering terms; eagerly wishing to merit his esteem, and declaring the pleasure with which he looked forward in the hope of becoming his friend, after he had learnt to render himfelf worthy the honour of facing him as an enemy. He likewise requested, in the most obliging terms, that he would accept of a present of fruit and vegetables, for his own use, which accompanied the letter, and of some ice and partridges for the gentlemen of his household; farther intreating, that as he knew the general lived entirely upon vegetables, he would

acquaint him with the particular kinds which he liked best, with a view to his regular supply. The whole letter may be considered as a model of military politeness.

General Elliot was not, however, less polite or obliging in his answer, whether with respect to the duke himself, or to the princes. But, he informed the duke, that in accepting the present, he had broken through a refolution which he had invariably adhered to from the commencement of the war, which was, never to receive, or to procure by any means whatever. any provisions or other commodity for his own private use; he declared, that every thing was fold publickly in the garrison, so that the private soldier, if he had money, might become a purchaser with the fame facility as the governor; and that he made it a point of honour, to partake of both plenty and scarcity, in common with the lowest of his brave fellow foldiers. He therefore intreated the duke, not to heap any more favours of the same kind upon him, as he could not in future apply them to his own use.-An answer and conduct worthy of General Elliot, and of the brave garrifon which he commanded.

The French princes arrived at the camp about the middle of August, and after examining the state of the preparations by land, reviewed the new and extraordinary machines contrived by the Chevalier de Arcon. They were accompanied on this occasion by all the principal commanders of both nations, whether in the land or naval fervice; and the battering ships, if the French and Spanish accounts are to be credited, not
[*P] 4

withstanding their vast bulk and immense weight, not only gave the greatest satisfaction, but astonished even the most intelligent of the officers present, when they saw them go through their various evolutions with all the ease and dexterity of frigates. The confidence now placed in the dreadful and immediate effect to be produced by their action, went beyond all bounds. Twenty-four hours was a longer time, than the public opinion would admit to be necessary, from the commencement of their attack, for the utter destruction of Gibraltar. the commanders held similar fentiments; and the Duke de Crillon was thought extremely cautious of hazarding an opinion, when he allowed fo long a term as fourteen days to the certainty of being in possession of the place.

Those who are acquainted with the temper and disposition of the French armies, or even of the people in general, will not be furprized that the arrival of the princes of the blood should excite an extraordinary enthusiasm in the troops of that nation. The contagion was foon communicated to the Spanish army; and as soon triumphed over the constitutional or habitual gravity of that nation. The impatience of the combined forces both by fea and land for action became excessive; and every hour appeared an age until they could have an opportunity, upon fo conspicuous a theatre, and under the eyes of so great a number of illustrious spectators, of signalizing their respective valour and The infection even emulation. reached to, and produced its eftell upon the commanders. The

engineer has fince complained, that much time was loft, before the preparation in confequence of his scheme was commenced, and that the precipitancy afterwards, in hurrying on measures before his plan was entirely completed, militated no less against its success than the original delay.

It is not however to be forgotten, that the apprehension of Lord Howe's arrival to the relief of the place, which began now to be every day expected, although the great inferiority of any force which he could bring was well-known, would, notwithstanding, independent of any other circumstances, have effectually ferved, both to quicken the determinations of the court, and to accelerate the operations of the fleet and the army. It is likewise to be observed, that the arrival of the princes contributed, on various accounts, to further this effect; and that even the inconveniences of their being detained long in the camp, and the prodigious expence which it occasioned to the Count de Artois, were probably matters of confideration.

Although the intrepid defender of Gibraltar had long observed the storm gathering, and saw that it must soon fail with unparalleled violence, yet he could only obtain fome general knowledge of the immense preparations that were making, and of the invention of fome terrible machines, which had inspired the enemy with a confidence of success, to which they had been before strangers; but was utterly in the dark as to the nature, construction, and mode of operation of those new-invented vessels. This uncertainty as to

the mode of attack, and ignorance of the nature and powers of a new enemy, feemed almost sufficient to shake the firmness of the most tried and constant resolution; and could not but greatly increase the already numberless anxieties of so arduous and perilous a fituation. In these circumstances, General Elliot left nothing undone, that it was possible for a great commander to accomplish: he provided for every circumstance of danger that could be foreseen or imagined, for the reception of every enemy, whatever his mode of operation might be: and confiding in the excellency of his officers, and the valour of the admirable troops they commanded, was not apprehensive of trusting the event to the decision of that fortune, which has ever been held favourable to superior exertions of virtue and bravery.

In the mean time, unawed by the vast force with which he was on every fide, by fea and land furrounded, General Elliot did not hefitate, by new and unexpected infult and damage, to provoke his combined enemies to the attack. For, observing that their works on the land fide were nearly completed, and some of them pretty far advanced towards the fortress, he determined to try (though dubious of the effect from the distance) how far a vigorous cannonade and bombardment, with red-hot balls, carcaffes and shells, might operate to their destruction. A powerful and admirably directed firing commenced from the garrison at seven o'clock in the morning of the 8th of September, and was supported through the day, with the usual unrivalled skill and

dexterity of the artillery officers. The effect far exceeded the general's expectation. By ten o'clock the Mahon battery, with another adjoining to it, were in flames; and by five in the evening were entirely confumed, together with their gun-carriages, platforms and magazines, although the latter were bomb proof. A great part of the communications to the eastern parallel, and of the trenches and parapet for musquetry, were likewise destroyed; and a large battery near the bay was fo much damaged, having been repeatedly on fire in feveral places, that the enemy were under a necessity of taking down one half of it. They acknowledged, that their works were on fire in fifty places at the fame instant. The emulation between the nations, as well as the presence of the French princes. urged the troops to expose themfelves exceedingly in their efforts to prevent the progress of the flames, fo that their loss in men, under so dreadful and well directed a fire, could not but have been very confiderable. This was indeed fully within the fight and obfervation of the garrifon, although the Spanish and French published accounts, in their usual manner, represented the loss of men as being so trisling, that it ill accorded with their own detail of the mifchief done to their works, and of the extraordinary valour displayed by the troops of both nations in exposing themselves to such imminent danger. It must have been highly curious and interesting, even to an indifferent spectator, to have beheld the diforder and confusion into which to powerful an army was thrown, and the lofs

and mischief it sustained, through the exertions of so inferior a number. If vanity was capable of producing such effects, there would have been an opportunity now for its full gratification.

This fresh affront recalled the memory of the loss and difgrace fuffered by the fally of the preceding year, and was resented so much by the allied commanders, that it feems to have contributed not a little to precipitate their measures. A new battery of 64 opened by beavy cannon was break of day on the following morning, which with the cannon in their lines, and above 60 mortars, continued to pour their shot and shells without intermission, upon the garrison, through the whole course of the day. At the fame time, a squadron of seven Spanish and two French ships of the line, with fome frigates and fmaller veffels, taking the advantage of a favourable wind, dropped down from the Orange Grove, at the head of the bay, and passing flowly along the works, discharged their shot at the fouth bastion, and the ragged flaff, continuing their cannonade, until they had paffed Europa point, and got into the They then form-Mediterranean. ed a line to the eastward of the rock, and, the admiral leading, came to the attack of the batteries on Europa point, and under a very flow fail, commenced a heavy fire with all their guns, which continued until they were entirely paffed.

The fmall marine force at Gibraltar had for fome confiderable time been commanded by Captain Curtis, of the Brilliant frigate, who had been much diffinguished

in several spirited actions with the Spanish frigates and gun-boats, and had been particularly fuccessful in rescuing the vessels that were coming into the garrison, from their attacks in the bay. We have already feen that the feamen had held a dislinguished part in the last fally; where as they were attached to different garrison corps, this gentleman acted only as a volunteer. In the present feafon of danger, when the superiority of the enemy shut them up from exertion on their proper element, it was thought necessary not to lose their services in the immediate defence of the place by land. They were accordingly formed into a distinct corps, under the name of the marine brigade, and Captain Curtis held the rank and title of brigadier, as their commander. To that officer, and his marine corps, was committed the defence of the works and batteries on Europa Point; a trust which they discharged so well, that having repeatedly struck the enemy in the first attack, they were afterwards glad to keep a more guarded distance; and two of the Spanish ships found it necessary to go to Algezinas to repair their damages.

mages.

The firing from the ifthmus was renewed on the next, and continued the fucceeding days; while the enemy boasted that it should be supported on the same scale until the reduction of the place; that being at the rate of 6500 cannon shot and 1080 shells, in every 24 hours. The ships likewise made repeated attacks upon Europa point, but the batteries were so excellently served, and the guns so well pointed, that they did not

approach

approach near enough to produce much effect. As if it had been hoped at once to confound and overwhelm the garrifon, by the multitudinous forms and variety of attack, and the enormous quantity of fire poured upon them, the gun and mortar boats were now added to all the other instruments of vengeance, and renewed with great fierceness their affaults both by day and by night upon the Indeed the numerous works. volunteers and spectators had now an unufual opportunity of gratifying their curiofity, in beholding the operations of war diversified nearly into all the forms, which it is capable of exhibiting, whether by land or by fea, in the attack or defence of a fortress.

It feems fearcely lefs than aftonishing, that these numerous attacks, accompanied by fo prodigious a weight of fire, in all its most destructive modes of action, should have produced very little effect, either with respect to the loss of men in the garrison, or to the damage done to the works. But the arduous day was now fast approaching, when courage, skill, and ingenuity, were to undergo their severest trial; and when all the united powers of gun-powder and artillery, in their highest state of discovery and improvement, were to be called into action.

The combined fleets, of 27 Spanish and 12 French ships of the line were now arrived at Algeziras from Cadiz, and with those already on the spot, amounted either to 48 or 49 sail of the line, besides two or three sisting. The battering ships were likewise in readiness. Their batteries were covered with 154 pieces of heavy

brafs cannon; and they carried fomething less than half that number to be used as exchanges. The Pastora, the admiral's ship, had 24 guns mounted, and ten in referve; the Prince of Nassau's ship, the Paula, was about the fame force, and held a fimilar propor-Thirty-fix artillery men, tion. and volunteers from the two armics, were allotted to the fervice of each gun; and these being exclusive of the officers, and of the feamen who navigated the vessels, the whole number on board was estimated at between fix and seven thousand men. The gun and mortar boats, with the floating battery and the bomb ketches. were to carry on their attacks in every possible direction, whilst the fire of the battering ships was directed against their destined objects. By this means, and by the fire of near 300 cannon, mortars, and howitzers from the isthmus, it was intended that every part of the works being attacked at the fame instant, and every quarter presenting a similar face of danger, the garrison should be thrown into irretrievable consternation and dismay, or at least, that their attention being called away to fo many fervices, the refistance must become generally ineffective, and totally unequal to the accumulated weight and force of the grand attack.

About seven o'clock, on the morning of the 13th of September, 1782, the ten battering ships of the enemy, lying at the Puenta Maillova, near the head of the bay of Gibraltar, and under the conduct of Admiral Don B. Moreno, were observed to be in motion; and soon after getting un-

der

der fail, to proceed to their stations for the attack of that fornine and Betw**e**en tress. o' clock they came to an anchor, being moored in a line, at moderate distances, from the Old to the New Mole, lying parallel to the rock, and at about 900 yards diftance. The greatest spirit was displayed through this whole evolution; and it is acknowledged on our fide, that nothing could be more masterly than the perform-The admiral's ship was stationed opposite the King's bastion; and the others took their appointed places, fuccessively, and with great regularity, to the right and left of the admiral. The furrounding hills were by this time covered with people, and it seemed as if all Spain had affembled to behold the spectacle.

The cannonade and bombardment, on all fides, and in all directions, from the ifthmus, the iea, and the various works of the fortreis, was not only tremendous but beyond example. The prodigious showers of red-hot balls, of bombs, and of carcasses, which filled the air, and were without intermission thrown to every point of the various attacks, both by fea and by land, from the garrison, astonished the commanders of the allied forces, who could not conceive the possibility, that General Elliot, streightened as he was within the narrow limits of a garrison, should have been by any means able to construct or to manage such a multitude of furnaces, as they deemed necessary to the heating of the infinite quantity of that then thrown. The number of red hot-balls, which the battering ships only received in the

course of the day, was estimated in their own accounts at not less than four thousand. Nor were the mortar batteries in the fortress worse supported; and while the battering ships appeared to be the principal objects of vengeance as they were of apprehension to the garrison, the whole extent of the peninsula seemed at the same time to be overwhelmed in the torrents of fire which were incessantly poured upon it.

As the violence of the attacks corresponded with the fury of the defence, and that the means and powers of annoyance and destruction were prodigious on both fides, no imagination could conceive a scene more terrible, than this day and the fucceeding night exhibited. All description would fail, in attempting to convey adequate ideas of fuch a scene; and the very actors in it could not be perfectly clear and distinct in their conceptions of what was passing, amidst the furrounding tumult and up-

The battering ships were found upon trial to be an enemy scarcely less formidable than had been represented. Besides maintaining a cannonade so prodigious through the greater part of the day, as fcarcely admitted any appearance of superiority on the side of the fortress, their construction was so admirably calculated for the purpose of withstanding the combined powers of fire and artillery, that for several hours the incessant showers of shells, and the hot shot with which they were affailed, were not capable of making any visible impression upon them.

About two o'clock, however, fome fmoke was feen to iffue from

the upper part of the admiral's fhip; and foon after, men were observed using fire engines, and pouring water into the shot-holes. This fire, though kept under during the continuance of day-light, could never be thoroughly fubdued; and in some time, the ship commanded by the Prince of Nassau, which was next in fize and force the admiral's, was perceived to be in the same condition. The disorder in these two commanding ships in the center, affected the whole line of attack; and by the evening, the fire from the fortress had gained a decided su-

periority. The fire was continued from the batteries in the fortress, with equal vigour, through the night; and by one o'clock in the morning, the two first ships were in slames, and several more visibly on fire. The confusion was now great and apparent; and the number of rockets continually thrown from each of the ships, as signals to the fleet, were fufficiently expressive of their extreme distress and danger. These signals were immediately answered, and means used by the fleet to afford the affistance which they required; but as it was deemed impossible to remove the battering ships, their endeavours were only directed to bringing off the men. A great number of boats were accordingly employed, and great intrepidity displayed in the attempts for this purpose; the danger from the burning vessels, filled as they were with instruments of destruction, appearing no less dreadful, than the fire from the garrison, terrible as that was; and that the light thrown out on all fides by the

flames, afforded the utmost precision in its direction.

This state of things presented an opportunity for the exercise of the daring genius of Captain Curtis, in using the exertions of his gunboats, to complete the general confusion and destruction. These were twelve in number, and each carrying an eighteen or a twentyfour pounder, their low fire and fixed aim was not a little formidable. They were speedily manned by the marine brigade, who were equally eager to second the defigns of their adventurous commander, whether by land or by sea. He drew these up in such a manner as to flank the line of battering ships, which were now equally overwhelmed, by the incessant direct fire from the garrifon, and by that just at hand, raking the whole extent of their line, from the gun-boats. scene was wrought up by this fierce and unexpected attack to the highest point of calamity. Spanish boats dared no longer to approach; and were compelled to the hard necessity of abandoning their ships and friends to the flames, or to the mercy and humanity of a heated and irritated enemy. Several of their boats and launches had been funk before they fubmitted to this necessity; and one in particular with fourfcore men on board, who were all drowned, excepting an officer and twelve men, who having the fortune to float on the wreck under the walls, were taken up by the garrison. The day-light now appearing, two Spanish feluccas, which had not escaped with the others, attempted to get out of the danger; but a shot from a gunbeat has banin

boat having killed feveral men on board one of them, they were both

glad to furrender.

It feemed, that nothing could have exceeded the horrors of the night; but the opening of daylight disclosed a spectacle still more dreadful. Numbers of men were feen in the midst of the slames, crying out for pity and help; others floating upon pieces of timber, exposed to an equal, though less dreadful danger, from the op-Even those in the polite element. ships where the fire had yet made a less progress, expressed in their looks, gestures, and words, the deepest distress and despair; and were no less urgent in imploring assistance.

The generous humanity of the victors now, at least, equalled their extraordinary preceding exertions of valour; and was to them far more glorious. Nor were the exertions of humanity by any means attended with less danger, nor with circumstances less terrible in the appearance, than those of active hostility. The honour and danger, however, in this instance, lay entirely with the marine brigade, and with their intrepid commander. The firing both from the garrison and gun-boats instantly ceased, upon the first appearance of the difmal spectacle presented by the morning light; and every danger was encountered, in the endeavours to rescue the distressed enemy from furrounding destruction. In these efforts, the boats were equally exposed to the peril arising from the blowing up of the ships, as the fire reached their magazines, and to the continual discharge, on all fides, of the artillery, as the guns

bccame to a certain degree heated. It was indeed a noble exertion! and a more striking instance of the ardour and boldness with which it was supported, needs not to be given, than that of an officer and 29 private men, all severely, and some most dreadfully wounded, who were dragged out from among the slain in the holds of the burning ships, and most of whom recovered in the hospital at Gibraltar.

In these extraordinary efforts to fave an enemy from perishing; though the most astonishing intrepidity was shewn by all the officers and men, yet their gallant commander was peculiarly distinguished; and his life was repeatedly in the most imminent danger. Besides his being the first to rush on board the burning vessels, and to fet the example of dragging with his own hands the terrified victims from the midst of the flames, his pinnace being close to one of the largest ships when she blew up, the wreck was spread all round to a vast extent, and every object being for a confiderable time buried in a thick cloud of smoke, General Elliot and the garrison suffered the most poignant anguish and distress, considering the fate their brave and generous friend, and of his bold companions, as inevitable. Indeed, their escape was little less than miraculous, though not quite complete; for the cockswain and some of the crew were killed, others wounded; and a large hole struck, by the falling timber, through the bottom of the pinnace; which was only faved for the instant from going to the bottom, by the feamen's stuffing the hole with their jackets, and by that means keep-

ing

ing her above water until other boats arrived to her affistance. Another gun-boat was funk at the fame instant, and a third so much damaged as to be with difficulty Something near or about faved. 400 men were faved, by thefe exertions, from inevitable destruction; and it may be truely faid, (and highly to the honour of our national character) that the exercife of humanity to an enemy, under fuch circumstances of immediate action and impending peril, yet displayed with was never greater lustre than upon this occacasion.

It was highly fortunate, that much the greater part of the troops and seamen on board the ships had been removed, before the effective, and admirably directed attack made by Captain Curtis with the gun-boats, could have been attempted. Numbers, however, perished; and it is supposed, at a very moderate estimate, that the enemy could not have lost less than 1500 men, including the prisoners and wounded, in the attack by fea. Admiral Don Moreno left his flag flying, when he abandoned his ship in which state it continued until it was confumed or blown up with the veffel. Eight more of the ships blew up fuccessively, with dreadful explofions in the course of the day. The tenth was burnt by the English, when they found she could not be brought off.

It does not appear that the Spanish gun and mortar-boats took any great share in this attack. They were intended to slank the English batteries, while they were attacked directly in front by the ships, and to throw their fire in fuch directions, as it was thought, besides increasing the general confusion and disorder, would render it impossible for the men to stand to their guns. It feems probable that their spirit of adventure funk, under the dreadful fire from the garrifon. The Spanish accounts only mention, that the rifing of the wind, and a swell of the fea, prevented their producing the expected effect. Only two of the bomb ketches came forward; but these continued to throw shells without intermission into the fortress, during the whole day and night of the attack. Nor did the fleet perform the fervices which were expected or threatened, by making attacks on all practicable parts of the fortrefs, and thereby causing, at least, a diversion, in favour of the battering ships. This failure has been attributed to an unfavourable wind.

The lofs fustained by the enemy, under the aftonishing fire which the garrifon continued to throw upon the isthmus during the whole time of attack, cannot be ascertained; their own various and contradictory accounts, being fo evidently calculated to depreciate their lofs both by fea and land, that the lists of killed and wounded officers, and of prisoners, which could not be concealed, fcemed almost necessary to their acknowledging that any was fustained. A letter from a French officer, dated on the evening of the 8th, giving an account of the attack upon the works on that day by the garrison, which was published in the foreign gazettes, contains the following pathetic paffage, which

may afford fome idea of the effect produced by a fimilar or greater fire on the 13th; viz. The eye is fatigued, and the " heart rent, with the fight and or groans of the dying and wounded, whom the foldiers are this " moment carrying away; the " number makes a man shudder; and I am told, that in other or parts of the lines, which are not within view of my post, the " numbers are fill greater. For-" tunately for my feelings, I have onot, at this instant, leisure to or reflect much on the state and " condition of mankind."

The loss on the fide of the garrison was less than could have been conceived, and was nearly confined to the artillery corps, and to the marine brigade. A few brave officers and men lost their lives, and a much greater number were wounded. From the 9th of August to the 17th of October, the whole number of non-commissioned officers and private men flain, amounted to fixty-five only; but the wounded were no less than 388. Of commissioned officers, twelve were in that time wounded, of whom a captain and a lieutenant died. Nor was the damage done to the works fo confiderable as to afford any room for future apprehension or at all to hold any proportion with the violence of the attacks, and the excessive weight of fire they fustained.

Such was the fignal and complete defensive victory, obtained by a comparatively handful of brave men, over the combined efforts and united powers, by sea and by land, of two great, warlike, and potent nations, who fparing no expence, labor, or exertion of art, for the attainment of a favourite object, exceeded all former example, as well in the magnitude, as in the formidable nature of their preparation. A victory which has fleed a fignal blaze of glory over the whole garrifon, but which cannot fail particularly to immortalize the name of General Elliot, and to hand down to posterity with distinguished honour those of Lieutenant-General Boyd, and the other principal officers.

The enemy rested all their hopes now, at least oftensively, on the defeat of Lord Howe's fleet; or at any rate, on preventing the intended relief, and thereby reducing the unconquered garrison to the necessity of a furrender, through the mere failure of ammunition and provisions. afforded the only subject of consolation, and nothing seemed to be fo ardently wished for as the arrival of the English fleet; an event which, it was held out, would afford an happy opportunity, for converting all past disgrace into an augmentation of present glory.

In the mean time, Lord Howe met with much delay, through, contrary winds and very unfavourable weather, on his way to Gibraltar; which was rendered exceedingly irksome, by the anxiety and apprehensions that prevailed relative to the fituation of things at that fortress, under a knowledge of the menaced attack. It was not until the fleet had arrived near the scene of action, that this doubt and apprehension were removed, by intelligence received from the coast of Portugal, of the total discomfiture of the combined forces

forces, in their grand affault upon that place. Advice was also received that the united fleets, inflead of waiting, as was expected, to encounter the British force, off Cape St. Mary, (a situation which would have presented a fair scene for general action on all sides) had taken their station in the Bay of Gibraltar, as a measure for prevent-

ing the intended fupply.

At this critical point of time, a violent gale of wind in the Straits, threw the combined fleets at Algeziras into the greatest disorder, and exposed them to no small This happened on the danger. night of the 10th of October, and during the courfe of the ftorm, much damage was done. One ship of the line was driven ashore near Algeziras; two more were driven to the eastward into the Mediterrancan; others lost masts or bowsprits; and many suffered more or The St. Michael, less damage. a fine Spanish ship of 72 guns, was driven across the bay, under the works of Gibraltar; where the fire of the batteries increasing the terror and confusion on board, she run aground, and was taken by the boats of the garrison; her commander, Admiral Don Juan Moreno, with 650 feamen and foldiers, became prisoners of war. The enemy, upon discovering the fate of the St. Michael, began, and continued for feveral days, a most furious fire upon the fortress, throwing at the same time an infinite number of shells at the St. Michael, in the hope of destroying her as she lay ashore. fire, however, produced no other effect, than some small loss of men, and much trouble to those who were employed in getting off Vol. XXV.

the St. Michael; which was, however, done in three or four days, without any other damage to the ship than what she received from the storm or the ground; and that, excepting the loss of a mast, was in no degree essential.

On the morning that Oct. 11th. fucceeded the florm, the British sleet (which had felt it, but without loss or damage) entered the firaits mouth, in a close line of battle a-head; and about an hour after midnight, the van arriving off the Bay of Gibraltar, a most favourable opportunity was afforded to the store-ships of reaching their destined anchorage, without any moleflation from the enemy; but through fome inattention of the captains to the peculiar circumstances of the navigation laid down in their instructions, only four of the thirtyone fail which accompanied the fleet effected their purpose. The rest, having missed the bay, were driven through the straits into the Mediterranean during the night, and were no fmall encumbrance to the fleet in its subsequent operations.

While Lord Howe was collecting his convoy in the Mediterranean, and preparing to escort them back to the rock, the enemy were under no finall auxiety for the fafety of the two line of battle ships, which had been driven from Algeziras out of the straits on the night of the storm. To recover there, and in the hope of intercepting, or preventing the return of the store-ships, the combined fleets failed from Algeziras on the 13th, their force being now leffened, by three disabled ships which they were obliged to leave behind.

behind, by the St. Michael, taken, and by the absence of two others.

The British fleet was a breast of Fungarola, a large port town lying between Malaga and Gibraltar, when advice was received of the approach of the enemy. Upon this intelligence, while the fleet was closing, and forming a line of battle, the Buffalo, of 60 guns, was dispatched with those store-ships which had yet been collected, to the Zafarine islands, which lie upon the coast of Barbary, about leagues above Gibraltar. The Panther, of the fame force, being left in the Bay of Gibraltar, for the protection, as they arrived, of the store-ships, Lord Howe's force now only amounted to thirty-two fail of the line.

About fun-fet, the enemy were descried in great force, at about fix leagues distance, in line of battle, with a strong wind full in their favour, and bearing directly down upon the English fleet. They amounted in number to fixty-four fail, of which forty-nine were square - rigged, and about fortytwo feemed to be of the line, including feveral very large three deckers. About nine o'clock, advice was received from the advanced frigates, that the enemy had hauled their wind and bore up; and at two in the morning, that they had tacked. By daylight, they were perceived close in with the land, and at fuch a distance as not to be visible from the deck. It would feem, that during that time they had recovered the two missing ships.

It was discovered in the morning, that several of the transports had not gone with the Buffalo on the preceding evening, and that se-

veral others had joined the fleet in the night. Upon this account, the wind happening to become favourable, the fleet proceeded in order of battle towards the mouth of the straits, and passed eighteen of the convoy fafe to Gibraltar Bay. By the 18th the veffels under the convoy of the Buffalo having rejoined the fleet, were fent into Gibraltar; two regiments, which were on board the ships of war and frigates, were likewise landed; and a scarcity of ammunition in the garrison, which seems not to have been provided for, was remedied by Lord Howe's fending in a supply of 1500 barrels of powder from the fleet.

During the performance of thefe effential fervices, the combined fleets of the enemy never once came in fight; but at the break of day, on the 19th, the British sleet being then in the entrance of the gut, and enclosed between the opposite points of Europa and Ceuta, they appeared, at no great diftance, to the north-east. British commander faw that would be the highest imprudence and rashness to hazard an action in the gut. There was not fufficient room for forming the line of battle; much less for the evolutions which might be necessary in the course of an engagement. The danger arising in such circumstances from the vicinity of the enemy's coasts, was not an object of less consideration than their superiority in number and force. The wind blew full from the Mediterranean, and was of course entirely in their favour; and, befides all the advantages to be derived from friendly shores, and fuch a perfect knowledge of them

HISTORY OF EUROPE. [*243

and of the currents, as to be able to evade, or to convert into benefits all the dangers of the straits, they had, in case of particular damage, or general misfortune, excellent ports at hand on all sides for their relief or protection; while the English ships, in case of any confiderable damage, which was a consequence to be considered as unavoidable with respect to some or other, had no friendly port to retire to for relief or shelter.

thefe In circum-Oct. 20th. stances, Lord Howe repassed the straits into the Atlantic, and was followed by the enemy. On the following morning, they were perceived, at about five leagues distance to windward. The English fleet formed in order of battle to leeward, to receive them; and the enemy had it in their power, during the greater part of the day, to have chosen their time of action as well as their distance. At fun-fet, they began a cannonade on the van and rear of the British sleet; but generally at such a distance as to produce little efat times approached within reach. This firing was held in fuch contempt by Lord Howe, that he did not return a fingle shot from his own ship, the Victory, although the was fired at by feveral, and at one time by three ships.

The enemy, however, perceiving a part of the rear a good deal separated from the rest, made a bolder attempt upon that division. The French and Spanish admirals, M. de Guichen, and Don Cordova, led the attack upon the fepa-

rated ships, which, referving themfelves till they were within a near distance, threw in so well-timed, fo heavy, and fo admirably directed a fire upon them, and this was supported with such spirit and effect, that the enemy were foon thrown into evident confusion, and their leading ships suffered some confiderable apparent damage. Don Cordova, in particular, was thrown all a-back; and the enemy hauling their wind, gave up the object entirely; the cannonade ended about ten o'clock, and the combined fleets being at a confiderable distance in the morning, and, to appearance, on their return to Cadiz, Lord Howe proceeded on his way to England.

This distant fire, as usual, and as all that was intended by it, excepting merely to fave appearances, did a good deal of damage to the yards and rigging of several of the English ships, so that if Lord Howe had even been disposaed to purfue the enemy on the following morning, he could not have so done; but that, undoubtfest; the fire being occasionally edly, neither was, nor ought to returned by different ships as they have been any part of his object. The measure of mere fighting, without any adequate object in view, can never be adopted by any wife commander, either by fea or by land. The great fervice of relieving Gibralter was, in the face of all Europe, most happily and gloriously performed, under such circumstances of inferiority force, as not only fully to support, but highly to exalt, our naval renown, and the honour of the British slag. It was evident, through the whole course of the proceed.

244*] ANNUAL REGISTER, 1782.

proceedings, that the combined enemy, with fo great a superiority as they possessed, had not, at any time, the smallest intention of hazarding a general action; however willing they might be to risque some loss in order to maintain that appearance, and however watchful they were to prosit of any advantage that might be afforded. The British comman-

der, besides, had other important services still to provide for. He detached eight ships of the line to the West-Indies, and fix to the coasts of Ireland, on his way home; neither of which, or at least the former, could probably have been done, if a forced action, (and which from its nature could not be decisive) had taken place.

CHRONICLE.

CHRONICLE.

JANUARY.

Petersburgh, Dec. 28, 1781.

N consequence of the resolution of the Empress, our august Sovereign, respecting the augmentation of her marine, orders have been issued for building 12 ships of the line at Cherson, and eight others, three-deckers, here: by this arrangement, our marine will amount to 42 ships of the line for the Baltic, and 12 of the line for the Black Sea, exclusive of frigates, gallies, bomb-vessels, and other armed ships,

Dantzig, Jan. 1, 1782. The total number of vessels arrived here during the year 1781, is 502, among which not one under Dutch colours; and the number of those which have sailed from this port during the same period, is 549; among the former 42 came from Holland, and among the latter 30 were destined for that Republic.

Most of the Dantzig vessels have been employed in carrying shipbuilding timber to England, and have had very high freights; but as all the neutral powers are at this time building trading vessels, it is thought the freights will be lower this year than last.

During last year, there have Yor. XXV.

only arrived here from Poland 4067 lasts of wheat, and 5600 lasts of rye, which is very different from former years, when the average importation of those grains used to be 40,000 lasts. We have at present, in our warehouses, about 5000 lasts of corn, and 3500 lasts of rye.

Our trade, in general, is much diminished; and if our navigation, and the sale of ship-building timber, did not bring us some advantages, many here would be in actual want.

3d. The fleet commanded by Don Louis de Cordova, confisting of 40 ships of the line, 9 frigates, with 70 transports, having 4000 troops on board, sailed from Cadiz on a secret expedition.

Milan, 18th. We have received here the ordinances of the Emperor, for the suppression of some religious orders of both sexes, the individuals of which lead a mere contemplative life, without being of any service to the public.

19th. The Vienna Gazette of this day's date contains the following notification:

"Notice is hereby given to all those who have hitherto kept out of their country on account of the religion they profess, that his Majesty pardons them, on condi-

194] ANNUAL REGISTER, 1782.

tion that they return in the course of the year 1782, promising that they shall enjoy the same benefits as those who, on account of religion, had quitted the place of their birth, and taken up their abode in other provinces belonging to his said Majesty."

The Marquis Fayette and Vifcount Noaille arrived at Paris from their stations in North

America.

St. James's, 25th. The Baron de Kutzleben had a private audience of his Majesty, to deliver a new letter of credence, giving him the character of Minister Plenipotentiary from his Serene Highness the Landgrave of Hesse Cassel.—He had afterwards a private audience of her Majesty.

Came on in the court of king's bench, the important question between the captors of the island of St. Eustatius and the British claimants of property in that island, Whether their claims should be determined in the court of admiralty, or whether the court of king's bench should prohibit that jurifdiction from proceeding in the fuits instituted in the admiralty, and leave the claimants to purfue their remedy against Sir G. Rodney and Gen. Vaughan in the courts of common law? This queltion drew the attention of the first gentlemen of the profession of the law, and was maintained with equal ability on both fides; but was at length determined in favour of the admiralty courts by Earl Mans-His Lordship said, that field. the English language could not state in clearer terms than the legiflature faid and understood, that the jurifdiction was in the admiralty.

A cartel ship, with 300 French prisoners on board, part of the regiments of Aquitaine and Soissons, which were taken by Admiral Kempenfelt, in clearing Mount Batten, in Plymouth Road, fell to leeward, miffed stays, and drove upon the reef of rocks at the cast end of it. The poor unfortunate prisoners, who were but a minute before huzzaing in the highest spirits, were now funk in the deepett diffres; many of them wringing their hands as if on the point of perishing. Some that could swim reached the boats that had put off to their assistance. Six boys got out the yaul, and attempted to reach the shore, but were dashed against a rock, and the boat instantly staved; the next wave that fucceeded cast the lads on the shore, who found means to crawl up the rocks, and were faved. A cutter that attended the cartel got out all the boats, and, with the affiftance that instantly came from the shore, took almost every man on board, not more than two or three being missing, who it was fupposed in the hurry had flipped between the boats.

The long pending and important cause between Mr. Difney Ffytche and the Bishop of London had a decisive hearing before Lord Loughborough, who pronounced the decifion in favour of Mr. Fytche; laying it down as a principle not only affecting the issue of this particular case, but of general operation-a doctrine founded on the immoveable basis of the law of the land - "That bonds of general refignation were not illegal, and that of course a bishop could not refule.

9

refuse, on this plea, the institution into a benefice of any clerk properly presented by the patron." An American ship arrived at Oftend reports, that congress took a resolution, towards the end of November last, to forbid the importation of all goods and merchandizes of the growth or manufacture of Great Britain and its dependencies, on pain of confiscation in case such goods and effects are found in their dominions, or within three leagues of the coast, and being intended for that country, except they are taken in prizes, and lawfully condemned. This important refolution is to take place the 1th of May, 1782.

At a meeting of the livery of the city of London, in common-hall affembled, this day, the right honourable the lord mayor reported the answer given by his majesty to the sheriffs of this city, respecting the presenting the address, remonstrance, and petition, agreed to at the last common-hall; also a letter from the Earl of Hertford, addressed to him, and his lordship's answer to the said letter.

Refolved, That the thanks of this common-hall be given to the lord mayor, for the fpirit and propriety of his conduct on this occasion.

Refolved, That whoever advised the king to deviate from the accustomed mode, admitted by his majesty, of receiving the livery of London, sitting on his throne, is an enemy to the rights and privileges of the citizens of this great capital of the British empire.

Resolved, That the unequal representation of the people, the corrupt state of parliament, and the perversion thereof from its original inflitution, have been the principal causes of the unjust war with America, of the consequent dismemberment of the British empire, and of every gricvance of which we complain.

Resolved, That these grievances can never be removed, until the right of the people to their constitutional share in the English government shall be re-established, by a fair and equal representation in parliament, and a frequent election of their representatives, according to ancient usage.

Resolved, That for the purpose of obtaining a restoration of these rights, a committee of the livery of London be appointed.

Refolved, That the committee appointed the 10th of February, 1780, by the common council of this city, to correspond and confer with the committees of other counties, &c. proved themselves firm friends to the people.

Refolved, That the following gentlemen be the committee of the livery of London now appointed, to correspond with the committees of the several counties, cities, &c. of the kingdom, viz. Wm. Plomer, Esq. Lord Mayor, Brass Crosby, Esq. Fred. Bull, Esq. J. Townshend, Esq. John Wilkes, Esq. John Sawbridge, Esq. Sir Watkin Lewes, Nath. Newnham, Esq. Tho. Sainsbury, Esq. Wm. Crichton, Esq. Barnard Turner, Esq. Mr. Wm. Hurford, Samuel Vaughan, Esq. Tho. Scott, Esq. Wm. Pickett, Esq. Josiah Dornford, Eiq. Mr. Samuel Thorp, Mr. John Pinhorn, Mr. John Withers, Mr. George Bodley, Mr. Tho. Skinner, Mr. George Bellas, Mr. A. Facer Kemp, Mr. [N] 2

ANNUAL REGISTER, 1782.

James Sharp, Edward Howse, Esq. Mr. Cha. Lincoln, Mr. Win. Prefton, John Jacobs, Esq. Mr. Robert Holder, Mr. Laurence Holker, Mr. Dep. Lake Young, Mr. Wm. Denham, jun. Mr. Dep. Jeremiah Percy, Mr. Wm. Anderson, Mr Nicholas Forster, and Mr. Wm. Falkener.

Refolved. That the faid committee do take the most esfectual methods for obtaining a more equal representation of the people in parliament, and a frequent election of the representatives, according to ancient usage, and for these purposes do confer and correspond with other committees

throughout the kingdom.

Refolved, That the commoncouncil of this city be requested to grant the use of the new commoncouncil room to the faid committee, for the purpose of their occasional meeting therein; and that the lord mayor be defired to communicate this request to the common-council at their first meet-

Resolved, That the said committee be directed to meet in Guildhall for their deliberations, and that Mr. town clerk do at-

tend them,

The lord mayor having preferted a paper, which his lordfhip informed the meeting had been delivered to him this morning, purporting to be a protest against the legality of this meeting, the fame was read; and a motion being made, and question being put, that the same be entered in the records of this city, it paffed in the negative.

Refolved, That the thanks of this common-hall be given to the right honourable the lord mayor,

for fo readily complying with the request of the livery, in calling this meeting, and for his impartial conduct during the course of the whole business.

RIX.

Feb. 1. The following protest, relative to the common hall, held yefterday, was previoufly delivered to the lord mayor at the mansionhouse by the gentlemen whose names are subscribed:

To the Right Hon. William Plomer, Esq. Lord Mayor.

" My Lord,

" At a numerous and respectable meeting of the livery, held the 29th of January, 1782, at the Half Moon Tavern, in Cheapfide, for the purpose of considering the propriety of a common-hall, convened by your lordship's precepts, to be holden on Thursday next, ' For the purpose of receiving the report of the gentlemen appointed to deliver the address, remonstrance, and petition, to his majesty, agreed upon at the last common hall, and to confider what farther steps are necessary to be taken, on the prefent alarming and critical fituation of this kingdom:'

" It was the unanimous opinion of the livery present, That the perpotes for which the faid common-hall is directed to be called, are not legal, and do not concern this city in its corporate capacity:

"That a committee be appointed to draw up and deliver a protest to your lordship against the meeting or affembling of fuch a common-hall; and that the faid committee do request that such protest may be read at the holding of the faid common-hall, and en-

tered

tered of record in the city books. " And a committee was ordered

accordingly.

" Therefore we the faid committee, and whose names are nereunto funicribed, do, in pursuance of the above authority, accordingly protest to your lordship against the holding of the said intended common-hall, for the reafons before mentioned.

" And in case your lordship shall, notwithstanding, think fit to hold the faid common-hall, we humbly request that your lordship will permit, and order the above proce dings, and this protest, to be read on the hustings, at the time of the holding of the faid common-hall, and to be entered on record on the city books. are, my lord, your lordthip's moth obedient humble fervants.

Gabriel Leekey, Skinner. John Merry, Draper. Thomas Wellings, Needle-maker. Thomas Tomlins, Scrivener. Thomas Evans, Armourer and Brazier."

Died, At Stetin, Dake Augustus William of Brunswick Lunenburg Bevern. All his possesfions, which were very confiderable, devolve to his brother Duke Charles, the only remaining branch of Bevern.

At Darlington, in the bishoprick of Durham, J Nicholls, a

labouring man, aged 105.

They case of Hevey, tried last fessions at the Old Bailey for forgery, and under a special verdict, was referved for the determination of the twelve judges, has been brought before them, and the law finally settled on that subject.-The case was summarily this; he uttered a bill of exchange, indorsed "B. Macarty," and said that his name was M'Carty, and that the indorfement was in his own hand-writing. On the trial it was proved, and the jury found, that the indorfement was not the hand-writing of Hevey, but of M'Carty; it followed of course that the indorsement was not forged: the difficulty therefore was, whether, by having personated the indorfer, he had brought himfelf within the statute against forgery. The judges have determined in the negative, so that the man's life is safe; but he remains to be tried for a conspiracy, in having fet up, in conjunction with divers others, pretended banking-houses in Bath and London, with an intention to defraud.

By the Hampden packet-4th. boat, arrived at Falmouth from Lisbon, advice is received of the Spanish fleet, confisting of 30 line of battle ships, and several frigates, being cruizing off Cape St. Vincent's. The packet, on her passage, fell in with a Portugueze ship, which had been detained by the Spanish sleet for several days, in order to prevent her giving intelligence.

Lord Mansfield gave the unanimous opinion of all the judges on the appeal from the adjudication of the high court of admiralty, relative to the captures made on land on the 2d of February, 1781,

by the forces under the command of A miral Sir George Rodney and General Vaughan, at St. Euflatius, when the judgment and jurifdiction of the admiralty were confirmed; and the rule fet afide, their judgment was difcharged.

The purser of the Bel-5th. mont East-Indiaman arrived at the East India-house, with the news of the above ship being safe arri ed at Plymouth on Saturday last. He brought the following account, that they failed from St. Helena the 2d of November, in company with the Prime, under convey of Commodore Johnston's foundron. Soon after they failed, fever I heavy gales of wind came on, which lasted for fix weeks; and that on the 23d of January they parted company. Several of the commodore's ships were much damaged.

6th. A bomb ketch of Commodore Johnston's squadson, arrived at Plymouth, brings information of the Hannibal having captured two of Moni. Vaudreuil's transports, one of them carrying 22 guns, and deeply laden with

stores.

Extract of a letter from Jersey,

Jan. 26.

"A flag of truce arrived here last week with some ransomers, and a young lady, who about 20 years since was sent to France for her education, but was shut up in a convent. Her mother had frequent assurances of her death, and certificates from the holy stathers, and went into mourning for her; but about two years since was surprized to receive a letter from her child, informing her of her utuation, and of her long meditated escape, which she had never been

able to effect. At length she found a method of getting away, hired a vessel, and came over.—
Her mother had paid for her suneral about sixteen years ago to a principal merchant who supported her when at school. Her name is Du Merick; she has a brother, a lieutenant in our service, and a cousin, who commands his majesty's ship Repulse, of 64 guns.

This day the lord mayor held the fession at Guildnall, when the attornies concerned for the several plaintiffs who sued the city for the damages sustained by the tumults in June, 1780, claimed, on behalf or their employers, the sums due; and the court made an order to pay 27,000 l, which had been collected, amongst the different plaintiss, and that the future collections should be responsible for the sum of 400 l, which still remains due to those verdicts.

8th. This being the day appointed for a folemn fail, the fame was observed at court; their majesties attended divine service at the chapel-royal, and heard a fermon preached by the Rev. Dr.

Kaye, fub-almoner.

The Bp. of Worcester preached a fermen on the same occasion in Westminster abbey, b fore the lord-chancester, sive temporal and ten spiritual lords, and took his discourte from the 5th chapter of Jeremiah, verse 25. As did the Rev. Dr. Dampier before the speaker and several members of the house of commons, at St. Mazgaret's church, from the 15th chapter of Ezek, ver. 32.

12th. Extract of a letter from Délin, Feb. 7.

"Yester Liv afternoon the whole city was thrown into the greatest [N] 4 conster-

consternation, by a very fatal acsident which happened in the Grove-room of the Music-hall, in Fishamble-street. A meeting was held there of the corporation of stationers, cutlers, &c. to confider of a proper person to reprefent this city in the room of the late Dr. Clements. The meeting was very numerous, and in the midst of some of the speeches the floor unhappily gave way, and fell with more than four hundred persons, above twenty feet, on feveral others who were below. The confusion occasioned by this furprize was inexpressible, and the fhrieks and groans of the numerous persons wounded were heard throughout the whole neighbourhood.

"Amongst twenty-one unfortunate persons hurt are the three candidates, Mr. Hartley, Mr. Pemberton, and Alderman Warsen, wounded, but not dangerously. Sir Edward Newenham's collar-bone broke, &c.

On Saturday a question of confequence, relative to the Anglesea militia, was brought before the court of king's bench, by way of mandamus, to declare the commissions of the major and captains ferving in that militia void. It appeared, that four volunteer companies raised in Ireland as regulars, attested for the 101st regiment, with Irish officers, were added to the Anglesea militia, without qualifications, in that country. The court, on Mr. Bearcroft's showing cause against the mandamus, made the rule absolute, to declare all their commisfions void.

Yesterday was tried, before the Earl of Manssield, in the court of king's bench at

Guildhall, a cause of general concern .- A merchant of Elushing brought an action against a merchant of this city, for the recovery of the amount of three bills of exchange, given by the defendant for tea fold by the plaintiff, and delivered at Oftend to the defendant's order: the defence was, that the tea never came to the defendant's hand, but was feized as run goods, therefore the plaintiff was liable to the loss: the defendant went upon two other points of law, namely, that the plaintiff could not apply for justice, as the act of felling the tea was a fraud upon the revenue; also, that if the tea had actually been delivered, the plaintiff was not entitled to recover. The noble judge, in his charge to the jury, remarked, that Flushing and Ostend were the most famous ports for imuggling. the jury confidered the tea to be fold for the purpose of being fmuggled to England, they would find for the defendant. He obferved, that the East-India ships were the only bottoms of conveyance of tea to England: besides, it was proved, that the plaintisf kept boats and horses to convey tea to the coast of England. The jury found for the defendant, and thereby made the notes void.

At the court at St. James's, the 15th of February, 1782, prefent the king's most excellent majesty in council.

It is this day ordered by his majefly in council, that an embargo be forthwith laid upon all flips and veffels laden, or to be laden, in any of the ports of the islands of Jersey, Guernsey, Alderney, and Sark, with beef, pork, or any fort of salted provisions; and that the said embargo do continue

and remain upon such ships and vessels until further order.

W. FAWKENER, The fessions at the Old 26th. Bailey, which began on the 20th, ended, when thirteen convicts received fentence of death, viz. Edward Wilkins for robbing John Morant on the highway near Bayswater, among other things, of a draught for 1301; Anthony Elcard, for itealing from the house of R. Onflow, Efq. goods to a considerable value; Lucias Hughes, for picking the pocket of Baron Kutzleben, minister plenipotentiary from Hesse Cassel, of his gold watch, as he was alighting from his carriage at the Operahouse; Peter Mayhew, for the wicked practice of cutting filk in the loom; Martin Taylor, for stealing a box, in which were 200 plates of tin; Henry Levi, for stealing a pair of coach harness; Henry Cohen, for stealing a silk handkerchief; Wm. Smith, for robbing the Chester mail; Anne Smith, for shop-lifting; Jane Lee, for a crime of the same nature; John Knowles and John May, for house-breaking; and Wm. Roberts, for stealing dowlas and cotton goods, the property of Messrs. Scott, Harris, &c. in Bread-fireet.

At this fessions two women were tried for the murder of a man in Eagle and Child - alley, Fleet-market, and acquitted. A young gentleman of fortune was likewise tried for stealing two silver spoons from the Bedford Head tavern, where he with another young gentleman had dined. The spoons were missed, and sound in the young gentleman's boot.

2d. Adm. Office. By Letters from Commodore Johnstone, dated on board the Diana, at Portsmouth, Feb. 28th, there is advice of his arrival, and that he has brought with him from Libon, Lieut.

202] ANNUAL REGISTER, 1782.

Lieut. Reid, of the Romney, who commanded the Dankbaarheyt, one of the prizes taken in Soldanha Bay, with ten others who were faved from the faid prize. They report, that the Dankbaarheyt, after losing all her masts on the 28th of January, near the Channel, had her pumps choaked on the 29th; that she gradually filled with water to the upper deck, and was on the point of finking on the 30th at dark, when they left her in a little boat in a hard gale of wind; that the crew had prepared a raft, and taken every precaution with coolness and intrepidity, but from all circumstances there is little hope that any of those brave men could furvive. The boat was obliged to keep right before the wind, and after running 80 miles to the fouthward, they were taken up by a Swedish brig, who, for a premium, landed them in the Tagus.

Lord Charles Fitzgerald, of his majesty's ship La Prudente, acquaints the board of his having taken the Eagle, French store-ship, bound to the East Indies, laden with naval and military stores. She failed from Brest on the 11th instant, with Count de

Guichen.

Captain Inglis, of his majefly's fhip Squirrel, acquaints the board, that he has taken the Furet brig, of 4 guns and 36 men, quite new,

and had taken nothing.

An order was issued from the privy council, for the enlargement of Mess. Gouverneur and Curzon from their confinement, on condition of their giving bail for their appearance, similar to that entered into some time

fince by Mr. Laurens, the American philoner.

4th. Sir Guy Carleton's commission, appointing him commander in chief in America, passed the great seal.

11th. The river Clyde rofe higher than has ever been known in the memory of man. In Glafgow the waters reached half

way up the Salt Market.

Cooper Hall was capitally convicted at Notting ham affizes, for robbing the mail of the Newcastle bag. His trial lasted between seven and eight hours, in which time 52 witnesses were examined.

The following malefactors were executed at Tyburn: Edmund Harris, for burglary; John Lucas, for robbing on the highway, and shooting at Mr. Ellingham, and wounding him in the back; and John Coleman, for robbing Mr. Davanes, in the foot-path leading from Pancras to Kentish town.

14th. Adm. Office. Capt. Passey of the Jupiter acquaints the board, that he had captured the Bologne privateer of St. Maloes, of 16 carriage guns. She had taken

nothing.

The Solebay. Capt. C. H. Everett, was unfortunately lost on the shallows off Nevre-point on the 25th of January. In manœuvring to avoid three ships that were then chasing, she got a-ground. In that situation two of them brought their broad-sides to bear upon her. Upon which it was resolved to quit her, which was done without the loss of a man; after which she was set on fire, and burnt to the water's edge.

The

The remains of Kirkham priory near Malton were blown down by the high wind. When Mest. Bucks took a view of them, 1721, they were not very confiderable.

Vienna. The emperor is determined to employ 100,000 florins annually in the education of foldiers children: of 50 regiments dispersed in Germany and Hungary, each will receive the annual fum of 2000 floring, which are to be expended in the education of 48 boys, whose fathers ferve in those regiments as foldiers.-Their education is to be very fimple, the object in view being to form good subalterns for the army, which they have, for a long time, felt the want of. The boys thus instructed, are to enter into fervice at eighteen years of age.

Adm. Office. Rear Adm. 19th, Graves of the London acquaints the admiralty board with his having taken, in his passage from New York to the West Indies, a French ship of 800 tons, 38 guns, and 319 men, called the Imperieux, from Cadiz to Philadelphia, laden with falt, fome arms, cannon, mixed goods, and

medicines.

The Duchess of Devonshire gave a grand ball and rout, to which a thousand of the first people of the kingdom were invited.

Com. Elliot hoisted his broad pendant on board the Edgar.

The Court of Madrid have lately published a list of their military forces now on foot, which they estimate to amount in the whole to 94,950 effective men. Horseguards 8400. National infantry, 3960. Iriih brigade 2400. Italian and Swifs troops, 11,000 Seven regiments Guarda Costas, 7700. Battalions of militia, 21,600. Sixteen regiments of ca-8400. valry, Dragoons, 6000. Fuzileers, 1200. Invalids, 6500. Detached volunteer corps of Grenada, Castile and Andalufia, 8000.

Vienna. Pius VI. Sove-23d. reign Roman pontiff, arrived yesterday in this capital. His imperial majesty, accompanied by his royal highness the Archduke Maximilian, went to meet his holiness through Naustadt to Neukirken, where the first interview to k place. After staying some time at the military academy at Neukirken, the holy father went into a coach with the emperor, and was received without the lines by a detachment of noble Hungarian and Galician guards, who escorted him to the castle, where, in the midst of an innumerable concourfe of people of all ranks, forming a line to the entrance of the imperial palace, his holiness arrived at half past three in the afternoon.

On descending from the coach the holy father was received by the Apostolic Nuncio, the ministers of state, the privy counsellors and chamberlains, and conducted by his imperial majesty and the Archduke Maximilian through the grand apartment to the oratory of the chapel of the chamber, where, in the prefence of the whole court, Te Deum was performed by way of thankigiving, for the happy arrival of his holiness, the host being exposed. After prayers the pope retired to his apartment, where the Archduke Maximilian repaired in the even-

ing, and a little after his eminence the Cardinal Harzan, who arrived from Rome the same day, had an audience of his holinefs.

This day the Rt. Rev. the Ld. Bp. of Lincoln, brother to the lord chancellor, was installed Dean of

St. Paul's.

The Danish envoy ex-30th. traordinary at the British court has demanded, on the part of the king his master, first, The restoration of the Danish ships taken at St. Eustatius; and secondly, The merchant fhips which Capt. Schioning was convoying to the Antilles, and which he permitted some English privateers to make prizes of without the least refistance. - This demand, it is thought, will not be speedily adjusted.

Died, Lately, at Lisbon, after a long and painful illness, John Jennings, Esq. groom of the bedchamber to his R. H. the Duke of Cumberland, grandson of the late Sir John Jennings, and nephew to the Earl of Clanrickarde.

At Brandford, Wiltshire, John

Isles, aged 103.

At Bath, aged 90, Mrs. Sarah Palmer, mother to Mr. Palmer, of Chapel-farm, on Landsdown. She has left iffue, children, grandchildren, and great grand-children, 156. She enjoyed a good state of health till within a few days of her death.

APRIL.

This day the lord mayor, aldermen, and sheriffs, with their ladies, attended by the governors of hospitals. &c. the city marshals, and children belonging to the hospitals, went in the usual procession from the mansion-house to St. Bride's church, where an excellent fermon was preached by

the Bishop of Lincoln.

The entertainment and ball at the mansion-house this evening, being Eatter Monday, was the most splendid that has been given by the chief magistrate for some years past.-The lord chancellor, Dukes of Richmond, Devonshire, and Manchester; the Marquisses of Rockingham and Caermarthen; Lord Howe, Mr. Fox, Mr. Burke, Gen. Conway, Mr. Townshend, Mr. Sheridan, and many other distinguished personages were prefent. The dinner was sumptuous in the extreme; the decorations and confectionaries were remarkable for take and novelty. The ball was the most numerous of any for fome years: it is faid that not less than 1800 persons were prefent.

This morning between 9 and 10 o'clock fome villains found means to break into the apartments belonging to Mr. Brooke, Somerset-herald, in the college of arms, and in the space of 20 minutes plundered them of plate, linen, wearing apparel, and other moveables, to a confiderable amount, with which they got clear

Prince de Gailitzin and M. de Markoff, minitlers from the Empress of Russia, presented a memorial to the states general, in conformity to the mediation fubmitted to her imperial majesty, for accelerating a fincere reconciliation between his Britannic majesty and their republic. To this memorial was annexed the copy of a letter addressed to Mons. St-

molin,

molin, her imperial majesty's minister at the Court of London, by Mr. Fox, secretary of state to his Britannic majesty, expressive of his majesty's readiness to enter into a negociation with their high mightinesses; and to give immediate orders for an armissice, if, on their side, the lords states general judge such a measure consonant to the end proposed. To this letter, however, no satisfactory answer has been given.

The Vansittart, the Glatton, and Ld. Manssield, East Indiamen, arrived at their moorings in the river Thames from

China.

Rear Admiral Ross hoisted his flag on board the Buffalo at Portsmouth.

6th. Rear Admiral Kempenfelt hoisted his stag on board the

Royal George.

9th. A court of common-council was held at Guildhall, at which a motion was made and feconded, that an humble address be presented to his majesty, on the late change in administration; which was agreed to, and a committee appointed to draw it up.

A motion was next made and feconded, that 2000 l. be applied in giving bounties of 40 s. to every able feaman, and 20 s. to every ordinary feaman, who shall voluntarily enter into his majesty's navy; but the inexpediency of this motion being clearly demonstrated, the

fame was withdrawn.

The court ordered the use of the new common-council room (or any other part of the Guildhall most convenient) to the corresponding committee appointed at the last common-hall.

The fix following gentlemen were chosen Directors of the East India Company, in the room of fix other gentlemen, who went out by rotation.

Ch. Boddam	_	752
Henry Fletcher	-	706
Jacob Wilkinson	-	655
St. Huthington	-	634
W. Devaynes	-	491
Nat. Smith	-	416

The following were chosen directors of the Bank:

Benjamin Winthorp, Esq. and

Mr. Boddington.

Cowes. Admiral Barrington has made a fignal from the Britannia, for all the ships to unmoor, which they are now performing, though the wind is at the S. W. and therefore will prevent their failing. The fleet at Spithead confifts of 19 fail of the line, viz. three of 100 guns, four of 90, feven of 74, and five of 64 guns; they are all coppered, and compleat vessels: Admirals Barrington and Kempenfelt command them. Befides the ships of the line, there are five frigates, with two fireships and two cutters.

Adm. Barrington, with the fleet under his command, passed by Torbay. Wind at E.

Dublin Cafile, The Duke of Portland, who embarked at Holyhead last night, arrived fair in this harbour this morning. His grace was received at landing by the lord mayor, aldermen, sheriffs, and commons of the city of Dublin. The foot forces in garrison lined the streets through which his grace, attended by a squadron of dragoons, proceeded

2067 ANNUAL REGISTER, 1782.

to the caffle; and the council having met at three o'clock, his grace was introduced in form to Lord Carlisle, who received him fitting under the canopy of state in the presence chamber, from whence a procession was made to the council chamber, where his grace's commission was read, and the oaths administered to him: after which, his grace having received the fword from Lord Carlisse, the great guns in his majesty's Phænix Park were fired, and answered by the regiments on duty, which were drawn up on College-green. His grace then repaired to the presence chamber, where he received the compliments of the nobility, and other persons of distinction.

Thomas and George Weston, brothers, two most notorious villains, who for some years have defrauded the country by various artful contrivances, and who some time ago robbed the western mail, were at length apprehended, and committed this

day to separate prisons.

At a chapter of the garter his Royal Highness Prince Wm. Henry, the Dukes of Richmond and Devonshire, and the Earl of Shelburne, were declared duly elected, and the three last

invested accordingly.

This day their H. M. M. the States General, by the unanimous consent of all the members of their confederate republic, took the memorable resolution of acknowledging the independence of the United States of America, and of admitting Mr. Adams in quality of minister.

Arrived at Plymouth his ma-

jesty's ship Artois, with the Bellona; Grand Serpentine; Duc de Chartres; Villa Nova; Fidelity; Lioness; Superb; and two others; all prizes taken by Admiral Barrington's squadron, laden with troops, military stores, cloathing, &c. and bound to the East Indies.

24th. Lord Carlifle arrived in town from Ireland, and immediately waited on her majefty.

at the queen's palace.

Arrived at Portsmouth the Pegasus, a French 74, convoy to the transports bound to the East-Indies. She is copper bottomed, and was taken by the Foudroyant, with the loss of only 3 or 4 people wounded, of whom the Captain (Jervis) was one.

Adm. Office. Letters from Vice Admiral Barrington confirm the capture of the Pegasus, and sour of the French transports, viz. La Fidelité, with 178 troops and slores on board; La Bellone, 147 ditto; La Lione, 180 ditto; and Duc de Chartres;

stores and arms.

Died, At Mr. Keate's, furgeon, in Parliament-street, Edw. Chamberlayne, Efq. F. A. S. lately appointed one of the joint fecretaries to the treasury. The melancholy accident which occafioned this gentleman's death, took its rife from an excess of diffidence attending his recent appointment. The day on which the fatal accident happened, he was vifited by a friend, who remonstrated with him on the abfurdity of the apprehension with which he appeared to be actuated, and requested him to go with him into the park, where they would discuss the mat-

ter

ter at their leisure. Mr. Chamberlayne promifed to comply, and pretended to go up stairs for his hat and cane, but took that opportunity to throw himself out of the window, in fuch a position as to light upon his head, which produced the fracture of which he died. He was one of the best fcholars of the age, equally proficient in erudition and tafte, at once profound in literature, and polite. The loss of such a man is therefore to be confidered as a public lofs.

M A Y.

The weather was uncommonly fevere, not in England only, but almost all over Eu-At Vienna the frost continued fo rigorous, that the vines were thought to be materially hurt. In Italy fuch a fall of fnow as has never been remembered. In Russia many thousands have perished of a sickness owing to the rigour of the feafon. In Sweden men and cattle have perished for want of food. In the Highlands of Scotland cattle die, or are killed, for want of fodder. In short, the feverity of the weather has been generally felt.

2d. Sir James Marriot made the report of five pirates under fentence of death, (among whom was Luke Ryan) to his majefly, when they were all ordered for exe-

cution.

A proclamation was this day iffued for granting a free pardon to all fmugglers and others under profecution, or liable to profecution, outlawry, in prison, or beyond sea, for any penalties in-

curred by the illegal practices of clandestinely running prohibited or uncustomed goods, who shall, on or before the first day of July next, voluntarily enter themselves as failors on board any ships belonging to the royal navy, or who shall procure one fit and able seaman, and one fit and able landman, as substitutes to serve for him, her, or them, provided the penalty to which fuch persons are liable does not exceed the fum of 5001. those above, and under 20001. to find two fit and able feamen, and two fit and able landmen; and those above 2000 l. to find three fit and able feamen, and three fit and able landmen; upon which conditions all specified offences are to be forgiven. Likewise his majesty's pardon to all deserters who shall surrender before the 17th of lune.

Ath. War of the line put to fea from the Texel; but on the 11th most of

them returned.

Admiral Kempenfelt failed from Spithead, with 7 ships of the line and a frigate, on a cruize to the wellward.

This day the entry on the Journals of the house of commons of the 17th of February, 1769, importing, "That John Wilkes, Esq. was adjudged incapable of fitting in that house," was, on motion, ordered to be expunged, 115 to 47.

9th of the line, failed from St. Helen's, as supposed to watch the motions of the Dutch sleet.

Six large ships, as convoy, thought to be part of this sleet, were seen on the 12th 25 leagues off Buchaness in Scotland, steering N. N. E. supposed to be going

north about, and probably bound to India.

Generia. We have ac-10th. counts from Turin, that 6000 French troops, and 4500 Sardinians, are marching towards this place; the latter are commanded by Count Fersero de Mafimara, who is to act as commander in chief, and is charged with the orders of both courts. This officer is to fummon the feditious to re-establish order, and to receive the legislative plan with which he is charged. If any refistance is attempted, no truce will be granted. If the plan is agreed to, it is to be guaranteed by the two powers; and as our fortifications, garrison, &c. only serve to shelter the seditious, they are to be annihilated.

At the rehearfal of the music at St. Paul's, previous to the feast of the Sons of the Clergy, the collection amounted to 1771. 95.

This day the four pirates, as they are deemed, for the execution of whom an order came down on Saturday, were respited by ano-

ther order.

At the anniversary meeting of the Sons of the Clergy, held this day, the collection at church amounted to 2411.1 s. 6 d. At the hall to 532 l. 11 s. which, with 177 l. 9 s. as above, made the whole collection for the prefent year 9511.1 s. 6 d. in which fum is included 50 l. given at the hall by the lord chancellor.

A proclamation offering a reward of 5001 for apprehending Thomas Lewen, Efq. late fecretary to the council at Madras, was published in the London Ga-

zetic.

This evening there was a general illumination throughout London for the fuccess of Admiral Rodney.

The Seffions at the Old Bailey, which began on Wednesday, ended, when three convicts received fentence of death. At this seffions the Westons were brought to the bar, but the witnesses (more than 100) not being got together, their trial was put off to next sessions.

Came into Torbay Adm. Kem-

penielt's fleet from a cruize.

The thanks of the house of commons were unanimously voted to Sir Geo. Brydges Rodney, for his gallant and spirited conduct on the 12th of April last.

Also to Sir Samuel Hood, Admiral Drake, Commodore Affleck, Sir Charles Douglas, and the rest of the captains of the fleet.

And likewise to all the seamen and marines, to be communicated to the captains of their respective

ships.

The house of commons votada ed a monument to be erected to the memory of Captain Bayne of the Alfred, Captain Blair of the Anson, and Captain Lord Robert Manners of the Resolution, who gloriously fell fighting for their country, in the late actions in the West Indies, on the 9th and 12th of April.

This day the thanks of the house of peers (verbatim with those of the house of commons) were voted to Sir-Geo. Brydges Rodney, and the other admirals, captains, seamen, &c.

29th. Vienna. There happened on the 15th instant, at the village of Dieuhepole, on the frontiers of Moravia, a storm which

which entirely destroyed 53 houses, forcing them into the river Waag, with furniture, cattle, and inhabitants. Thirteen other houses were blown down. Only 13 dead bodies have been yet found, the river having carried off the rest. The same day the whole horizon of Pest, a city of Hungary, was in violent agitation; many thoufands of glass windows were broken, trees torn up by the roots. roofs blown off, houses destroyed and swept away, for the most part, by the torrents which the waters had prodigiously swelled. However, in the last mentioned calamity only one child of 12 years of age lost its life.

Died, Mr. Daniel Bernouil!i, physician and professor of natural philosophy at Basil, the celebrated

Swiss philosopher.

The Right Hon. James Fortefcue, member of parliament for the county of Louth, in Clarestreet, Dublin.

Richard Wilson, Esq, at Clomen-du, in North Wales, one of the royal academicians, and librarian to that society.

JUNE.

The Dutch mails of yesterday announce the capture of the island of Providence by Don Galvez; the force employed on this business consisted of 1500 Spanish troops, and two ships of the line.

Late last night an express arrived at the admiralty from Portsmouth, with the agreeable intelligence of the Ostrich cutter, and 30 fail of vessels, the remain-

ing part of the Charles-town fleet, being arrived there; the failors on board these ships will be of great service at the present criss.

The dispatches which have 7th. been received at the Earl of Shelburne's office from General Ellict, brought by the Cerberus frigate from Gibraltar, contain the agreeable assurance that the garrifon is in good health, but speak very feelingly of the hard duty which the troops experience from the smallness of their number, and the immenfe fortifications they are compelled to attend. With respect to fresh provificns, the governor fave, they are well supplied by the Barbary states; but they are purchased at fo dear a rate, that the private men are very barely furnished with

Letters by the Lisbon mail fay, that a disorder (similar to the prefent influenza) prevails over that country, with which all ranks of people have been severely afflicted; and that the crops are in great backwardness, owing to the severity of the season.

Sir Richard Bickerton. who is supposed to have arrived at St Helena the latter end of May, had under his convoy the following East Indiamen. besides three storeships on account of government, and two on that of the East India company:—For Coast and China, the Calcutta, Captain Thompson; Ceres, Price; Earl Talbot, Taylor; Ganges, Dempster; Hawke, Scott; Kent, Stokes; Major, Arthur; Morie, Elliott; Alfred, Brown; Norfolk, Benham; and Royal Henry, Dundas :- For Madrafe, Bombay, [0]

210] ANNUAL REGISTER, 1782.

and Bengal, Anne and Amelia, Popham; Naffau, Gore; Nottingham, Curtis; Warren Hastings, Larkings; and Worcester, Cook. The Royal Bithop, Captain Mayne, was the only ship for Bencoolea.

Accounts are received from Brest, that the epidemie diforder reigns there with such violence, that more than half the hands employed in the king's arfenals are confined to their beds. The hospitals are all full, and the crews of the men of war uncommonly sickly.

Extract of a Letter from Dublin, June 15.

" By a veifel (Captain Tripe) bound from Hallifax to London, put into Dingle last Monday, we learn, that three frigates, and feven transports, with troops on board, had arrived at Boston from Erest the 23d of April last. The land forces were computed to amount to 2000 effective men. Captain Tripe also mentions the extraordinary fuccels of a new York privateer, of 22 guns, who in the course of three weeks had captured, between Rhode Island and Cape Sable, fourteen American and French vessels, and probably would have taken more, but for want of hands to man them. the prisoners have been landed at Hallifax."

A letter from Petersburg fays, that the disorder still rages in all the north part of the empire, and numbers die of it. On account of which it is found very difficult to recruit the army, and to raise men for the navy; the latter of which are at this time much want-

€d.

A most severe storm of 18th. thunder and lightning flruck the city of London and its fuburbs with terror. It was followed by a luminous phenomenon, which appeared in the west, in the form of a spear, and continued visible near five minutes, and on its disappearing, that part of the firmament became beautifully illuminated with an immense number of rays, projecting from a point, and spreading like a fan, till, growing fainter and fainter, they wholly disappeared. Seen from different places, it assumed different forms, and some reprefent it as a vortex, with a circular motion of infinite velocity. One of the heaviest claps of the thunder burit over a house in the Borough, and forced down the roof, fplit the flack of chimneys from top to bottom, twifted the iron-work of a casement in several shapes, and lifted the door of an upper room off the hinges, removing it to a confiderable distance. A water-spout burft near Clapham Common.

Triefie. The emperor has within fome time past shewed great
marks of his attention to this
place, by advancing four millions
of florins to the merchants of this
town for the increase of their commerce, not only in Asia, but in
Africa, and also in America; and
has also promised them every succour in his power which their circumstances appear to require.
With such a protection it is not
astonishing that this place has increased so much within a short

time past.

This day judgment was given in the court of king's bench, in the important cause re-

lative to the market at Warwick. The franchise of the market place, belonged by an ancient prescription to Sir John Mosely, and the feveral stalls have been accustomed to be rented of him. A person who had no right nor interest in the market, lately erected some stalls and sheds on his own freehold, adjoining to the market, without any real molestation to any of those before erected. Sir John Mosely brought an action for a nuisance, in order to try his exclufive right to erect stalls for vending of goods, wares, and merchandize, in that market. The court held that the franchises of markets and of fairs, according to the common law, ought not to be infringed by any person erecting stalls for merchandize, even upon their own freehold, without the consent of the legal proprietors of the market or fair.

At a court of common 20th. council Mr. Thorpe submitted to the court the following motion, which was feconded by Mr. Alderman Townsend, and carried unanimoully.

Resolved, That the freedom of this city be presented, in a gold box of one hundred guineas value, to the Right Hon. Lord Hood, rear admiral of the blue, as a testimony of the high opinion which the members of this court entertain of his judicious, brave, and able exertions, in the various engagements with the enemy's fleet in the West Indies.

Mr. Thorpe then moved, that the freedom of this city be presented to Admiral Drake, in a gold box of one hundred guineas value, for his great and diffinguished fervices to this country; which was also agreed to unanimoully.

Altena, The Court of 21 ít. Denmark being informed that Sweden has admitted the King of Prussia into the armed Neutrality, has also confented to his admission.

Verfailles. The merchants 23d. and traders of Marfeilles, in common council affembled, having voted by proclamation 1,200,000 livres, for the building a ship of 110 guns, and 300,000 more to be applied towards the relief of the families of feamen belonging to that city, and the whole county of Provence, who may have been fufferers by the prefent war; their deliberation was laid before the king by the Marquis de Caftries, when his majetty, moved at fo fignal a mark of their patriotism, was graciously pleased to accept of the offer, and ordered the ship to be called, from the circumttance, Le Commerce de Marfeilles.

Slavery is entirely abolished in Austrian Poland, and joy is seen in every peasant's countenance, for that he can now reap the fruit of his labour, unoppressed by a tyrannical lord.

DIED, The Princess Sophia, of Mecklenburgh Strelitz, her majefty's fifter.

Her Royal Highness Maria, Prin-Dowager of Wirtemberg. daughter of the late Margrave of Brandenburgh Schwedt, at Berlin.

Park - street, Grolvenor fquare, Lloyd Dulany, Efq. a gentleman of a most respectable character, and large property in the province of Muryland. His death is faid to be occasioned by a wound which he received on Tuefday evening last, in a duel with the Rev. Mr. Allen, in Hyde-park. The second of the former was

 $[O]_{-2}$

Delancey, Esq. and of the latter, Robert Morris, Efq. was attended by Dr. Millman, and Messrs. Pott and Adair.

The magistrates of Bow-street having advertised a reward of ten guineas each for the apprehension of the Rev. Mr. Allen, and Robert Morris, Elq. they were in confequence apprehended, and committed to Tothil-Fields bridewell.

IULY.

This morning, about eight o'clock, five felons made their escape out of Newgate, amongst whom were the two Westons. They had fawed their irons off, and, as foon as the turnkeys unlocked their rooms, they rushed on them, and fired two pistols, but happily missed them; they then took the keys, and let themselves out, some running towards Smithfield, the Fleet, and Newgate-market. One of the Weltons was taken in Cocklane, after firing another pissol, and wounding a porter on the cheek, the other in Smithfield, and the other two in Fleet-street .- They were brought back and ironed to the floor. One Nicolfon, a coiner, made his escape.

Yesterday was tried before 4th. the Earl of Mansfield and a special jury at Guildhall, the important cause between two capital tradelmen, respecting a draft for 600 l. on a late banking house, given at half past one on the day previous to the stoppage of payment. Mr. Sollicitor General, on behalf of the plaintiff who received the draft, and who brought his action to recover the amount from the defendants of whom he received it, strongly contended that

the former verdict, declaring the loss to fall upon the plaintiff, who ought to have gone the same day, was expressly against law. Wallace, for the defendants, faid, he should call the attention of the jury to the particular circumstances of the case, and from thence they were to judge whether there was not a reasonable time for the plaintiff, who received the draft at noon, to go into Lombardstreet before five o'clock, and take the money. He did not mean to fay, that a draft received fo late as four o'clock, or at York, was to be taken the fame day, but he contended the question lay with the jury, whether there was a reasonable time. Lord Mansfield declared it was a question of great commercial confequence, and fince the last trial he found it had been the subject of much talk in the The court had therefore city. taken deliberation on it, and there was not a case in print or manufcript, which had not been fearched into; his lordship gave his opinion the same as on the former trial, that the next morning was a reasonable time. But the jury gave a verdict for the defendants.

By an act just past, after 5th. the first of August next enfuing, all inland bills of exchange, promiffory notes, or other notes, payable otherwife than upon demand, of any fum less than 501. must be drawn upon a sheet or piece of paper, charged with a stamp duty of 3d. And all bills or notes of the like kind of 501. or upwards must be drawn upon a fheet or piece of paper, charged with a stamp duty of 6d.

Any bill or note as above, not stamped agreeable to this act, and bearing date after the above pe-

riod,

riod, or marked or stamped with a lower duty, shall not be pleaded or given in evidence in any court, or be available in law or equity. And any person counterfeiting the above stamps is guilty of felony.

Dover, 5th. Yesterday evening about half past nine o'clock, their Royal Highnesses the Duke and duchess of Gloucester arrived at the Ship inn, where they supped and slept, and this day at twelve o'clock embarked on board one of the passage yachts for Calais, Their royal highnesses were saluted by the cannon at the castle and forts.

This day Lord John Cavendish refigned the office of chancellor of the exchequer, as likewise did Mr. Fox the office of secretary of state.

Yesterday the Rev. 6th. Allen surrendered himself at the Selfions-house, in the Old-Bailey, when he and Robert Morris, Esq. were indicted for the wilful murder of Lloyd Dulany, Esq.-Mr. Justice Buller, in his charge to the jury, observed, that the case before them consisted of two parts-law and fact. As to the law, there is not, nor ever was a doubt, that where two perfons mect together deliberately to fight a duel, and one of them is killed, the other is guilty of murder, and his fecond likewise. In respect to the facts, he stated that the quarrel arose from a circumstance of three years standing; a paragraph called characters of principal men in rebellion,' pub-lished in the Morning Post, June 29, 1779, referred to the 1st and 5th of July the same year, and now recognized by the prisoner Allen, in a letter proved to be his

hand-writing, avowing himfelf the author of those characters, retorting the charge of liar and affassin upon the deceased, telling him he did not mean to dispute with, but to punish him; and if he (the deceased) harboured any resentment, or desire of revenge, the bearer (Morris) would put him in the way of putting it in immediate execution; this brought on fundry verbal messages, and at last, on the 18th of June, a meeting of Mr. Dulany, Mr. Delancey, his fecond, and Mr. Morris, from whence they want to a Mr. Wogden's, gun-maker, to get Mr. Allen's pistols charged; and about half past nine in the evening, after meafuring eight yards, discharged each their pistols, when the deceased fell.

Mr. Delancey faid, that Mr. Morris repeatedly urged deferring the duel till the next day. One Lydia Lepine deposed that she faw the prisoner Allen shooting at a mark in a field near Black Friars-bridge, with piftols, between eleven and twelve on the 18th of June. Her master and his fon confirmed the fact, but could not twear positively to the perfon. His lordship concluded with observing, that a mistaken point of honour was not to bias the judges and the jury in fuch a

The jury withdrew about 20 minutes, and brought in a verdict, Allen, Guilty of Man-flaughter; Morris, Not Guilty.

Mr. Recorder then, after a pathetic speech, pronounced sentence on Mr. Allon, of is. fine, and to be imprisoned six months in Newgate.

Bamber Gascoigne, sen. Esq. [0] 3 and

and two ladies, proved an alibi as to the thooting at a mark; and they, as well as the Lords Bateman, Mountmorres, and feveral other perfons, gave Allen an excellent character. Mr. Morris brought no witnesses.

This morning, at nine o'clock, came on at the Seffions-house, in the Old Bailey, the trials of George and Joseph Weston, for the rubbery of the Bristol mail, in Jan. 1780; when after the examination of a number of witnesses, which lasted till half past 12 o'clock, nothing appearing to prove their guilt, they were both acquitted of that fact, but tried immediately on another indictment, for forging an indo ement in the name of John Wood, on the back of a bank ped-bill, and putting it off, at the Dun Horse in the Borough; but nothing appearing also to criminate Joseph in respect to this matter, he was acquitted, George capitally convicted. 10feph was afterwards tried for shooting at a man with a patol, in Cock-lane, on Tuesday last, as he was making his escape; and being tried on the black act, was capitally convicted.

This day the combined fleets of France and Spain were feed W. S. W. from the Lizard, distant about 13 leagues.

The London Gazette of this day confirms the account of the furrender of the Bahama Islands to the arms of Spain, on capitulation. And the New York Gazette afferts, that, by orders from the Court of France, the French flag has been hoisted at St. Eustatius, in place of that of the United Provinces.

The king has been pleased to

permit Thomas Earl of Clarendon to accept the honour of bearing the Prussian eagle as a mantle to his arms; an honour conferred on his lordthip as a mark of his Pruffian Majetty's remembrance and esteem.

Dien, on Monday, July 2, after a short illness, at his house at Wimbleton, the most noble Charles Watton Wentworth, Marquis of Rockingham, Earl of Malton, Vifcount Higham of Higham Ferrars, Baron Rockingham of Rockingham, Baron of Malton, and of Worth and Harrowden in England. and Earl and Baron of Malton in Ireland.

The noble Marquis was born on the 13th of May, 1730. He took his feat in the English parliament on the decease of his father Thomas, the first Marquis of Rockingham, on the 22d of May, 1751; and on July 9 following was conflituted Lord Lieutenant and Custos Rotulorum of the North and West. Ridings of the county of York by the late king, to whom he was one of the Lords of the Bedchamber, in which posts he was continued by his present majesty, at whose 'coronation, Sept. 22. 1761, as Deputy to the Duke of Nortolk (Lord of the Manor of Worksop) he presented him with a right-hand glove before his receiving the sceptre with the cross from the Archbishop of Canterbury, and afterwards occasionally fupported his majesty's right hand. His lordship also, after the king was enthroned, and whilst he received the homage of the Peers Spiritual and Temporal, held, as Deputy aforefaid, the faid fceptre with the crofs, and which having re delivered, pronounced the words words of the homage for all the Marquiffes. He was elected Knight of the Garter, with Earl Temple, on February 4, 1760, and inflalled on May 6 following.

His lordship, in 1763, resigned his offices of Lord of the Bedchamber, Lord Lieutenant and Custos Rotulorum of the aforesaid Ridings of Yorkshire, on account of the fystem of the Earl of Bute; but he was appointed First Lord of the Treasury, in the room of the Right Hon. George Grenville, on July 20, 1765, and was again ap ointed Lord Lieutenant of the Riding of Yorkshire, &c, West and during this administration, the characteristic of which was the repeal of the flamp-act, he difplayed ' fuch found principles, fuch an enlargement of mind, fuch clear and fagacious sense, and unshaken fortitude, as to bind a most extensive and honourable party of men, by an inviolable attachment to him from that time forward.

The intrigues of that faction, which were then in opposition, growing violent, the Marquis refigned his place of First Lord of the Treasury, on August 1, 1766; and during the whole of the miniftry of the different men who refumed the measures of coercion, he acted a zealous and decifive part. The noble Marquis was, on the late important revolution, called again to the place of First Lord of the Treasury; and, to the great and alarming misfortune of his country, they are thus sud-denly deprived of his services, when their consequence and value were just beginning to be felt.

His lordship married, on Fe-

bruary 26, 1752, Mary, daughter and heir of Thomas Bight, of Badiwerth, in com. Ebot. Eq. uncle to Lord Ravenworth, but has left no issue.

The Marquis of Rockingham having died without issue, the title becomes extinct; the Earl of Fithwilliam, his moreover, who is a Lord of Parliament, becomes seir to a great part of his landship's fortune in England and Ireland.

Last Satu day the 25th. mains of the Marqui- of Rockingham, after lying in great and folemn state at York, were interred in the minster with his noble ancestors. The concourfe of the principal people from all parts of the country, to pay the last tribute of affiction to his manes, was immenfe beyond example. The great bell at the cathedral tolled every minute on Friday, both day and night.

AUGUST.

Advice was received of the safe arrival of the fleet from Jamaica, under convoy of Sir Peter Parker, in the Sandwich of 90 guns, in which ship came the Count de Grasse. A letter received from an officer on board the Namur, takes notice of the narrow escape of that ship by the Mersey store ship taking fire, and then falling a-drift among the fleet in Port Royal harbour, all in flames; fhe miraculcufly paffed them all except the Namur, which was fo entangled with her, as literally to finge her beard; her fails and rigging were on fire, and [0] 4

every boat in the fleet got out to fave the men, when by cutting the drove clear.

This day Sir Henry Fletcher, Bart, was chosen chairman of the East India company in the room of Robert Gregory, Esq. who, to the regret of the whole body of proprieters, has disqualified on account of his bad state of health.

Wednesday Count de Grasse 5th, with his fuite landed on South Sea Common, Portsmouth, where carriages had been procured by Vice Admiral Sir Peter Parker, who conducted them to the George, where a most sumptuous dinner had been procured for him and his fuite by Sir Peter, who entertained him and his officers at his own expence, until the Count had permission to go to London, which was not till Friday morning, when he fet off with his fuite, attended by the admiral, who had previously fent an express to the George at Godalmin, to prepare dinner and beds, and on Saturday morning they purfued their route to Mrs. Nugent's (the mother of Lady Parker) in Queen-square, Westminster, where they arrived about three o'clock, from whence Count de Graffe walked up to the Royal Hotel in Pall-mall.

Count De Grasse is the first commander in chief of a French sleet or army, who has been prisoner in England since the reign of Queen Anne, when Marechal Tallard was taken by the Duke of Marlborough, and confined to the town and environs of Nottingham. Marechal De Belleisle, indeed, and his brother, the Chevalier, were prisoners with us the war before

last, and were confined in Windfor tower, but they were not in command when taken; they were merely as passengers travelling through Harover, on their way, indeed, to take a command, where they were stopped, and sent prifoners to England.

6th. M'Carthy, condemned in March last, and who have been in prison upwards of 18 months, have received his majesty's pardon.

About four in the afternoon, a gentleman calling
at Mrs. Fortescue's at Tottenhamgreen, was surprized on knocking
at the door to find no admittance.
Suspecting something wrong, he
procured a peace-officer, and
forced an entrance into the house,
when he sound the two maids tied
one to one bedstead, and the other
to another bedstead, in separate
rooms, and the house robbed of
plate and effects to the value of
5001. Mrs. Fortescue and her
daughter were out on a tea-visit.

This day came on at Wincheffer, by fpecial commiffion, before the Hon. Mr. Justice Heath, the trial of David Tyrie, for high treason, for holding correspondence with the enemy. The principal witnesses against him were.

1. Maria Harvey, who having a packet of papers put into her care with a particular charge, had the curiofity to look into the contents, and finding them of a dangerous nature, as she thought, took them to Mr. Page of Westminster, who carried them to the secretary of state. The papers were produced; consisting of copies of papers called the Navy Prograss.

çon 9

containing lists of the navy, with the situation and state of repair of each ship. Also a plan for a regular course of intelligence, and the terms on which such intelligence might be obtained from every public office and every public dockyard.

2. Mr. Vowell, stationer, of London, to whom he was clerk, went

to prove his hand-writing.

3. Capt. James proved an agreement with him to go to Boulogne for wines, at 15 guineas a trip. He also produced letters which he was to deliver to the commandant of the port, and a passport from Boulogne to Cherburgh. These contained intelligence of the failing of the East and West India sleets, and of other important matters.

He had little to fay in his defence, but that what he had collected was no more than was daily to be gleaned from the public papers, and that his intelligence was directed to particular friends, who he knew would make no ill use of it, and that it rather led to deceive the enemy, and to mislead them, than to give any true information. The judge and jury were, however, of another opinion, and found him guilty .-After he left Mr. Vowell, he went into partnership in the mercantile line, and had arrived to fuch high credit, as once to put up for member for Hindon. He afterwards procured a place in the Navy-office at Portsmouth, which proved his ruin.

Advice was received at the admiralty of the fafe arrival of the Leeward Island fleet, under convoy of the Presson and

Roebuck men of war,

About two in the morning the most dreadful fall of rain began at Dublin and its neighbourhood, that was ever remembered in that country. It continued for fourteen hours, with a violence that was truly alarming. The distresses of the inhabitants in different parts of Dublin are beyond description. Rings - end bridge was borne down by the flood.

Letters from Holland, of this day's date, bring a melancholy account of the effects of the cold and wet weather, which have destroyed the hopes conceived of a plentiful harvest all along the coasts of the Rhine.

Commod. Hotham, with eight fail of the line, and two frigates, failed from Portfmouth, as is supposed for the North Seas, to convoy home the Baltic fleet.

This day Mr. Bosanquet was chofen one of the directors of the East India Company, in the room of Mr.

Gregory, who disqualisted.

This night's London Ga-24th. zette, in an article from Constantinople, gives a most melancholy account of the ravages of the plague in that city and its neighbourhood. But what aggravates that calamity, is a most dreadful fire that broke out there on the 29th of July, in the quarter called the Balatta, mostly inhabited by Jews. As the wind was rather high, the flames spread with fuch rapidity, that notwithstanding every effort, in about three hours the whole city was threatened with destruction. It is impossible to paint the horrid scene exhibited by this alarming conflagration, which raged with equal violence

violence for about 15 hears, and fpread through one of the most inhabited parts of the town. number of houses destroyed is computed at 10,000, besides mosques, churches, and other public edifices .- At three o'clock P. M. the fire, which had appeared nearly extinguished, broke out anew, in three diffinct places, and proceeded in different directions. The wind, which had fallen, became again pretty high, and the greatest apprehensions were entertained for the fate of the city. The Grand Signior, Vizir, and all the Grandees, attended 17 hours, to encourage the exertions of the people to check the progress of the flames. Subfiguent advices reduce the number of houses burnt to 9000.

On Theriday night an gothe express arrived at the admiralty office, which brought the molancholy news of the lofs of the Revel George, of 100 guns, with the greatest part of her crew. The thip was careening at Spithead, and many of her gund being removed to one fide, some of her upper ports being open, and near the water's edge, a fudden gud of wind overfet her, and the went to the bottom with about 400 of her crew, and, it i, supposed, at least as many women and children. The captain and two " lieutenants, with about 300 men, are faved, but we are very forry to learn, that Adm. Kempenfelt was among the number of those that

perished.

Sheerness, which for ages has suffered great inconvenience from want of water, is now plentifully fupplied from a spring which was discovered by digging a well at the instance of the garrison. After feveral days labour, they came to a rocky bottom, which was no

fooner broken through, than the water flowed in fo plentifully, that the workmen were with difficulty

DIED suddenly, at Kingsgate, near Margate, aged 43, Robert Child, of Offerley Park, Middlefex, Eq. M. P. for Wells. his will, we hear, he has given all his estates, both real and personal, to Mrs. Child, Mr. Lovelace, Mr. Dent, Mr. Church, and Mr. Keyfall, his partners, in trust, for the purpoic of paying all his partnerthip debts, and for carrying on the buffiness as usual at the house at Temple-bar, and has made them executors. He has also left Mrs. Child 6000 l. a year, 2000 l. a year to Lady Westmoreland, his only child, and 12,000 l. to each of her ladyship's younger children down to the twelfth, except the fecond, to whom he has left the refidue of his fortune, which, it is imagined, will be nearly equal to that particularly devited. He hath died worth 15,000 l. per annum in landed property, exclusive of his feat at Offerley Park, which is deemed the most superb and elegant thing of its kind in England. His share of the profits in the banking bufinels has never been estimated at less, for some years, than 30,000 l. per annum, which immense addition he possessed also the right of bequeathing in common with his other property.

SEPTEMBER.

The parliament, which stood prorogued to the 3d instant, was further prorogued to October 10.

The foundation stone of a new bridge over the river Peafe, near

the old Camda, Edinburg, was laid. The centre arch is to be

123 feet in height.

Capt. Thornborough, late 4th. commander of his majesty's frigate Le Blonde, arrived in town with an account of the loss of that ship. He had been cruizing for fome time off Boston for the only ship of war the congress are in possession of; instead of which he had taken a large vessel, mounting 22 guns, laden with masts and stores for the French fleet, and was towing her into port, when, unfortunately, the Blonde struck upon fome rocks, and was entirely lost. The prize, fearing the same fate, pursued her course, and is safe arrived at Halifax.-By means of a raft, the crew of the Blonde got to a barren uninhabited island, where they continued two days in the utmost distress, when providentially they were seen and taken off by two American cruisers, who landed them near New York, in gratitude to Capt Thornborough, for the generous and humane treatment he had shewn to the prisoners he had on board when he met with the unhappy difaster. When he left New York there were twelve American Privateers cruifing there to intercept the trade.

Was executed at Hereford gallows, one John Webb, for having plundered a Venetian vessel driven on shore on the coast of Glamorganshire by distress, some time in November last.— This, it is hoped, will put a final stop to that inhuman practice of plundering ships wrecked upon the

coaft.

9th. A court martial was held on board the Warspite, at

Portsmouth, on Capt. Waghorne, for the loss of the Royal George, when he was honourably acquitted. A carpenter on board, who escaped, declared, that the ship went down so suddenly, that he had only time to tell his brother that she was finking. It also appeared that she was so old and rotten, that when a plank started not a peg would hold together.

The same day the body of Mr. Saunders, the first lieutenaut, was taken up under the stern of the Montagu Indiaman, at the Motherbank. His gold watch was in his feb, and 51. 15 s. 6 d. in his

pocket.

At the fame time failed the trade and transports for Gibraltar, outward bound East and West India sleets, and Heart of Oak armed

thip.

On board of the grand fleet, which has failed for the relief of Gibraltar, there are fix regiments, which are to act as marines; the 2d, 25th, 29th, 61th, 62d, and another whose number we could not learn. The 25th and 59th are intended to be left as a reinforcement to the garrison; and the others, it is thought, will be fent with the naval detachment, under Alexander Hood, Esq. to the West Indies.

The following letter was received by the Recorder of London, at the Sessions-house in the Old-Bailey, from the Right Hon. Thomas Townsend, one of his majestly's principal secretaries of state:

SIR,

I have the king's commands to fignify to you his pleasure, that, confidering the great number of robberies that have been lately committed, and attended with acts of great cruelty, you should report to him in council, as soon as pos-

fible, upon fuch cases as shall appear to you to call for immediate

punishment.

I have it likewise in charge to acquaint you, that, in order to deter persons from being guilty of such acts of cruelty, his majesty has determined to grant no pardon or respite to any person convicted of such offences, on any solicitation whatever.

I have the honour to be, with great regard, Sir, your most obe-

dient humble servant.

T. Townsend.

Mr. Recorder of London.

Captain Trollope, com-14th. mander of his majesty's ship Rainbow, having sailed from Plymouth on the 2d infant, to join Commodore Elliot, fell in with, and captured the Hebe, a French frigate of 40 guns, 28 of which were French 18-pounders. She had failed from St. Maloes the day before with a convoy for Brest, which, during the chace, got into Morlaix. She was commanded by M. de Vigny, of the order of St. Louis, who was flightly wounded; their fecond captain and 4 men killed, their wheel shot away, and foremast badly wounded, which was the only damage. gave only one broadfide, and struck. The Rainbow had only one man killed.

An express arrived in town with advice that the Dutch fleet, confissing of 17 fail, 14 of which were two-deckers, sailed from the Texel early on the 15th; but what their object is, time must discover.

This morning an express arrived at the admiralty with the agreeable news of the Baltic fleet, confishing of 340 fail, being

fafe

fafe arrived off Flamborough head, under convoy of two or three frigates, a floop, and a cutter.

On the 21st of August, at o P. M. a most dreadful fire broke out at Constantinople. A strong N. E. wind blowing, the flames spread with such rapidity that there was no approaching with the engines. It continued burning till the 24th at 10 A. M. The seven towers, the Janizary Aga's palace, most of the fine buildings and mosques, are de-Aroyed, and full one half of Constantinople. The fire round two large mosques was so very violent, that some hundred miserable objects who had taken refuge there were destroyed. Towards the sea the flames formed a femicircle, and reached on each fide to the water's edge, when clofing by degrees, the poor fufferers who were within the circle, from its vast extent unacquainted with the circumstance, were at last driven on each other, and faw nothing left but the fea for a refuge; many flew to it, and those that had strength, and were fortunate enough to be where it was shallow, furvived: but those who could not stand twelve hours in the water, exposed to the waves on one fide, and the fcorching heat of the fire on the other, funk under it, were first drowned and then burnt, by being thrown upon Those who were in fituations that were deep, were mostly drowned. - Some poor wretches had fastened themselves to boards, in hopes of floating, but the waves throwing them on thore, they were The Grand Vizir burnt to death. is fince deposed.

Dublin, 30. The following gentlemen have each undertaken to raife a regiment of Fencibles in Ireland, for the defence of the country: R. Talbot, Efq. co-Dublin; M. Archdell, Efq. co. Fermanah; T. Dawson, Esq. co. Armagh; W. K. French, Esq. co. Galway; A. Blennerhaffet, Efg. co. Kerry; Lord Inchiquin, co. Kerry. Each regiment to confift of eight companies to be raifed by the officers without levy-money allowed them. The Col. to raise 100. Lieut. Col. 60. Major 45. 5 Captains 30 cach. 1 Capt. Lieut. 20. 9 Lieutenants 13 each. 6 Ensigns 7 each. I Chap I Adj. 1 Surgeon. 16 Serjeants. 16 Corporals. 16 Drummers. 2 Fifers. 500 Privates. In all 557. Government to provide accoutrements, and the respective Colonels to affigu the off reckonings for the cloathing in the usual manner. Arms to be delivered by the ordnance. From the day of their being reported complete, if within four months from the day of their beating orders, they are to be put upon the establishment, and paid from the date of their beating orders. The officers to keep their respective quotas complete at the price of their commissions.

Died, At Dunkirk, Catharine Daubenbulke, a native of Flanders, aged 107 years, 3 months, and 16 days.

At Poplar, Mrs. Coles, who during the last war served on board several men of war as a sailor. After her discharge, upon a small fortune devolving to her, she resumed the semale character, and was from that time considered as a very polite and elegant woman.

OCTO-

OCTOBER.

This morning arrived at Plymouth, the London, Capt Obrien, from London, for Jamaica, with king's flores. She parted from Lord Howe's fleet on the 28th of September in lat. 48: 55, long 12: 36, being so leaky the could not pursue her voyage, owing to heavy gales and contrary winds, which the whole fleet had been exposed to ever fince they left the channel, but had suffered no material damage.

3d. A chapter of the most noble order of the Garter was held for investing the most noble Charles Duke of Rutland with the ensigns

of that most noble order.

A proclamation was this day iffued for the meeting of parliament on the 26th day of November.

The first news of the tre-5th mendous gale which the Ja-maica fleet with their convoy met with off Newfoundland, was received at the Admiralty-office .--Capt. Cornwallis, of the Canada man of war of 74 guns, who arrived at Portsmouth the day before, brought the account of the return of the Ardent of 64 guns. one of the convoy, to Port Royal in Jamaica, having sprung a leak in Blue Fields; that the Glorieux, with five merchantmen, joined the convoy off the Grand Camanas; and that off the Havannah they fell in with Admiral Pigot, who was cruizing in order to intercept Don Solano's fleet from Cape François; and who had taken a nest of American privateers waiting for the fleet, and had deflroyed a fort in Matanfa-bay, that harboured them.

Capt. Moulton, of the Trueiove Jamaicaman, who arrived at Portfmouth about the fame time, gave a still more deplorable account of the effects of the above gale, which continued three days, and in which the Rodney was feen to perish; the Truelove had feven feet water in her hold, and was faved only by the lightness of her cargo, chiefly spirits. The gale came on the 16th of September. the 17th 35 fail were feen, most of them dismasted or water-logged. On the 24th the Parnassus, Capt. Carr, was feen captured by an American privateer, but has fince

An account of the damage fuftained by the convoy to the

Jamaica fleet:

Ville de Paris, 104 guns, her mainsail carried away.

Glorieux, 74, lott her foremails, bowsprit, and mizen top-mail.

Ramelies, 74, after losing her mizen-mast, main-mast, and fore top-mast, went to the bottom; most of the crew faved.

Canada 74, loft her mizen-

mait.

Caton, 64, went to America in diffress before the gale, and the Pallas to attend her.

Ardent, 64, fo leaky, that she was obliged to put back to Port Royal,

from Bluefields.

Jason, 64, left watering at Bluefields when the fleet failed, and was seen some time after near the Canaries.

8th. The privy council of Ireland met on the subject of the emigrants from Geneva, when it was unanimously agreed to recommend the matter in the strongest manner to his majesty, who has since since been graciously pleased to extend the royal bounty in their favour, by a grant of 25,000 l. to defray their charges in removing, and a farther sum of 25,000 l. in aid of their establishment. The Earl of Ely has offered them a settlement in Wexford county; and the Duke of Leinster has made the same offer in the county of Kildare.

Accounts from Madras were this day received at St. James's, by which his majety received the agreeable news of the fafe arrival of the Sultan and Magnanime, with their convoy, on March 31; and that the French fleet had left the Coromandel coaft.

Was exposed to public view, the Cenotaph, erected in Guildhall, to the memory of the late Earl of Chatham.—Elevated on a base, fixed to a rock, the Earl of Chatham, in the habit of a Roman fenator, appears gracefully looking on a figure representing the city of London; his left hand directs the helm of government, whilst his right embraces Commerce, who, charged with her proper attributes, is most delightfully smiling on her kind protector, through whose zeal, affifted by the four quarters of the world, she is pouring plenty into the lap of Britannia.

The city, in her mural crown, with a look of gratitude, is addressing her noble friend, pointing the while to Commerce; at her feet are placed the emblems of Industry, and on her right hand those of Justice and Power. Upon the plinth is engraved the following inscription,

" In grateful acknowledgment to the supreme Dispoter of events, who, intending to advance this nation for fuch time as to his wifdom feemed good, to a high titch of prosperity and glory, by unanimity at home—by confidence and reputation abroad - by alliance wifely chosen and faithfully obferved - by colonies united and protected—by decifive victories by fea and land — by conquest made by arms, and generofity in every part of the globe - and by commerce, for the fift time united with, and made to flourish by war - was pleased to raise up, as a proper instrument in this memorable work,

WILLIAM PITT.

" The mayor, aldermen, and common council, mindful of the benefits which the city of London received in her ample thare in the general prosperity, have erected, to the memory of this eminent state man and powerful orator, this monument in her Guildhall, that her citizens may never meet for the transaction of their affairs, without being reminded that the means by which Providence raises a nation to greatness, are the virtues insused into great men; and that to withold from these virtues, either of the living or the dead, the tribute of esteem and veneration, is to deny to themfelves the means of happiness and

"This diffinguished person, for the service rendered to King George II. and to King George III. was created

EARL OF CHATHAM.

"The British nation honoured his memory with a public funeral,

and a public monument amongst her illustrious men in Westminsterabbey."

Began the fessions at the 16th. Old-Bailey, when Thomas Edwards was tried for fleating a guinea, the property of Chambers, Langston and Hall, to whom he was clerk. He became suipected, and Mr. Hall marked fome guineas in the presence of a confidential fervant, and put them into a desk to which the prisoner had access; one of which was found upon the prisoner. In alleviation, he pleaded the first offence, and called a multitude of gentlemen to his character; on whose recommendation he was permitted to enter into the service of the East India company, in the military line.

Dr. Richard Watfon was 19th. confecrated in Bow Church Bishop of Landass, in the room of Dr. Barrington promoted to Sa-

lisbury.

The fame day the fessions at the Old-Bailey, which began on Wednesday, ended, when nine received fentence convicts death.

Adm. Office. Rear-admiral 22d. Digby defires to acquaint their lordships that Capt. Purvis, of the sloop Duc de Chartres, of 16 guns and 125 men, had captured, and brought into New York, the Argyle of 22 guns and 136 men, after a sharp action of an hour; in which time she had her first captain with 12 men killed, and her two next officers with The Duc de 13 men wounded. Chartres did not lose a man. Argyle had dispatches for the French fleet.

Old wheat was this day fold in Derby market at 8 s. 9 d. a bushel, and malt at 7 s.

Admiral Pigot, with 22 fail of the line, arrived at New York from the West Indies

on the 5th of September.

The Grand Duke and Duchess of Russia arrived at Berne in Switzerland on the 7th ult. as did likewise their Royal Highnesses, the Duke and Duchess of Gloucester with their suite. These royal travellers went together to view the ice mountains, the most remarkable natural curiofities in that part of Europe.

His Imperial Majesty of Germany has limited the universities throughout his kingdoms to feven; at Vienna, at Prague, at Pest, at Lemberg, at Pavia, at Louvain, and at Loyburgh. The establishment of the latter is on the fame footing with that of Gottingen, where every one is at liberty to think with freedom, and to publish his thoughts to all the world.

DIED, At Preston, near Hull, Val. Cateby, who attained to the great age of 116; and had his intellects perfect till within two days of his diffolution. His diet for the last 20 years was milk and biscuit. He went to sea in his 18th year, and continued a failor 36 years; he then turned farmer, which occupation he followed 36 years.

NOVEMBER.

Mr. Seaton's prize is this ist. year adjudged to Spencer Madan, M. A. of Trinity College, Cambridge, for his poem on The Call of the Gentiles.

Yesterday a common hall was held at Guildhall for the election of a lord mayor, for the year enfuing; when the recorder informed the livery, that they were called together for the very important business of electing a chief magistrate, in the room of a worthy alderman who was discharged that office on account of his bad state of health.

The names of the aldermen who had ferved the office of sheriff were severally put up, when the sheriffs declared the shew of hands to be in favour of the Aldermen Newnham and Clark, and reported the same to the court of aldermen, then sitting in the council chamber, who soon after returned into the hall, when the recorder declared the election to have fallen on Nathaniel Newnham, Esq.

Yesterday a court of proprietors was held at the India House, from noon till six in the evening, for the purpose of ballotting on the question to rescind the vote of the court of directors, for removing Warren Hastings, Esq. from the Government of Bengal, &c.

At eight o'clock, the scrutineers made their report, when there ap-

peared to be

For the motion - 428 Against - - 75

Majority - 353
By this, the resolution of the court of directors is voted to be rescinded.

3d. A confirmation was received in Holland of the loss of the Union man of war, a new ship of 68 guns, in the north seas, in which every soul on board perished. Count de Welderen, eldest Vol. XXV.

fon of the late ambassador of that name to the Court of London, who commanded the Union, is much lamented.

8th. The first general meeting of the patrons of the charity schools throughout Great Britain was held at St. Paul's Coffeehouse in St. Paul's Church-yard, when the Right Hon. Thomas Harley was chosen president; the Right Hon. Lord Bagot and Sir Watkyn Williams Wynne, vice-presidents; Wm. Wright, Esq. of Soho-square, treasurer; Mr. John Robinson, of Bartlett's buildings, secretary; and Mess. Boldero, Barnston, and Co. bankers to the society.

This day a court of general officers met at the Horse - guards, in obedience to a warrant from his majesty, to try the Hon. Lieut. General Murray, late Governor of Minorca, on several charges exhibited against him by Lieut. General Sir William Draper, Knt. of the Bath, late deputy-governor, or second in command of the same island.

Arrived at Plymouth, being part of Lord Howe's fquadron, the Egmont 74, Bienfaisant 64, and the Buffalo of 60. The accounts brought by these ships are, that Lord Howe has detached for the West Indies, having first victualled and watered them completely from the sleet, the following men of war:

Ships.	Guns	
Princels Am	elia 80{	Adm. SirR. Hughes, Capt. Reynolds.
Union -		Capt. Dalrymple.

[P]		The

226] ANNUAL REGISTER, 1782.

The Samson, Crown, and Vigilant, of 64 guns, and the Minerva and Andromache, were left cruising off Lissen; and the Ocean of 96, Admiral Milbank, with the Foudroyant, 80, Fortinde, 74, Dublin, 74, Asia, 64 and Panther, 60, were gone to Ireland to victual and water. They are since arrived at St. Helens.

Letters just received from Newfoundland, give a very melancholy relation of the loss of the Hector man of war off that island. She had just had an engagement with two French frigates, whom the beat off; but a florm coming on foon after the action, fhe became so leaky that it was impossible to keep her above water. Just as the crew were about to leave her and commit themfelves to the mercy of the waves in their boats, a brig came in fight, and landed as many of them as were able to come on board upon the abovementioned island, but in a miserable condition. Among them was Captain Bourchier, who is fince arrived in Ireland, being feverely wounded in the engagement, and it was with difficulty that the officer prevented her falling into the hands of the enemy. Capt. Drury, who was passenger on board, is now in town, and confirms the melancholy fituation of that part of the crew who were faved (about 200 in number); the rest went to the bottom with the ship.

Lord Howe with part of the fleet under his command arrived at St. Helens, viz. The Victory, Britannia, Atlas, Queen, Princess Royal, Blenheim, Cambridge, Royal William, Alexander, Courageux, Edgar,

Ganges, Goliah, Vengeance, Pegafe; and the Bombay, Monfieur and Diana frigates.

The vessel with the diving bell came into Portsmenth harbour, having fished up to guns, with cordage, &c. belonging to the Royal George.

This day Capt. M'Bride was at the levee, and delivered to the king returns of the volunteer feamen raifed in Ireland for the royal navy.

Yesterday a court of proprietors was held at the East India House, in Leadenhall-street, pursuant to an advertisement from the court of directors, when the following motion was made:

" Refolved, That it appearing that there is fome defign to dispute the rights of the East India company; and it being found from the tenor of the letters that have past between his majesty's secretary of flate and the directors, that something inimical to the privileges of the court of proprietors is intended, a committee of nine proprietors be appointed to watch over the business of the East India company, as it may be agitated in parliament; and to take all fuch legal fleps as may appear necessary to prevent those much seared innovations, subject to the controul of general courts; and that the directors be instructed not to send out to India the over-land express that had been intended."

After some defultory conversation the motion was reduced merely to the appointment of a committee of nine proprietors, to meet at an apartment in the house, any five to do business; and then, one motion, the court adjourned.

Late

Late on Friday night the following letter was received at the mansion house from the Hon. Mr. Thomas Townshend, one of his majesty's principal secretaries of

Whitehall, Nov. 22, 1782. To the Right Hon, the Lord Mayor of the City of London.

My Lord, His Majesty's ministers, anxious to prevent as early as possible the mischiefs too commonly resulting from speculation in the funds during the uncertain state of negociations of peace between the powers at war, which it is the general honour and interest of all persons to avoid, have thought it their duty to ask his majetly's permission to communicate to you, that the negociations now carrying on at Paris, are brought fo near to a criss, as to promise a decisive conclusion either for peace or war before the meeting of parliament; which will on that account be prorogued from 'Tuefday the 26th inft. to Thursday the 5th of December; and I have his majeffy's command to assure you, that you will receive immediate notice of

(Signed)

the fame.

T. Townshend.

Died, Charles Lee, Esq. a major - generai in the Polish service. He was in the service of the American States, who suspended him in 1778. He was furprifed by Col. Harcourt, 1776; and being afterwards exchanged, was tried by order of Congress, and suspended for one year. He was brother to Wm. Lee, who was Sheriff of London in 1774, and in 1775 chosen Alderman of Aldgate Ward,

which he refigned in 1780, having retired to the Continent.

In America (two months ago) Major Gen. Horatio Gates (the captor of General Burgoyne), his

wife, and fon.

At Rhuabon, Denbighshire, the celebrated Mr. John Parry, generally known by the appellation of the famous blind barper.

DECEMBER.

Saturday being St. Andrew's day, the Royal Society held their anniversary meeting in Somerfet Place, in the Strand, when the following gentlemen were elected for the council.

Of the Old Council. Sir Joseph Banks, Bart. Peter Holford, Efq. Edward Hooper. N. Maskelyne, D. D. P. Henry Maty, M. A. Lord Mulgrave. Joseph Planta, Esq. Sir W. Mufgrave, Bart. R. Saunders, M. D. W. Watfon, M. D. Samuel Wegg, Efj.

Of the New Council. Ifaac Havkips Browne, Efg. Sir William Chambers. Earl of Dartmouth. Right Hon. W. Ellis. John Frere, Eig. Mr. W. Harriton. Joseph Hoare, D. D. Cyril Jackson, D. D. Philip Stephens, Efq. Sir Noah Thomas.

And the officers were, Sir Joseph Banks, Bt. prefident; Paul Honry Maty, M. A. feeretary; Joseph Planta, Eiq. fecretary; Samuel Wegg, Eff. treafurer.

[P] 2

In the late action in the 4th. east, the French had a weight of metal superior to our fleet by 110 guns, besides the assistance of near 3000 troops. In the first action, we fought them five to eight; and in the second, ten to twelve; and though our thips were much disabled, yet the British flag rode triumphant in both actions. The Superbe had upwards of 500 shot in her hull, many of them under water. There was no news of Sir Richard Bickerton, when the Royal Charlotte left India.

Yesterday a court of com-12th. mon council was held at Guildhall, at which were present the right hon. the lord mayor and

fixteen aldermen.

Mr. Dornford moved, That the resolution of the last court, for converting the chapel into a justice's office be rescinded—but the court confirmed the resolution.

The motion for subscribing to build a ship of war was ordered to fland over till the next court day.

A motion was made and carried, that the lord mayor and sheriffs, instead of collecting charitable benefactions for prisoners at Christmas, should draw upon the chamber

for one hundred pounds.

A letter from Barbadoes, dated October 28th, fays, " that the Argo frigate has lately taken a French 64 gun ship called the Actif, armed en flute, with a large quantity of brafs cannon, mortars, and all kind of artillery stores from Old France, bound to Martinique; she had also on board upwards of 200 soldiers, and her own lower deck guns in her hold. The Argo had like to have captured a frigate also, which was in

company with her, on board of which was the Marquis de Bouille."

Last Tuesday being the anniverfary of the institution of the Royal Academy, a general affembly of the academicians was held at the Royal academy, Somerfet Place, when the officers elected for the year enfuing were Sir Joshua Reynolds, president.

Council.—Edw. Burch, Charles Catton, P. J. De Loutherbourg, Joseph Nollekens, James Barry, George Dance, Jeremiah Meyer, and John Richards, Efgrs.

Visitors. — James Bary, J. B. Cipriani, P. J. De Loutherbourg, Jeremiah Meyer, Rev. Mr. Peters, A. Carlini, Richard Cosway, Jofeph Nolleken, and Joseph Wilton,

Efgrs.

This day fe'nnight the fubscription for a national Bank in Ireland, was opened in Dublin, and filled in a few hours, 30,000 l. more than was wanted was offered. The Bank opens for business the 1st of next lune.

Yesterday, a court of al-18th. dermen was held at Guildhall, at which were present the right hon, the lord mayor, and 17 aldermen, when John Hopkins, Esq. was fworn in Alderman of Caftle Baynard Ward, in the room of Samuel Plumbe, Esq. resigned. Also the recorder and common ferjeant gave in their opinions, that alderman Wooldridge might be removed, for the reasons given in a petition against him, and he was ordered to attend, by himself or attorney, the 21st of January, to shew cause why he should not be removed.

This day arrived a mail from New York, brought by the Swal-

1019

low packet-boat to Falmouth. She failed the 20th of November. Capt. Afgill came home paffenger on board the above packet.

Wednesday a court of proprietors was held at the East India House, in Leadenhall-street, for the purpose of declaring a dividend on the last half year's stock, when it was settled at 81. per cent. for the half year, from Midsummer

day last to Christmas.

A letter from Plymouth, 23d. dated December 20, mentions arrival of the Mediator, of 44 guns, from a cruize, and has brought in a fine new ship called the Menagere, deeply laden with all forts of naval and military stores, amongst which are 100 tons of gun-She failed from Bourdeaux with five others, under convoy of two French frigates, and an American, called the Alexander, of 22 guns, bound to Port-au-Prince, which the Mediator took. Menagere maintained a running fight of feveral hours before the struck, but no considerable damage on either fide; she has the appearance of a very beautiful ship, and looks as long as any ship in the navy; only her upper-deck guns mounted; her lower-deck ports are marked out, but the holes not yet cut; 'tis thought she is capable of mounting 74 guns. The Alexander is arrived at Portsmouth.

Yesterday an express arrived at the admiralty from Falmouth, with advice of the Queen Charlotte being arrived there, from Jamaica. She failed from Port Royal the 10th of November, and came through the windward passage. A few days before she sailed, the Lon-

don man of war of 90 guns, Captain Kempthorn, returned there from a cruize; during which she fell in with a French man of war, of 74 guns, and engaged her for near two hours, when she struck; but, unfortunately, at that period, she perceived the London had received confiderable damage, and was unmanageable, and therefore took the advantage of making fail and got off. The London had upwards of 70 men killed and wounded, and, it is faid, was very much injured by the French ship running foul of her, whilst they were engaging; but we are happy to find, that the Torbay, of 74 guns, came up just after the action, and immediately gave chace to the French ship, who, by endeavouring to escape, run on shore near Port Dauphin, on the north fide of Hispaniola, where it was supposed she would be loft.

DIED, Charles Gray, Esq. of Colchester, F. R. S. and a Trustee of the British Museum, and member for that borough in sive parliaments.

THIS table, which is founded on the reports of the Westminster General Dispensary, was made with a view to shew the proportion of natives to persons born in the disferent counties of England and Walcs, in Scotland, Ireland, or foreign countries.

 $[P]_3$

A Comparative Table of the Population of London, by R. Bland, M. D. from vol. lxxi. of the Philosophical Transactions.

Of 3236 married persons,

\$24 or one-fourth were born in London.

- 1870 or four-fevenths in the different counties of England and Wales.
- 209 or 1 in 15 in Scotland.
- 280 or 1 in 11 in Ireland.
- 53 or 1 in 60 were foreigners.

3236

Of the above number the males and females were in the following proportions.

Wemen.

- 329 were born in London, and 495 or 166 more than men.
- 952 in different counties, 917 or 35 fewer than men.
- 135 in Scotland, 74 or 61 fewer than men.
- 162 in Ireland, 119 or 43 fewer than men.
- 40 --- were foreigners,

13 or 27 fewer than men.

1618

1618 166

APPENDIX to the CHRONICLE.

Gen. Murray's Account of the Siege of Fort St. Philip's; Articles of Capitulation, and Returns of the State of the Garrifon and Artillery.

From the LONDON GAZETTE.

Copy of a Letter from the Hov. Gen.
Murray, Governor of Minerca,
to the Earl of Hillborough, one of
his Majesty's principal Secretaries
of State. Received by Capt. Don,
March 19.

Minorca, Feb. 16, 1782.

HAVE the honour to acquaint your lordship, that Fort St. Philip's was surrendered to his Catholic Majesty the 5th Instant. The capitelation accompanies this. I flatter myself all Europe will agree the brave garrison showed uncommon heroisn, and that thirst for glory, which has ever distinguished the troops of my royal master. Our necessary guards required four hundred and lifteen men, the night before the capitulation; the whole number able to carry arms amounted to fix hundred and fixty only, of course

there were none for picquet, and

a defect of one hundred and feventy to relieve the guards, as is

evident by the returns. The most

Vol. XXV.

inveterate scurvy which I believe ever has infected mortals reduced us to this fituation. The reports of the faculty fully explain the dreadful havock it made, and that three days further obflinacy on my part must have inevitably destroyed the brave remains of this garriton, as they declare there was no remedy for the men in the hospitals, but vegetables; and that of the fix hundred and fixty able to do duty, five hundred and fixty were actually tainted with the fourty, and in al' likelihood, would be in the hospitals in four days time. Such was the uncommon spirit of the king's foldiers, that they concealed their disorders and inability, rather than go into the hospital;; feveral men died on guard, after having flood fentry; their fate was not discovered till called upon for the relief, when it came to their turn to mount again. haps a more noble, nor a more tragical fcene, was ever exhibited, than that of the march of the garrifon of St. Philip's through the Spanish and French armies. It confifted of no more than fix hundred old, decrepid toldiers, two hundred feamen, one hundred and twenty of the royal artillery, twenty Corficans, and twenty-five Greeks, Turks, Moors, Jews, &c. The two armies were drawn up in [::]

two lines, the battalions fronting each other, forming a way for us to march through: they confisted of fourteen thousand men, and reached from the Glacis to George-town, where our battalions laid down their arms, declaring they had furrendered them to God alone, having the consolation to know, the victors could not plume themselves

in taking an hospital. Such was the distressing figures of our men, that many of the Spanish and French troops are said to have shed tears as they passed them: the Duke de Crillon and the Baron de Falkenhayn declare it is true: I cannot aver this, but think it was very natural: for my own part, I felt no uneafiness on this occasion, but that which proceeded from the miserable disorder which threatened us with destruction. Thanks to the Almighty my apprehensions are now abated; the humanity of the Duke de Crillon (whose heart was most fensibly touched by the misfortunes of fuch brave men) has gone even beyond my wishes in providing every thing which can contribute to our recovery. The Spanish as well as the French furgeons attend our hofpitals. We are greatly indebted to the Baron de Falkenhayn, who commands the French troops. owe infinite obligations to the Count de Crillon; they can never be forgot by any of us. I hope this young man never will command an army against my fovereign, for his military talents are as conspicuous as the goodness of

his heart. Lists of the killed and wounded, with the number of our guns which were destroyed by the enemy's battering artillery, which

confished of 109 pieces of cannon and 36 mortars, are inclosed. I shall wait here until I see the last man of my noble garrifon fafely and commodiously embarked. If my accompanying them in a tranfport to England could be of the fmallest service to any of them, I would chearfully go with them by fea; but as I can be of no further use to them after they are on board ship, I trust his majesty will approve of my going to Leghorn to bring home with me my wife and my children, who fled to Italy in the evening of the day the Spanish army landed on the island.

My aid de camp, Capt. Don, will have the honour to present this letter to your lordship; he is well acquainted with the most minute circumstance relative to the fiege, is an intelligent, diftinguished officer, and is furnished with copies of all the papers I have, which he will lay before your lordship, if

requifite.

The captains Savage, Boothby, and Don, of the 51st regiment, Lieut. Mercier, of ditto, Lieut. Botticher, of Goldacker's regiment, and Lieut. Douglas the engineer, are exchanged for the officers we made prisoners at Cape Mola.

Colonel Pringle and his nephew Licut. Pringle are to be left hoftages until the transports return agreeable to the capitulation.

I have the honour to be, &c.

JAMES MURRAY. P. S. It would be unjust and ungrateful was I not to declare, that from the beginning to the last hour of the siege, the officers and men of the royal regiment of artillery, and likewise the seamen, diffinguished themselves: I believe

APPENDIX to the CHRONICLE.

the world cannot produce more expert gunners and bombardiers than those who served at this fiege, and I am fure the failors shewed uncommon zeal. It is neceffary likewife to declare, that no garrison was ever nourished with better falt provisions of all kinds, than we had fent to us from England; fresh vegetables we could not have; but we had plenty of peafe, good bread and rice, with currants and raisins; and left in the fort fix months full allowance of all kinds, although a magazine, containing fix months more, was burnt by the enemy's shells.

IAMES MURRAY.

Articles of Capitulation proposed by his Excellency the Hon. James Murray, Lieutenant General of his Britannic Majesty's forces, Colonel of the 13th regiment of foot, Captain-General and commander in chief of Fort St. Philip's, to his Excellency Louis Berton de Balls, Duc de Crillon, Lieutenant General of the French and Spanish forces, and commander in chief of the combined army.

St. Philip's Castle, Feb. 4, 1782, at nine o'clock in the morning.

ARTICLE I. THAT all acts of hostility shall cease till the articles of capitulation are agreed upon and figned.

ART. II. That the garrison, upon their furrender, shall be allowed all the honours of war, viz. To march out with shouldered arms, drums beating, colours flying, twenty-four rounds per man, matches lighted, four pieces of cannon, two mortars, with twentyfour rounds of fainmunition for each piece, four covered boats not to be fearched upon any account.

ART. III. That the whole gar-

rison, comprehending all his Britannic Majesty's subjects, civil as well as military, and the Corfican corps and Greeks, &c. shall have their baggage and effects fecured to them, with leave to move or dispose of it as they shall think proper; and that his Britannic Majesty's subjects serving in the garrison, who possessed houses and grounds in Mahon and George-Town, shall have leave to dispose of them to any of his Catholic

Majesty's subjects.

ART. IV. That the garrison, including officers, artificers, foldiers, and other British subjects and their families, shall be provided with convenient transports at the rate of one ton and a half per man, and to be carried to the first port in Great-Britain, and landed there as foon as they arrive, at the expence of the crown of Spain; and that provisions shall be allowed to them, out of fuch as remain in the magazines of the garrison at its furrender, for the time they remain in the island, and for their voyage by fea for ten weeks, in the fame proportion as they now receive it; and the officers with their families, who have the governor's permission, shall passports granted to them to go to England or Germany by land; that the Corficans, Greeks, &c. now serving in the garrison, who do not exceed seventy men, shall be transported to Leghorn, and landed there likewise at the expence of the crown of Spain, but their provisions for the passage to be taken from the magazines of the garrison. That the transports are to be provided, for the accommodation of the troops during the voyage, with the bedding of the garrison. That a proper hospital [2] 2 for

for the fick and wounded, during the time that the transports are getting ready, (which time shall not exceed one month from the figning of this) shall be provided; and such as may not then be in a condition to embark, shall be allowed to stay behind, and be properly taken care of, till they shall be able to be fent to Great-Britain by another conveyance.

ART. V. That while the garrison continues in the island, permission shall be granted to purchase vegetables and fresh meat in the markets, for the sick in the hos-

pital.

ART. VI. Until the garrison quits the place, it shall not be permitted to corrupt the soldiers, and try to make them desert from their regiments, and the officers shall have access to them at all times; for which purpose no communication betwixt the soldiers of his Catholic Majesty and the troops of the garrison shall be admitted of.

ART. VII. That exact difcipline shall be kept up on both

fides.

ART. VIII. That the four inhabitants of the island, viz. Paul Guiard, Marc Reure, Michael Amengual, and Lewis Roca: who have joined in the defence of the garrison, shall be permitted to remain and enjoy their properties in the island unmolested.

ART. IX. That all prifoners of war made fince the landing the Spanish army, shall be delivered

up on both fides.

ART. X. Hostages being delivered on both fides for the faithful execution of the preceding conditions, his Excellency the Hon. Lieut. Gen. Murray consents to

deliver up the place, with all the military flores and ammunition, cannon and mortars, except what is referved in the fecond article, to his Catholic Majesty; likewise to direct that all mines and underground works shall be shewn to his Catholic Majesty's engineers; plans of the galleries, mines, and other subterrancous works, shall be likewise delivered up.

(Signed) JAMES MURRAY. Duke de Crillon's Anfiver to General Murray's first proposal to capi-

tulate.

THE order which I have from my court, forbidding me to liften to any capitulation, except under the express condition that the garrison of Fort St. Philip's shall be prisoners of war, I am under the obligation to return his Excellency General Murray the articles which he proposes to me; but I am very forry I have not an opportunity to make known to him my desire for the preservation of his men, and particularly the esteem with which his person and his brave garrison have inspired me.

B. B. Duc De Crillon.

Mahon, February 4, eleven o'clock in the morning.

Further Articles of Capitulation proposed by his Excellency General Murray to his Excellency the Duke de Crillon, dated Fort St. Philip's, February 4, 1782, at eight o'clock, at night, he having objected to those formerly fent to him: with the Anjwers of the Duke de Crillon to the last Articles proposed by General Murray, dated Mahon, February 4, 1782, at ten at night.

ART. I. As his Excellency the Duke de Crillon, by the express orders of his Sovereign, cannot

receive

receive the garrifon but as prifoners of war, his Excellency the Hon. Lieutenant General James Murray consents to furrender the garrifon agreeable to the Duke de Crillon's instructions from his court; but he expects the Dake de Crillon will allow the garrifon to march out of it with all the honours of war he has required in the fecond article of those sent to the Duke, which is by no means incompatible with his Excellency's instructions, and will tend more to his glory; for certainly no troops ever gave greater proofs of heroifm than this poor worn out garrifon of St. Philip's Calle, who have defended themselves almost to the last man.

Answer. The garrison shall be prisoners of war; but in consideration of the constancy and valour which General Murray and his men have shewn in their brave defence, they shall be permitted to go out with their arms shouldered, drums beating, lighted matches, and colours flying, till having marched through the midst of the army, they thall lay down their arms and colours; and moreover, being defirous of giving a proof of my high esteem for the General, he shall be allowed a covered boat.

ART. H. General Murray defires the garrifon may be allowed to return to England, prisoners of war, in transports furnished by the King of Spain, but paid for by the King of ringland; and that the troops shall be victualled, while they remain on the island, till the transports are got ready for them, and during the passage to Great-Britain, out of the flores of the garrifon, at the fame allow-

ance for each man they have been accultomed to receive; the troops of the garrison are likewise to be allowed to take their bedding with them into the transports. Granted.

ART. 111. That the Corticans, Greeks, &c. ar to be transported to Leghorn, and likewife victualled out of the flores of the garrifon at the ufual allowance: the transports at the expence of England. Granted.

ART. IV. That the General thinks that the officers should follow the fate of their men, and therefore will not permit any officer to go home by land, but those whose health requires it: that his own will not admit of a long feat vovage, and therefore he hopes the Duke de Crillon will allow him and his furte to go to Marfeilles, and from thence to England, for which purpote he ims the King of France's paffport. Granted.

Ast. V. That the Duke de Crillon may depend upon it the garrifon of Fort St. Philip's shall not force during the war, unless they are regularly exchanged, or a cartel fettled betwirt the belligerent powers, which may liberate them from the obligations of

not ferving during the war. Anguer. The confidence which

I have in the honour of all the of-Le is of the garrifon of St. Pahip dues not fuffer me to doubt of their keeping their promise not to serve against Spam and her allies, until they have been exchanged by Spain, either man for man, or by means of a cartel, in cale any thould be established by their Catholic and Britannic Majeflies, for the officers thall be prisoners of war on their parole of honour, [2] 3 given

given in writing under their hands; with regard to the foldiers, a lift of their names must be made out, their officers shall explain to them the obligation they have contracted of not serving during the war, till they have been exchanged, and shall warn them of the penalty of death they will be punished with if guilty of breaking this obligation.

ART. VI. That the Duke de Crillon's known humanity leaves General Murray no doubt that his Excellency will be happy to allow vegetables and every possible refreshment, to be bought in the markets of the island, which can contribute to the recovery of the sick of the garrison. Granted.

ART. VII. That he has as little doubt that his Excellency's generofity will not admit of allowing the officers, foldiers, and artificers of the garrifon, to be plundered of their baggage, and maltreated by the befieging army; for which purpose he proposes to put the Duke de Crillon immediately in possession of Marlbro', Charles Fort, Queen's Redoubt, and the Kane Lunette. Granted.

ART. VIII. That the English garrison shall remain possessed of the other out-works till the day they embark; and that no insults may be offered them by the Spanish soldiers.

Answer. The whole garrison shall early to-morrow morning quit the place, to be conducted to Alcor, where they shall remain till they are embarked, and every attention shall be paid them, which their defence and valour deserve.

ART. IX. Hostages to be delivered on both sides for the faithful performance of the preceding articles.

Answer. In consequence of the 2d and 3d preceding articles, which treat of the transports that are to be surnished by Spain, his Excellency General Murray shall name some principal officers, who shall remain as hostages till the return of the said transports.

Hospital, St. Philip's Cassle, F.b. 1, 1782.

FROM the extraordinary increate of the fick in the garrison, and the little progress we make in reducing that evil, we judge it necessary both on account of the public fervice, as well as our own credit, to inform your Excellency, that the prevailing disease, the scurvy, amongst the troops, is got to fach an alarming height, as feems to us to admit of no remedy in our present situation. Every means has been tried to palliate this formidable malady; but the daily, and we may fay, the hourly falling down of the men, baffles all our endeavours. The different returns of the fick, will shew your Excellency the truth of this affer-We are forry to add, that it does not appear to us, that any one now in the hospital, will be able to do the smallest duty under the present circumstances, where no vegetable food is to be had, or free air.

Remarkable Actions at Sea, &c.

LONDON GAZETTE.

Admiralty Office, April 27, 1782.

Extract of a Letter from the Hon.

Vice Admiral Barrington to Mr.

Stephens,

Stephens, dated on Board the Britannia, at St. Helens, the 25th of April, 1782.

HAVE the pleasure to acquaint you for all tion of my Lords Commissioners of the Admiralty, that on the 20th instant, Ushant bearing N. E. half E. 23 leagues, at one P. M. I perceived the Artois, Captain Macbride, with a fignal out for discovering an enemy's sleet, but at fuch a diffance that it was with the utinost difficulty I could diftinguish the colour of the flag; it was then calm, but a breeze fpringing up, I made the figual for a general chace; the enemy at such a distance that I could but just discover them from the Britannia's mast head at three o'clock. the close of the evening seven of our ships had got a good distance a head of me, the Foudroyant, Captain Jervis, the foremost; and in the night, it coming to blow ftrong with hazy weather, after having lost his companions, at 47 minutes after 12, brought the Pegase of 74 guns and 700 men to a close action, which continued three quarters of an hour, when the Foudroyant, having laid her on board on the larboard quarter, the Frenchmen Bruck. My pen is not equal to the praise that is due to the good conduct, bravery and discipline of Capt. Jervis, his offcers and feamen on this occasion: let his own modest narrative, which I herewith inclose, speak for itself.

The next morning foon after day-break, the wind then fouth, blowing flrong, it shifted in an instant to west, and with such violence that it was with difficulty I could carry my courses to clear Ushant and get the Channel open, which being accomplished by noon, I brought to and remained so until the evening of the 22d to collect the squadron.

By the accounts of the prisoners there was 13 fail, laden with stores, provisions, and ammunition, under the convoy of the Protecteur of 74, Pegaie 74, L'Andromache 32, together with L'Actionaire, a two-decker, armed en flute, all bound for L'Isle de France. They left Brest the 19th indant.

I cannot pretend to give their lordships a particular account of the number of prizes, but must refer them to that they may receive as they arrive in port, though I believe there are ten at least.

Proceedings of his Mejepy's Ship uncer my command from the 20th injunt.

Near sun-set on the 20th, I was near enough to discover that the enemy confided of three or four ships of war, two of them at least of the line, with 17 or 18 fail under their convey, and that the latter dispersed by fignal. At half pail nine I oblerved the smalled of the thips of war to speak with the headmost, and then bear away. At a quarter pail ten, the fiernmost line of battle ship, percciving we came up with her very fait, bore up also. I pursued her, and at 47 minutes after twelve brought her to close action, which continued three quarters of an hour, when, having laid her aboard on the larboard quarter, the French ship of war Le Pegale, of 74 guns and 700 men,

commanded by the Chevalier de

Cillart, furrendered.

The discipline and good conduct of the officers and men under my command will best appear by the state of the killed and wounded, and of the damages fullained in cach ship.

I am happy to inform you that only two or three people, with myfelf, are flightly wounded; but I learn from the Chevalier de Cillart, that Le Pegase suffered a very great carnage, and was materially damaged in her masts and yards, the mizen-mast and fore-top-mast having gone away foon after the action ceased.

It blew so strong yesterday morning, that I with difficulty put eighty men on board the prize, but received only forty prisoners in return, in performing which I fear two of our boats were loft. The disabled state of the prize, together with the strong wind and heavy fea, induced me to make the fignal for immediate affiftance, which Commodore Elliot supplied, by making the Queen's fignal to assift the disabled ship.

At eight o'clock last night they bore S. S. W. four miles distance of us: we lay-to till ten, in hopes of their joining, but not perceiving them, we bore up, and ran N.E. twenty-three miles till day light. when, feeing nothing of them, we brought-to, and at half past eight made fail to join the squadron.

By all I can learn from the prifoners, this small squadron, composed of Le Protecteur, Monsieur de Soulange, Commodore, Le Pegase, and L'Andromache frigate, was making a fecond attempt to proceed on an expedition to the East Indies, some of the troops hav-

ing been before captured under that destination, by the squadron under the command of Rear-Admiral Kempenfelt, in the presence of the above-mentioned ships of war.

JOHN JERVIS.

Foudroyant, April 23.

N. B. Advice has been received, that the Pegase of 74 guns is arrived at Spithead, and the following ships, part of the abovementioned captures, at Plymouth.

La Fidelite, with 178 troops and stores. La Bellone, 147 troops and stores. La Lionne, 180 troops and ftores. Duc de Chartres, stores and arms.

LONDON GAZETTE.

Admiralty office, April 2, 1782. Copy of a Letter from Capt. Pole. of his Majesty's Ship the Success, of 32 Guns and 220 Men, to Mr. Stephens, dated at Spithead the 30th of March, 1782.

HAVE the honour to defire you will inform my Lords Commissioners of the Admiralty, that on the 16th inft. at day light, in lat. 35: 40 N. Cape Spartel bearing E.N.E. eighteen leagues, the wind at S. W. standing for the gut, with the Vernon storeship, we discovered a sail right a-head, close hauled on the larboard tack: as foon as I could discover her hull from the mast-head, which the haze and lofty poop magnified, I made the Vernon's fignal to haul the wind on the starboard tack, and make all fail; foon after hauled our wind, the strange fail tacked and gave chace; at half past two, P. M. finding the chace gained on the Vernon, I shortened fail to let her go a-head, and then brought-to, in hopes at least

APPENDIX to the CHRONICLE. [251

to make him shorten sail, and divert his attention from the ship under my convoy. We foon after discovered him to be only a large frigate with a poop: at a little after five he hoisted a Spanish enfign, with a broad pendant, and fired a gun: at fix, being within random shot, astern of me, I wore, and stemmed for his lee bow, till we had just distance sufficient to weather him; then hauled close athwart his forefoot, giving him our whole fire within half piftol shot; passed close to windward engaging, while the enemy expecting us to leeward, were firing their lee guns into the water; the disorder our first fire threw them into they did not recover. then wore, and placed ourselves to great advantage, which our fuperiority of failing allowed us to do, supporting without intermiffion, a most astonishing close and well ferved fire, at never more than half a cable distance, till the enemy struck, which was about twenty minutes past eight. proved to be the Santa Catalina, Don Mig. Jacon, commander, of thirty four guns, twenty-fix long Spanish twelves on the main deck, and eight fix-pounders on The number of quarter deck. men I have not been able to afcertain. We have on board 286 prifoners. The captain and officers fay they had between 25 and 30 killed, and only 8 wounded. Don Mig. Jacon is a captain in the line, hath a distinguishing pendant as fuch, and is fenior officer of the frigates cruifing off the Straits: had a very particular description of the Success sent him, whom he was particularly directed to look out for; had been cruifing three weeks for us; had seen us four times; chaced us twice with a squadron of four and fix fail, from whom he parted two days before. He speaks with much displeasure of the behaviour of his ship's company. Lieutenant Oakely, whom I had appointed to take charge of the prize, was indefatigable in clearing the wreck. Her mizenmast fell some time before she struck; the main-mast in a short time after, and her fore-mast must have shared the same sate, if the water had not been remarkably fmooth: in short, without affuming much prefumption, I may add our guns did as much execution in the little time as could have been done; her hull was like a fieve, the shot going through both sides. From this state of the prize, their lordships may imagine my hopes of getting her to port were not very fanguine. Whilst we were endeavouring to secure her foremast, and had just repaired our own damages, which were confiderable in our yards, maits, and fails, at day-light of the 18th. fix fail appeared in fight, two frigates from whom had chaced, and were reconnoitering us; I inflantly ordered the Vernon to make all fail, hoifted all my boats out, fent on board for Lieutenant Oakley and the feamen, with orders to fet fire to the Santa Catalina before he left her. She blew up in a quarter of an hour. The wind being at S.E. I made all fail from the fix fail, and determined on proceeding with the Vernon to Madeira, she being now in want We had of provisions and water. now 286 prifoners on board, whose intention to attempt rifing we had fortunately discovered, encouraged

X

by the fuperiority of numbers, which appeared very shiking to

them.

The spirited behaviour of every officer, and of the ship's company, is superior to my praise; their real value and merit upon this occasion hath shown itself in much stronger and more expressive terms than I am master of; but still it becomes a duty incumbent on me to represent them to their lordships as deferving their favour and protection; I have particular pleafure in fo doing. Lieut. M'Kinley, (2d) affitted by Mr. James, mafter, were very affiduous in getting the Success's damages repaired, as well as they could admit. Lieutenant Pownal of the marines, by the greatest attention and good example, formed a party that would do honour to veteran foldiers. Indeed, Sir, the warrant, petty, able, &c. did their duty in fo noble a manner, that I feel myfelf happy in rendering them my public thanks. I shall hope, if their lordships are pleased to consider the conduct of the Success on this occasion as deserving their notice, that they will permit me to recommend the first lieutenant to their favour. From the reports given me fince, it adds to my fatisfaction to know, that, had I not been obliged to let fire to the Catalina, the could not have fwam, a gale of wind coming on immediately after, which obliged us to Lay to under a ftorm flay fail: fhe was the largest frigate in the King of Spain's fervice: her exact dimensions I have received from the captain; they were taken three months fince when the was empered at Cadiz. I am forry to add, that amongst the list of our wounded is Mir. George Hutchin-

fon, Beatfwain, who lost his arm: the fervice will lose a very valuable man.

Dimensions of the Santa Catalina.

Length of keel — 138 11
Length of deck — 151 10
Extreme breadth — 39 4
Height of middle port
when victualled for four

when victualled for four months

My thanks are due to Colonel Gladstanes and the other officers, passengers on board the Vernon store-ship, for their attention, particularly in assisting to secure the prisoners.

I am, Sir,

Your most obedient humble fervant,

CHA. M. POLE.
Killed in the Success, 1;
wounded, 4.

Admiralty Office, May 18, 1782.

Lord Cranston, one of the captains of his majesty's ship the Formidable, and Capt. Byron of the Andromache, in which ship his lordship came passenger, arrived early this morning with dispatches from Admiral Sir George Brydges Rodney, Bart. to Mr. Stephens, of which the fellowing are copies.

Sir,

Formidable at Sea, Afril 14, 1782.

Thas pleafed God, out of his divine Providence, to grant to his majeffy's arms a most complete victory over the fleet of his enemy, commanded by the Count de Grasse, who is hamself captured with the Ville de Paris, and four other ships of the fleet, besides one sunk in the action.

This important victory was obtained the 12th inft. after a battle

which

APPENDIX to the CHRONICLE. [253

which lasted with unremitting fury from seven in the morning till half past fix in the evening, when the setting sun put an end to the contest.

Both fleets have greatly suffered; but it is with the highest satisfaction I can assure their lordships, that though the mass, sails, rigging, and hulls of the British fleet are damaged, yet the loss of men has been but small, considering the length of the battle and the close action they so long sustained, and in which both fleets looked upon the honour of their king and country to be most effentially concerned.

The great supply of naval stores lately arrived in the West Indies will, I flatter myself, soon repair all the damages his majesty's fleet has suffained.

The gallant behaviour of the officers and men of the fleet I had the honour to command, has been such as must for ever endear them to all lovers of their king and country.

The noble behaviour of my fecond in command, Sir Samuel Hood, who in both actions most conspicuously exerted himself, demands my warmest encomiums; my third in command, Rear Admiral Drake, who, with his division led the battle on the 12th instant, deserves the highest praise; nor less can be given to Commodore Assieck, for his gallant behaviour in leading the centre division.

My own captain, Sir Charles Douglas, merits every thing I can possibly fay; his unremitted diligence and activity, greatly eased me in the unavoidable fatigue of the day.

In thert, I want words to express how sensible I am of the merito-

rious conduct of all the captains, officers, and men, who had a share in this glorious victory, obtained by their gallant exertions.

The enemy's whole army, confisting of 5500 men, were on board their ships of war: the destruction among them must be prodigious, as for the greatest part of the action every gun told; and their lordships may judge what havock must have been made, when the Formidable fired near eighty broadsides.

Inclosed I have the honour to fend for their lordships inspection, the British and French lines of battle, with an account of the killed and wounded, and damages sustained by his majesty's fleet.

Lord Cranslon, who acted as one of the Captains of the Formidable during both actions, and to whose gallant behaviour I am much indebted, will have the honour of delivering these dispatches. To him I must refer their lord-ships for every minute particular they may wish to know, he being perfectly master of the whole transaction.

That the British slag may for ever flourish in every quarter of the globe, is the most ardent wish of him, who has the honour of being, with great regard,

Your most obedient
humble fervant,
G. B. RODNEY.

APPENDIX to the CHRONICLE. [255

Returns of Officers Killed and Wounded, the 9th and 12th of April 1782, included in the above Lift.

Royal Oak.—Mr. Gwatkin, first lieutenant, killed; captain of marines, wounded.

Alfred .- Captain Bain, killed.

Montagu.—Mr. William Cade, master, killed; Lieutenants Breedon and Buchan of marines, wounded.

Valiant. — Mr. Richard Wimbleton, fecond licutenant, killed; Mr. William Brown, fifth licutenant, and Mr. Backhouse, master, wounded.

Warriour. - Mr. Stone, master, wounded.

Centaur.—No return, having a prize in tow, and not joined.

Magnificent. — Capt. Bagg, of

the marines, wounded.

Ajax. — Mr. John Elliot, first lieutenant, Mr. Thomas Rossiter, pilot, wounded.

Repulse. - Captain of marines,

and master, wounded.

Formidable. — Lieutenant Hele, killed; Captain Bell and Lieut. Harris of marines, wounded.

Duke. — Lieut. Cornish, Mr. Cooper, master, Mr. Scott, boat-fwain, wounded.

Agamemnon.—Lieuts. Incledon and Brice, wounded; the latter fince dead.

Refolution.—Capt. Right Hon. Lord Robert Manners, wounded, and fince dead.

Prothee.—Mr. Thomas Love, master, wounded.

Hercules.—Lieut. Hobart, killed; Captain Savage, wounded.

America. — Lieut. Collowhill, killed; Lieutenant Trelawney, wounded.

Anson.-Captain Blair, killed.

Torbay —Lieut. Mounier of marines, killed.

Princessa. — Lieuts. Dundas and McDouall, and Lieut. Laban of marines, wounded.

Alcide. — No returns, baving a prize in tow, and not joined.

+ Joined at St. Kitts.

Arrived with the Brest convov.

SIR,

Formidable at Sea, April 14, 1782.

I must desire you will please to acquaint their lordships, that not-withstanding the disposition I had made of his majesty's sleet under my command, which were stationed to windward of the French islands, in a line stretching from the latitude of Desiada to the lati-

tude

tude of St. Vincent, with a line of frigates to windward, which their lordthips may perceive, by the difposition of the fleet I have the honour to inclose, and which disposition was thought by every officer of the fleet to be fuch, as to render it impessible for any convoy bound to the French islands to escape, yet notwithstanding the vigilance of every captain and officer, the enemy found means to escape by making the island of Desiada, and creeping close in under Gaudaloupe and Dominique, they arrived fafe in the bay of Fort Royal on the 20th and 21st of March.

Information having been given me of this unlucky event, I thought it my duty to return to the bay of Gros Islet, St. Lucia, where I had ordered the storeships, victuallers, and trade bound to Jamaica, to

rendezvous.

On my arrival in that bay, every dispatch possible was made in resisting the seet, and taking in stores and provisions for sive months of all species for the whole seet. A watchful eye being kept the whole time on the French sleet in the bay of Fort Royal, as I knew that Count de Grasse would hasten the resisting his sleet, and take the first opportunity of proceeding to the place of his destination.

On the 5th of April I received intelligence that the enemy were embarking their troops on beard the ships of war, and concluded they intended to fail in a very

few days.

Captain Byron of the Andromache, an active, brifk, and diligent officer, watched their motions, with fuch attention, that on the 8th inflant at day-light, he

made the fignal of the enemy's coming out, and standing to the North West; I instantly made the fignal to weigh, and having looked into the bays of Fort Royal and St. Pierre's, where no enemy's ships remained, I made the fignal for a general chace, and before day light of the 9th, came up with the enemy under Dominique, where both fleets were becalmed, and continued fo for fome time. The enemy first got the wind and food towards Guadaloupe; my van division under that gallant officer Sir Samuel Hood, received it next and stood after them. At nine the enemy began to cannonade my van, which was returned with the greatest briskness.

The baffling winds under Dominique did not permit part of the centre division to get into action with the enemy's rear till half past eleven, and then only the ship next

to me in the line of battle.

Their lordships may easily imagine the mortification it must have been to the fixteen gallant officers commanding the ships of the rear, who could only be spectators of an action which it was not in their power to join, being detained by the calms under Dominique.

The enemy's cannonade ceafed upon my rear's approach, but not before they had done confiderable damage to the fhips of the van, and difabled the Royal Oak and Montagu, and his majefly had loft a gallant officer, viz. Capt. Bayne of the Alfred, and a number of efficers and feamen, as mentioned in the account transmitted to their lordships; but fuch was the fleady behaviour of Sir Samuel Hood and the ships of the van, that the enemy received more damage than they occasioned.

The

APPENDIX to the CHRONICLE. [257

The night of the 9th instant the fleet lay to, to repair their da-The 10th they continued mages. to turn to windward under an eafy fail, the enemy's fleet continuing to do the same, and always had it in their power to come to action, which they most cautioufly avoided, and rendered it impossible for me to force them in the fituation they were in, between the Saints and island of Dominique. On the 11th of April, the enemy having gained confiderably to windward, and the wind blowing a fresh and steady gale, I made the fignal for a general chace to windward; which continued the whole day. Towards fun-set, fome of the headmost ships of the fleet had approached near to one of the enemy's ships that had received damage in the late action, and had certainly taken her, if Count de Grasse had not bore down with his whole fleet for her protection, which brought him fo near, that I flattered myself he would give me an opportunity of engaging him the next day. With that view I threw out the fignal for the form of failing, and stood with the whole flect to the fouthward till two o'clock in the morning; then tacked, and had the happiness at day-light to find my most fanguine desire was near being accomplished, by my having it in my power to force the enemy to battle. Not one moment was lost in putting it into execution: the confequences have been such as I have had the honour to represent in my former letter of this day; and can fay no more, than that too much praise cannot be given to the gallant officers and men of Vol. XXV.

the fleet I had the honour to command.

I have the honour to be, &c.

G. B. RODNEY.

N. B. Lord Cranston and Capt, Byron relate, that the Cæsar, one of the captured ships, soon after she was taken possession of, took fire by accident and blew up, and a considerable number of the people on board her unfortunately perished; and that Lord Robert Manners died in his passage home in the Andromache.

-Paris. July 9.

Extract of a Letter from Count de Guichen to the Marquis de Cafiries, Secretary of State for the Marine Department; duted at Sea, on bourd the Terrible, June 27.

HAVE the honour to inform you that the combined fleet has had very little wind fince its departure from Cadiz, which, however, would not have retarded us much, had it not become quite contrary at the entrance of the bay. We were a little recompensed afterwards by meeting with a fleet of the enemy's ships, which we described the 25th of June, in lat. 47. 36. N. and 15. 20. W. from the meridian of Paris.

This fleet, composed of 18 fail, was escorted by the Portland, of 50 guns; the Oiseau, of 32; the Dance, of 24; and the Merlin floop: it was desired for Canada and Newsoundland. Our frigates have taken the 18 ships, but could not come up with the ships that convoyed them. At the departure of the courier from Brest, the prizes appeared off Uthant.

The Jenny, 250 tons, Captain
[R] John

John Stewart, laden with spirits, falt, &c. 12 men; the Commerce, 250 tons, Capt. Edward Prichard, laden with provisions, 10 men; the Eagle, 300 tons, Capt. William Crones, laden with provifions, 36 men; the John, 170 tons, provisions, 22 men; the Fogo, 40 tons, Capt. Joseph Bickguen, provisions, 7 men; the Canada, Capt. John Karokins, 250 tons, laden with provisions; the Maria, three masts, laden with provisions; the Jenny, three masts, Capt. Williams, provisions, 24 men; Kingston, 16 men, provisions; the Garland, Capt. Robert Plout, 120 tons, laden with provisions; the Lively, provisions and wine, 9 men; the Charak, Capt. James Wallarche, 150 tons, laden with provisions; the Providence, Capt. John Ebiter, provisions; the Nancy, Capt. Thomas Cawley, laden with provisions, 12 men; the Magdalen, Capt. Boukay, provisions, 12 men; the St. George, 100 tons, provisions, 12 men; the Admiral Campbell, 70 tons and 8 men, laden with provisions; the Hermit, Capt. David Nunny, 11 men, laden with provisions and wine.

Whitehall, Nov. 16.

The letters, of which the following are copies and extract, from the Right Hon. General Elliot, Governor of Gibraltar, were received on Thursday last at the office of the Right Hon. Thomas Townshend, his Majesty's Principal Secretary of State for the home department,

(Ĉ O P Y)
Gibraltar, Sept. 15, 1782.

My Load, HE enemy having collected his whole force by fea and land; 44 fail of the line, besides 3 inferior two-deckers; 10 battering ships, 5 bomb-ketches, several frigates and xebecques, a great number of gun and mortar boats, a large sloating battery, many armed vessels, and near 300 boats, purposely constructed for carrying troops:

Their land batteries mounted with above 100 pieces of cannon, and an equal number of mortars

and howitzers:

An army of near forty thousand

On the 13th instant, at eight in the morning, all the battering fhips, commanded by Don Buen-Moreno, rear-admiral, ventura were put in motion, and came forward to the feveral stations previously determined they should take up. The admiral being placed upon the capital of the King's Bastion, the other ships extending three to the fouthward of the flag, as far as the Church Battery; five to the northward, about the height of the Old Mole; and one a very little to the westward of the admiral; by a quarter before ten, they were anchored in line at the distance of 1000 to 1200 yards: immediately a heavy cannonade began from all the ships, supported by the cannon and mortars in the enemy's lines and approaches. At the same instant our batteries opened with hot and cold that from the guns; and shells from the howitzers and mortars. This firing continued, without intermission, on both sides, until noon, when that of the enemy, from their ships, seemed to slacken, although but little. About two o'clock the admiral's fhip was obferved to fmoke, as if on fire, and a few

APPENDIX to the CHRONICLE. [259

a few men bufy upon the roof, fearching for the caufe. Our batteries never discontinued; enemy's fire from the ships gradually decreased. About seven in the evening they fired from a few guns, and that only at intervals. At midnight the admiral's ship was plainly difcovered beginning to burn; an hour after it was completely in flames; eight more of the ships took fire in succession. Signals of diffress being now made, the launches, feluccas, and boats of the whole flect began to take out the men from on board the burning ships. Many shot were still fired from those in which the flames had yet made no confiderable progress; and the fire from the enemy's batteries on shore did not in the least diminish. Brigadier Curtis, who with his fquadron of gun-boats, lay ready to take advantage of any favourable circumstance, left the New Mole, at o'clock, and about three formed a line upon the enemy's flank, advancing and firing with great order and expedition; which to aftonished and disconcerted the enemy, that they fled precipitately with all their boats, abandoning the ships, in which some officers and numbers of their men, including many wounded, were left to perish. This unavoidably must have been their wretched fate, had they not been dragged from amidst the flames by the personal intrepidity of Brigadier Curtis, at the utmost hazard of his own life, a life invaluable to his majesty's fervice. For some time I felt the utmost anguish, seeing his pinnace close to one of the largest ships at the instant she blew up, and spread her wreck to a vast extent all

round. The black cloud of smoke being dispersed, I was again revived by the sight of his pinnace, little apprehending that the brigadier was in the utmost danger of sinking, some pieces of timber having sallen into, and pierced the boat, (killing the cockswain, and others of the men) scarce any hope left of reaching the shore. Providentially he was saved by stopping the hole with the seamen's jackets, until boats arrived to their relief. One of our gunboats was sunk at the same moment.

In the course of the day the remaining eight ships severally blew up with violent explosions; one only escaped the effects of our fire, which it was thought proper to burn, there being no possibility of preserving her.

The admiral's flag remained flying on board his ship till she was

totally confumed.

Your lordship will be pleased to inform his majesty, that the royal artillery additional gunners and marine brigade only could be employed on this fervice, which they executed with the deliberate coolness and precision of school practice, but their exertion was infinitely superior. The fire was incessant, and the batteries abundantly supplied with ammunition; every foldier in the garrison, not on duty, eagerly pressing to share in the honourable labours of the The enemy's daring attempt by sca was effectually defeated by the constant and well supported fire from our batteries; but the well-timed, judicious, and spirited attack made by Brigadier Curtis, rendered this success a complete victory.

[R] 2 The

The enemy's lofs, killed, burnt, drowned, and wounded, must have

been great indeed.

I inclose a list, No. 1. of the ships destroyed, No. 2. of prisoners, taken, all by Brigadier Curtis, except one Spanish officer, and eleven French soldiers, who, out of sourseore, escaped on the wreck of their boat. Two large launches from the fleet were taken with the officers and men belonging to them. The fincere gratitude all the prisoners of war expressed for their deliverance from the various horrors that surrounded them, afforded the highest satisfaction to humanity.

I am happy to fay, my lord, that notwithflanding the enemy's violent effort, our loss has not been great in numbers; yet such gallant individuals must ever be

regretted.

Capt. Reeves, of the royal artillery, was the only officer killed, and is much to be lamented for his knowledge and constant unwearied attention to every duty. Our wounded officers will all do well, and we are hopeful not to lose

many of the foldiers.

The Duke de Crillon, a general of the highest reputation, having the chief command of the allied forces, princes of royal blood of France, dignified characters of Europe, first nobility of Spain, and great military officers, being present with the besieging army, an amazing concourfe of speciators, that filled the camp, and covered the adjacent hills on this occasion, induce us to believe, the combined powers had formed the most fanguine expectations of fuccels from their battering ships, deemed perfect in design, compleated by dint of prodigious last bour, and unlimited profusion of expence; and, by common report, pronounced invincible.

I am, my lord, with respect, &c.

G. A. ELIOTT.

To the Earl of Shelburne, &c. &c.

(C O P Y.)
Gibraltar, Sept. 28, 1782.

My Lord,

THÉ public dispatches will be delivered by Capt. Vallotton, my first aid-de-camp, who is sufficiently well informed to answer any farther particulars your lordship may wish to have minutely explained.

Capt. Valiotton is an active, intelligent, and zealous officer: if his majefty is graciously pleased to bestow any mark of savour upon him, I am sure he will never prove

undeferving.

I am, my lord, &c. &c.

G. A. ELIOTT.

The Earl of Shelburne, &c. &c. &c.

(EXTRACT.)

Gibraltar, 0£1.2, 1782.
THE night of the 30th inftant, between 10 and 12, the enemy's mortar boats threw a number of shells for the town, incampments, and hospital: at the same time the land batteries increased the quantity of their fire; but no injury was done to our works, stores, or magazines.

London Gazette Extraordinary.

Friday, November 8. Admiralty-Office, Nov. 7, 1782. APTAIN Henry Duncan, of his Majesty's ship the Victory, arrived this morning with difpatches from Lord Viscount Howe, and also with dispatches from Capt. Curtis, of the Brilliant, who commanded the brigade of seamen at Gibraltar, of which the following are extracts.

Extract of Triplicate of a Letter from Lord Viscount House to Mr. Stephens, dated on board the Victory, October 21, 1782, Cape Spartel E. N. E. 40 leagues.

RESERVING the more particular account of my proceedings to be delivered on my return to England, I fend the Peggy cutter now to acquaint you, for the information of the Lords Commiffioners of the Admiralty, that after much delay by contrary winds and very unfavourable weather, the fleet arrived off Cape St. Vincent on the 9th instant.

between Marvella and Malaga.

'According to the advices previously obtained, I had reason to expect to find the enemy off Cape St. Mary's; but by authentic intelligence I had then an opportunity to procure, I learnt that the combined fleets, confifting of fifty fail of three and two decked ships, had taken a flation, some time before, in Gibraltar Bay.

In the morning of the 11th the fleet entered the Straits, and the van arriving off Gibraltar Bay a short time after the close of the day, a very favourable opportunity offered for the store-ships to have reached their destined anchorage without molestation from the enemy; but, for want of timely attention to the circumstances of the navigation, pointed out in the inflructions communicated by Capt. Curtis, only four of the thirty-one, which had 1-opt company with the fleet on the passage, effected their purpoie.

Very tempestuous weather in the night of the 10th had put two of the enemy's two-decked ships on shore, a third lost her foremast and bowsprit, and a fourth had been driven under the works of the garrison and captured: two more went out of the bay to the eastward. With the rest of their force they put to sea the evening of the 13th, to interrupt the introduction of the remaining storeships; and having the wind at W. N. W. they bore down upon the fleet then off Fangerole *, in order of battle. Upon fight cf the fleet (flanding to the fouthward) about nine that night, they appeared to haul to the wind on

* Fungerola is inuated fifteen leagues north-east of Gibraltar, exactly

the larboard tack. In the morning of the 14th, the fleet being to the fouthward of the enemy fix or feven leagues, and the wind changing foon after to the eastward, the opportunity was taken to pass such of the store-ships as were then with the fleet into the bay.

On the night of the 18th the rest of the store-ships, which had been ordered to a special rendezvous with the Buffalo, on fight of the enemy on the 13th, (the Thompson victualler, that parted company in the mean time excepted) were likewise anchored in Rosia Bay. The troops, embarked in the ships of war, together with a large fupply of powder, being landed at the same time, and the wants of the garrison amply provided for in every respect, I proposed taking advantage immediately of the eafterly wind, which had prevailed the two or three preceding days, for returning through the Straits to the westward.

At break of day on the 19th, the combined force of the enemy was feen at a little distance to the N. E. The fleet being at that time fo nearly between Europa and Ceuta Points, that there was not space to form in order of battle on either tack, I repassed the Straits, followed by the enemy.

The wind changing next morning (the 20th) to the northward, the combined fleets (confishing of forty-five or forty-fix thips of the line) still retained the advantage

of the wind

The British fleet being formed to leeward to receive them, they were left, uninterruptedly, to take the distance at which they should think fit to engage. They began their cannonade at fun-fet on the van and rear, feeming to point their chief attack on the latter, and continued their fire along the whole line, at a confiderable diftance, and with little effect, until ten at night. It was returned occafionally from different thips of the fleet, as their nearer approach at times afforded a more favourable opportunity for making any

impression upon them.

The enemy hauling their wind, and the British sleet keeping on all night with the full fail directed before the commencement of their fire, the fleets are now much feparated; but as I conceive the knowledge of the relief of Gibraltar may be of much confequence at this time, I take the opportunity, while it is now almost calm, and the ships are refitting the damages they have fustained in their masts and rigging by the enemy's fire, to forward this dispatch without further delay.

P.S. The Minerva naval tranfport, with the baggage of the regiments embarked in the ships of war, feparated from the fleet in the night of the 13th, and was, I hear, fince taken by the enemy.

Extract of a Letter from Lord Vifcount Howe to Mr. Stephens; dated on board the Victory, at fea, O.F. 24, 1782.

SIR,

DEEMING it effential to his Majesty's service, that the debarkation of the troops and stores at Gibraltar should be communicated to the Lords Commissioners of the Admiralty as foon as possible, I fent the Peggy cutter the 21st inft. with with a general report of my proceedings, in execution of my orders,

to that period.

A duplicate of that report went in the Buffalo, ordered for England the next day on account of the state of her wounded masts; and I enclose a triplicate of the same by this conveyance, to connect the relation of the different circumstances respecting the employment of the fleet, which have fince occurred. Some of the ships having sustained more damage in their masts and yards by the fire of the enemy on the 20th than was at first obferved, the necessary repairs were not completed until the 22d. But as it was mostly calm in the mean time no advantage could have been made of an opportunity to follow the enemy, (who, when last seen on the 21st, were standing off to N. N. W. by the wind on the starboard tack) if the masts had been carlier fecured.

A lift of the killed and wounded will likewise accompany this dispatch. I have only to express my regret, that the little confidence the enemy shewed in their superiority, by keeping always as near as they could haul to the wind, prevented the full exect of the animated exertions, which, I am fure, would have been made by every officer and feaman in the fleet under my command, if they could have closed with their opponents: but as I judged fuch nearer approach could not then be feafonably attempted, I made no change in the disposition of the ships as formed at first to receive the enemy,

For fimilar reasons I do not dwell more particularly on the merits of the slag officers of the fleet on the same occasion, being certain they would disregard any commendations of their efforts against an enemy who declined giving them an opportunity to discharge the duty of their stations, in repelling a more serious attack: but, at the same time, I am reminded of the advantages derived to his majesty's service, from the extensive knowledge of the difficult navigation within the Straits acquired by, and the unremitting assiduity of my first captain, Levelon Gower.

Having had but very little wind from the N. E. chiefly fince the 21st, I cannot much longer, with prudence (under the reduced state of the water and stores in many of the ships) make the pursuit of the enemy's fleet, which I suppose are on their return to Cadiz, the first

object of my attention.

Capt. Duncan, of the Victory, taking his passage in the Latona, is charged with this dispatch; and as Capt. Curtis, who was sent off to me for the last time the 19th, with Gen. Eliott's confidential sentiments, could not be put on shore again, in consequence of the return of the enemy from the eastward that morning, I have appointed him to command the Victory for the time being, until their lordship's pleasure is signified for his future conduct.

Return of the Killed and Wounded, from the Fire of the Combined Fleets, Oct. 20, 1782.

APPENDIX to the CHRONICLE. [269

was in readiness for their reception. At ten the admiral's ship was placed about one thousand yards from the King's Bastion, and commenced his fire. others were very shortly afterwards posted to the north and south of him, at fmall distances afunder, and began their cannonade. They were all fixed to the stations allotted them in a masterly manner. Our batteries opened as the enemy came before them: the fire was very heavy on both fides: the redhot shot were sent with such precifion from the garrison, that in the afternoon the Imoke was feen to issue from the upper part of the Admiral, and one other, and men were perceived to be using sire engines and pouring water into the holes, endeavouring to extinguish the fire. Their efforts proved ineffectual; by one o'clock in the morning the two before-mentioned were in flames, and feveral others actually on fire, though as yet not in fo great a degree. Confusion was now plainly observed among them, and the numerous rockets thrown up from each of the ships, was a clear demonstration of their great distress: their fignals were anfwered from the enemy's fleet, and they immediately began to take away the men, it being impossible to remove the ships. I thought this a fit opportunity to employ my gun boats, and I advanced with the whole, (12 in number, each carrying a twenty-four or eighteen-pounder) and drew them up so as to flank the line of the enemy's battering ships, while they were annoyed extremely by an excessive heavy and well-directed fire from the garrifon. The fire from the gun-boats was kept up with great vigour and effect.

The boats of the enemy durst not approach; they abandoned their flips and the men left in them to our mercy, or to the flames. The day-light now appeared, and two felucas, which had not yet escaped, endeavoured to get away; but a that from a gun-hoar, killing five men on board one of them, they submitted. The scene at this time before me was dreadful to a high degree: numbers of men crying from amidit the flames, fome upon pieces of wood in the water, others appearing in ships where the fire had as yet made but little progress, all expressing by speech and gesture the deepelt distress, and all imploring affiltance, formed a spectacle of horror not enfily to be described. Every exertion was made to relieve them; and I have inexpreffible happiness in informing my lords, that the number faved amounts to 13 officers and 344 men. One officer and 29 wounded, (some of them dreadfully) taken from among the flain in the holds, are in our hospital, and many of them in a fair way. The blowing up of the ships around us, as the fire got to the magazines, and the firing of the cannon of others, as the metal became heated by the flames, rendered this a very perilous employment; but we felt it as much a duty to make every effort to relieve our enemics from fo shocking a fituation, as an hour before we did to affift in conquering them. The loss of the enemy muit have been very confiderable. Great numbers were killed on board, and in hoats. Several launches were funk. In one of them were fourfcore men, who were all drowned, except an officer and twelve of them, who were floated

266] ANNUAL REGISTER, 1782.

floated under our walls upon the wreck. It was impossible that greater exertions could have been made to prevent it, but there is every reason to believe that a great many wounded perished in the flames. All the battering thips were fet on fire by our hot that except one, which we afterwards burnt. The admiral left his flag flying, and it was confumed with the ship.

A large hole was beat in the bottom of my boat; my coxswain was killed, and two of the crew were wounded by pieces of timber falling on her when one of the battering ships blew up. same cause funk one of my gun-

boats, and damaged another.

Two of the enemies bombketches were brought forward, and continued to throw shells into the garrison during the attack of the battering ships.

A confiderable detachment of seamen did duty as artillerists upon the batteries, and gave great

The officers and men of the brigade of feamen under my command, in whatever fituations they were placed, behaved in a manner highly becoming them.

I have the honour to enclose herewith a lift of the battering ships. They were of different fizes, from 1400 to 600 tons burthen. Their guns, in all 212, were brafs twenty-fix pounders,

and entirely new.

latisfaction.

The enemy had collected, from different ports, between two and three hundred large boats, besides a vast number belonging to this vicinity, to be employed in carrying troops, or any other fervices connected with their operations against this fortress.

4

The loss in the brigade of feamen on the 13th and 14th, confidering the nature of the attack, has been very trifling, having only one killed and five wounded.

APPENDIX to the CHRONICLE. [267

guns in use, exclusive of officers and marines for working the ships. ROGER CURTIS.

Extrast of a Letter from Cattain Curtis, of his Majesty's ship Brilliant, to Mr. Stephens; dated Camp at Europa, O.J. 16, 1782.

ON the evening of the 8th inft, it being deemed proper to use all means to send home an account of the late events at this place, which had hitherto been impossible, the Governor purchased a small vessel, and she was sent off for Leghorn, or any other port in Italy, with

our dispatches,

On the afternoon of the 10th, it blew very fresh from the south west. The enemy made many fignals along shore, and two frigates and a cutter arrived from the west-Towards the following morning the gale increased, and the guns of distress were heard from the combined fleets in the bay. Just at the break of day, the St. Michael, a Spanish ship, mounting 72 guns, was discovered very near the garrison in a crippled state, and after having two men killed and two wounded from the fire of our batteries, flie fell on shore near to the south bassion. As the day advanced, the fleet of the enemy appeared to have fuffered confiderably by the gale. A fhip of the line and a frigate were on shore near the Orange Grove; a French ship of the line had lost her fore-mail and bowsprit. ship of three decks and another of the line were forced from their anchors, and ran to the eastward; feveral others were driven far over towards the garrison, but withal to the northward. I took possession of the St. Michael as foon as poffible, landed the prisoners, and carried out anchors to prevent her going further on shore. I have no doubt of faving her: she is a very fine ship, and was commanded by Don Juan Moreno, a Chef D'Escadre, and had on board about 650 men.

At three in the afternoon of the 11th, the figurals made by the enemy indicated the approach of the British fleet. The Latona anchored in the bay soon after sunfet. Only four of the convoy fetched into anchorage, the remainder were driven to the back of the rock, to which place the fleet also repaired.

Extract of a Letter from Captain Curvis, to Mr. Stephens; dated on board the Victory, at Sea, October 22, 1782.

THE Admiral, Lord Howe, having conducted the remaining ships of his convoy into the Bay of Gibraltar on the evening of the 18th, and landed the troops at the fame time, General Elioti charged me with the final communications his Excellency had to make to his lordship, and I embarked on board the Latona frigate, for the purpose of repairing to the Victory, and left the Bay about midnight. The fituation of the enemy's fleet the next morning, cut off my return to Gibraltar, and I was put on board this ship in the evening. when the fleet brought to, after it had gained the Atlantic.

I have great pleafure in acquainting my lords, that the St. Michael, a Spanish man of war of 72 guns, which being driven from her anchors in a gale of wind very early on the morning of the 11th, and captured under the walls of

Gibraltar,

268] ANNUAL REGISTER, 1782.

Gibraltar, as mentioned in my letter of the 16th, was got off on the 17th, and has not received the least damage. She is a very fine thip of large dimensions; and I am forry that having lost her mizen-nast, and the most of her flores being taken out to lighten her, it was impossible to fend her home with the fleet

The enemy threw a prodigious number of shells at the Saint Michael, while sne was on shore, with the intent to destroy her; and they annoyed us excessively in the getting her off, but without any obstruction to our work, or doing us any material damage.

Admirally Office, New. 30, 1782. Lieutenant Alexander Allen (commander of his majefty's armed transport the Royal Charlotte) arrived at this office yesterday, with dispatches from Vice Admiral Sir Edward Hughes, Knt. of the Bath, and commander in chief of his majesty's ships in the East Indies, of which the following are extracts.

Extracts of a Letter from Sir Edward Hughes to Mr. Stephens; dat d ev Board bis Majefly's ship Superbe, at Sea, April 4, 1782.

ry trom Trincamale for Wadras Read, in order to get a supply of provisions and stores, of both which the ships were then in want.

On the 8th of February I anchored in Madras Road, and the fame day received advice from

Lord Macartney, the governor of that place, that a French fquadrea, confishing of thirty fail of fhips and veffels, was at auchor about twenty leagues to the northward of that port. In the afterncon of the 9th, Captain Alms, in his majesty's ship Monmouth, with the Hero, Isis, and the armed transport Manilla, joined me in the road. I continued to use all possible diligence in getting the necessary stores and provisions on board the several ships until the 15th of February, when the enemy's squadron, consisting of 12 fail of line of battle ships, o frigates, 8 transports, and 6 captured vessels, came in fight to the northward, standing for Madras Road, and about noon, the fame day, anchored about four miles without the road. In the mean time I placed his majesty's ships in the most advantageous manner to defend themselves, and the other ships in the road with springs on their cables, that they might bring their broadfides to bear more effectually on the enemy, should they attempt an attack.

At four in the afternoon the enemy weighed and flood to the fouthward, when I immediately made the fignal to weigh, and flood after them, having received on board a detachment of 300 officers and men of his majefty's 98th regiment, who were diffributed to the ships of the squadron that were the world manned. I stood with the squadron, as per margin*, to the southward all that night under an easy sail, and in the morning at day-light sound

^{*} Superbe, Euster, Monarca, Here, Worcefter, Burford, Monmouth, Eagle, Ifit, Scahorfe, Combuttion.

APPENDIX to the CHRONICLE: [269

the enemy's ships had separated in the night; their 12 line of battle thips and a frigate bearing east of me, distant about four leagues, and to fail of their frigates and transports bearing S. W. distant about three leagues, and steering a direct course for Pondicherry; on which I instantly made the fignal for a general chace to the S. W. in order, if possible, to come up with and take their transports, well knowing the enemy's line of battle ships would follow to protest them, all in their power. In the course of the chace, our copper-bottomed ships came up with and captured fix fail of ships and veffels, five of which were English, taken by the enemy when to the northward of Madras, out of which I ordered the Frenchmen to be taken, and the veffels to proceed with their own crews to Negapatam; the fixth was the Lauriston, a transport, having on board many French officers, 300 men of the regiment of Lausanne, and laden with guns, shot, powder, and other military itores: this ship, so valuable to us, and of fo much confequence to the enemy, was taken by Captain Lumley, of his majesty's ship Isis.

So foon as the enemy's squadron discovered my intention to chase their transports, they put before the wind, and made all the sail they could after me; and, by three o'clock in the afternoon, four of their best failing line of battle ships were got within two or three miles of our sternmost ships, and the ships in chace were very much spread by the enemy's ships they were chasing steering different courses, some to the S. E. others to the S. and several to the

S. W. I therefore judged it neceffary to make the fignal for the chafing ships to join me, which they all did about feven o'clock in the evening, and I continued standing to the S. E. under an easy fail, all that night, the enemy's squadron in fight, and making many fignals.

At day-light in the morning of the 17th, the body of the enemy's foundron bore N. by E. of ours, diffant about three leagues, the weather very hazy, with light winds and frequent fqualls, of fhort duration, from the N.N.E. the enemy crouding all the fail they could towards our fquadron.

At fix in the morning I made the fignal for our fquadron to form the line of battle a-head; at 25 minutes past eight, our line ahead being formed with great difficulty, from the want of wind and frequent intervals of calms, I made the fignal for the leading fhip to make the fame fail as the admiral, and made fail formed in the line a-head, intended to weather the enemy, that I might engage them closely. At ten the enemy's fquadron having the advantage of the squalls from the N. N. E. (which always reached them first, and in consequence continued longest with them) neared us very fast, and I made the fignal for our line to alter the course two points to leeward, the enemy then fleering down on the rear of our line, in an irregular double line a breast. At half pass noon, I made the fignal for our fquadron to form the line of battle a-breaft, in order to draw the rear of our line clifer to the centre, and prevent the enemy from breaking in on it, and attacking

23

At three in it when separated. the afternoon, the enemy pushing on to our rear in a double line a-breast, I again altered my course in the line, in order to draw our ships still closer to the centre; and, at 40 minutes after three, finding it impossible to awoid the enemy's attack, under all the disadvantages of little or no wind to work our ships, and of being to leeward of them, I made the fignal for our squadron to form at once into the line of battle ahead. At four the Exeter (which was the sternmost ship in our rear when formed in line of battle ahead on the larboard tack) not being quite closed to her second a-head, three of the enemy's ships in their first line bore right down upon her, whilst four more of their fecond line, headed by the Hero, in which ship Mons. Suffrein had his flag, hauled along the outfide of the first line towards our centre. At five minutes past four, the enemy's three ships began their fire on the Exeter, which was returned by her, and her fecond a-head. At ten minutes past four I made the fignal for battle, and at 12 minutes past, the action became general from our rear to our centre, the commanding ship of the enemy, with three others of their fecond line, leading down on our centre, yet never at any time advancing farther than op-posite to the Superbe, our centre thip, with little or no wind, and some heavy rain during the engagement.

Under these circumstances the enemy brought eight of their best ships to the attack of five of ours, as the van of our line, confifting of the Monmouth, Eagle, Bur-

ford, and Worcester, could not be brought into action, without tack= ing on the enemy; and although the fignal for that purpose was at the mast head ready for bolking; there was neither wind fufficient to enable them to tack, nor for the five ships of our centre and rear, then engaged with the enemy, hard preffed, and much difabled in their masts, fails, and rigging, to follow them, without an almost certainty of separating our van from our rear.

At fix in the afternoon a fquall of wind from the S. E. took our flips, and paid their heads round on the enemy to the north eastward, when the engagement was renewed by our five ships, with great fpirit and alacrity, from our starboard guns; and at 25 minutes past fix, just before dark, the enemy's ships engaged with ours, having visibly suffered feverely, the whole of them hauled their wind, and stood to the N.E.

At this time the Superbe had lost her main-yard, shot into two pieces in the flings, had five feet water in her hold, and continued for fome time to gain on all her pumps, until feveral of the largest fhot-holes under water were plugged up, and neither brace nor bow-line left entire; and the Exeter, reduced almost to the state of a wreck, had made a fignal of diffrefs. The other three ships in our rear, the Monarca, Isis, and Hero, had suffered less, as the enemy's fire appeared plainly to be directed principally against the Superbe and Exeter.

It is with particular pleafure I have to acquaint their lordships, that the officers and men of the

five

APPENDIX to the CHRONICLE. [27]

five ships, engaged against so superior a force of the enemy, behaved through the whole action with the greatest steadiness and

bravery.

After the action I stood to the fouthward under little fail all night; and in the morning, at day - light, found the Superbe's main-mast, fore-mast, and bowsprit fo much wounded, as to render it exceedingly dangerous to carry fail on them; the Exeter's masts were also much damaged, and the fhor-holes, in all the thips that had been engaged, fo far under water, as to render it impossible to stop them, but by giving the flips deep heels in fmooth water; all which, and the wind continuing to blow from the northward, determined me to proceed to Trincamale, as the only proper place to refit the disabled ships, and I accordingly arrived there on the 24th; and having done, with the utmost expedition, what repairs were absolutely necessary to put the disabled ships into a condition for fervice, I failed from that place with the fquadron on the 4th of last month. On the 12th I arrived at Madras with the fquadron, having feen nothing of the enemy's fquadron on my paffage from Trincamale to that place. The accompanying enclosure contains an exact list of their fquadron, and the number of troops embarked on it at the Mauritius. fquadron was commanded by M. D'Orve when it left the islands; but he dying a few days after its arrival on this coast, the command devolved on Monsieur Suffrein. On their passage from the islands to this coast they fell in with his majesty's ship the Hannibal, Capt.

Christie, off the West coast of Sumatra, and took her: this ship raised the number of their line of battle to twelve, against nine under my command; had she joined me, our disparity both in number and force would not have been so great.

I am much concerned to inform their lordflips, that his majefly's floop the Chafer, commanded by Captain Parr, was captured by the enemy's frigate, the Bellona, in her way to Madras Road, from a cruize on the northern part of this

coaft.

April 4, 1782.

A lift of the names, force, and commanders of the French squadron, now on the Coromandel coast, and of the land forces embarked on them, and transports at the Mauritius, the 7th of December last, and now landed to join Hyder Ally.

Among aubon avere the under-mentioned Officers, viz.

Superbe. — Captain Stephens, wounded, (fince dead.) Lieutenants, Hughes and Newcombe, wounded.

Exeter, — Captain Reynolds, kined; Lieutenant Charles Jones, wounded.

Extrast of a Letter from Sir Edw. Hughes, to Mr. Stephens; "acted on Board bis Maj n; s Ship Superbe, in Trincamale Bay, May 10, 1782.

HAD the pleasure to address you by letter on the 4th of last month, and have now that of communicating to you, for their lord-thips further information, an account of the transactions of his majesty's squadron as per margin *, and of the enemy's to this time.

In my last, I mentioned the junction of his majesty's ships Sultan and Magnanime with the squadron on the 30th of March; both ships were then very fickly; and much feduced by the fcurvy; but as I had on board the fquadron a reinforcement of troops for this garrison, and a quantity of military stores, I judged it most for the public service, especially as I knew the enemy's squadron was to the fouthward, not to return to Madras to land the fick and scorbutic of these two ships, but to proceed directly for Trincamale, and there to land the reinforcement and military stores, as well as the fick of the Sultan and Magnanime, without either feeking or fhunning the enemy.

In pursuance of this refolution I flood with the squadron to the southward, and on the 6th of April sell in with a Prench ship, last from Mauritius, having on board dispatches from France for their commanders in chief by sea and land; this ship was chased on shore and burnt near Tranquebar, the officers and men escaping with

the dispatches.

On the 8th, about noon, I came in fight of the enemy's squadron, consisting of 18 sail, in the N. E. quarter, and continued my course for this place. On the 9th, 10th, and 11th, the enemy still in fight. On the 11th, having made the coast of Ceylon, about 15 leagues to windward of Trincamale, I bore away for that place. On the 12th, at day-light, the position of the enemy's squadron being altered by my bearing away, so as

^{*} Superbe, Sultan, Hero, Monarca, Eurford, Exeter, Magnanime, Monmouth, Worcefter, Eagle, Itis, Seahorfs, Combustion fire-ship.

to give them the wind of ours, I discovered them crouding all the sail they could set after us; and their coppered bottomed ships coming sast up with the ships in our rear, I therefore determined to

engage them.

At nine in the forencon I made the fignal for the ships in our fquadron to form the line of battle ahead on the flarboard tack, at two cables length dittance from each other, the enemy then bearing N by E. distant about fix miles, and the wind at N. by E. they continued manœuvring their ships, and changing their positions in their line till fifteen minutes past noon, when they bore away to engage us; five fail of their van stretching along to engage the ships of our van, and the other feven fail steering directly on our center ships, the Superbe, the Monmouth her fecond a-head, and the Monarca her second a-stern. At half past one the engagement began in the van of both squadrons; three minutes after I made the fignal for battle. The French admiral in the Hero, and his second a-stern the L'Orient, bore down on the Suberbe within pistol shot. The Hero continued her position, giving and receiving a fevere fire for nine minutes, and then flood on greatly damaged to attack the Monmouth, at that time engaged with another of the enemy's ships, making room for the ships in his rear to come up to the attack of our center, where the engagement was hottest. three the Monmouth had her mizen-mast shot away, and, in a few minutes after, her main-maft, and bore out of the line to lee-And at 40 minutes past three, the wind unexpectedly con-Vol. XXV.

tinuing far northerly, without any fea breeze, and being careful not to entangle our thips with the shore, I made the signal for the fquadron to wear, and haul their wind in a line of battle a-head on the larboard tack, still engaging the enemy. At 40 minutes pall five, being in fifteen fathom water, and apprehensive lest the Monmouth might, in her difabled state, drive too near the shore, I made the fignal for the fquadron to prepare to anchor. At 40 minutes palt fix the enemy's fouadron drew off in great disorder to the eastward, and the engagement ceased, their admiral having shifted his flag from the Hero to the French Hannibal, on account of the Hero's disabled state; and foon after I anchored with the fquadron, the Superbe close to the Monmouth, in order to repair our damages, which on board the Superbe and Monmouth were very great in the hulls, masts, sails and rigging; and almost all the ships had fuffered confiderably in their masts, taus, and rigging.

Much about this time the French frigate, La Fine, being ordered, I inppose, to tow and assist their disabled ship the Hero, sell on board his majesty's ship liss, and had actually struck his colours to her; but taking advantage of the darkness of the night, and the state the Isis was in, just come out of action, in which she had a number of men kiled and wounded, and otherwise ill muned, the frigate got clear of the Isis, and escaped.

An account of the number of officers and men killed and wounded on board the feveral flips of the fquadron, is here enclosed.

On the morning of the 13th, at day light, I found the enemy's [S] fqua-

274] ANNUAL REGISTER, 1782.

fquadron had anchored about five miles without us, in much diforder and apparent distress, but they had lost no lower musts: both squadrons were busily employed in repairing damages, drawing into order for defence, the enemy feeming to apprehend an attack from us, and I myfelf uncertain if they would not renew the engagement, in order to get hold of the Monmouth. In these fituations both fquadrons continued at anchor till the 19th in the morning, when the enemy's got under fail with the land wind, and flood out to fea close hauled, and at noon tacked with the fea breeze, and flood in for the body of our fauadron, as if with intent to attack; but after coming within two miles of us, finding us prepared to receive them, they again tacked and flood to the eaftward by the wind; and I have not fince been able to learn certainly where they are gone. Having re-fitted the Monmouth in the best manner our fituation would admit, with jury, main and mizen-masts, I failed with his majesty's squadron for this place on the zed, and anchored here on the evening of the fame day, immediately landing the reinforcement and military flores deflined for the garrison, and the fick and wounded.

In this fituation of the squadron and its men, I thought it best for his majesty's fervice to remain at anchor here, and to set about the repairs of the hull, masts and rigging of the several ships, whilst the sick enjoy every benefit of fresh meat, vegetables and wine, on thore, for their recovery.

I have the fatisfaction to inform their lordships, that I shall be able to re-mast the Mosmouth by the end of this month, from the spare stores on board the several ships; and that the damage they suffained in the last engagement will be every way made good about that time.

Al-stract of the Killed and Wounded on board his Majesty's ships.

Among the Killed were the following Officers, viz.

Superbe. - Two Lieutenants, Master.

Monmouth.—One Lieutenant of Marines.

Worcester.—One Lieutenant.
Burford.—One Lieutenant of
Marines.

Nanres not mentioned.

Admirally Office, December 24, 1782.
Extract of a Letter from James Luttrel, Ejq. Commander of his Majefy's Ship the Mediator, to Mr. Stephens, dated in Plymouth Sound, December 19, 1782.

OU will please to acquaint their lordships with my arrival here with the Menagere, one of my prizes, having left the Alexarder to follow two days ago. It was my intention to have returned to England as soon as possible.

fible, for the reasons given in my letter, dated off Ferrol the 6th instant; but, having received intelligence from a neutral vessel, that an American frigate was ready to sail from Bourdeaux, the wind being easterly, I returned to the southward to be able to fall into her track; and,

On the 12th of December, at fewer A. M. we discovered five sail on our lee beam, made sail and

gave chace.

At eight their hulls were above water; they were forming in a close line of battle, and shortened fail to their topfails to wait for us; the headmost was L'Eugene, frigate built, of 36 guns, 133 men, commanded by Monf. Le Capitaine Baudin, laden for the French king, and bound to Port au Prince; flie lay with a French pendant and enfign flying; next to her was an American brig, of 14 guns, and 70 men, with American colours; next to her a twodecked ship, the length of a 64, armed en flute, called the Menagere, French pendant and enfign flying, commanded by Monf. de Foligne, Capitaine de Brutot, of department of Rochfort, mounting on her main deck 26 long twelve-pounders, and 4 fixpounders on her quarter deck and forecastle, with a complement of 212 men, laden with gunpowder, naval stores, and bale goods, for the French king's fervice, at Port au Prince; next to her lay the Alexander, of 24 nine-pounders, and 102 men, with a French pendant and an American enfign, commanded by a Capt. Gregory who appears to have been an Irithman, but has a Congress commission, laden with stores, provi-

fions, &c. for the French king's use at Port au Prince; next to her lay the Dauphin Royal, of 28 guns, 120 men, bound to the East Indies, having a French pendant and enfign flying : and having determined, without losing a moment's time, to endeavour to throw their fquadron into confusion, and, if possible, to take advantage of fome of them; and relying on the good failing of the Mediator to bring her off, if I could not fee a probability of fuccels after a few broadsides; I continued bearing down, with all fail fet, on the enemy, except fuch fails as might be in the way of quick manœuvres.

At ten received a few shot from the Menagere's upper deck, which convinced me she had no lower deck guns, though she had all the ports complete to the eye; centinued to approach the enemy, and receive fire from their line, and employed occasionally in tacking, wearing, bearing down, &c.

At half past ten, having very much approached the rear of their line, it broke, the brig and Dauphin Royal crouding fail away from the rest; upon which the Menagere, Eugene, and Alexander wore under an easy fail

At eleven I bore down, and cut off the Alexander from her conforts, employed fighting both fides occasionally; and the first broadfide, when very close to the Alexander, made her strike her American colours, and let fly her sheets; the Menagere and Eugene, after firing at us for some time, crouded all fail, and went away before the wind; boarded the prize, and laid her head towards the enemy, under an easy sail,

fail, to permit us to take out 100 priloners, meaning to chace the

Menagere.

At half past truelve made all fail in chace, leaving the prize to follow, or bear away for England, if we run her hull down.

At three the Eugene hauled her wind away from the Menagere.

At five began firing at the Menagere, to prevent her aiming at our matts, by covering ourselves with smoke.

At half past five had gained very considerably on the Menagere, and occasionally fired broadsides at each

other.

At fix a fudden fquall caught me, with three of my lower deckers run out, and obliged me to put before the wind, the water rushing in till knee deep on the deck, but with the chain pumps we foon cleared our ship, and as soon as she was safe, I hauled towards the enemy, crouding sail to regain her.

At feven began again to fire at each other, and our main top gallant mail and force top gallant yard were shot away: continued constantly firing at each other,

Till nine, when I had got within piftol shot of the Menagere's quarter, and put my helm a-weather to pour in a broadside of round and grape shot from all my guns, which she, being aware of, threw up in the wind, hauled down her colours, and hailed that she had struck. I instantly ordered my people to desist firing, shortened sail, and judging myself then within about sive miles of the entrance of Ferrol, where they must have heard our guns, I hastened to get both ships from off the land,

At eleven P. M. my prize the

Alexander joined us. The fore shrouds and a great deal of running rigging being shot away, detained us, but in two hours we received 200 prisoners more, and were able to make a little sail together to westward off shore.

At day-break we saw the Island Sifargo, distant about 5 or 6 leagues, and in the offing the Dauphin Royal, with her main top-mast gone, and otherways difabled; and the brig with all her masts gone, except part of her lower masts: I thought it however improper to risk the king's thip, by leaving ourfelves with fewer men; for having fent 50 on board the large ship, and 20 on board the Alexander, besides manning the Spanish prize, I had remaining only 100; half of whom must sleep at nights, and the rest were few to work the ship and guard 340 prisoners; for this reafon I hope their lordthips will approve of my not chacing the Dauphin Royal and brig; the former stood in towards the land, the brig feemed returning to Bourdeaux, from whence this armed convoy failed on the 9th instant.

On the 14th of December, at ten P.M. Capt Stephen Gregory, of the Alexander, laid a plot to occasion the prisoners to rise, and hoped to have taken the Mediator from me; but through the indefatigable attention of Lieutenant Rankin of the marines, in the disposal and regulation of centries, &c. as a guard, and the lucky precaution we had taken of ordering the gratings of all the hatches in the lower gun deck to be battoned down with capstan bars, leaving room for only one man at a time to come up abaft,

wher

APPENDIX to the CHRONICLE. [277

where, in case of an alarm, we had fixed our rendezvous, the desperate scheme of Gregory was prevented without bloodshed, the prisoners finding no passage where they could get up. The alarm he fixed on was to fire an eighteen pounder gun in the gun room where he lay, for he messed with my lieutenants, and had received

every friendly attention.

At ten at night I felt a terrible shock from some explosion, and heard a cry of fire: I was foon after informed, that the lee port was blown away by the gun into the fea, and the water making in. As foon as I had wore ship on the other tack, to get the port hole covered with tarpaulins, and fecnred, I went down, found the gun room on fire, and every thing shattered that was near the explofion; Gregory, with his accoinplice, dreffed, though they had pretended to go to bed; and in their cot was found gunpowder, which they had provided to prime the gun with; and in short, every proof necessary for a conviction of Gregory's having fired it for an alarm to make the prisoners rise: he had also endeavoured to provide himself with a sword, but being disappointed in his project, he begged his life. A cry of fire forwards was heard among the prifoners when the fignal gun was fired; but all being discovered and fettled, I ordered Gregory, together with those of his officers and men, whom I suspected concerned in the plot, to be put in irons, and kept on bread and water. I think it my duty to trouble their lordships with this narrative, in justice to his majesty's colours, under which no prisoners are un-

deservedly treated with rigour. The officers of the Menagere having always conducted themselves like men of honour, I was happy to have the pleasure of continuing them at my table, with the usual confidence in their parole; and the pritoners in general have had every mark of numanity and attention frewn to them that our own fafety would admit of. When their lordships consider the force offering us battle, and at united to oppose us, they will, I trust, be convinced, that our succefs was chiefly owing to the ex-ertions and activity of the officers and men in working the flip, as well as in fighting her.

The enemy's shot having been entirely aimed with a view to dismust us, fortunately prevented my officers and men from receiving any hurt; my lower rigging forwards and some abast was shot away: also the main top gallant mast, studding sail and yard, and fore top gallant yard, top mast, rigging, sails, and running rigging in general much cut, which, with a few shot in the bows, is all the damage we have as yet discovered to have happened to his majesty's

thip Mediator in the action.

Killed and wounded on board the Menagere.

Monf. Darmaignac, a gentleman of property in the island of St. Domingo, and three teamen killed. Seven or eight feamen wounded.

Killed and wounded on board the Alexansier

Six feamen killed. Eight or nine feamen wounded.

This lift is taken from the report of their ordicers, not having [S] 3 had

had time as yet to examine the

prisoners by litt.

N. B. An account is received from the purser of the Mediator, of his arrival at l'ortimouth with the Alexander.

Articles of Capitulation of the islands of St. Christophers and Nevis, between his Excellency the Count de Grafe, and the Marquis de Bouille; and his Excellency Major General Shirley, Governor, and Brigadier General Fraser.

THE Governor, the ART. I. Commander of the troops, the regular officers and foldiers, the officers and privates of militia, shall march through the breach on the fort of Brimstone Hill, with the honours of war, with drums beating, colours flying, one mortar, two brass field pieces, ten rounds each, arms and baggage, and then lay down their arms at a place appointed, the officers excepted.

The regular troops ART. II. shall be prisoners of war, and sent to England in safe and good veffels, which shall be furnished with provisions for the voyage, but they shall not serve against the King of France until they shall be exchanged. The officers are per-mitted to reside in any of the islands, upon their parole. militia and armed negroes shall return to their respective homes.

ART. III. The inhabitants or their attorneys shall be obliged to take the oaths of fidelity to the King of France, within the space of one month, before the governor of the said islands, and those that are prevented from it by fickness, fhall obtain a delay.

ART. IV. They shall observe an exact neutrality, and shall not be compelled to take arms against his Britannic Majesty, or any other power. They are at liberty to retain their arms for the internal police and better subjection of their negroes; but they are to make a return of them to the justice of the peace, who shall be responfible for any bad use that may be made of them, contrary to the tenor of the prefent capitulation.

They shall enjoy, Art. V. until a peace, their laws, customs, and ordinances. Justice shall be administered by the same persons who are actually in office. All expences attending the administration of justice, shall be defrayed

by the colony.

Apr. VI. The Court of Chancery shall be held by the council of the island, and in the same form as heretofore, and all appeals from the faid court shall be made to his most Christian Ma-

jesty in council.

The inhabitants ART. VII. and clergy shall be supported in the possession of their estates and properties, of whatfoever nature and denomination, and in their privileges, rights, titles, honours, and exemptions, and in the poffession of their religion, and the ministers in the enjoyment of their livings. The absentees, and those who are in the fervice of his Britannic Majesty, shall be maintained in the possession and enjoyment of their estates and properties, which shall be managed by their attornies. The inhabitants may fell their estates and possessions to whom they shall think proper, and they are at liberty to fend their children to England to be educated, and from whence

they may return when they judge

proper.

ART. VIII. The inhabitants shall pay monthly into the hands of the treasurer of the troops, in lieu of all taxes, the value of two thirds of the articles that the islands of St. Christophers and Nevis paid to the King of Great-Britain; which shall be estimated according to the valuation of the revenues made in the year 1781, and which shall ferve as a basis.

ART. IX. The flores which may have been taken during the fiege shall be religiously restored, and they may also be reclaimed in any of the French windward or leeward islands.

ART. X. The inhabitants shall not be obliged to furnish the troops with quarters, except in extraordinary cases; but they are to be lodged at the expence of the king, or in houses belonging to the crown.

ART. XI. In cases where the king's business may require negroes to work, they shall be furnished by the inhabitants of the faid islands, to the number of five hundred, but they shall be paid at the rate of two bills per day each, and victualled at the expence of the king.

Art. XII. The veffels and droghers belonging to the inhabitants at the capitulation shall be restored entire to their owners.

The vessels which the said inhabitants expected from the ports of England, or from any of his Britannic Majesly's possessions, shall be received in the fame colonies during the space of fix months; and they may load them to return under neutral colours even for the ports of Great Britain, with the

particular permission of the governor; and if any of the vessels expected shall stop at any of the English islands, the governor shall be authorized to grant permission for them to come to either of the faid islands.

ART. XIII. The inhabitants and merchants shall enjoy all the privileges of commerce granted to the subjects of his most Christian Majesty, throughout all the extent of his dominions.

ART. XIV. Whatever may have been furpished for the French army during the flege, and to this day by the faid islands, and the losses that the inhabitants have suftained by the burning of plantations, and by every other means, thall be estimated by a meeting of the inhabitants, and the amount equally borne by the two islands, under the head of contribution or indemnity for the expences of the war, but in fuch a manner, that this article fliall not diminish the taxes above-mentioned, which are to take place from the date of the capitulation; but the affembly of the inhabitants may apply to it the arrears of the general taxes which remain in their hands at the date of the capitulation.

ART. XV. The failors of merchant ships, those of privateers, and other individuals, who have no property in the faid islands, shall depart from the same in the fpace of fix weeks, if they are not employed in droghers, or avowed by two proprietors, who will anfiver for them, and means fliall be furnished them to depart for the neutral islands.

Art. XVI. The General of the French troops shall be put in possession of all the artillery, all [8] 4 the the effects, depending on the colonies, belonging to his Britannic Majesty, all rowder, arms, ammunition, and king's vessels shall be given to the commander of the French troops, and an inventory of them presented to the governor

ART. XVII. Out of respect to the courage and determined conduct of Generals Shirley and Frafer, we confent that they shall not be considered as prisoners of war; but the former may return to his government of Antigua, and the latter continue in the service of his country, being happy to tellify this mark of particular efteem for those brave officers.

At S. Christopher's, F b. 12, 1782.

LE MARQUIS DE BOUILLE. THOMA SHIRLEY,

(Governor and Major General in his Majeftv's army.)

Thomas Fraser, Brig. Gen. It is moreover covenanted, that the inhabitants of thefe islands, with the permission of the governor, may export their merchandize in neutral vessels, for all the ports of France and America.

(Signed as above)

Copies of two Letters which paffed between the Duke de Crillon and General Elliot during the Siege of Gibraltar.

Camp of Buenavista, Aug. 19, 1782. SIR,

🍞 🎖 I S Royal Highness comte d'Artois, who has received permission from the King his brother to affift at this fiege, as a vofunteer in the combined army, of which their most Christian and Cathol c Majesties have honoured me with the command, arrived in

passing through Madrid, to take charge of some letters, which had been fent to that capital from this, and which are addressed to perfons belonging to your garrifon: his royal highness has defired that I would transmit them to you, and that to this mark of his goodness and attention I should add the strongest expressions of esteem for your person and character. I feel the greater pleafure in giving this mark of condescension in this august prince, as it furnishes me with a pretext, which I have been anxiously looking for these two months that I have been in this camp, to affure you of the high esteem I have conceived for your excellency; of the immense defire I feel of deferving yours; and of the pleafure to which I look forward of becoming your friend, after I shall have learnt to render myfelf worthy of the honour of facing you as an enemy. Highness the Duke de Bourbon, who arrived here twenty-four hours after Comte d'Artois, defires also that I should assure you of his particular esteem. Permit me, dear general, to offer you a few little trifles, for your table, of which I am fure you must stand in need: as I know you live entirely on vegetables, I should be glad to know what kind you like best. I shall add a few partridges for the gentlemen of your household, and some ice, which I presume will not be difagreeable, in the excessive heat of this climate, at this feafon of the, year. I hope you will be obliging enough to accept the small portion which I fend with this letter. I have the honour to be, &c.

this camp the 15th instant.

young prince has been pleafed, in

His Excellency Gen. Elliot, &c,

APPENDIX to the CHRONICLE. [281

I FIND myself highly honoured by your obliging letter of yesterday, in which your excellency was fo kind as to inform me of the arrival in your camp of his Royal highness the Comte d'Artois, and the Duke de Bourbon, to ferve as volunteers at the fiege. These princes have shown their judgment in making choice of a master in the art of war, whose abilities cannot fail to form great warriours. I am really overw elmed with the condescension of his royal highness, in suffering some letters for persons in this town, to be conveyed from Madrid in his car-

riages; I flatter myfelf that your

excellency will give my most pro-

found respects to his royal high-

ness and to the Dake de Bourbon,

for the expressions of eleem with

which they have been pleafed to

honour fo infignificant a person as

SIR.

Gibraltar, Aug. 20.

I am. I return a thousand thanks to your excellency for your handfome presents of fruits, vegetables, and game; you will excuse me, however, I trust, when I affure you, that in accepting your present, I have broken through a refolution, which I have faithfully kept fince the beginning of the war; and that was, never to receive, or procure by any means whatever, any provisions or other commodity for my own private use; so that, without any preference, every thing is fold publicly here, and the private foldier, if he has money, can become a purchaser, as soon as the governor. I confess I make it a point of honour to partake both of plenty and fearcity, in common with the lowest of my brave fellow foldiers; this furnishes me with an excuse for the liberty I now take, of entreating your excellency not to heap any more favours on me of this kind, as in future I cannot convert your presents to my own private use. Indeed, to be plain with your excellency, though vegetables at this feafon are scarce with us, every one of us has got a quantity proportioned to the labour he has beflowed in raining them: the Englith are naturally fond of gardening and cultivation; and here we find our amutement in it, during the intervals of rest from public dutv.

" The promise which the Duke de Crilion makes to honour me, in proper time and place, with his friendship, lays me under infinite obligations: the interests of our fovereigns being once folidly fettled, I thall with eagernefs embrace the first opportunity to avail myfelf of fo precious

treafure.

I have the honour to be, &c. His Excellency the Duke de Crillon, &c.

Copy of a Note from the Right Hon. Lord George Gordon to the Right Hon, the Earl of Shelburne,

ORD George Gordon prefents his compliments to the Earl of Shelburne, and begs his lord-ship to do him the favour to inform him whether his majesty's present cabinet approve of the declaration made in the letter, faid to be written by Sir Guy Carleton and Admiral Digby to General Washington: "That his majesty, in order to remove all obstacles to that peace which he fo ardently

282] ANNUAL REGISTER, 1782.

wishes to reitore, has commanded his ministers to direct Mr. Grenville, that the independency of the Thirteen provinces should be proposed by him, in the first instance, instead of making it a condition of

a general treaty?

Lord George would not have asked this question to satisfy any private curiofity; but he thinks it his duty to the king to acquaint Lord Shelburne, as prime minister, that great bodies of the people in the united kingdom of Scotland, are daily proffing Lord George, in the strongest terms, and in the most zifectionate expressions, to write his fentiments to them on the present flate of public affairs in the united kingdoms; and Lord George finds, among other ferious matters, that the late letter, faid to be written by his majefty's commissioners at New York, not being publicly authenticated in the London Gazette, alarms the fuspicions of those who ardently with for peace with their brethren, that that letter is a forgery, and that peace with America is not intended: - and on the other hand, not being contradicted by the king's present servants, it causes the greatest anguish and disgust to those who have conscientiously approved and supported the American war.

The people of Scotland are much distracted and disturbed with this apparent misunderstanding in the cabinet of the united kingdoms, thinking the honour of the united kingdoms is trisled with; and they are anxious in the highest degree to receive some information that they may depend upon in so assections.

the independency of America is to their own national, particular, and immediate interest: Lord George, therefore, hopes Lord Shelburne will condescend to inform him whether the proposal of independency, in the letter said to be written by the king's commissioners, is, or is not, a measure to be adhered to by his majesty's present administration?

Lord George has the honour to affure Lord Shelburne, that he wifnes he could understand and approve of the measures of the king's counfellors, that he, and those who act with him, might have an opportunity of demonstrating the uprightness, and loyalty of their proceedings and intentions, and of exerting themselves, according to their vocations, to the uttermost of their power, in support of good government, the true interest of the people, the honour and happiness of the king's majesty and his posterity, and the true public liberty, fafety, and peace of the three kingdoms of Scotland, England, and Ireland.

Welve.k-fireet, 02.16, 1782.

Letter from the Rev. Mr. Wyvill to Lord Shelburne, inclosing the second Address to the Electors of Great -Britain*, agreed to by the Committee of Association for the County of York, Oct. 17, 1782, with his Lordship's Answer thereto.

My LORD, York, Oct. 17, 1782.

TAKE the liberty to inclose for your lordship's perulal, a manuscript copy of the second address to the electors of Great Bri-

^{*} For the copy of this Address, see the State Papers.

APPENDIX to the CHRONICLE. [283

tain, agreed to by the committee of affociation for the county of York, at a most numerous and respectable meeting held here this day. It contains their just acknowledgments of your lordship's distinguished exertions in the general cause of parliamentary reformation; and expresses their grateful sense of your generous endeavours to accomplish a coalition on the principles adopted by this affociation, and other respectable bodies in different parts of the kingdom.

These, I beg leave to affure you, are the genuine sentiments of this committee; and not more warmly felt by any one member of it than

by, My Lord, &c.

Earl of Shelburne. C. WYVILL.

SIR, Bowood Park, 24 08. 1732.

WAS yesterday honoured with your letter of the 17th instant:

The repeated approbation of the committee of the county of York, gives me personally the greatest satisfaction: I am happy to find nearly the same opinions, which

I expressed to this county last year, more ably, as well as more fully, inculcated in the address you do me the honour to inclose to me. Their perseverance must command general respect, and will, I trust, finally conquer every difficulty in so found a cause. As to myself, I am still ready to enter into the strictest and most unequivocal union with any public man, or public body of men, who may be deemed, in point of national weight and opinion, component to the effecting those important ends.

Words cannot express how much I am alarmed at the public fituation at home and abroad; or my apprehensions for what may be the

refult.

The difinterested zeal, as well as temperate conduct, which you have shewn in the public service, has impressed me with a respect with which I must always remain, yours, &c.

SHELBURNE.

The Rev. Mr. Wyvill, Chairman, &c.

284] ANNUAL REGISTER, 1782.

The following authentic Extracts from the Corn-Register, are taken from Accounts collected from the Custom-House Books, and delivered to Mr. John James Catherwood, by Authority of Parliament.

An Account of the Quantities of all Corn and Grain exported from, and imported into, England and Scotland, with the Bounties and Drawbacks paid, and the Duties received thereon, for one Year ended the 5th of January 1783.

STATE PAPERS.

His Majesty's most gracious Speech to both Houses of Parliament, on the 27th of November, 1781.

My Lords and Gentlemen, WHEN last I met you in parliament, I acquainted you with the arduous fituation of public affairs at that time, and I represented to you the objects which I had in view, and the refolution with which I was determined to persevere in the defence of my dominions against the combined power of my enemies, until such a pacification could be made as might confift with the honour of my crown, and the permanent interest and security of my people. The war is still unhappily prolonged by that reffless ambition which first excited our enemies to commence it, and which still continues to disappoint my earnest defire and diligent exertion to restore the public tranquillity; but I should not answer the trust committed to the fovereign of a free people, nor make a fuitable return to my subjects for their conflant, zealous, and affectionate attachment to my person, samily, and government, if I confented to facrifice, either to my own defire of peace, or to their temporary ease and relief, those essential

rights and permanent interests, upon the maintenance and preservation of which, the future strength and security of this country must ever

principally depend.

The favourable appearance of our affairs in the East Indies, and the fafe and prosperous arrival of the numerous commercial fleets of my kingdoms, must have given you fatisfaction; but in the courfe of this year, my assiduous endeavours to guard the extensive dominions of my crown have not been attended with fuccess equal to the justice and uprightness of my views; and it is with great concern that I inform you, that the events of war have been very unfortunate to my arms in Virginia. having ended in the loss of my forces in that province.

No endeavours have been wanting on my part to extinguish that spirit of rebellion which our enemies have found means to foment and maintain in the colonies, and to restore to my deluded subjects in America that happy and prosperous condition which they formerly derived from a due obedience to the laws; but the late missortune in that quarter calls loudly for your firm concurrence and assistance, to frustrate the designs of our enemies, equally presented.

[T] z judicial

judicial to the real interests of America, and to those of Great Britain.

In the last session you made a confiderable progress in your enquiries into the state and condition of our dominions and revenues in the East Indics. - You will, I am perfuaded, refume the profecution of that important deliberation with the fame spirit and temper in which it was begun, and proceed with the fame attention and anxiety to confider how those remote provinces may be held and governed with the greatest security and advantage to this country, and by what means the happiness of the native inhabitants may be best promoted.

Gentlemen of the House of Commons,

I will order the estimates for the enfuing year to be laid before you. I rely on your wifdom and public fpirit for fuch supplies as the circumstances of our affairs shall be found to require. Among the many ill consequences which attend the continuation of the prefent war, I most sincerely regret the additional burthens which it must unavoidably bring upon my faithful fubjects.

My Lords and Gentlemen,

In the profecution of this great and important contest in which we are engaged, I retain a firm confidence in the protection of Divine Providence, and a perfect conviction of the justice of my cause; and I have no doubt but that, by the concurrence and support of my parliament, by the valour of my fleets and armies, and by a vigorous, animated, and united exertion of the faculties and resources of my people, I shall be enabled to restore the blessing of a safe and honourable peace to all my domi-

The humble Address of the Right Honourable the Lords Spiritual and Temporal in Parliament afsembled.

Die Martis, 27 Novembris, 1781.

Most gracious Sovereign,

E, your majesty's most du-tiful and loyal subjects, the lords spiritual and temporal in parliament assembled, beg leave to return your majesty our humble thanks for your most gracious speech from the throne.

It is with equal concern and indignation that we fee the war prolonged by that restless ambition which first excited your majesty's enemies to commence it, and which still continues to disappoint your majesty's earnest defire and diligent exertion to restore the public tranquillity.

We acknowledge, with the fincerest and warmest gratitude, your majesty's wisdom and constant attention to the real welfare of your people, equally confpicuous in your earnest defire of peace, and in your fixed and unalterable resolution, never to facrifice, either to that defire, or to the temporary ease and relief of your subjects, those effential rights and permanent interests, upon the maintenance and preservation of which the future strength and security of this country must ever principally depend.

We feel great satisfaction in the favourable appearance of our af-

fairs in the East Indies, and in the fase and prosperous arrival of the numerous commercial sleets of these kingdoms; but we regret that in the course of this year your majesty's assiduous endeavours to guard the extensive dominions of your crown have not been attended with success equal to the justice and uprightness of your majesty's views; and we lament that the events of war have been so unfortunate to your majesty's arms in Virginia.

We are gratefully fensible of the parental folicitude your majesty has shewn for the general happiness of your people, in the endeavours your majesty has used to extinguish that spirit of rebellion which our enemies have found means to foment and maintain in the colonies, and to restore to your deluded subjects in America, that happy and prosperous condition which they formerly derived from a due obedience to the laws; and we beg leave to affure your majesty of our firm concurrence and affistance to frustrate the defigns of our enemies, equally prejudicial to the real interests of America, and to those of Great Britain.

We will, without loss of time, resume the deliberation upon the state and condition of the British possessions and revenues in the East Indies, will carry it on with the same spirit and temper in which it was begun, and proceed with the same attention and anxiety to consider how these remote provinces may be held and governed with the greatest security and advantage to this country, and by what means the happiness of the native inhabitants may be best promoted.

Firmly refolved to decline no difficulty or hazard in the defence of our country, and for the prefervation of its effential rights and interests, we shall continue to give our most hearty concurrence and support in the prosecution of the great and important contest in which we are engaged.

We rely upon the protection of Divine Providence in fo just a cause, and fully trust that, by the concurrence and support which we shall most cheerfully give, by the valour of our sleets and armies, and by the vigorous, animated, and united exertions of the faculties and resources of your people, your majesty will be enabled to disappoint the ambitious designs of your enemies, and to restore the blessing of a safe and honourable peace to all your dominions.

His Majesty's most gracious Answer.

My Lords,

I thank you for this very dutiful and affectionate addrcfs.—The affurances of your cheerful concurrence and support in the prosecution of the great and important contest in which we are engaged, give me the highest fatisfaction, and must have the most salutary effects. It shall be my constant endeavour to make the best use of this support for the attainment of the sole end which I have ever in view, a safe and honourable peace.

The humble Address of the House of Commons to the King.

Most gracious Sovereign,

W E, your majesty's most dutiful and loyal subjects, the
[7] 3 com-

294] ANNUAL REGISTER, 1782.

commons of Great Britain in parliament affembled, return your majefly the thanks of this house, for your most gracious speech from the throne.

We assure your majesty, that we fee with concern that the war is still unhappily prolonged by that restless ambition which first excited our enemies to commence it, and which still continues to disappoint your majesty's earnest desire and diligent exertion to restore the

public tranquillity.

We are femility affected by your majesty's paternal expressions of concern for the real welfare of your fubjects; and we receive with the strongest emotions of duty and gratitude, your majesty's gracious and endearing declaration, that you should not answer the trust committed to the fovereign of a free people, nor make a fuitable return to your subjects for their constant, zealous, and affectionate attachment to your person, family, and government, if you confented to facilifice, either to your own desire of peace, or to their temporary eafe and relief, those effential rights and permanent interests, upon the maintenance and prefervation of which the future strength and security of this country must ever principally depend.

We declare on our part, that we know no means of making to your majefty any return fo fuitable and fo just, and of answering the great trust committed to us by those whom we represent, as by giving your majesty this firm assurance, that we are resolved to affist and support your majesty to the utmost of our power, in maintaining and prescring the essential

rights and permanent interests of your crown and people.

The favourable appearance of affairs in the East Indies, and the fafe and prosperous arrival of the numerous commercial fleets of your kingdom, have given us great satisfaction: but we fincerely regret that your majesty's assiduous endeavours to guard your extensive dominions have not in all places been attended with fuccefs; and we learn with the deepest concern, that the events of war have been very unfortunate to your majetty's arms in Virginia, and have ended in the lofs of your forces in that province.

We are fully perfuaded, that the principal view of the confederacy of our enemies was to foment and maintain the rebellion in North America; and under the specious delusion of the establishment of an independent empire, to render your majesty's colonies subfervient to the power and influence of the crown of France: but your majesty may rely on our steady asfistance to second your majesty's endeavours to defeat the dangerous defigns of our enemies, equally prejudicial to the real interests of America, and to those of Great Britain.

We will not fail to refeme the great and momentous confideration of the state and condition of the dominions and revenues which this country ponesses in the East Indies; and, we trust that, in our deliberation on these important matters, we shall proceed with the same spirit and temper in which they were begun, and with the same care and anxiety to consider how those remote provinces may be held, and governed with the

greatest

greatest security and advantage to this nation, and by what means the happiness of the native inhabitants may be best promoted.

In this arduous conjuncture, we consider it as our first duty to our country, to grant your majesty fuch supplies as the circumstances of affairs should be found to require. We cannot but feel that the war is burthensome and expensive; but we are convinced, at the same time, that it is just and necessary; and nothing on our part shall be wanting, to give efficacy and fuccess to the valour of your majesty's fleets and armies; and we shall have a firm confidence, that by a vigorous, animated, and united exertion of the refources and faculties of the nation, and of the fpirit of a free people, your majesty will be enabled, under the protection of Divine Providence, to reflore the bleffing of a fate and honourable peace to all your · dominions.

His Majesty's most gracious Answer. Gentlemen,

I return you my most cordial thanks for this very loyal, dutiful, and affectionate address.

It breathes the spirit and firmness of a brave and free people. Nothing could afford me so much satisfaction, or tend so effectually to the public safety and welfare in this critical situation.

LORDS PROTESTS.

The following is entered against the Proceedings in the House of Lords on Tuesday, Nov. 27th.

I T was proposed to leave out, after the second paragraph of

the motion for the addrefs, the remaining part of the motion, and to infert, "And we will, without delay, apply ourselves with united hearts to propose and digest such counsels, to be laid at his royal see, as may excite the efforts, point the arms, and command the considence of all his subjects."

After long debate, the question

was put thereupon.

It was resolved in the negative.

Then the question was put, that the motion at first proposed do stand part of the question,

It was resolved in the affirmative.

Dissentient,

For reasons too often urged in vain for these last seven years against the ruinous prosecution of the unjust war carrying on by his majesty's ministers against the people of North America, and too satally confirmed by repeated experience, and the late disgraceful loss of a second army, to stand in need of repetition.

Richmond. Fitzwilliam. Rockingham.

February 18.

HIS day the following motion was made in the House of Lords, viz.

"That it is highly reprehen"fible in any person to advise
"the crown to exercise its indis"putable right of creating a
"peer in favour of a person la"bouring under the heavy cen-

" bouring under the heavy cen" fure of a court martial; viz.

'This court, upon due confideration of the whole matter be-[7] 4 'fore fore them, is of opinion, That Lord George Sackville, is guilty of having disobeyed the orders of Prince Feedinand of Bruny-wick, whom he was by his commission and instructions directed to obey, as commander in chief, according to the rules of war: and it is the further opinion of this court, that the said Lord George Sackville is, and he is hereby adjudged, unfit to serve his majesty in any military capacity whatever.

Which fentence his majesty has been pleased to confirm.

' And public orders given out

in consequence thereof.

fit is his majesty's pleasure, that the above sentence be given out in public orders, that officers, being convinced, that neither high birth nor great employments can shelter offences of such a nature; and, that secting they are subject to censures much worse than death, to a man who has any sense of homour, they may avoid the stall consequences arising from the disobdience of orders.'

This motion being rejected by a majority of 93 to 28, the following protest was entered:

DISSENTIENT,

"Because we cannot look upon the raising to the peerage a person so circumstanced, in any other light, than as a measure fatal to the interests, as well as the glory of the crown, and to the dignity of this house, insulting to the memory of the late sovereign, and likewise to every surviving branch of the illustrious house of Brunswick; repugnant to every principle of military discipline, and directly contrary to the maintenance of that house, which has

for ages been the glorious characterific of the British nation, and which, as far as can depend on us, we find ourselves called upon, not more by duty than inclination, to transmit pure and unsullied to posterity."

Pembroke, Devonshire,
Craven, Abingdon.

Address of the House of Commons to his Majesty, against the further Prosecution of the American War; with his Mujesty's most gracious Answer.

Esolved, Wedn. Feb. 27, in the house of Commons 4111 an humble address be presented to his majesty, most humbly to reprefent to his majesty that the further profecution of offensive war on the continent of North America, for the purpose of reducing the revolted colonies to obedience by force, will be the means of weakening the efforts of this country against her European enemies, tends, under the present circumflances, dangerously to increase the mutual enmity fo fatal to the interests both of Great Britain and America, and, by preventing an happy reconciliation with that country, to frustrate the earnest defire graciously expressed by his majesty to restore the blessings of public tranquillity."

Refolwed, "That the faid address be presented to his majesty

by the whole house."

Ordered, "That fuch members of this house, as are of his majesty's most honourable privy council, do humbly know his majesty's pleasure when he will be attended by this house."

March

March 4. His Majesty was graciously pleased to return the following Answer to the abovementioned Address of the House.

"Gentlemen of the House of Commons,

"THERE are no objects nearer to my heart than the case, happiness, and prosperity of my people.

"You may be affured that, in pursuance to your advice, I shall take such measures as shall appear to me to be most conducive to the restoration of harmony between Great Britain and the revolted colonies, so effential to the prosperity of both; and that my efforts shall be directed in the most effectual manner against our European enemies, till such peace can be obtained as shall consist with the interests, and permanent welfare of my kingdoms."

Besides the address of the House of Commons, the following were also presented to his majesty, at the same time, praying for a speedy conclusion of the American war.

The address, remonstrance, and petition of the county of Middlesex, presented by John Wilkes and George Byng, Ligrs.

Ditto of Surrey, by Admiral Keppel and Sir Joseph Mawbey, Bart.

Ditto of London, by the Right Hon. the Lord Mayor.

Ditto of Westminster, by the Hon. Charles James Fox.

Ditto of Southwark, by N. Polhill, Esq. and Sir Richard Hotham, Bart.

An Address of Thunks to his Majesty by the House of Commons for the foregoing most gracious Arfwer to their Address.

T was resolved nemine contradicente,

" That an humble address be presented to his majesty, to return his majesty the thanks of this house for his most gracious answer to their address, presented to his majesty on Friday last, and for the affurances his majesty has been pleased to give of his intention, in the pursuance of the advice of this house, to take such measures as shall appear most conducive to the restoration of harmony between Great Britain and the revolted colonies; and that his efforts shall be directed, in the most effectual manner, against our European enemies, until fuch peace can be ob-tained, as shall confist with the permanent welfare and prosperity of his kingdom, this house being convinced nothing can, in the present circumstances of this country, to effentially promote those great objects of his majesty's paternal care for his people, as the measures which his most faithful commons have most humbly and earneftly recommended to his majesty.

The fame being read, was ordered to be delivered to his majefty by the privy counfellors

members of the house.

Address of the City of London to his Majesty, with his Majesty's myt gracious Anjaver.

St. James's, April 12.

His day the Right Honourable the Lord Mayor, the Aldermen, Sheriffs, and Common Council of the City of London, waited

waited upon the King (being introduced by his Grace the Duke of Manchester, Lord Chamberlain of his Majesty's Household) with the following Address, which was read by James Adair, Esq. Recorder.

To the King's most Excellent Majesty. The humble Address of the Lord Mayor, Aldermen and Commons of the City of London, in Common Council affembled

" Most gracious Sovereign,

"WE your majesty's most du-tiful and loyal subjects, the lord mayor, aldermen, and commons of the city of London, in common council affembled, beg leave to approach your throne with fentiments of the most sincere loyalty and attachment to your royal perfon and family, and humbly to express our warmest thanks to your majesty, for having gracioufly complied with the wishes of your people, in making a change in your majesty's councils, and taking those persons into your majetty's confidence, who are refpected by their country for their constitutional principles, and distinguished abilities, and whose endeavours, we trust with the bleffing of Providence, will reftore the dignity of your majefty's crown, union among your people, and promote the interest and profperity of all your dominions.

Signed by order of the court. WILLIAM RIX."

To which his Majesty was pleased to return the following most gracious answer.

"THE affurances given mc by the city of London, of their loyalty and attachment to my

person and family, cannot fail of giving me the highest satisfaction. The dignity of my crown, the union of my people, and the interests and prosperity of all my dominions, must ever be the principal objects of my care."

Memorial of Prince Gallitzin and. Mons de Marcost, Ministers of the Empress of all the Russias, presented to the States General; with Mr. Secretary Fox's Letter to Monf. Simolin, Russian Minister at the Court of London.

PRINCE Gallitzin, and Monf. de Marcoff icia. Hague Gazette Extraordinary, April 3. de Marcoff, joint Ministers of the Empress of all the Russias, have presented, this day, to the States General, the following memorial.

"The underwritten, joint ministers of the Empress of all the Russias, in consequence of the orders given them to accelerate as much as in them lies, the falutary work of the mediation entrulled to her Imperial Majetty, think it their duty to lofe no time to communicate to your High Mightinesses a copy of a letter written to Monf. Simolin, their fovereign's minister at the court of London, by Mr. Fox, secretary of state to his Britannic Majesty. It will convince your High Mightinesses of the intentions of his Britannic Majesty to be sincerely reconciled to the republic, on the conditions by yourselves established, in your resolution of the 14th ult. by which you again accept of the empress's mediation; the preliminary concession, made on the part of Great Britain, concerning the principal article of the treaty

of 1674, feems to level all the obstacles which had hitherto prevented your entering upon a negociation for a final peace. in the interim, the proposal made in the faid letter, of a suspension of hostilities, should be thought conformable to the interests of the nation, nothing could be more for to the principles of humanity in general, which actuate the empreis, and to her private fentiments, of benevolence and affection for this flate; especially as fuch a measure has the double advantage of preventing the useless effusion of blood; and from this instant restoring to the republic, the enjoyments of the rights of freedom in trade and navigation, which fall to the share of neutral nations, and especially those that have acceded to the principles of the armed neutrality.

Full of confidence in the difposition equally peaceful, and conformable to the real welfare of the state, which your High Mightinesses have always manifested in the most folemn and positive manthe under-written flatter ner; themselves, that you will not hefitate to make a proper use of the letter, they have the honour to communicate, in order to take a quick and decifive refolution, that may tend to restore peace and harmony with your old friend and ally, upon terms as honourable as

they are advantageous.

(Signed)
P. GALLITZIN.
MARCOFF.

The following is a Copy of the Letter alluded to in the above Memorial:

"HAVING laid before his majesty an extract of the letter

which you did me the honour, Sir, of communicating from Prince Gallitzin, and Monf. de Marcoff, I have his majesty's commands to inform you, that the king, defirous of testifying his intentions towards their High Mightneffes, and of renewing that friendship which has been fo unfortunately interrupted between old allies, who ought to be united in the bonds of mutual interest, is ready to enter into a negociation, for the pur-pose of setting on soot a treaty of peace, on the terms and conditions of that which was agreed to in 1674, between his majesty and the republic; and that the better to facilitate the execution of a plan which his majesty has fo much at heart, the king is willing to give immediate orders a suspension of hostilities, if, on their part, the Lords the States General should think such a measure suitable to the object in view.

"I am commanded by his majefty to explain to you, Sir, his fentiments on so important a subject, and desire you will impart the same to the ministers of her Imperial Majesty to their High Mightnesses, that they may be conveyed, without the least delay, to the ministers of the republic; being of opinion that it is the most convenient step, with the medication and good offices of her Imperial Majesty, to put an end to the scourge of that war, which unfortunately subsists between the two nations.

I have the honour to be, &c.

(Signed)

C. J. Fox."

The

300] ANNUAL REGISTER, 1782.

The following is a Copy of the Earl of Shelburne's Letter to the Lord Mayor relative to arming the People, together with the Heads of the Plan therein inclosed.

Whitehall, 7th of May, 1782. CIRCULAR COPY.

SIR.

T IS majesty has commanded If is majesty has commanded me to express his firm reliance upon the spirit and loyalty of his people, and his royal confidence, that, during this feafon of difficulty, their utmost endeavours will not be wanting to give unquestionable proofs of their attachment and emulation for his fervice; and forefeeing that by wife, strenuous, and timely preparations, he may not only disappoint or defeat any hostile attempts, but, by appearing strong and united at home, he may be enabled to make the more powerful efforts for maintaining his lonour and the public interests abroad, and thereby lay the furest foundations for a fate, an honourable, and a lafting peace; and as the populousness of the principal towns and cities of Great-Britain, naturally offers the greatest facility, as well for forming into corps, as for learning the military exercife, without loss of time, interruption of labour, or any confiderable fatigue, his majesty has commanded me to transmit to you the inclosed propositions, which have been submitted to his majesty, as at least a temporary plan for augmenting the domestic force of the nation, which being adopted or improved, according to the circumstances and situation

of the town, of which you are the chief magistrate, may tend to the immediate formation of a great and respectable addition to the national force at home, on the most natural and constitutional principles.

For this purpose, I have his majesty's commands to signify to you his desire and recommendation, that you should take the same into immediate consideration, and, after having considered it, report to me whatever observations may occur to you for the carrying into execution a plan, the purpose of which is to give security to your own persons and property, and to the general desence of the kingdom.

I am, Sir,
Your most obedient,
humble fervant,
(Signed) Shelburne.

Heads of a Plan for raising Corps in the several Towns in Great Britain.

1st. The principal towns in Great Britain to furnish one or more battalions each, or a certain number of companies each, in proportion to their fize and number of inhabitants.

2d. The officers to be appointed from among the gentlemen of the neighbourhood, or the inhabitants of the faid town, either by commission from his majesty, or from the lord lieutenant of the county, upon the recommendation of the chief magistrate of the town in which the corps are raised.

3d. They are to be possessed of some certain estate in land or money, in proportion to their rank.

4th. Adjutant or town major

in

in each town, to be appointed by his

majesty.

5th. A proper number of ferjeants and corporals, from the army, to be appointed for the corps in each town, in proportion to their number.

6th. The faid ferjeants and corporals, as well as the adjutant, or town major, to be in go-

vernment pay.

7th. The men to exercise frequently, either in battalion, or by companies, on Sundays, and on all holidays, and also after their work is over in the evenings.

8th. Arms, accourtements, and ammunition, to be furnished at the expence of government, if re-

quired.

9th. Proper magazines or storehouses to be chosen or erected in each town for keeping the said arms, &c.

noth. The arms and accourrements to be delivered out at times of exercise only, and to be returned into the stores as soon as the exercise is finished.

major to be always present at exercise, and to see that the men afterwards march regularly, and lodge their arms in the store-houses.

12th. Proper penalties to be inflicted on such as absent themselves from exercise, and also for disobedience of orders, insolence to their officers, and other disorderly behaviour.

13th. The above corps not to be obliged on any account, or by any authority whatever, to move from their respective towns, except in times of actual invasion or rebellion.

14th. His majesty shall then

have power to order the faid corps to march to any part of Great Britain, as his fervice may require.

15th. They are on such occafions to act either separately or in conjunction with his majesty's regular forces, and be under the command of such general officers as his majesty shall think proper to

appoint.

16th. Both officers and men to receive full pay as his majesty's other regiments of foot, from the day of their march, and as long as they shall continue in service out of their towns.

17th. They are to be subject to military discipline in the same manner as his majesty's regular forces, during the said time of their being so called out and receiving government pay.

18th. All officers who should be disabled in actual service, to be entitled to half-pay; and all non-commissioned officers and private men disabled, to receive the benefit of Chelsea Hospital.

19th. The widows of officers killed in the fervice to have a penfion for life.

A Letter from Sir Guy Carleton to his Excellency General Washington; the General's Answer, and Resolution of Congress thereupon.

Philadelphia, June 1.
Extract of a Letter from his Excellency General Washington to Congress, duted Head Quarters, May
10, 1782.

" UST as I am closing these dispatches, a letter from Sir Guy Carleton is handed me, covering covering fundry printed papers, a copy of which, with the papers, I have now the honour to enclose to your excellency, together with a copy of my answer to him; and I flatter myself my conduct herein will be agreeable to the wishes of Congress."

Head Quarters, New York, SIR, May 7, 1782.

HAVING been appointed by his majefly to the command of the forces on the Atlantic Ocean, and joined with Admiral Digby in the commission of peace, I find it proper in this manner to apprize your excellency of my arrival at New York.

The occasion, Sir, seems to render this communication proper, but the circumstances of the prefent time render it also indipensible, as I find it just to transmit herewith to your excellency certain papers, from the perufal of which your excellency will perceive what dispositions prevail in the government and people of England towards those of America, and what further effects are likely to follow; if the like pacific dispositions should prevail in this country, both my inclination and duty will lead me to meet it with the most zealous concur-In all events, Sir, it is rence. with me to declare, that, if war must prevail, I shall endeavour to render its miseries as light to the people of this continent as the circumstances of such a condition will possibly permit.

I am much concerned to find that private and unauthorised perfons have on both sides given way to those passions which ought to have received the strongest and most effectual controul, and which have begot acts of retaliation, which, without proper prevention, may have an extent equally calamitous and dishonourable to both parties, though as ir should feem more extensively pernicious to the natives and settlers of this country.

How much foever, Sir, we may differ in other respects, upon this one point we must perfectly concur, being alike interested to preferve the name of Englishmen from reproach, and individuals from experiencing such unnecessary evils as can have no effect upon a general decision; every proper meafure which may tend to prevent these criminal excesses in indivividuals I shall be ever ready to embrace; and as an advantage on my part, I have, as the first act of my command, enlarged Mr. Livingston, and have written to his father upon the subject of such excesses as have passed in New Jertey, defiring his concurrence in fuch measures, as, even under the conditions of war, the common interests of humanity require.

I am further to acquaint you, Sir, that it was my intention to have fent this day a fimilar letter of compliment to Congress, but am informed it is previously necessary to obtain a passport from your excellency, which I therefore hope to receive, if you have no objection for the passage of Mr. Morgan to Philadelphia, for the above purpose.

I have the honour to be, &c. (Signed)

GUY CARLETON.

His Excellency Gen. Washington.

Head Quarters, May 10, 1782. S I R.

I HAD the honour last evening to receive your excellency's letter of the 7th, with the several papers enclosed.

Ever fince the commencement of this unnatural war, my conduct has borne invariable testi mony against those inhuman excesses which in too many instances have marked its various progress.

With respect to a late transaction, to which I presume your excellency alludes, I have already expressed my fixed resolution, a resolution formed on the most mature deliberation, and from which I shall not recede.

I have to inform your excellency, that your request of a passport for Mr. Morgan to go to Philadelphia, will be conveyed to Congress by the earliest opportunity, and you may rest assured that I will embrace the first moment to communicate to you their determination thereon.

Many inconveniences and diforders having arisen from an improper admission of slags at various posts of the two armies, which have given rise to complaints on both sides—to prevent abuses in suture, and for the convenience of communication, I have concluded to receive all slags from within your lines at the post of Dobb's Ferry, and no where else, so long as the head quarters of the two armies remain as at present.

I have the honour to be, &c.
G. WASHINGTON.
His Excellency Sir Guy Carleton.

By the United States in Congress, affembled May 14, 1782. THE letter of the 10th, from the commander in chief, being read, inclosing a copy of a letter to him from Sir Guy Carleton, dated head quarters, New York, May 2, 1782.

Refolved, That the commander in chief be, and hereby is directed to refuse the request of Sir Guy Carleton, of a passport for Mr. Morgan, to bring dispatches to Philadelphia.

Published by order of the Congress, Cha. Thompson, Sec.

RESOLUTION of CONGRESS.

By the United States in Congress afsembled, October 4, 1782.

W HEREAS by the articles of confederation and perpetual union, the fole and exclufive right of making peace is vested in the United States in Congress assembled; and by the treaty of alliance between his Most Christian Majesty and these United States, it is declared, that neither of the contracting parties fmall conclude peace or truce with Great Britain, without the consent of the other; and ministers plenipotentiaries of these United States in Europe, are vested with full power and authority, in their behalf, and in concert with their allies, to negotiate and conclude a general peace: nevertheless, it appears, the British court still flatters itself with the vain hope of prevailing on the United States to agree to some terms of dependence on Great Britain, at least to a separate peace; and there is reason to believe, that commissioners may be sent to America to offer propositions of

that nature to the United States, or that fecret emissaries may be employed to delude and deceive. In order to extinguish ill-founded hopes, to frustrate infidious attempts, and to manifest to the whole world the purity of the intentions, and the fixed unalterable determination of the United States.

Refolved unanimously, That, Congress are sincerely desirous of an honourable and permanent peace; that as the only means of obtaining it, they will inviolably adhere to the treaty of alliance with his most Christian Majesty and conclude neither a separate peace nor truce with Great Britain; that they will profecute the war with vigour, until, by the blessing of God on the united arms, a peace shall be happily accomplished, by which, the full and absolute sovereignty and independence of these United States having been duly assured, their rights and interests, as well as those of their allies, shall be effectually provided for and fecured.

That Congress will not enter into the discussion of any overtures for pacification, but in confidence and in concert with his Most

Christian Majesty.

That to guard against the secret artifices and machinations of the enemy, it be, and hereby is recommended to the respective States, to be vigilant and active in detecting and teizing all British emissaries and spies, that they may be brought to condign punishment: that it be enjoined on all officers of departments charged with persons coming from the enemy under the protection of stags of truce, to take special care that such persons do not abuse their privileges, but be restrained from all intercourse with the country and inhabitants, which is not necessary for transacting the public business on which they may be sent; and lastly, it is recommended to the several States, that no subject of his Britannic Majesty, coming directly or indirectly from any part of the British dominions, be admitted into any of the United States during the war.

CHA. THOMPSON, Sec.

A FRENCH STATE PAPER.

A Letter from Monsicur du Portail, a French officer in the service of America, to Monseigneur Le Comte de St. Germain, Secretary of State for the War Department in France, dated at Washington's Camp at White Marsh, twelve miles from Philadelphia.

Nov. 12, 1778.

Monfeigneur, HAVE had the honour of giv-ing you an account of the battles of Brandywine and German Town, and of fending you the plans, with that of Philadelphia and its environs, within five leagues, to enable you to judge of the fituation of General Howe. I hope you have received them. Till now General Howe has not taken the two forts on the river, which hinder veffels coming up to the city, and deprive him of all communications with them, but by the little passage which I have marked on the map, and from which we can eafily cut him off this winter, when we have received a reinforcement of victorious

troops

troops from the north. We reckon on striking a stroke on the other side of Schuylkil. There are already troops in the Jerfeys on the left-hand bank of the Delaware. On this plan, General Howe will be obliged to remain in Philadelphia, and run a great risk of dying by hunger; but, in truth, we do not hope for fo He will furely take the much. forts, if he attacks them well, and then he will have a communication with his fleet. You fee, Monseigneur, that for people that have been beat twice, we are in no very bad posture; we owe this to the English having but little cavalry, fo that they were incapable of pursuing their victory; we owe it yet more to the woods and obstacles of every fort, with which this country is defended.

In the mean time it is natural enough, after the experience of this campaign, to alk this queftion, Will the Americans succeed in making themselves free or not? France, without doubt, they can only judge by what is past; they will hold the affirmative; as for us, who have been witnesses of the whole, it is another affair. To make short of the matter, it is not the good conduct of the Americans that enabled them to make a campaign on the whole sufficiently fortunate. IT is the FAULT OF THE ENGLISH. It was an enormous fault of the British government to require General Burgoyne to tra-verse more than 200 leagues of a country, replete with difficulties, almost desert, and of consequence, very useless to take, and that only to join Generals Howe and Clinton in the middle of the country. This project might appear very Vol. XXV.

magnificent in the cabinet of London, but to those who know the country it was highly desective.

This judgment on my part is not after the event. You may remember, perhaps, Monseigneur, that I was in very good humour with the English for opposing to us only ten thousand men here, and that I greatly hoped General Burgoyne would not arrive here till the field could no longer be kept; that his army would be half destroyed by hunger, misery, and defertion, together with daily loffes fuffered from our militia, fcattered through the woods, who fighting thus in "a manner peculiar to themselves, the event has been more happy than I could have even hoped.

If the English, instead of making so many diversions, which have been all too much at the expence of the principal assion, had opposed General Washington with twenty thousand men, I do not very well know, what would have become of us. As for us, in doubling our army, we should have nearly redoubled his force, and we should have tripled our own embarrassment. Thus much for the plan of this campaign.

If we examine next the conduct of General Howe, we shall see that he has not done even what he had in his power to do. As I had the honour to write to you after the battle of Brandywine, if the English had followed up their advantages that day, Washington's army would have been spoken of no Since that time, likewise, General Howe has, in all his operations, exhibited fuch flowners and timidity, as on every turn to prove the object of my aftonish-[U]ment. ment. But we must recollect, they may fend another general, and then we shall not find ourselves so fortunately circumstanced. As for the rest, the events, which depend on the ability of generals not being to be forescen, we cannot count on them in our speculations on the future.

Having then a reference only to the number of troops, I think I may affert, if the English can have here thirty thousand effective troops, THEY MUST REDUCE THIS COUNTRY.

A fecond thing which must haften this reduction, and even of itfelf nearly effect it, is the want of avarlike stores. They avant almost every thing. Another object is, they are in want of both linen and woollen cloths, leather, cordage, fpirituous liquors, fugars, These last articles are more important than at first might be imagined. Before the war, the Americans, though despising luxury, had in abundance every thing that is necessary to an easy and agreeable life. To have no great matters to do, to pass the greatest part of their time in smoking or drinking spirituous liquors or tea, was the taste of these countries. It is then very little with their inclinations, that they find themselves transformed, at a stroke, into a warlike people, and reduced to the necessity of leading a hard and frugal life. So much do they in general detest the war, that it is easy to see, if their wants are but increased to a certain point, they would prefer the yoke of the English, to a liberty which costs them the comforts of life.

This language aftonishes you, Monseigneur, but in truth, such

is the people. They are foft without refort, without vigour, without passion, for a cause which they sustain only, because it is natural to them to follow the movement with which they have been impressed. There is a hundred times more enthafiasm for this revolution in a coffee-house at Paris than in all the colonies united.

It is necessary, therefore, for France, if flie wishes to support this revolution, to furnish the people with every necessary, nor fuffer them to fustain any confiderable want. It will cost France a great fum, even fome millions, but she will be amply repaid by the ANNIHILATION of the MARINE power of England, which having NO LONGER ANY COLONIES can in a little time bave NO MARINE. Commerce will of consequence pass over to France, which can in that case have NO RIVAL among the powers of Eu-

Some persons have pretended, that France has no interest in seeing the English colonies form a free state, and that we might thereby run the hazard of losing our own colonies; but whoever knows this country fees, that it will be fome ages before they could fend forth a squadron to make conquests, and long before that the jealousies which one province entertains of another (the appearances of which are already discernible) will have divided them into different states, none of which will be to be feared. I may be asked, whether France had not better make a treaty with the United States, and fend twelve or fifteen thousand men hither, to effect more readily this revolution. This would be the effectual me-

thod

thod of spoiling all. This people, though at war with the English, hate the French more than them; we prove this every day; and notwith-standing every thing that France has done, or can do for them, they will prefer a reconciliation with their ancient brethren. Should they for the moment consent to the coming of the French troops, their natural antipathy would soon shew itself, and produce the most fatal quarrels.

There is yet another project to examine. May not France, forced to make open war on England, seek to possess herself of Canada, in con-

cert with the Congress.

After the observations in the preceding article, it appears, that Congress would utterly reject such an arrangement. They would not seek freedom in the neighbourhood of the French, for they would not expect to retain it long. If they must needs be dependant, they had rather be so on

England.

If France does not declare war against England, she must by every means that policy can suggest, prevent the English from having more than from twenty-five to thirty-thousand men here at most. The American states will not have more this campaign. General Washington has never had more than 15,000; Gen. Gates 10,000, and Gen. Putnam from five to fix Perhaps they would thousand. not be able to augment the whole by one quarter in case of necesfity.

You have here, perhaps, Monfeigneur, more than you have asked of me, but forgive me these differtations, through a desire of fulfilling, at least, your intentions, and of rendering my abode here, if possible, useful to my country.

I am,
with the most perfect respect, &c.
(Signed)
Du PORTALL.

To Monseigneur the Count de St. Germain, Minister of War, at the Court of France.

To the Honourable the Commons of Great Britain in Parliament affembled.

The humble Petition of the Freeholders of the County of York,

SHEWETH,

HAT your petitioners, sensible of the original excellency of the constitution of this country, most ardently wish to have it maintained upon the genuine principles on which it was founded.

Your petitioners further shew, that it is necessary to the welfare of the people, that the Commons' House of parliament should have a common interest with the nation; and that in the present state of the representation of the people in parliament, the House of Commons do not sufficiently speak the voice of the people.

Your petitioners therefore humbly pray this honourable house to take into their most ferious consideration the present state of the representation of the people in parliament, and to apply such remedy to this great and alarming evil, as to this honourable house

may feem meet.

And your petitioners shall ever pray, &c. $[U]_2$ Heads

Heads of two principal Acts of PARLIAMENT paffed during the present Session.

An Act for better securing the Freedom of Elections of Members to ferve in Parliament, by difabling certain officers, employed in the Collection or Management of his Majesty's Revenues, from giving their Votes at fuch Elections.

ROM August 1, 1782, no commissioner or officer employed in collecting or managing the duties of excise, customs, &c. shall have any vote in the election of members of parliament.

The penalty on persons voting, who are disqualified by this act, is 1001. and rendered incapable of executing any office or place of

truft, &c.

Clause, not to extend to commissioners of the land tax, or perfons acting under them; nor to of-fices held by letters patent for any estate of inheritance; nor to perfons who shall resign their offices before August 1, 1782.

Limitations of actions, viz. 12 months after the penalty is incur-

red.

An Ast for restraining any Person concerned in any Contract, Commission, or Agreement, made for the Public Service, from being elected, or fitting and voting as a Member of the House of Commons.

AFTER the end of this fession, all persons holding contracts for the public fervice, shall be incapable of being elected, or fitting in the House of Commons.

Any member accepting a contract, or continuing to hold any

contract after the commencement of the next fession, his seat shall be void.

Not to extend to incorporated trading companies.

Not to extend to contracts al-

ready made for one year.

Clause relative to contracts which are not to expire until a year's notice be given, viz. that where any contract, agreement, or commission, has been made, entered into, or accepted, with a provision that the fame shall continue until a year's notice be given of the intended diffolution thereof, the same shall not difable any person from sitting and voting in parliament until one year after the faid notice shall be actually given for the determination of the faid contract, agreement, or commission, or till after twelve calendar months, to be computed from the time of passing this act.

Not to extend to contracts by descent, &c. until after twelve

months possession.

Members holding contracts may be discharged therefrom on giving

twelve months notice.

Clause relative to patentees for new inventions, viz. that if any person actually possessed of a pa-tent for a new invention, or a prolongation thereof by act of parliament, and having contracted with government concerning the object of the faid patent before the paffing of this act, shall give notice of his intention to dissolve the said contract, the same shall be null and void from the time of giving fuch notice.

If any person hereby disqualified shall be elected, such election shall

be void.

Disabled persons who shall sit in the House of Commons after this Tession, shall forfeit 500 l. for each

day.

A condition to be inferted in all public contracts, that no member of the House of Commons shall have any share thereof.

Penalty on contractors who shall admit any member of the House of Commons to any share of their

contracts.

Limitation of actions, viz. twelve months.

The fourth Report of the Commiffioners appointed to examine, take and state the public Accounts of the Kingdom

P ROCEEDING in our inquiries into balances in the hands of those accountants who appear upon the certificate of accounts depending in the office of the auditor of the imprest, we find therein, next to the treasurers of the navy, the names of several persons whose accounts have not been profecuted for upwards of feventy years. We could have no expectation of profiting by a pursuit of claims arising at so remote a period; and therefore passing on to the next class, namely, the paymasters of the forces, we see standing first in that class the name of Henry Earl of Lincoln; whose final account of the forces for fix months, to the 24th of June, 1720, is therein described " to have been " delivered into auditor Aislabie's " office, but, being very imper-" fect, to have been long fince " withdrawn, and not returned." We issued our precept to his grace the Duke of Newcasile, for an account of the public money in his hands, custody, or power, as re-presentative of Henry Earl of Lin-

coln, late paymaster-general of the forces. The Duke of Newcastle, in a letter dated the 24th of August last, informed us, that " he never had in his hands, cuf-" tody, or power, any of the " public money which was pof-" feffed by his late father as pay-" master of the forces, nor any of " his accounts or vouchers rela-" tive thereto; nor could he in-" form us what balance, if any, " was due from him on that ac-" count; that his late father died " intestate, leaving him, and se-" veral other children, then in-" fants, and that Lucy Counters " of Lincoln, his widow, admi-" nistered to him, and possessed " what effects he left, which she " applied towards discharge of " his debts :" and in a subsequent letter, dated the 23d of November last, the duke informed us, that he took administration de bonis non to his late father, in May 1748. In consequence of these letters from the Duke of Newcastle, we proceeded no further in this inquiry.

Having issued our precepts to John Powel, Esq. the only acting executor of Henry Lord Holland; to Lady Greenwich, administratrix to the Right Hon. Charles Townshend, late paymaster of the forces, to Lord North, and to the Right Hon. Thomas Townshend, late paymaster of the forces, each jointly with George Cooke, Esq. deceased, for an account of the public money in their respective hands, custody, or power; the total of which amount to 377,7281.

5s. 7d.

Having thus obtained a knowledge of the balances, our next step was to examine whether they were liable to any such services,

[U] 3

310] ANNUAL REGISTER, 1782.

or subject to any such payments, in the hands of these accountants, as rendered it necessary to permit them, or any part of them, to re-main longer in their possession. For this purpose we examined John Powel, Efq. the cashier, and Charles Bembridge, Efq. the accountant to the paymaster-general of the forces; by whom we are informed that the money in the hands of the paymasters-general of the forces, after they are out of office, continues, as long as their accounts are kept open, liable to the payment of any claims of the staff or hospital officers, or of any warrants for contingencies and extraordinaries, which were voted during the time they were respectively in office, and have not been claimed; after the final accounts are closed, such claimants must apply for payment, either to the treatury or the war-office, according to the nature of the claim. These fums remaining in their hands are likewise subject to the payment of fees of divers natures, and of fees for passing their accounts and obraining their quietus, together with the payment of a gratuity to the officers and clerks of the payoffice; who at the fame time that they transact the business of the paymaster in office, carry on also, make up, and finally close, the accounts of the paymasters after they are out of office; but, having no falary or reward whatever for this extra buñness, it has been cuttomary for them, when the final account is ready to be passed, to present a memorial to the lords of the treasury, praying them to procure the king's warrant to the auditors of the imprest, to allow them a certain fum for their trou-

ble, payable out of the balance remaining in the hands of that paymaster.

The fums now in the hands of these late paymasters of the forces, or of the representatives of those who are dead, are still liable to claims that may be made upon them under various heads of services, and subject likewise to the payment of sundry sees, and of the customary gratuities; but neither these claims, sees, or gratuities, do, in our opinion, furnish any objection to the payment of these balances into the Exchequer.

Lord Holland resigned this office in 1765; Mr Charles Townshend in 1766; Lord North and Mr. Cooke in 1767; Mr. Cooke and Mr. Thomas Townshend in 1768; fince which, fufficient time has elapfed for all the claimants upon thefe paymasters to have made their applications for payment. The public are not to be kept out of possession of large sums of their own money, nor public accounts to be kept open, because persons may have for fo long a time neglected their own business; not that these claimants are without remedy after these accounts are closed; by applying either to the treasury, or to the war-office, as the cafe may require, their demands may be inquired into and fatisfied, by proper warrants upon the paymaster in office.

The fees and gratuities become payable when the final accounts are ready to be passed in the office of the auditor of the imprest; how long it will be before the final accounts of these late paymasters will be in that situation, it is not easy to ascertain. John Lloyd, Esq. deputy auditor of the imprest

EC

to Lord Sondes, informed us, that the final account of Lord Holland was delivered into that office in January, 1772; the final account of Mr. Charles Townshend in July, 1777; the final account of Lord North and Mr. Cooke in October, John Bray, Esq. deputy 1779. auditor to William Aislabie, Efq. informed us, that the final and only account of Mr. Cooke and Mr. Thomas Townshend was delivered into that office in November, 1779. From an objection herein-after mentioned, made by the acting executor of Lord Holland, to the final closing of that account, and from the representation given to us by these officers, of the fituation in which the other accounts now are in the imprest office, none of them appear to be in fo advanced and perfect a state as to give us reason to expect their speedy completion; and therefore we do not think the payment of these balances into the Exchequer ought to be delayed until the accounts are fettled, especially as we fee no reason why the paymaster in office may not be authorized to pay, out of the public money in his hands, all the fees and gratuities, whenever they become payable.

Seeing, therefore, no objection to arife, from the fervices or purposes to which these balances are still applicable, to the payment of them into the Exchequer, we adverted to such reasons as might be suggested to us by the accountants themselves, or by those who have an interest or trust in the funds out of which these balances must be paid. To this end we examined the Honourable Charles James Fox, Esq. and John Powell, Esq.

executors of the late Lord Holland; Lady Greenwich, adminiflratrix to Mr. Charles Townshend;
Lord North, Mr. Thomas Townshend, Col. George John Cooke,
and Mr. Charles Molloy, devisees
of the estates of Mr. Geo. Cooke,
late paymasters-general of the
forces.

Mr. Fox and Mr. Powell objected to the payment into the Exchequer of so much of the sum of 256,456 l. 8s. 2d. (being the balance in the hand, of Mr. Powell as executor of the late Lord Holland) as may be affected by the desistion of certain suits depending in the Court of Chancery. The sum that may be so affected, according to Mr. Powell's account, amounts to 73,149 l. 10s. 7d.

The state of the proceedings in these suits is set forth in Mr. Powell's information to be as follows: —The accounts of Mr. Robert Paris Taylor, one of the deputy paymasters to Lord Holland, in Germany, during the late war, were examined in the office of the auditors of the imprest, where he is furcharged with the fum of 12,052l. 13s. 10d. halfpenny, which furcharge he controverts. In the beginning of last year, the executors of Lord Holland commenced two actions in the Court of King's-Bench against Mr. Taylor, and the executors and devisees of Peter Taylor, his father, who was his furety, to recover the fum of 28,185 l. 9 s. 5d3, being the balance supposed to be due from him upon these accounts, in which fum the furcharge is included. As the question in these causes appears to be, whether Mr. Taylor was indebted to the executors of Lord Holland in this fum, or any [U] \downarrow part

part of it, the balance of public money in Mr. Powell's hands might be increased, but could not be diminished by the event of these actions; and therefore Mr. Powell does not infilt upon retaining any part of this balance to fecure him against such event; but Mr. Taylor, and the devisees of Peter Taylor, foon after filed two bills in the Court of Chancery against the executors of Lord Holland, fuggesting errors, and praying that these accounts may be taken in that court. These causes have not yet come to a hearing; but the ground of Mr. Powell's claim to the detention of this fum of 73,1491. 10s. 7d. as collected from his information, and the letter of his folicitor, appears to be this; that should an account be decreed, every item in Mr. Taylor's accounts will be open to litigation; and Mr. Taylor having charged himself, before the auditors of the imprest, with the sum of 786,357 guilders, and 9 stivers, which is 73,1491. 10s. 7d. sterling, as a profit to the public arifing on money transactions in his department as deputy paymaster, may suggest, in the progress of these causes, that he has erroneously charged himself with this fum; and therefore Mr. Powell claims to retain it in his hands, to guard against the consequences of a possible decision upon this sum in Mir. Taylor's favour.

Subjects under litigation in a court of justice should not be examined elfewhere without an absolute necessity, and not even then but with great caution. point coming thus incidentally before us, in the progress of an enquiry within our province, we

may, without impropriety, venture to fay, that in our opinion, the bare possibility that Mr. Taylor may, in the Court of Chancery, object to, and be discharged of a fum he has charged himself with before the auditors of the imprest, and which he was bound by his instructions to charge himfelf with, as a profit to the public, and to which, for aught that appears to us, he has never yet objected, but has, on the contrary, in part applied to the use of the public, is not a fufficient reason for permitting the fum of 73,1491. 10s. 7d. to continue in the hands of the executors of Lord Holland, until two fuits in chancery, not yet heard, praying an account may be taken of the receipt of 913,4051. 6s. 2d3, and of the expenditure of 878,0081. 18 s. 1 4d, during upwards of four years of the late war in Germany, shall be finally determined in the court.

Lady Greenwich, Lord North, Mr. Thomas Townshend, Colonel Cooke, and Mr. Molloy, do not object to the payment into the Exchequer of their balances; nor do Mr. Fox and Mr. Powell, as the residue of Lord Holland's balance, upon feverally receiving their quietus, or a fecurity equivalent

thereto.

Where accounts must be passed by the auditors of the imprest, the payments into the Exchequer, made by the accountants, before the final adjustment, are payments upon account only; but should these accountants be directed to pay in their full balances, they will be entitled to, and ought in justice to receive, a fecurity and indemnification against all claims and payments whatever, to which

the balances in their hands were subject; the fund possessed by the paymaster in office being substituted in the place of these balances, to answer such future claims and demands, the accountant himself will stand liable only to the errors and omissions that may be discovered in the examination of his accounts, in the office appointed for auditing them: should there be errors, he may either pay the balance to, or receive it from, the paymaster in office, according as it may be determined; then, and not before, he will be entitled to his quietus, which being the formal official difcharge of every public accountant, cannot but be subsequent to the complete examination, and the payment of the balance, if any, according to the final adjustment of his accounts.

Having, therefore, not heard, either from the accountants themfelves, or from those who may be interested in our decisions, any reasons to alter our opinion, we conceive that the balance of public money now remaining in the hands of John Powell, Efq. as the only acting executor of Lord Holland; and in the hands of Lady Greenwich, as administratrix to Charles Townshend, late paymaster of the forces; and in the hands of lord North, and of Mr. Thomas Townshend, as late paymasters of the forces, each jointly with Mr. George Cooke, deceased, ought to be paid into the Exchequer, to be applied to the public service; and that such payments should be without prejudice, and a proper security and indemnification be given to each of them against any loss or detri-

ment that may accrue to them in confequence of fuch payment.

During the course of this inquiry, two circumstances engaged our observation.

First, the injury sustained by the public from not having the use of the money remaining in the hands of the paymasters of the forces after they have quitted the office. We procured from the payoffice, accounts of the balances and fums received and paid every year, by each of thefe paymasters, fince they feverally went out of office. A computation of interestat four per cent. per annum, upon these balances every year, from fix months after they feverally refigned the office, proves that the loss by the money left in the hands of Lord Holland amounts, at fimple interest, to 248,3941. 13s. of Mr. Charles Townshend, 24,247 l. 3s. of Lord North and Mr. Ccoke, to 18,7751. 3s. of Mr. Cooke and Mr. Thomas Townshend, to 3,419l. 15 s. tal, 294,8361. 14s.

Such has been the loss sustained by the public. Much does it behove them to guard against the possibility of the like evil for the future. If there exists in government no power to compel an accountant to disclose his balance, and to deliver back to the public what their fervice does not require he should detain, it is time such a power was created. If it does exist, the public good requires it should be constantly exerted, within a reasonable limited time after an accountant has quitted his of-

Secondly, The other circumstance that claimed our attention

314] ANNUAL REGISTER, 1782.

is, the delay in passing the accounts of the paymasters of the forces.

The making up and passing these accounts is the concern of three different parties; the paymaster, whose accounts they are; the pay-office, where they are made up; and the auditors office, where they are passed. The first flep must be taken by the pay-office; there the accounts must be made up, and from thence fent with the vouchers to the auditors office, before they can be examined. Near forty-fix millions were isfued to Lord Holland; his final account was not delivered into the auditors office until feven years after his relignation. About two millions were iffued to Mr. Charles Townshend; his final account was not delivered until eleven years after his resignation. Near two millions were iffued to Lord North and Mr. Cooke; their final account was not delivered until twelve years after their refignation. Five hundred and feventy thousand pounds were iffued to Mr. Cooke Mr. Thomas Townshend; their only account was not delivered until eleven years after their resignation.

In the office of the auditors of the imprest, the custom of not passing the accounts of a successor, until the predecessors are completed, is a cause of delay. A dispute with a deputy stops Lord Holland's accounts; but that can be no reason for delaying one moment the accounts of his successors; they depend not upon, nor are connected with each other. It is regular to examine and pass accounts in order of time; but in

the case of the paymaster's accounts, convenience, both public and private, will warrant a deviation from this rule. Every accountant has a material interest that his accounts should be passed with dispatch; the quiet of himfelf, his family, and fortune. It is not unreasonable to presume, that taking from an accountant his balance, may be a means of expediting the pailing of his accounts; whilft he holds a large fum in his hands, he may be lefs anxious to come to a final adjustment, less eager to procure a quietus, the condition of which is the depriving himfelf of that balance.

We are proceeding to examine the fum in the hands of the paymaster general of the forces in office; but finding, from the variety and extent of his transactions, it will require a confiderable time before we can obtain the knowledge necessary for forming a report, we judged it most consonant to the spirit and intention of the act, that regulates our conduct, to fubmit, with all the dispatch in our power, to the wisdom of the legislature, the consideration of a fum of public money of fuch magnitude as that now remaining in the possession of the paymasters general of the forces out of office.

Authentic

Authentic Copies of the Preliminary Articles of Peace, between his Britannic Majesty, and the Most Christian King, his Most Catholic Majesty, and the United States of America. Signed at Versailles, the 20th of January, 1783.

Translation of the Preliminary Articles of Peace, between his Britannic Majesty, and the Most Christian King. Signed at Versailles, the 20th of January, 1783.

IN THE NAME OF THE MOST HOLY TRINITY.

HE King of Great Britain and the Most Christian King, equally animated with a defire of putting an end to the calamities of a destructive war, and of re-establishing union and good understanding between them, as necesfary for the good of mankind in general as for that of their respective kingdoms, states, and subjects, have named for this purpose, viz. on the part of his Britannic Majesty Mr. Alleyne Fitz-Herbert minister plenipotentiary of his faid Majesty the King of Great Britain; and on the part of his Most Christian Majesty, Charles Gravier, Comte de Vergennes, counsellor in all his councils, commander of his orders, counfellor of state, minister and secretary of state, and of the commands and finances of his faid Majesty, for the department of foreign affairs; who, after having duly communicated to each other their full powers in good form, have agreed on the following Preliminary Articles:

ÁRTICLE I. As foon as the preliminaries shall be signed and ratisfied, sincere friendship shall be

re-established between his Britannic Majesty, and his Most Christian Majesty, their kingdoms, states, and subjects by sea and by land, in all parts of the world. Orders shall be fent to the armies and fquadrons, as well as to the fubjects, of the two powers, to stop all hostilities, and to live in the most perfect union, forgetting what is passed, of which their sovereigns give them the order and example. And, for the execution of this article, sea-passes shall be given on each fide for the ships which shall be dispatched to carry the news of it to the possessions of the faid powers.

ART. II. His Majesty the King of Great Britain shall preserve in full right the island of Newsoundland, and the adjacent islands, in the same manner as the whole was ceded to him by the thirteenth article of the treaty of Utrecht, save the exceptions which shall be stipulated by the fifth article of the

present treaty.

His Most Christian Art. III. Majesty, in order to prevent quarrels which have hitherto arisen between the two nations of England and France, renounces the right of fishing, which belongs to him by virtue of the faid article of the treaty of Utrecht, from Cape Bonavista to Cape St. John, situated on the eastern coast of Newfoundland, in about 50 degrees of north latitude; whereby the fishery shall commence at the faid Cape St. John, shall go round by the North, and, going down the western coast of the island of Newfoundland, shall have for boundary the place called Cape Raye, fituated in 47 degrees 50 minutes latitude.

ART. IV.

316] ANNUAL REGISTER, 1782.

ART. IV. The French fishermen shall enjoy the sishery assigned them by the foregoing article, as they have a right to enjoy it by virtue of the treaty of Utrecht.

ART. V. His Britannic Majefly will cede in full right to his Most Christian Majesty the islands

of St. Pierre and Miquelon.

ART. VI. With regard to the right of fishing in the gulph of St. Laurence, the French shall continue to enjoy it conformably to the fifth article of the treaty of Paris.

ART. VII. The king of Great Britain shall restore to France the island of St. Lucia, and shall cede and guarantee to her that of To-

bago.

ART. VIII. The Most Christian King shall restore to Great Britain the islands of Grenada and the Grenadines, St. Vincent, Dominica, St. Christopher's, Nevis, and Montserrat; and the fortresses of those islands conquered by the arms of Great Britain and by those of France, shall be restored in the fame condition in which they were when the conqueit of them was made, provided that the term of eighteen months, to be computed from the time of the ratification of the definitive treaty, shall be granted to the respective subjects of the Crowns of Great Britain and France, who may have fettled in the faid illands, and in other places which shall be restored by the definitive treaty, to fell their estates, recover their debts, and to transport their effects and retire without being restrained, on account of their religion, or any other whatever, except in cases of debt or of criminal profecutions.

ART. IX. The King of Great

Britain shall cede and guaranteo in full right to his most Christian Majesty the river of Senegal and its dependencies, with the forts of St. Louis, Podor, Galam, Arguin and Portendu. His Britannic Majesty shall restore, likewise, the island of Gorée, which shall be given up in the condition in which it was when the British arms took possession of it.

ART. X. The Most Christian King shall, on his side, guarantee to his Majesty the King of Great Britain the possession of Fort James

and of the river Gambia.

ART. XI. In order to prevent all discussions in that part of the world, the two courts shall agree, either by the definitive treaty, or by a separate act, upon the boundaries to be fixed to their respective possessions. The gum trade shall be carried on in suture as the English and French nations carried it on before the year 1755.

ART. XII. In regard to the rest of the coasts of Africa, the subjects of both powers shall continue to frequent them, according to the custom which has prevailed

hitherto.

Was

was carried on by the late French East India company, whether it be carried on by them as indivi-

duals or as a company.

ART. XIV. Pondicherry, as well as Karical, shall likewise be restored, and guaranteed to France; and his Britannic Majesty shall procure, to serve as a dependency round Pondicherry, the two districts of Valanour and Bahour; and as a dependency round Karical, the sour contiguous Magans.

ART. XV. France shall again enter into possession of Mahé, and of the Comptoir at Surat: and the French shall carry on commerce in this part of India conformably to the principles laid down in the thirteenth article of

this treaty.

ART. XVI. In case France has allies in India, they shall be invited, as well as those of Great Britain, to accede to the present pacification; and for that purpole a term of four months, to be computed from the day on which the proposal shall be made to them, shall be allowed them to make their decision; and in case of refusal on their part, their Britannic and Most Christian Majestics agree not to give them any affiftance, directly or indirectly, against the British or French possessions, or against the ancient possessions of their respective allies; and their faid Majesties shall offer them their good offices towards a mutual accommodation.

ART. XVII. The King of Great Britain, defirous of giving his Most Christian Majesty a sincere proof of reconciliation and friendship, and of contributing to the folidity of the peace which is on the point of being re-established,

will confent to the abrogation and fuppression of all the articles relative to Dunkirk, from the treaty of peace concluded at Utrecht in 1713, inclusively to this time.

ART. XVIII. By the definitive treaty, all those which have existed till now between the two contracting parties, which shall not have been derogated from either by the faid treaty, or by the present preliminary treaty, shall be renewed and confirmed; and the two courts shall name commissioners to inquire into the state of commerce between the two nations, in order to agree upon new arrangements of trade, on the footing of reciprocity and mutual convenience.—The faid two courts shall together amicably fix a competent term for the duration of that business.

ART. XIX. All the countries and territories which may have been, or which may be, conquered in any part of the world whatfoever, by the arms of his Britannic Majesty, or by those of his Most Christian Majesty, and which are not included in the present articles, shall be restored, without difficulty, and without

requiring compensation.

ART. XX. As it is necessary to assign a fixed epoch for the refitutions and the evacuations to be made by each of the high contracting parties, it is agreed, that the King of Great Britain shall cause to be evacuated the islands of St. Pierre and Miquelon, three menths after the ratisfication of the definitive treaty, or sooner if it can be done; St. Lucia in the West Indies, and Gorée in Africa, three months after the ratisfication of the definitive treaty, or sooner if it

ANNUAL REGISTER, 1782. 218]

can be done. The King of Great Britain shall, in like manner, at the end of three months after the ratification of the definitive treaty, or fooner if it can be done, enter again into possession of the islands of Grenada, the Grenadines, St. Vincent, Dominica, St. Christopher's, Nevis, and Montferrat.

France shall be put into posseffion of the towns and comptoirs, which are restored to her in the East Indies, and of the territories which are procured for her, to ferve as dependencies round Pondicherry, and round Karical, fix months after the ratification of the definitive treaty, or fooner if

it can be done.

France shall, at the end of the fame term of fix months, restore the towns and territories which her arms may have taken from the English or their allies in the East-Indies.

In confequence whereof, the neceffary orders shall be fent by each of the high contracting parties, with reciprocal passports for the ships which shall carry them, immediately after the ratification of

the definitive treaty.

ART. XXI. The prisoners made respectively by the arms of his Britannic Majesty, and his Most Christian Majesty, by land and by fea, shall be restored reciprocally, and bonâ fide, immediately after the ratification of the definitive treaty, without ranfom, and on paying the debts they may have contracted during their captivity; and each crown shall respectively reimburfe the fums which shall have been advanced for the fubfistence and maintenance of their prisoners, by the sovereign of the country where they fliall have been detained, according to the receipts and attested accounts, and other authentic ticles which shall be produced on each fide.

ART. XXII. In order to prevent all causes of complaint and dispute which may arise on account of prizes which may be made at sea after the figning of thefe preliminary articles, it is reciprocally agreed, that the veffels and effects, which may be taken in the channel and the north feas, after the space of twelve days, to be computed from the ratification of the present preliminary articles, shall be restored on each fide. That the term shall be one month from the channel and north feas, as far as the Canary islands, inclusively, whether in the ocean or in the Mediterra-Two months from the faid Canary islands, as far as the equinoctial line or equator; and lastly, five months in all other parts of the world, without any exception or any other more particular description of time and place.

ART. XXIII. The ratification of the prefent preliminary articles, shall be expedited in good and due form, and exchanged in the space of one month, or fooner if it can be done, to be computed from the day of the fignature of the prefent

articles.

In witness whereof, we, the underwritten ministers plenipotentiary of his Britannic Majesty, and of his Most Christian Majesty, by virtue of our respective full powers, have figned the prefent preliminary articles, and have caused the seal of our arms to be put thereto.

Done at Verfailles, the 20th day of January, 1783.

(L. S.)

ALLEYNE FITZ-HERBERT. (L. S.)

GRAVIER de VERGENNES.

Translation of the Preliminary Articles of Peace, between his Britannic Majesty, and the Most Catholic King. Signed at Verfailles, the 20th of January, 1783.

IN THE NAME OF THE MOST HOLY TRINITY.

HE King of Great Britain and the King of Spain, equally animated with a defire of putting an end to the calamities of a destructive war, and of re-establishing union and good understanding between them, as necessary for the good of mankind in general. as for that of their respective kingdoms, states, and subjects, have named for this purpose, viz. on the part of his Majesty the King of Great Britain, Mr. Alleyne Fitz-Herbert, minister plenipotentiary of his faid Majesty, and on the part of his Majesty the King of Spain, Don Peter Paul Abarea de Bolea Ximines d'Urnea, &c. Count of Aranda and Castel Florido, Marquis of Torres, of Villanan and Rupit, Viscount of Rueda and Yoch, Baron of the Baronies of Gavin, Sietano, Clamofa, Enipol, Trazmoz, La Mata de Castil, Viego, Antillon, La Almolda, Cortes, Jorva, St. Genis, Robovillet, Oreau, and St. Colom de Farnes, Lord of the Tenance, and Honour of Alcalaten, the Valley of Rodellar, the castles and towns of Maella, Mefones, Tiurana, de Villap'ana, Taradell, and Viladran, &c. Rico Hombre in Aragon, by birth, Grandee of Spain of the first class, Knight of the order of the Golden Fleece, and of that of the Holy Ghost, Gentleman of the King's Bed-chamber in Employment, Captain-general of his Armies, and his Ambassador to his Most Christian Majesty, who, after having duly communicated to each other their full powers in good form, have agreed on the following Preliminary Articles:

ARTICLE I. As foon as the preliminaries shall be figned and ratified, fincere friendship shall be established between his Britannic Majesty and his Catholic Majesty, their kingdoms, states, and subjects, by sea and by land, in all parts of the world. Orders shall be fent to the armies and fquadrons, as well as to the subjects of the two powers, to stop all hoftilities, and to live in the most perfect union, forgetting what has passed, of which their sovereigns give them the order and example; and for the execution of this article, sea-passes shall be given on each fide for the ships which shall be dispatched to carry the news of it to the possessions of the faid powers.

Art. II. His Catholic Majesty shall keep the island of Minorca.

ART. III. His Britannic Maicity shall cede to his Catholic Majesty East Florida, and his Catholic Majesty shall keep West Florida, provided that the term of eighteen months, to be computed

320] ANNUAL REGISTER, 1782.

from the time of the ratification of the definitive treaty, shall be granted to the subjects of his Britannic Majesty who are settled as well in the island of Minorca as in the two Floridas, to fell their estates, recover their debts, and to transport their effects, as well as their persons, without being restrained on account of their religion, or under any other pretence whatfoever, except that of debts and criminal prefecutions; and his Britannic Majesty shall have power to cause all the effects that may belong to him in East Florida, whether artillery or others, to be carried away.

His Catholic Ma-ART. IV. jesty shall not, for the future, suffer the subjects of his Britannic Majesty, or their workmen, to be disturbed or molested, under any pretence whatfoever, in their oc-cupation of cutting, loading and carrying away logwood, in a diwhich the boundaries ftrict of shall be fixed, and for this purpose they may build without hindrance, and occupy without interruption, the houses and magazines necessary for them, for their families, and for their effects, in a place to be agreed upon, either in the definitive treaty, or within fix months after the exchange of the ratifications; and his said Catholic Majesty assures to them, by this article, the entire enjoyment of what is above stipulated; provided that these stipulations shall not be confidered as derogatory in any respect from the rights of his fovereignty.

ART. V. His Catholic Majefty shall restore to Great Britain the islands of Providence and the Bahamas, without exception, in the

fame condition in which they were, when they were conquered by the arms of the King of Spain.

ART. VI. All the countries and territories which may have been, or may be conquered in any part of the world whatfoever, by the arms of his Britannic Majefty, or by those of his Catholic Majefty, and which are not included in our present articles, shall be restored without disticulty, and without requiring compensations.

Art. VII. By the definitive treaty, all those which have exifted till now between the two high contracting parties, and which shall not be derogated from either by the faid treaty, or by the prefent preliminary treaty, shall be renewed and confirmed; and the two courts shall name commissioners to enquire into the state of the commerce between the two nations, in order to agree upon new arrangements of trade, on the footing of reciprocity and mutual convenience; and the two faid courts shall together, amicably fix a competent term for the duration of that business.

ART. VIII. As it is necessary to assign a fixed epoch for the restitutions and evacuations to be made by each of the high contracting parties, it is agreed, That the King of Great Britain shall cause East Florida to be evacuated, three months after the ratification of the definitive treaty, or sooner if it can be done.

The King of Great Britain shall likewise enter again into possession of the Bahama illands, without exception, in the space of three months after the ratification of the definitive treaty.

Įn

In consequence whereof, the necessary orders shall be sent by each of the high contracting parties, with reciprocal passports for the ships which shall carry them, immediately after the ratisfication of the definitive treaty.

ART. IX. The prisoners made respectively by the arms of his Britannic Majesty, and his Catholic Majesty, by sea and by land, shall, immediately after the ratification of the definitive treaty, be reciprocally and bona fide restored without ransom, and on paying the debts they may have contracted during their captivity, and each crown shall respectively reimburse the sums which shall have been advanced for the fubfistence and maintenance of their prisoners by the sovereign of the country where they shall have been detained, according to the receipts and attested accounts, and other authentic titles which shall be produced on each fide.

ART. X. In order to prevent all causes of complaint and dispute, which may arise on account of prizes which may be made at sea after the signing of these preliminary articles, it is reciprocally agreed that the ships and effects which may be taken in the channel, or in the north seas, after the space of twelve days, to be computed from the ratification of the present preliminary articles, shall be restored on each side.

That the term shall be one month from the channel, and the north seas as far as the Canary islands inclusively, whether in the ocean or in the Mediterranean: two months from the said Canary islands as far as the equinoctial line, or equator, and, lastly, sive Vol. XXV.

months in all parts of the world without exception, or other more description of time and place.

ART. XI. The ratifications of the present preliminary articles shall be expedited in good and due form, and exchanged in the space of one month, or sooner if it can be done, to be computed from the day of the signature of the present articles.

In witness whereof, we the under-written ministers plenipotentiary of his Britannic Majetty and of his Catholic Majetty, by virtue of our respective powers, have agreed upon and signed these preliminary articles, and have caused the seal of our arms to be put thereto.

Done at Verfailles, the 20th day of January, 1783.

ALLEYNE FITZHERBERT, (L. S.) LE COMTE D'ARANDA, (L. S.)

Articles agreed upon by and between Richard Oswald, Ejq. the Commissioner of his Britannic Majesty for treating of Peace with the Commissioners of the United States of America, in behalf of his faid Majesty, on the one part, and John Adams, Benjamin Franklin, John Jay, and Henry Laurens, four of the Commissioners of the faid States for treating of Peace with the Commissioner of his faid Majesty, on their behalf, on the other part; to be inserted in and to constitute the treaty of Peace proposed to be concluded between the crown of Great Britain and the faid United States; but which Treaty is not to be concluded until Terms of a Peace shall be agreed upon between Great Britain and France; and his Bri-|X|

tannic Majesty shall be ready to conclude such treaty accordingly.

WHEREAS reciprocal advanence are found by experience to form the only permanent founda-tion of peace and friendship between states, it is agreed to form the articles of the proposed treaty on fuch principles of liberal equity and riciprocity, as that partial advantages, those feeds of discord, being excluded, fuch a beneficial and fatisfactory intercourse between the two countries may be established as to promife and fecure to both per-

petual peace and harmony.

ART. 1. His Britannic Majefty acknowledges the faid United States, viz. New Hampshire, Masfachusets Bay, Rhode Island, and Providence Plantations, Connecticut, New York, New Jersey, l'ennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia, to be Free, Sovereign, and Independent States; that he treats with them as fuch; and for himfelf. his heirs, and successors, relinquishes all claim to the government, propriety, and territorial rights of the same, and every part thereof: and that all disputes which might arise in future, on the subject of the boundaries of the faid United States, may be prevented, it is hereby agreed and declared that the following are and shall be their boundaries, viz.

ART. II. From the north-west angle of Nova Scotia, viz. that angle which is formed by a line drawn due north from the fource of Saint Croix River to the Highlands: along the faid islands, which divide shofe rivers that empty themselves

into the River St. Laurence from those which fall into the Atlantic Ocean, to the north-westernmost head of Connecticut River, thence down along the middle of that river to the forty-fifth degree of north latitude, from thence by a line due west on said latitude, until it strikes the River Iroquois or Cataraquy; thence along the middle of faid river into Lake Ontario, thro' the middle of faid lake, until it strikes the communication by water between that lake and lake Erie; thence along the middle of faid communication into lake Erie, through the middle of said lake until it arrives at the water communication between that lake and Lake Huron; thence along the middle of faid water communication into the Lake Huron; thence through the middle of faid lake to the water communication between that lake and Lake Superior; thence through Lake Superior, northward of the Isles Royal and Phelipeaux, to the Long Lake, thence through the middle of faid Long Lake, and the water communication between it and the Lake of the Woods, to faid Lake of the Woods; thence through the faid lake to the most north-western point thereof, and from thence on a due west course to the River Mississippi; thence by a line to be drawn along the middle of the faid River Misfissippi, until it shall intersect the northernmost part of the thirtyfirst degree of north latitude. South, by a line to be drawn due east from the determination of the line last-mentioned, in the latitude of thirty-one degrees north of the equator, to the middle of the River Apalachicola, or Catahouche; thence along the middle thereof to its junction with the Flint

Flint River; thence strait to the head of Saint Mary's River; and thence down along the middle of St. Mary's River to the Atlantic Ocean. East, by a line to be drawn along the middle of the River Saint Croix, from its mouth in the Bay of Fundy to its fource, and from its fource directly north to the aforefaid highlands, which divide the rivers that fall into the Atlantic Ocean from those which fall into the River St. Lawrence; comprehending all islands within twenty leagues of any part of the shores of the United States, and lying between lines to be drawn due east from the points where the aforefaid boundaries, between Nova Scotia on the one part, and East Florida on the other, shall respectively touch the Bay of Fundy and the Atlantic Ocean; excepting fuch islands as now are, and heretofore have been, within the limits of the faid province of Nova Scotia.

ART. III. It is agreed that the people of the United States shall continue to enjoy unmolested the right to take fish of every kind on the Grand Bank, and on all the other Banks of Newfoundland; also in the Gulph of St. Lawrence, and at all other places in the fea, where the inhabitants of both countries used at any time heretofore to fish; and also that the inhabitants of the United States shall have liberty to take fish of every kind on fuch part of the coast of Newfoundland as British fithermen shall use (but not to dry or cure the same on that island) and also on the coasts, bays, and creeks, of all other of his Britannic Majesty's dominions in America; and that the American fishermen shall have liberty to dry and cure fish in any of the unsettled bays, harbours, and creeks, of Nova Scotia, Magdalen islands, and Labrador, so long as the same shall remain unsettled, but so soon as the same or either of them shall be settled, it shall not be lawful for the said fishermen to dry or cure sish at such settlement, without a previous agreement for that purpose with the inhabitants, proprietors, or possessor the ground.

ART. IV It is agreed, that creditors on either fide, shall meet with no lawful impediment to the recovery of the full value in serling money, of all bona fide debts

heretofore contracted.

ART. V. It is agreed that the Congress shall earnestly recommend it to the legislatures of the respective States, to provide for the restitution of all estates, rights, and properties, which have been confiscated, belonging to real British subjects, and also of the estates, rights, and properties of persons resident in districts, in the possesfion of his Majesty's arms, and who have not borne arms against the said United States. And that persons of any other description fhall have free liberty to go into any part or parts of any of the Thirteen United States, and therein to remain twelve months unmolested in their endcavours to obtain the restitution of such of their estates, rights and properties, as may have been confifcated; and that Congress shall also earnestly recommend to the feveral States a reconfideration and revision of all acts or laws regarding the premifes, fo as to render the faid laws or acts perfectly confistent not only with justice and equity, but with that spirit of conciliation, which on the return of the bleffings of

peace

peace should reductify prevail. And that congress shall also carneilly recommend to the several States, that the estates, rights and properties of such last-mentioned persons shall be restored to them; they refunding to any persons who may be now in possession the bona side price (where any has been given) which such persons may have paid on purchasing any of the said lands or properties since the confiscation.

And it is agreed, That all perfons who have any interest in confiscated lands, either by debts, marriage settlements, or otherwise, shall meet with no lawful impediment in the prosecution of their

just rights.

ART. VI. That there shall be no future confiscations made, nor any profecutions commenced against any person or persons for or by reason of the part which he or they may have taken in the prefent war; and that no person shall, on that account, fuffer any future loss or damage, either in his perfon, liberty, or property, and that those who may be in confinement on fuch charges, at the time of the ratification of the treaty in America, shall be immediately set at liberty, and the profecutions fo commenced be discontinued.

ART. VII. There shall be a firm and perpetual peace between his Britannic Majesty and the said States, and between the subjects of the one and the citizens of the other, wherefore all hossilities both by sea and land shall then immediately cease: all prisoners on both sides shall be fet at liberty, and his Britannic Majesty shall, with all convenient speed, and without causing any destruction, or carrying away any negroes, or

other property of the American inhabitants, withdraw all his armies, garrifons, and fleets from the faid United States, and from every port, place, and harbour within the same; leaving in all fortifications the American artillery that may be therein: and shall also order, and cause all archives, records, deeds, and papers, belonging to any of the faid States, or their citizens, which in the course of the war may have fallen into the hands of his officers, to be forthwith reffored and delivered to the proper States and persons to whom they belong.

ART. VIII. The navigation of the Mississippi, from its source to the ocean, shall for ever remain free and open to the subjects of Great Britain and the citizens of

the United States.

ART. IX. In case it should so happen, that any place or territory belonging to Great Britain or to the United States, should be conquered by the arms of either from the other, before the arrival of these articles in America, it is agreed, that the same shall be restored without difficulty, and without requiring any compensation.

Done at Paris the 13th day of November, in the year 1782.

CHA-

CHARACTERS.

Charaster of Augustus Cæsar: from Dr. Bever's Legal Polity of the Roman State.

T has been the fate of this prince, in common with many others in the same exalted station, to be transmitted to posterity in two opposite views ; both of which being too much difguiled by false colours, it is as difficult to cleanse him from the dark stains of calumny, as from the gaudy fmear of adulation. It would be needless to repeat what has so often been urged on each fide, upon to interesting and popular a topic; suffice it, therefore, to indulge our curiofity with a few observations upon one particular part of this celebrated character, which has been the subject of more general censure; and for which his conduct too often supplied occasion.

As we are not now attempting to draw the spotless portrait of a patriot king, a prodigy which never existed, unless in the reverries of visionary politicians, we are not concerned about what he

ought to have been, but to reprefent him as he actually was. If, by throwing a shade over those defects, where it can be introduced with propriety, we can feften their harsh appearance; if by accounting for fome dubious instances of his behaviour, upon principles that are less disgraceful to the human heart, there may be a chance of approaching nearer to the real truth; we shall then enjoy the pleasing opportunity of doing some little justice to the memory of a very eminent perfonage; who, with all his blemishes, was both an ornament and bleffing to his country.

All his defamers, whether ancient or modern, feem, as it were, to have been angry with him, for ceasing to be a tyrant, because he undoubtedly was such, when he first presumed to place himself at the head of the commonwealth; striving to make us believe, that a prosound hypocrify predominated through the very best of his actions †; as it a man who had been once bad could not possibly resorm; and every token of re-

^{* &}quot; Apud prudentes, vita ejus varie extollebatur, arguebaturve." Tac Ann. 1. 9. Their fentiments are to be found at large in the fune pullage.

† "Pietatein erga parentem, et tempera reipublica, obtentui lumpia."
Tac. Ann. 1. 10.

rentance for past misconduct were only to add one more vice to his former number.

That Augustus wanted that greatness of mind, that fearless openness of heart, which were the peculiar characteristics of Julius Cæsar, may be admitted, without being imputed as a crime. The complexion of the soul, in its original formation, is no more within a man's own power, than the complexion of his countenance. Both, indeed, may be improved by labour and cultivation; but, in consequence of certain natural defects, cannot, with all the art of man, be heightened into absolute persection.

him, therefore, to Allowing have been inferior in these natural endowments, it was, at worst, only his misfortune. But had he been possessed of them in a still more exalted degree, the very temper of the times would have prevented him from exerting them in their full latitude. Surrounded as he was with a miscellaneous multitude, it behoved him to fludy their dispositions, and to watch their motions, in order to guard against the machinations, either of open enemies, or treacherous The instance of his iltriends. luftrious ancestor, still bleeding before his eyes, who had himfelf tallen a victim to his too great contempt of fuspicion, admonished him to beware of the concealed dagger, to stifle his resentment, and look with complacency, even upon his suspected assassin.

This constant reserve and circumspection, therefore, was the natural consequence of that perilous eminence whereon he flood; without implying the least malicious defign against the peace and liberties of his country. On the contrary, if actions speak the man, we shall be well justified in affirming, that, tyrannically as he began his career, the virtues of the Prince were a reasonable atonement for the vices of the Triumvir. When once difengaged from his pernicious connexions with his abandoned affociates *, and in quiet possession of an imperial throne, his life was tainted with fewer gross blemishes, than generally fall to the lot of those, whom Providence has been pleased to intrust with any portion of fovereign authority.

A course of near forty years indefatigably employed in the faithful administration of justice; in preserving an immense dominion in a general state of union and tranquillity; in cultivating the arts of peace; in improving the comforts and elegancies of domestic life; and in the exercise of every other benevolent and patriotic virtue; clearly displays the real complexion of the heart, and loudly calls upon all mankind to give it full credit for sincerity.

If to accomplish these beneficial and noble purposes; if, the more effectually to govern a seditious people, long used to all the wildness of licentiousness, he found it necessary, on occasion, to study

^{* &}quot;Multa Antonio, ut intefectores patris ulcisceretur, multa Lepido concesfisse. Postquam hic socordia senuerit, ille per libidines pessum datus sit: in non aliud discordantis patriae remedium fuisse, quam ut ab uno regeretur." Tac, Ann. 1. 9.

their inclinations, to temporize with their humours, to restrain or conceal his own love of absolute power, and to alleviate the weight of the yoke, that they might all bear it with greater chear-ulnefs; these are no other than the laudable artifices of the most confummate wifdom; fuch as the foundeft policy need not bluth to avow, nor the mildest government to practife. To fligmatize fura behaviour with the odious names of hypocrify or cowardice, is not only a violation of the first principles of common charity; but it is (what the great fatirift knew to be too deeply rooted in the nature of man) a malicious joy in misconstruing and saverting the moral qualities of human actions *.

But had the heart of this illustrious prince been fo truly corrupt, we should never have seen the pen of his profest encomiast glowing with fuch rapturous praises of political liberty; nor the most firm

and stubborn champion of it that Rome ever beneld, the avowed and irreconcileable enemy of the whole blood of the Cæfars, drawn under that most fublime and majettic of all characters, the giver of laws to the bleffed spirits in Ely-Much less should we have heard the inhuman Mezentius fo warmly imprecating those calaminies, which had a defervedly fallen upon his innocent and amiable fon Laulue; and pathetically confessing the justice of those punishments, which he then suffered from the well-grounded refentment of tis much injured people t. This is too bold and dangerous a language for a poet to echo in the ears of a tyrant; had Augustus, therefore, actually merited that opprobrious name, where now would have been the works of Virgil? He who rescued his memory from oblivion, and gave immortality to his muse, contrary to the express will of the too modest author,

" "At nos virtutes ipfas invertimus, atque

"Sincerum cupimus vas incrustare.----- " Hic fugit omnes

"Infidias, nulloque malo caput obdit opertum;

" (Cum genus hoc inter vitæ verf-mur, ubi acris

"Invidia, atque vigent ubi crimina) pro bene sano "Ac non incauto, fictum aftutumque vocamus."

Observations, which apply so very closely to the case before us, that one would almost imagine them introduced by this ingenious fatirist, as an oblique answer to some malevolent aspersions, which might have been thrown out against the character of his princely puron.

† "Secretosque pios, his dantem jura Catonem." Virg. Æn. 8. 670.

1 " Idem ego, nate, tuum maculavi crimine nomen;

"Pulsus ob invidiam solio sceptrisque paternis, " Debueram patrize pœnas; odifque meorum

must not only have admired his genius, but have applauded his

principles.

The prince, therefore, who at once professes himself a friend to learning, and an enemy to liberty; who strives to enlighten the understanding of his subjects, only to make them more sensible of their own wretchedness; is a monster, which human nature, pregnant as the is with contradictions, has very rarely exhibited to the eye of the world. It is the blessed property of the liberal arts, to mollify the rudeness of the manners, and to calm the natural ferocity of the passions. The rank and poisonous weeds of flavery will fhrink and wither away, when overshadowed by the luxuriant and fertile branches of found literature.

The court of Augustus was the true feat of politeness and humanity; and was adorned with the brightest constellation of genuine wits, that ever inone at the fame inflant in any age or country, from the beginning of time. In this facred asylum, every science that could harmonize the mind, or improve the heart, was fure of being embraced with the most cordial himself, affection. Inspired, a mature education, with the warmest zeal for every kind of ingenuous and useful knowledge *,

he neither wanted judgment to discern real abilities in others, nor generofity to reward them. preside in the assemblies of the poets, orators, historians and philosophers, to submit his own productions to their candid and friendly criticisms, were among the most favourite amusements of his leifure hours; and while he listened with attentive pleasure to the rehearfals of their elegant compositions, his smiles gave life to genius, and wings to emulation +. Honours fo judiciously conferred redounded with double lustre upon his own character t, A mind occupied in fuch rational and benepursuits, could find no volent room for the lawless suggestions of ambition or power; but, at perfect ease in itself, was able to strike even his enemies with awe and reverence; and, without one painful effort, to fecure to a wide and extensive empire the substantial comforts of universal peace, and domestic happiness.

Neither was it less to his glory to have had a Macenas for his friend and counsellor, whose household was the consummate model of refined elegance; where modest merit never wanted a patron; where friendship dwelt without jealously, erudition without contention, wit without petulance, and where the most accomplished

^{1 &}quot;At neque dedecorant tua de se judicia, atque "Munera, que multà dantis cum laude tulerunt,

scholars of the age were rivals in excellence, without envy *. This is not the policy of real tyrants, whose sovereignty has often no firmer basis than the supineness and ignorance of their people; and whose interest it is to discountenance all solid learning, and ingenious investigations of the common rights of mankind, that may help to expose the weak and rotten foundations of despetism.

Upon the whole, therefore, after making all reasonable allowances for the infirmities of human nature in general; for those temptations to which the great and powerful are more particularly exposed; and for the very desective ideas of moral rectitude, under the impersect system of religion at that time universally prevailing; we may venture to pronounce, that the virtues of Augustus far out-

weighed his vices; and to enroll him in the catalogue of those princes, who have been a bleffing to their country, and an ornament to a throne.

Character of Justinian; from the fame Author.

AVING thus brought down the history of the Roman Law to its final reformation, it may be worth while to take a short view of the character of this great prince, to whom the world will lie under a perpetual obligation for these inestimable treasures. This character, which he had himself carefully erected upon the most solid basis of wisdom, justice, and munificence, received its due share of applause from such impartial judges as best knew how to

* "Domus hậc nec purior ulla est,

" Nec magis his aliena malis; nil mì officit unquam,

" Ditior hic, aut est quia doctior; est locus unicuique suus."

The same poet, in another passage, gives this affectionate account of several of his most intimate friends;

" Plotius, et Varius Sinuessæ, Virgiliusque Occurrunt; animæ, quales neque candidiores

- "Terra tulit, neque queis me fit devinctior alter.

 O, qui complexus, el gaudia quanta fuerunt!
- " Nil ego contulerim jucundo fanus amico."

Sat. 1. 5. 40.

And in another he seems to have described, in one view, almost the whole society of learned men, with whom he spent the best part of his life;

" Plotius et Varius, Mæcenas, Virgiliusque,

- "Valgius et probet hæc Octavius optimus, atque "Fuscus, et hæc utinam Viscorum laudet uterque."
- " Ambitione relegatà te dicere possum,
- " Pollio; te, Meffala, tuo cum fratre; fimulque " Vos Bibuli, et Servi; fimul his te, candide Furni;
- " Complines alios, doctos ego quos et amicos
- " Prudens prætereo: quibus hæc, fint qualiacunque,
- " Arridere velim: doliturus, ti placeant tpe
- " Deterius noftra."

Ib. Sat. 1. 10, 81, &c.

appreciate its merits, though it often suffered the rude attacks of abuse and obloquy; a common tribute, which the most virtuous and patriotic fovereigns, in all ages and countries, have ever paid to envy, discontent, and faction. But, towards the beginning of the feventeenth century, a very black cloud was fuddenly spread over it, in confinence of a manufcript, which the malicious industry of a Popish bigot had brought out of some obscure corner of the Vatican, and introduced to the world with all the parade and confidence of authentic history.

Though this extraordinary composition had neither beginning nor ending, name nor date, to determine by whom or when it was written, it was boldly fathered upon Procopius*; a person whose dutinguillied learning and abilities had recomme ded him to the favour of the emperors Anaflanus and Justin, by the latter of whom he was appointed affessor, or counfellor, to the famous Belifarius. By the advantage of this fituation, wherein he continued for a long term of years, he was enabled to write a very exact and elegant history of those times, which he published, much to the fatisfaction of Justinian; and, without any apparent adulation or bitterness had related what he either then knew, or believed to be fact.

It is afferted indeed by fome later authors, that, finding himself afterwards deceived in certain particulars, which he had represented too much in favour of that emperor, he intended to correct thefe mistakes; and it is probable that he did actually publish something to that effect. But it is very obfervable, that the author, who gives a catalogue of the works of Procopius, calls it by a name implying only a retractation † of some former errors, and of much more confined fignification than the title given to the book in question; which contains great variety of detached flories, bearing little or no relation to what Procepius had fuid in his former hillery, and confequently could not be the thing he then professed to publish.

This circumstance entirely defiroys the proof of the identity of the author, upon which the editor so much relies, and which he endeavours to establish upon the credit of Suidas; who mentions, that a book, under the name of Anecdotes, was written by Procopius, full of severe reslections upon Juf-

^{*} The title of this work is, " ALERDOTA, feu Arcana Historia." It was first published at Lyons, in 1625, by one Nicholaus Alemannus, with a very ingenious and artful Preface, and a variety of learned and entertaining annetations, all well calculated to impose upon a negligent or prejudiced reader; and, as fuch, it garned considerable credit with many, especially the zealous sirends of the Holy See. It is likewise reprinted, in a very pompous and magnificent manner, among the other Eyzantine Historians, at Paris, in 1663.

[†] Το δε τεταρτη, ΑΝΤΙ ΡΡΉΣΙΣ ες η, 'ων προς Ικςισιανόν είρνε δι' επαίου παίων, και 'ως' εν τις παιογρία των ευτώ με καλώς είρνμειαν. Νίσορη, Cull. lib. 17. c. 10. edit. Par. 1630.

cinian and his empress Theodora, as well as upon Belisarius and his wise. From hence, and likewise from divers extracts made by Suidas, which correspond with the present work, he concludes it must necessarily be the same that was written by Procopius.

But the age in which this lexicographer lived is wholly unknown; and it is certain, that his original text has been so much interpolated and corrupted in later times, that men of the best learning entertain great doubts of its authority †. The utmost, therefore, that can be collected from these premises, is that a book of this kind was published; but it cannot go fo far as to ascertain the The most general real author. conjecture is, that he must have been some obscure and contemptible scribbler, who, disgusted with Justinian on account of certain religious disputes, which then raged with the most unseemly violence, could think of no better mode of revenge, than to fall foul upon his character.

In fact, as it has been very pro-

perly observed by a judicious writer of the last century, "who-" ever was the real author, it does " almost as much prejudice to the " reputation of Procopius, as it " hurts the memory of the empe-" ror I." The verbose and affected flyle, with the defultory and incoherent arrangement of facts, are the reverse of every thing that can be included within the description of judgment or scholarship. charges brought against Justinian, of vice, oppression, and cruelty, are fo numerous and exaggerated, that, if true, so far from enjoying his crown and life, as he actually did, for near forty years, a people who had but the lowest degree of feeling for their own comfort. would not have suffered such a tyrant to have lived an hour. And, what amounts to the most unquestionable self-refutation of all others, the tales with which it abounds are so monstrous, incredible, and unnatural, that they would be a difgrace to the most fabulous legends, in the darkest periods of Popish ignorance and superstition §. Neither are they stronger

^{*} Προκοπιος—γεγανέν επιτών χρινών Ιερινιανε το βασιλείος, ύπιος αφείς χριματίσας Βελισαρίος και ακόλυθος καια παθας τος συμφανίας πολεμός το και πραξείο, και ότι αυθό συγγραφείσαις, εγράψε και έπεριν διδλίεν, τα καλυμένα ΑΝΕΚΔΟΤΑ, των αυθών πραξείν άς είναι αμφύτερα τα βιδλία θ. το βιδλίον Προκοπίο το καλυμένον ΑΝΕΚΔΟΤΑ, ψογός και κογκώδιας Ιερινιανό το Βασιλείος περιέχει, και τος αυτό γυναίκος, Θευδαράς αλλα μέν και αυτό Βελισαρίος και τος γαμέτης αυτό. [†] V. Præf. Lud. Kust. 2d. edit. ut sup. ‡ Howell's Hist. Mundi, pt. 3. c. 2. sect. 3. § 67.

Among these stories, some of the most curious are, That Justinian was begotten upon his mother by a damon:—That his head was formed of an aerial substance, which often seemed to evaporate, so that he was seen to walk about without any upon his shoulders:—That a holy Monk, once coming to present a petition to him, on approaching the throne, instead of an emperor, saw it filled with a frightful spectre.—That the empress Theodora had frequently carnal communications with infernal spirits; with others of equal authority, which the reader, if he thinks it worth his while, may find at length in the work itself, c. 12.

proofs of the wickedness, than of the folly or infanity, both of the author himself, and of those who have to a mostly endeavoured to impose him at the public, as an object worthy or attention.

Procopius was a man of the world, univerfally effected for his knowledge and probity; who had enjoyed the same high and honourable station, under no less than three fuccessive emperors, for a long course of years; and under one of the best and greatest generals that Rome, or, perhaps, any other nation, could ever boaft of; by all of whom he was respected, cherished, and rewarded. spirit, dignity, and correctness, with which the history of his own times is written, plainly shew, that he scorned either to flatter or fear. He published it at the earnest encouragement of an able and differning prince, who could receive honest praise and honest centure with the fame complacence and equanimity.

If, amidst the complicated variety of facts, which the vaft extent of his subject required him to relate, he had been guilty of any material errors, it did him honour to confess and retract them upon conviction. But what he had affested as a man of honour, he would recant as a man of honour. He would have been assamed to oppose unmerited praite with base calumny, or to rectify mittakes by improbable fallehoods, or incredible fables. Could he have condescended to proflitute his penin fo vile and prepofterous a work as that now imputed to him, he must, in the first instance, have been a most abject sycophant; in the other, a most slanderous assassin.

But, as history will justify no fuch suppositions, this worthy and learned historian stands fairly acquitted, in the eyes of all persons and conscience. of moderation The real author, whoever he be, from his mere infignificance and obfcurity, efcapes that infamy and deteffation which his memory well deferves; and the whole difgrace falls upon the editor and his abettors; who, with abilities and erudition equal to a more honourable employment, rescued this despicable libel out of its congenial darkness, for the avowed purpose of blatting the good name of this accomplished and discerning prince, who so wifely checked the infant pride, and humbled the rifing arrogance, of the fictitious successors of St. Peter.

Politically speaking, the design was artful and well-timed. aspiring pontisfs, who, for several pail ages, had held the whole Christian world in the most humiliating flate of thraldom, under the impious claim to a divine commission, had the mortification to perceive that many rich and potent kingdoms had shaken off their fetters. They found themselves engaged with the temporal princes of Europe, whose understandings were more enlightened than formerly with the beams of found learning; who knew how to oppose authority with authority; who could trace this usurped power up to its original fources, and fay, "that from the begin-" ning it was not fo;" who those were, whose superflitious timidity gave new life to their spiritual infolence; and who had the courage to restrain and punish it. They could fay - this was lustinian-

this

this was he who, in virtue of his own fupremacy, fummoned the fifth ecumenical council at Conftantinople, and fent Virgilius, that turbulent Bishop of Rome, into exile; from whence he suffered him not to return, till his infallibility condescended to set his hand to the decisions of that affembly, to which he at first had resused his affent.

No effort was to be left untried to weaken the force of fo dangerous a precedent. When, therefore, some fortunate accident, as it most probably was, brought to light this musty fragment, imperfect as it was, it supplied the quiver of flander with plenty of new shafts against the common enemy; and, furnishing no evidence whereby to authenticate itfelf, it was easily in the power of an ingenious and artful commentator to ascribe it to whomsoever he pleased, and to place it in those hands where it would do the most execution.

Thus did it fall to the let of Procopius. But whoever will take the trouble to peruse the dedication and preface of the editor, and consider the bitterness and acrimony with which they are penned, will instantly perceive, that the supposed insults upon the dignity of the Holy See were the grand springs of their resentment; that these were the tones the most in

unison with the master-strings of their passions; and that maiice and revenge could have been the only motives for imposing such trash upon the public, which deferved no better fate than what it had already in part fuffered, to be food for worms. Upon the whole, it is hoped that what has been here advanced, to rescue a respectable author from the infamy of being the parent of such spurious offspring, will be admitted to fland upon much more substantial foundations than mere uncertain coniecture +.

It may possibly be expected, that fome notice should be likewise taken of Justinian's ingraticude and cruel treatment of the great Belifarius, whereby he is reported to have deprived him of his eyefight, and to have exposed him, in his old age, to every extreme of poverty and contempt. This calumny was first broached by a later author, named Crinitus, of little note or reputation; but, being of a nature well calculated to affect the passions, has received by far the greatest degree of its credit from the pathetic pencils of a Vandyke and a Salvator Rofa. This. however, is too gross a fable almost to require confutation. Not one of the historians who lived near those times has given the least hint to justify such a supposition: on the contrary, though

^{*} Mosh. Hist. Eccl. pt. 2. c. 3. § 11.

[†] For further satisfaction on this subject, the reader is referred to the Prefaces themselves, as prefixed to the edition of the ANEKAOTA before mentioned; or to the resultation of it by Hein. Hist. Jur. Civ. § 384. in which he has pointed out the principal foreign writers who have taken up the question in savour of Justinian: and more particularly to the learned Dr. Howell, Hist. Mun. pt. 3. c. 2. sect. 3. § 61. ad fin. who lived not long after the publication, and seems to have engaged in the controversy with equal learning and candour.

Belifarius, either through the malice of his enemies, or his own imprudence, fell into a temporary difgrace, it is certain, from very good authority *, that Juitinian foon became fensible of his injuries; that he restored this preferver of his country to his fortune and station, and that he died, far advanced in years, in the arms of plenty, peace, and honour.

To close the whole in as few words as possible, we shall now give a short sketch of the most striking parts of this prince's conduct, which are universally admitted to be true both by friends and enemies, from which every reader of discernment will easily form his own judgment, as the defects of his character in no wise depreciate the merit of his laws.

On his first appearance as the defigned fucceffor to the throne, he gave the public a rather unfavourable opinion of his regard for decorum; by prevailing upon his illiterate and fuperannuated uncle to repeal some laws of Constantine and Valentinian, which, to preferve the dignity and purity of the senatorian families, had forbiden all persons of that rank to marry proflicutes, or any other women in fuch base and infamous stations of life +. This gave a licence to many mean and unequal matches; though the principal view of Justinian was, to enable himself to espouse a woman of the same low and difreputable occupation; which was still more extraordinary, as he was then at a time of life when, generally speaking, men are past

the age of being martyrs to love, and too young to dote. Indeed it has been univerfally allowed, that this lady, whose name was Theodora, was possessed of such a bewitching delicacy of features, animated with fuch an exquisite wit and sprightly conversation, that, however reprehensible his choice may appear to those whose judgment is regulated by the cold phlegm of discretion, it must be left to fuch as have quicker feelings of that tender and delicate passion, to decide in what degree it will admit of an excuse. confequence of this union, however, was certainly to be lamented, as his daily increasing attachment to a woman of an ambitious and aspiring temper, sometimes betrayed him into acts of imprudence and injustice, which his own better understanding could not fail to condemn. He has likewife been accused of vanity, and fondness of adulation and popularity; which is more or less blameable, in confideration of the principle from whence it flows. Irregular emotions of this kind may often proceed from an exuberant goodness of heart, and from too anxious a defire of reaping that reward from the applause of others, which a perfon of more moderate passions will derive, in much greater perfection, from an inward consciousness of his own virtuous intention.

But, taking him with all these desects, and with whatever else the chaste tongue of historic truth can with justice lay to his charge,

C. 5. 5. 7. et ib. tit. 27. 1. which were repealed accordingly by C. 5. 4. 23.

^{*} Cedrenus, inter Hist. Byzant. p. 370, &c. an author of acknowledged veracity.

it must be confessed, that, for the course of a long reign, he governed a vast and heterogeneous mixture of people with mildness and equity; that he protected them with his arms; adorned their provinces with magnificent edifices, chiefly dedicated to the fervice of the true religion: that he recovered very wide and extensive regions, which had been long alienated, especially the antient capital of the empire; and that the laws, which he collected methodized with fo much care and wifdom, not only contributed to a more equal and regular administration of justice within the limits of the Roman dominions, but will be a lasting blessing to the whole civilized part of mankind to the latest posterity.

Characters, Manners, Customs, Sc. of the People of Naples; from Travels in the Two Sicilies, by Henry Swinburne, Ejq;

N Christmas time, all quarters of Naples resound with Pastorali or Siciliane, a kind of simple rural music, executed by Abruzzese or Calabrian shepherds, upon a species of bag-pipes, called in Abruzzo, Zampogna, and Ciaramelli in Calabria. The tunes vary according to the provinces: in the south, they have

three different airs; the northern shepherds know only two, to which they add what variations the boldness of their own genius inspires. The boys learn of their fathers to play upon this instrument as the means of subsistence*. At other seasons, it is rare to hear any agreeable founds in the streets of Naples, though it is the nursery of mulical professors: a school, where the greatest masters have imbibed their principles, and acquired that knowledge of compofition, which has enchanted the ears of all Europe. There is no fuch thing as a national music, unless we give that name to a monotonous drawling feguidilla, that ferves the nurses + as a lullaby to put their children to rest. and feems borrowed from the Spaniards, who, I believe, learnt it of the Moors. I never resided in any Italian town where there was a less musical turn in the populace: few fongs, guittars, vielles, or organs, enliven the evenings, as in the northern states of Italy, unless they be sent for to entertain the parties that in fummer sup on the shore of Posilipo 1.

They do not even dance to music, but perform the Tarantel-la to the beating of a kind of tambourine, which was in use among their ancestors, as appears by the pictures of Herculaneum. The Tarantella is a low dance, con-

* The waits still kept in the pay of some corporations in England, are counterparts of these shepherds.

I have been told, that before the famine and calemities of 1764, the populace of Naples was more cheerful and muficulty inclined than at prefent.

[†] To fecond its parcotic influence, they administer to them copious doses of Venice treacle, of which such quantities are used, as render it a material article of importation. The Neapolitans have tears at command, and are very easily moved to shed them. Neither blows nor carefles can stop their children when once they begin to cry: they must roar till they are tired.

fifting of turns on the heel, much footing and inapping or the fingers *. It ieems the delignt of their foul, and a contant holiday diversion of the young women; who are, in general, far from handsome, although they have fine eyes and flriking features. Their hands and feet are clumfy, then shapes neglected, their necks Habby, and their skins discoloured by living fo much in the fun without bonnets. Amongst them we may find alm ? every mode of hair-dressing seen on the Greek and Roman coins +.

The women are always fighting and fcolding, but never relift their husband's authority, when comes to separate the combatants, and carry home his dishevelled fpouse, who seems to stand as much in awe of her confort, as the Russian wives do of theirs, and fuffers herself to be beaten by him with as little murmuring. I was fhewn a woman here, who, during the life of her first husband, was a pattern of modesty and evenness of temper to the whole parish; but upon contracting a second marriage, furprized fcandalized the neighbourhood with her perpetual riots and obthrepsroufness. On being reprimanded for her behaviour by the curate, the very frankly acknowledged that her former husband

understood the management of a

wife, and used to check her intemperate burfts of passion by timely correction; but that her pretent helpmate was too mild, to apply the proper chastisement which every wife requires more or less. Men seldom interfere in feminine brawls; and if they do. generally content themselves with abuling, threatening, or shaking a cudgel or pitchfork at their antagonist, till the crowd comes in to part them. Sometimes a man is stabbed, but this is a rare event among the fishermen, the class of inhabitants I have had most constantly under my eye. Manners vary with the districts; in some they engage with bludgeons, and those are the true lazaroni of Massaniello; in others the attack is made with knives and other deadly weapons; but the Neapolitans are by no means fo bloody and revengeful a people as they are represented by many travel-It requires more than a flight provocation to lead them to extremities. During the prodigious hurry and confusion of the races in Carnival, not the least tumult or quarrel was heard of; and even in the cruel famine of 1764, the only act of violence committed by a hungry populace, increased to double its number by the concourse of peasants from the provinces, where all crops had failed, was to break open and

* Persons of all ranks here dance very low, but mark the time as persectly

pillage

with their steps, as other nations do by springing from the ground.

† The coiffure of the younger Faustina, with the coil of plaited hair upon the crown of the head, occurs frequently in the old town: that with the coll lower down, which may more properly be stiled Lucilla's head-dress, is common among the younger part of the fex in the fuburbs of China, and Plotina's among the women more advanced in years. I do not recollect to have feen any with the roll of treffes to high up as it appears on the head of Faustina the elder.

pillage a fingle baker's shop. Can as much be faid for the temper of the mobs at London and Edinburgh? Drunkenness is not a common vice at Naples, therefore quarrels, its usual confequences, are rare; besides, the Neapolitan rabble allow each other a great latitude of abuse and scolding before they are wound up to a fighting pitch. It is also uncommon to see any thing in public like gallantry among the people; no foldiers are met leading their doxies, or girls going about in quest of lovers; all which are, in other countries, fources of riot and bloodshed. At Naples there is nothing but a mere nominal police; yet burglaries are unknown, riots still more fo, and the number of affaffinations inconfiderable: it bears no proportion to that of the murders committed in the distant provinces, where, I am credibly informed, no less than four thoufand persons are killed annually. Most of these crimes are perpetrated with guns in the mountainous countries, where a great ferecity of character, and wildness of manners prevail, and where the inhabitants are more wandering, and less exposed to the purfuits of the law, which is indeed far from formidable in any part of the realm. It would require a prudent, inflexible, and long exertion of impartial criminal justice, to reduce to order the fierce untractable assassin of the mountainous regions of Calabria, who being driven by the oppression of the barons and officers of the revenue to penury and despair, sets little value upon his life, and braves danger to the last drop of his

blood. The execution, however cruel, of a few banditti, would strike but little terror into their associates, and produce no effect but that of ridding fociety of one or two bad members; nor will any measures of police ever prove effectual, unless government adopt and puriue, with iteadiness, a system that may leffen the grievances of the poor, restrain the despotism of the petty tyrants, and, by providing the peasant with more means of supporting himself and family by honest labour, guard him against the temptation of taking up a lawless line of life. The case is different in the soft and fertile plains of the happy Campagna; there the well-timed prompt execution of a criminal, without allowing him any unneceffary respite to prepare for death, and without fuffering pricits to affemble round him, to excite the devotion, compassion, and almost admiration of the crowd, would operate with great energy on the dattardly minds of the docile race that inhabits this charming climate; the terror of active justice would prove a powerful check to murder, and violent out-

At prefent, the forms of criminal jurisprudence are here so ill ordained, so multiplied and so complex, that if the king were to insist upon a villain, who was taken in the fact, being tried, and if found guilty, hanged before the end of three days, the dispatch would almost kill the judges with satigue; for the trial and procedures would employ them eighteen hours out of each twenty-four: First, the accusation must be laid according to rule, and

witneffes

witnesses examined; next the council for the prisoner pleads a couple of hours; then the advocate for the fisco replies during one hour, and after him the advocate of the poor makes a rejoinder, which he has a right to fpin out for two hours: this done, every one of the four judges harangues; then all the notifications are made, examinations canvaffed, debated, and a thousand trisling formalities observed, which occafion fuch shameful, insurmountable delays, as eternize a criminal process. It happened lately, that upon the final determination of the trial, and condemnation of a malefactor, a message was sent to the jailor to bring the culprit into court in order to receive fentence; when, behold! the turnkey appeared, and made affidavit that the prisoner had died of a long fit of fickness the Christmas twelvemonth before. As the falary of a judge in Naples is only fifty ducats a month (9l 7s 6d), he cannot afford to be honest or expeditious: but the case is still worse in the provinces, where the judges have but twenty-five ducats, and with that must keep a coach and proper household establishment. The scrivani, or commissaries, who have the department of warrants, arrests, and police, are allowed no pay, though they must keep thirty bailiffs a-piece under them; fo that they are naturally very active in taking up an offender, where there is a probability of extorting any money out of him: when once in durance, the prisoner ceases to be an object of confideration to them, and therefore they take no pains to forward his trial, or bring him to justice:

there are at this day above twelve thousand criminals rotting in the different prisons of the kingdom, whose maintenance costs the state above two hundred thousand ducats a year (thirty-seven thousand

five hundred pounds).

The fishermen of Santa Lucia are the handsomest men in Naples: they have the true old Grecian features, and fuch well-proportioned limbs, that they might ferve for models in any academy of defign: they are the most subflantial and best lodged portion of the Neapolitan populace. It is true, as most writers affert, that the houseroom of this metropolis is very inadequate to the population, which, according to authentic accounts, amounted, at the close of the year 1776, to three hundred and fifty thousand fixtyone fouls; and that numbers of these are destitute of house and property. But it is not equally a fact, as they affert, that winter and fummer these houseless inhabitants pass their lives in the open air, and fleep in all weathers in the streets. In summer it is very pleasant so to do, but in winter not even a dog could bear the inclemency of the weather, not fo much on account of cold, as of wet. When the rainy season fets in, it commonly lasts several successive weeks, falling, not in such showers as we are acquainted with in England, where we have rain more or less every month in the year, but by pailfuls, an absolute water-spout, that carries all before it, and almost drowns the unfortunate passenger who is caught out of doors by the storm. The quantity of rain at Naples is much more confiderable than that which

falls

falls on the same space of ground England. Whole months of drought are compensated by the deluge of a day: and besides, the fouth winds are frequently fo boifterous in winter, as to burft open the bolts of both doors and win-At that rainy time of the dows. year, few are so wretched and helpless as to lie in the street, but moit of the vagrants refort to the caves under Capodi Monte, where they fleep in crowds like sheep in a pinfold. As they are thus provided with a dwelling, for which no rent is exacted, they also procure food without the trouble of cooking or keeping house: the markets and principal streets are lined with fellers of macaroni, fried and boiled fish, puddings, cakes, and vegetables of all forts; where, for a very finall fum, which he may earn by a little labour, running of errands, or picking of pockets, the lazaro finds a ready meal at all hours: the flaggon hanging out at every corner invites him to quench his thirst with wine; or if he prefers water, as most of them do, there are stails in all the thoroughtares, where lemonade and iced water are fold. The passion for iced water is so great and so general at Naples, that none but mere beggars will drink it in its natural state: and, I believe, a scarcity of bread would not be more feverely felt than a failure of fnow. It is brought in boats every morning from the mountains behind Caftelamare, and is farmed out at a great rent: the Jesuits, who possessed a large capital, as well as the true spirit of enterprize, had purchased the exclusive privilege of supplying the city with it.

Very little suffices to clothe the lazaro, except on holidays; and then he is indeed tawdrily decked out, with laced jacket and flamecoloured stockings: his buckles are of enormous magnitude, and feem to be the prototype of those with which our present men of mode load their insteps. The women are also very splendid on those days of shew; but their hair is then bound up in tiffue caps and scarlet nets, a fashion much less becoming than their every day fimple method. Citizens and lawyers are plain enough in their apparel, but the female part of their family vies with the first court ladies in expensive dress, and all the vanities of modifh fop-Luxury has of late advanced with gigantic strides in Naples. Forty years ago, the Neapolitan ladies wore nets and ribbons on their heads, as the Spanish women do to this day, and not twenty of them were posfessed of a cap: but hair plainly drest is a mode now confined to the lowest order of inhabitants, and all distinction of dress between the wife of a nobleman and that of a citizen is entirely laid aside. Expence and extravagance are here in the extreme. The great families are opprest with a load of debt; the working part of the community always spend the price of their labour before they receive it; and the citizen is reduced to great parfimony, and almost penury, in his house-keeping, order to answer these demands of external shew: short commons at home whet his appetite when invited out to dinner; and it is fearce credible what quantities of victuals he will devour. The nobility in general are well ferved, and live comfortably, but it is not their custom to admit strangers to their table; the number of poor dependants who dine with them, and cannot properly be introduced into company, prevents the great families from inviting foreigners: another reason may be, their fleeping after dinner in fo regular a manner as to undress and go to bed: no ladies or gentlemen finith their toilet till the afternoon, on which account they dine at twelve or one o'clok. The great officers of state, and ministers, live in a different manner, and keep sumptuous tables, to which strangers and others have frequent invitations.

The establishment of a Neapolitan grandee's household is upon a very expensive plan; the number of fervants, carriages, and horses, would suffice for a sovereign prince; and the wardrobe of their wives is formed upon the fame magnificent scale; yet it is a fixed rule, that all ladies, whatever be the circumstance of their husbands, affluent or circumscribed, have an hundred ducats a month, and no more, allowed them for pin-money. At the birth of every child, the husband makes his wife a present of an hundred ounces, and fome valuable trinkets, according to his fortune. Marriage portions are not very great in general; it does not cost a nobleman more to marry a daughter than it does to make her a nun; for a thousand pounds will not defray the expence of the ceremonies at her reception and profession: she must have a penfion fettled upon her, and referves, befides, a power over her inheritance, in case she shall arrive at any dignity in the convent, and with to enrich it with buildings, plate, or vestments.

Servants and artificers of the city give from fifty to an hundred ducats with their daughters; peafants and country workmen go as far as three hundred. Females at and near Naples are esteemed helpless and indolent, and therefore have always twice or thrice as much fortune as their brothers, who have greater refources in their ftrength and activity. would fcarce get a husband, if her lover did not expect to be reimburfed by her portion the fum he had paid away with his own fifters. In the plains, it is customary for a peasant, on the birth of a daughter, to plant a row of poplar trees, which are down and fold at the end of feventeen years, to make up a fortune for her. The proverbial benediction of Figlij mafchi, male children, which a Neapolitan gives a woman when she sneezes, is founded on the great facility with which the common people provide for their fons: as foon as they can run about they are able to earn their bread, while their fifters remain idle at home, or beg till they are old enough to attract the notice of the men.

Anecdotes of Charles the XIIth of Sweden; from Letters Military and Political, translated from the Italian of Count Algarotti.

To Signor Don GIUSEPPE PECIS.

OU apply to me, as a perfen who has lived much among the northern courts, to clear clear up certain doubts respecting Charles the Twelsth. I will endeavour, to the best of my power, to resolve your questions respecting a prince who was for a length of time the polar star of the military world, and will remain to after ages its most dazzling meteor. You may at any rate rest assured, that I shall not give you a single anecdote, but what I have heard from those who were eyewitnesses to every transaction.

To begin with the vifit he paid to his principal enemy King Augustus at Dresden, you need not entertain the smallest doubt of it, however extraordinary it may appear to you. Charles was not a man of the common samp: he might say, like father Arduin, What! do I rife every morning two hours before day, to think like the rest of mankind? In fact, it was a whim that he determined to indulge. The Swedish army was then on its march towards Russia. One morning, as it was filing off not far from Dresden, the king fuddenly departed with two companions on horseback, directing his course to the city. One of his attendants he leaves at the gate as a centinel, and rides immediately to the palace with the other, whom he leaves in the same manner; giving him his horse in charge, while he ascends the stairs, and enters the apartments of King Augustus, before he had rifen from his bed. Thus was the king obliged to get up without ceremony, and dress himself in the presence of the man who had just before driven him from his throne. Charles remained with him about three Vol. XXV.

quarters of an hour; during which time he scarcely ever took his eyes off him, nor would give him an opportunity of speaking to any person; not even to a page or valet, much less to the minister, who came as foon as he heard of the King of Sweden's arrival. It happened, as they were walking through the rooms of the palace, that Charles first passed through one of the doors, when the minister seized that opportunity of making figns, to know whether it was the king's pleasure that he should be detained; to which he made a fignal in the negative. The vifit turned out a mere affair of ceremony; and Charles being conducted by Augustus to the gate of the palace, he there mounted his horse, and set off full speed to join his army, which he found in the utmost anxiety about him. As foon as it was known that the king had entered Dresden, not feeing him return immediately, they thought every quarter of an hour an age, and became fo impatient as to think of no less than marching up to the town, and laying slege to it, in order to recover their prince.

When in quarters in Saxony, his defign was to march into the heart of the empire, and with his victorious arms to give law to Europe, which was then divided about the Spanish fuccession, Many reasons have been given for the step he took afterwards, of leaving the empire, and turning his arms against Russia. What principally urged him to this was, according to the best-received authors, a note of one hundred thousand pounds sterling given to fomubody

fomebody by the Duke of Marl-borough.

Momentumque fuit mutatus Curio rerum.

The duke finished the business of exasperating him against the Czar, towards whom he had already a violent animofity; and pointed out to him the glory of crushing his only rival, and of becoming the arbiter of the north, which would in the end make him the arbiter of Europe. There were two ways to march into Ruffia; the one by Livonia, a Swedish country on the sea-coast, abounding with grain, which would sublist his army; whence entering into the fertile provinces of Russia, he might direct his march to Moscow, with case and convenience, along the banks of navigable rivers: the other was by Poland and Ucrania, to which he was invited by the Cosack Mazeppa, a malcontent, who promised him every kind of assistance; and by this route he might fall at once upon Moscow, which would decide the fate of Russia. Of these two, Charles himself chose that which was more worthy of his courage than his prudence; as was fully proved by the hardships his troops were obliged to go through, and the extreme misery to which they were at length reduced.

Charles's last campaign against the Danes, wherein he lost his life, was planned indeed entirely by himself; which was not the case with regard to his first enterprises, that were followed with so great success: in these, though he was the Achilles, some other was the Chiron. It was always

his custom to charge the enemy at the head of his cavalry: the difposition of the battle was left to Levenhaupt. The famous difembarkation at Copenhagen, with which Charles, while yet a youth, opened his military career, was projected by General Stuart; the attack of the enemy's trenches at Narva, which brought to mind the exploits of the Greeks against the Persians, by one Gundvil. neral Altendorff conceived the idea of the famous passage of the Duna, where some rasts being floated down the stream with wet straw on them, which was set fire to, the Swedish army passed the river, covered by the smoke from the enemy, who was to leeward; a stratagem first put in practice by Hannibal.

His army was strengthened by the presence of several brave and experienced generals, who had ferved under Charles the Eleventh, his father; who might be of infinite service to him in council, as Philip's officers were to Alexander. It was not so with the Czar, his enemy, who derived instruction from his defeats alone. He reaped more benefit, however, from these defeats, than Charles did even from his victories. The fuccess of the engagement at Pultowa he owed entirely to himself; in which he had to do with the most terrible enemy he ever had upon his hands; over whom this battle gave him a complete and decifive advantage, a battle that might be called the modern Pharfalia.

Charles having arrived, after fuffering many difficulties, in U-crania, found the great promifes of Mazeppa, who had engaged

to subsist his army, reduced to nothing. Being in the greatest diffress for want of provisions, partly through the disappointment he met with from Mazeppa, and partly from the defeat of Levenhaupt on his march to the army with 15,000 men, and a considerable escort of ammunition and provisions, he came to the resolution of laying siege to Pultowa. In this place the Czar had collected a quantity of provisions, and had left a strong garrison to defend it. By the capture of it, Charles might restore plenty to his army, and fecure a good post for his head-quarters, whence he might direct the future operations of the war. Various were the opinions in the Russian army, during the siege, of the steps that should be taken by them: some were for inclosing the Swedes by an entrenchment, and reducing them through hunger to a capitulation: others were for laying waste the country for a hundred leagues around, and leaving them to perish without the risk of a battle. But fearing that the town, which was vigoroufly attacked, would be obliged to furrender, and that Charles would be enabled to refresh his army, the Russians at last determined on not delaying any longer to give him battle. The Czar gave the more readily into this measure, as he knew that Charles's impetuous disposition would induce him to seize eagerly the occasion of a general action with the Russian army, however it might be to his own disadvantage. He marched then early in the morning, so as to arrive in time to encamp in the enwance of a wood, near the King of Sweden; who, he supposed, would prepare matters to attack him the next morning. judged the Czar, and thus it really happened. But in the night the Czar gave orders for feven redoubts to be raised in the wood, just in front of his infantry. This was for two different purposes; one to check the impetuofity and break the order of the Swedes in their first onset, which by experience he had sufficient reason to dread; the other, that he might not that up his troops in a continued line of entrenchment, but afford them the means of fallying out upon the enemy through the intervals between the redoubts; a method of fortifying an encampment highly applauded by Marfhal Saxe, and thenceforward esteemed the most perfect. The king went forth in the morning, full of ardour, and flushed with the hopes of conquest; but it was some time before he took notice of the Czar's disposition. The consequence was, that, though the Russian horse were beaten, and three of the redoubts taken by storm, the Swedes had in the end the worst of the action; which was equal to a decifive victory on the part of the Russians.

The king of Sweden excelled more in the field than in council, was more capable of executing than planning any great defign: he might be compared to a shell, which does sometimes prodigious execution; but it must be when under the direction of an able bombardier.

When he had occasion to confult with others, which was but feldom, he never did it in a direct manner; but proposed a general C 2 question

question to those in whom he placed the highest considence, and took their different opinions on the subject. This might have been the effect of pride, or perhaps of that maxim of princes and statemen, to advise with others, without disclosing their own sentiments.

All the world knows the averfion this great man had for women; but very few know whence it originated. He had scarcely mounted the throne, when, breathing nothing but war, he was continually employed in thinking of the most effectual and destructive means of making it. A certain professor of Stockholm had communicated to him a new invention in the branch of ordnance, with which he was so much pleased as to order him immediately to make the experiment. Impatient for the completion of the work, he went very early one morning all alone to the professor's house, who was in bed, having been taken ill the day before with a fe-After knocking for a confiderable length of time at the door, he was let in, and had a conference with the professor on the subject that his mind was so fully taken up with. At his departure he was preceded by a young girl, a fervant of the professor's, who carried a lantern, and had some pretensions to beau-The king took a fancy to ty. the girl, which shewed he was not indifferent to the fex, and began to take fome liberties with her: but fne, being perhaps a native of Dalecarlia, with a heart congenial to the foil, did not much relish this freedom of the king, and in return treated him

rather roughly. We are affured, that this repulse made so deep an impression on the king's mind, that he absolutely resuled in Poland to see the Countess of Konigsmarck, and for ever banished the sex from his company and his pleasures.

Magnanimity, which you allow him, he certainly possessed to a very high degree. I shall give you an instance of it, by an anecdote which Plutarch would not have omitted, had he written the life of Charles. He happened to be one day, after his return from Turkey, riding out, with a small number of attendants, whom he left, and went on confiderably before. Being come to the gate of a field he had to pass through, he opened it, and neglected to shut it again, according to the laws of the country. The owner of the ground, who was an enfign in the army, being near at hand, and being not acquainted Charles's person, called out to know why he did not shut the gate after him, according to the king's orders, and, as he passed, made use of some uncivil expressions. Why do you not go and shut it yourself? answers the king. This fo enrages the gentleman, that he seizes the bridle, and flops the horse. On this Charles puts his hand to his fword; but the other, being too strong for him, fnatches it from him. The king then draws out a pistol, and threatens to make the other repent it, unless he immediately lays down the fword on a stone that was close by. You would not be fo valiant, fays the gentleman, if I was also provided with a pistol. Go, and fetch one, says

the king. The gentleman on this goes for a pistol, while the king waits his return. As he was coming back in high dudgeon, he espies the king's attendants at a little distance; which giving him some suspicion, he makes his retreat. The noblemen, who had j ined the king, feeing him take up his fword without faving a word, did not venture to ask him any quettions, but followed him in filence. It happened that not long after, the regiment, in which this gentleman was an enfign, became vacant, and was given to one of the noblemen who had that day attended the king. The gentleman thought it necessary to inform his colonel of all the particulars, and defired he would contrive to extricate him from the difficulty. The day being arrived, on which the regiment was to pais in review, the entign does not make his appearance. majesty observes to the colonel, There is an officer missing. informed, that the officer is on guard. Let him be fent for, fays the king. The enfign is accordingly brought forth, God knows with what fenfations. The king immediately gallops up to him, then stops, and looking upon him Redfastly, names him to a first lieutenancy, and orders a good round number of florins to be counted out to him.

There are many other instances related of his magnanimity, which it would be too tedious to enumerate; amongst which, I know not whether you will place that resolution of his, not to have his wound dressed, after hearing of the total deseat of his army at

Pultowa, and his tenring off the dreffings, like another Cato.

A certain particular in the aneedotes of Charles's life, you, who are so curious in investigating the human heart, will be giad to know; which is, that he sometimes recommended to the chaplins of his army, in the fermons which among the Lutherans are preached to the soldiers, to take the following text:

Mincte in vocatione in qua vocati estis.

As Petrach often raifed his thoughts to the third circle of the heavens, where he supposed his Laura was with the other devoted flaves of love; fo did Charles to the circle of the God of War, which was bis heaven. He was frequently overheard by his domeltics counterfeiting first the noise of drums, then that of artillery, and finally the report of fmall arms; when he would all on a fudden clap his hand to the fword which he always wore by his fide; his imagination transforming the chairs and tables in the room into horse and footmen.

During his flay at Bender, having heard mention of the length of time a man may live without nourithment, and of the fasting and austerity practised by the Santons, and by the oriental Jews, he took it in his head to try the strength of his own constitution in this particular. He held out for a week, taking only a glass of water each day; and at the fame time omitting none of his ordinary exercises, among others, that of riding ten leagues on horseback. On the eighth day he found an inclination to eat: so he would suppose, what was very light and easy of digestion, but some good substantial meat, and in no small quantity. This, however, affected neither his health nor his stomach, so as to prevent him from pursuing his or-

dinary course of living.

Whenever he played at Chess, as he frequently did to pass away the time at Bender, he always moved the king towards the front as foon as possible. To cover himself was entirely out of the question; and if ever a pawn happened to be in his way, he did not puzzle himself long about the method of moving him, knocked him at once off the board. Such influence has that genius, or natural disposition, that is born along with us, which in Charles shewed its prevalence to the last: for, after receiving his fatal blow at Frederickstadt, he was found with his hand upon the hilt of his fword.

Thus you have a flight sketch, but an original one at least, of the rival of Peter the Great, to whose great qualities he was at length obliged to give way. tavus Adolphus, who attended the lectures of our Galileo at Padua, and united the characters of the foldier and the politician, was, doubtless, a much greater man; notwithstanding Gustavus mitted an overfight, in neglecting to follow up his victory of Leip-Having completely routed his enemies in that battle, instead of marching straight into Bohemia, he was content with detaching there his ally the elector of Saxony, who carried on the war

without spirit, and was soon gained over by the Austrians. Gustavus divided and diffipated his force, like a great river that overflows its banks, and went here and there throughout Germany, befieging towns, and laying countries under contribution; knew not how to contract and abridge the war, according to the Roman and Turkish method. He gave time to the enemy to recover himself, and lost all his former advantages: so that he was obliged at Lutzen to re-commence that game which he had before won, and which then terminated with his life.

It appears to me, beyond all dispute, that the greatest man among the Swedish monarchs was Gustavus Vasa. He found the means of well regulating and directing the natural strength of his country; and did not attempt to push it beyond its proper bounds, but made so judicious a use of it within the kingdom, that without him it could neither have been extended so far beyond the limits of the realm by Gustavus Adolphus, nor so gloriously misguided, as it was afterwards, by Charles the Twelsth.

Some Account of the Life of Castruccio Castracani of Lucca; from the same Author.

MONGST the opuscula of the fecretary *, the most considerable is the life of Castruccio Castracani; who signalized himself for his valour, about the time that Dante recalled the Muses into Italy: and, as this latter

gave a new life to poetry, fo did Castruccio to the military art. Of the lowest extraction, he raised himself by his personal merit alone to the dominion of Lucca, of Lunigiana, of part of the Riviere of Genoa, and afterwards of Pisa and Pistoja; and, if death had not put a stop to his career, after he had just brought to a successful issue a most important enterprise against the Florentines, he would in the end have made himself master of all Tuscany. Critics will have it, that he took the thread only from real history, the texture being entirely his own; and that, in imitation of Xenophon's Cyropædia, he wished to exhibit Castruccio to the world, as a model of civil and military That this was really the conduct. case, may be inferred from some expressions of the ancients, which he puts into the mouth of Castruccio; and in particular from the variation that is observable between the facts he lays down in the Life, and those which he has related of him in the History of Florence. In the former he gives free scope to his imagination; whereas in the latter he follows the authority of Villani, a contemporary author; who nevertheless represents Castruccio to have been magnanimous, prudent, dextrous, diligent, indefatigable, brave, and at the same time cool in battle, and extremely fortunate in his enterprises. Such in fact does he fhew himself in all his actions. That might be truly called a defign worthy of a Cæfar, which he had formed, of throwing a dam across the streights of the Golsoline rock, that he might make himself master of the city of Florence, by causing the waters of

the Arno to overflow it. He shewed prodigious ingenuity in the siege of Pistoja, a little before his death; having made use of several curious machines, particularly the wooden tower of the ancients, and fortified his camp in a most admirable manner against the town, and still more so against the Florentines, who attempted in vain to relieve it: so that nothing can be richer than this piece of embroidery, as we may call it, wrought by the se-

cretary.

Three battles were given by Castruccio, which were embellished, if not entirely planned, by Macchiavel; who feems in his relation of them to be fond of shewing his military knowledge. The first was at Mount Carlo, not far from Pescia, when Caltruccio served under Uguccione della Faggiuola, who commanded the combined forces of the Pisans and Lucchese against the Florentines. Illness having obliged Uguccione to leave the camp, the enemy took courage, thinking they could eafily beat an army without a commander. They accordingly marched out, and offered battle every day, eager to come to action, and in their own minds fure of gaining the victory. Castruccio did all in his power to confirm them this opinion, shewing every fign of fear, and not fuffering any one to go without the entrenchments. At length, having learnt the disposition of the Florentines, who placed the flower of their troops in the center, and the weaker upon the fianks, he fallied out, forming his army in an oppolite order; and having ordered his center to move flow whilst the wings advanced rapidly, the C 4

best of his troops came to engage the worlt of the enemy's; by which manœuvre he obtained the

viftory.

The next battle was fought upon the hill of Serravalle, which lies at the end of the vale of Nievole, between Pescia and Pistoja. The Lucchese were encamped on one fide of the hill, and the Florentines on the other. It was Caftruccio's intention to engage the enemy in this narrow pass; where his troops could not, before the action should begin, discover their number, and would have the advantage of the ground. The night before the battle, he took the precaution of occupying fecretly the castle of Serravalle, which was siinated at the top of the hill, at a little distance from the road; and in that war observed a perfect neutrality. This done, he puts his army in motion betimes in the morning; and about break of day, his infantry falls in with the cavalry of the advanced guard of the Florentine army, who were ascending the hill on the other fide, with little expectation of meeting Castruccio. The advantage he had of attacking the Florentines unexpectedly, and flanking them from the castle. gained him the battle.

The third victory which he obtained over the fame enemy, was no less fignal. They were encamped at St. Miniato, on the left fide of the Arno, about thirty miles from Pifa. Having fecured Pisa with a strong garrison, Castruccio pitched his camp at Fucecchio, on the other fide of the river; a strong and commodious position. He kept at a little diftance from the Arno, in order to

encourage the Florentines to pals it. His defign succeeded: and no focner had they begun one morning to ford it with a part of their army, than Castruccio, having divided his forces into two lines, fell upon them with the first. The fight was obstinate; Caftruccio being inferior in force, but with the advantage of engaging troops who were in disorder: for the Florentines, not having all crossed the river, had not time to form their line of battle. Meanwhile he detaches two corps of infantry, one higher up, and the other lower down the river, to prevent the enemy from passing it, in order to take him in flank. The fortune of the day still remained in suspense, the Florentines making a vigorous defence against the troops of Castruccio, as fast as they gained the bank. Caf-truccio then ordered his second line to relieve the first; which, being composed of fresh troops, soon broke the Florentines, who were nearly exhausted, and drove them into the river. That part of the Florentine cavalry, which had hitherto remained unbroken, was obliged to give way, when attacked at once by Castruccio's cavalry, and by his infantry, which had no longer any of the Florentine infantry to oppose them.

With fuch skill and dexterity does Castruccio fight his battles, according to the fecretary's account of them. If his relations are not true, we must allow them at least to be plausible; and they may perhaps induce us to think with Ariftotle, that fiction is more

instructive than history.

Extract from the Confessions of J. J. Rousseau, translated from the French of J. J. Rousseau.

OW much did the first fight of Paris believed: of it! The external decoration I had feen at Turin, the beauty of the streets, the symmetry and squareness of the houses, induced me to feek at Paris still more. I had figured to myself a city as beautiful as large, of the most impoling aspect, where nothing was feen but superb streets and marble or golden palaces. Coming in at the suburbs St. Marceau, I faw none but lie le, dirty flinking freets, ugly black houses, the appearance of nailiness, poverty, beggars, carters, old cloath botchers, criers of ptisan and old hats. All these things struck me, at first to such a degree, that all I have feen at Paris, really magnificent, has not been able to destroy this first impression, and that there still remains a secret disgust to the residence of this capital. I can say the whole time I afterwards remained there, was employed in feeking resources which might enable me to live far from it. Such is the fruit of a too active imagination, which exaggerates beyond the exaggerations of mankind, and always fees more in a thing than has been heard. I had heard Paris fo much boafted of, I looked on it like ancient Babylon, from which I should, perhaps, have found full as much to deduct, had I feen it, from the the picture I had drawn of it. The fame thing happened to me at the opera, where I hattened to go the morrow of my arrival: the same afterwards happened at Verfailles;

after that, likewise, on seeing the sea; and the same thing will always happen to me, on seeing any thing too much extolled; for it is impossible to mankind, and disficult to Nature itself, to surpass the richness of my imagination.

From the manner I was received by all those for whom I had letters, I thought my fortune made. I was most recommended to, and least caressed by, was M. de Surbeck, retired from the fervice, and living philesophically at Bagneux, where I went feveral times to fee him, without his once offering rie even a glass of water. I was better received by Madam de Merveilleux, fifter-in-law to the interpeter, and by his nephew, an officer in the guards. The mother and fon not only received me well, but offered me their table, of which I often benefited during my stay at Paris. Madam de Merveilleux appeared to me to have been handsome; her hair was a beautiful black, and formed, in the old fashion, ringlets on her forehead. That which does not perish with beauty still remained. an agreeable mind. She feemed pleased with mine, and did all in her power to ferve me; but no one seconded her, and I was soon undeceived on all this great interest they appeared to take in my behalf. I must, however, do the French justice; they do not fmother you with protestations, as is faid of them; and those they make are almost always fincere; but they have a manner of interesting themselves in your favour, which deceives you more than words. The coarse compliments of the Swifs can impose on tools only. The French manners are more

more feducing, only because they are more simple; you think they don't tell you all they intend to do for you, to surprise you more agreeably. I shall go farther: they are not false in their demonstrations; they are naturally officious, humane, benevolent, and even, whatever may be faid of it, more downright than any other nation; but they are light and airy. They have, in effect, the fentiment they express; but this fentiment goes off as it came. While speaking to you, they are full of you: go out of their fight, they have for-Nothing is permanent got you. in them; every thing with them lasts but a moment.

I was therefore flattered much, ferved little. The Colonel Godard, whose nephew I was to be with, seeing my distress, and although rolling in riches, wanted me for nothing. He pretended I should be with his nephew, a kind of valet without wages rather than as a real tutor. Continually engaged with him, and by that difpensed from duty, I must live on my cadet's pay, that is, a foldier's; it was with trouble he confented to give me a uniform; he had been glad to put me off with that of the regiment. Madam de Merveilleux, engaged at his proposals, advised me herfelf not to accept then; her fon was of the same opinion. Other things were fought, but nothing found. I began, however, to be in want; an hundred livres, on which I had made my journey, could not carry me far. Happily, I received from the ambassador a trisling remittance, which was very useful; and I believe he had not discarded me, had I had more patience:

but to languish, wait, folicit, are, to me, impossibilities. I was difcouraged, appeared no more, and all was at an end. I had not forgot my poor Mamma; but how to find her? where to feek her? Madam de Merveilleux, who knew my story, assisted me in the refearch, but long to no purpole. At last she told me that Madam de Warens had been gone more than two months, but it was not known whether to Savoy or Turin, and that fome faid she was returned to Switzerland. Nothing more was necessary to determine me to follow her, certain, that, wherever fhe might be, I should find her in the country much easier than I could have done at Paris.

Before my departure, I exercifed my new poetical talent, in an epistle to Colonel Godard, in which I bantered him as well as I I shewed this scrawl to could. Madam de Merveilleux, who instead of censuring me, as she ought, laughed heartily at my farcasms, and her son likewise. who, I believe, did not love Mr. Godard; it must be owned he was not amiable. I was tempted to fend him my verses, they encouraged me: I made a parcel of them directed to him; and, as there was no penny-post then at Paris, I fent it from Auxerre in passing through that place. laugh yet, fometimes, on thinking of the grimaces he must have made on reading his panegyric, where he was painted stroke by stroke. It began thus:

Tu croyois, vieux Pénard, qu'une folle manie

D'élever ton neveu m'inspireroit l'envie.

This little piece, badly composed posed in fact, but which did not want salt, and which shewed a talent for satire, is nevertheless the only satirical work that ever came from my pen. My mind is too little inclined to hatred, to glory in this kind of talent; but I sancy you may judge by some pieces of controversy, written from time to time, in my desence, that had I been of a warring humour, my aggressors had seldom had the

laughers on their fide.

What I most regret in the particulars of my life, which I do not remember, is not having kept a journal of my travels. Never did I think, exist, live, or was myself, if I may fay so, so much as in those I made alone and on foot. Walking has fomething which animates and enlivens my ideas: I can scarcely think when I stand still; my body must stir in order to stir my mind. The view of the country, the fuccession of agreeable fights, a good air, a good appetite, and good health, I get by walking; the freedom of inns, the distance of those objects which force me to see fubjection, of every thing which reminds me of my condition, the whole gives a loofe to my foul, gives me more boldness of thought, carries me, in a manner, into the immensity of beings, so that I combine them, chuse them, appropriate them to my will, without fear or restraint. I imperioully dispose of all Nature: my heart, wandering from object to object, unites, becomes the same with those which engage it, is compassed about by delightful images, grows drunk with delicious sensations. If to determine them, I divert myself by painting them in my mind, what vigorous

touches, what resplendent colouring, what energy of expression do 1 not give them! We have, you'll fay, feen all this in your works, though written in the decline of life. Oh! had you known those of the flower of my youth, those I made during my travels, those I composed but never wrote. Why, fay you, did you not write them? And why write them, I answer you; why withdraw myfelf from the actual charms of enjoyment, to tell others I did enjoy? What cared I for readers, the public, and the whole earth, while I was swimming in the heavens? Besides, did I carry ink and paper? Had I thought of all these things, nothing had I did not foresee I struck me. have ideas; they come fhould: when they please, not when I please; they overwhelm me with number and force. Ten volumes a day had not sufficed, Where borrow time to write them? On arriving I thought of nothing but a hearty dinner. On departing I thought of nothing but trudging on. I saw a new Paradise awaited me at the door; I ran off to catch it.

I never felt all this so much as in the journey I am speaking of. In coming to Paris I was confined to ideas relative to the business I was going on. I launched into the career I was going to run, and should have run through it with glory enough, but this career was not that my heart called me to, and real beings prejudiced imaginary ones. Colonel Godard and his nephew made poor figures when opposed to a hero like me. Thanks to Heaven! I was now delivered from all these obstacles; I could I could plenge at will into the land of chimeras, for nothing more was feen before me. And I was fo far bewildered in it, I really loft, feveral times, my road. I had been very forry to have gone straighter; for finding, at Lyons, I was almost on earth again, I had been glad never to have reached it.

One day, among others, going on purpose out of my road, the better to see a spot which appeared admirable, I was fo delighted with it, and went around it fo often, I entirely lost myself. After running backwards and forwards feveral hours in vain, tired and dying of hunger and thirst, I went to a country person's, whose house had not a very good appearance, but it was the only one I saw near me. I thought it was as it is at Geneva or Switzerland, where every inhabitant, who could afford it, might exercife hospitality. I begged this man to let me dine with him for my money. He offered me some skimmed milk and coarse barley bread, and told me 'twas all he had. I drank the milk with pleafure, and eat the bread, straw and all: but this was not very ilrengthening to a man exhausted with fatigue. The countryman, who examined me, judged of the truth of my flory by that of my Having told me that appetite. he very well faw * I was a goodnatured, honest young man, who was not come there to betray him, he opened a little trap door, near the kitchen, went down, and in an inflant came back with a good household loaf of pure wheat, a gammon of bacon very enticing, though already cut, and a bottle of wine, whose appearance raised my spirits more than all the rest. An onselet pretty thick was added to these, and I made a dinner such as those only who travel on foot were ever acquainted with. When offered to pay, his uneafiness and fears came on him again, he would not take my money; he returned it with extraordinary agitation; and the pleafantest of all was, I could not imagine what he had to dread. At last he pronounced with trembling thefe terrible words, Officers and Cellar-He made me understand that he hid his wine for fear of the excise, his bread for fear of the poll-tax, and that he was a ruined man, had they the least doubt but that he was starving with hunger. Every thing he told me on this subject, of which I had not the least idea, made an impression on me that will never wear away. This was the spring and source of that inextinguishable hatred which hath fince unfolded itself in my heart against the vexations the poor people experience, and against their oppressors. This man, though in easy circumstances, dared not eat the bread he had earned by the sweat of his brow, and could escape ruin solely by an appearance of that want which was feen all around him. I went from his house with as much indignation as pity, deploring the fate of these beautiful countries, to which nature has been lavish in her gifts, only to fall a prey to barbarous publicans.

This is the only thing I di-

^{. *} It feems I had not, at that time, the physiognomy they have fince given me in my portuits.

flinctly

finctly remember of all that happened in this journey. I recollect only one thing more, that, in approaching Lyons, I was tempted to prolong my travels by going to fee the borders of the Lignon: for among the romances I read at my father's, Astrea had not been forgotten; it came more frequently to my mind than any other thing. I asked the way to Forez, and, in chattering with a landlady, she told me it was a rare country for workmen, that it contained many forges, and that good iron work was done there. This encomium at once calmed my romantic curiofity; I did not think proper to go to feek Diana's and Silvanus's amidst a generation of blackfmiths. The good old woman who encouraged me in this manner, certainly took me for a journeyman locksmith.

I did not quite go to Lyons without fome view. On my arrival, I went to fee, at the Chafottes, Miss du Châtelet, an acquaintance of Madam de Warens, and for whom she had given me a letter when I came with M. Ie Maitre; it was, therefore, an acquaintance already made. Miss du Châtelet told me, that, in fact, her friend had passed through Lyons, but she could not tell whether she had continued her road as far as Piedmont, and that she was uncertain herself, at her departure, whether or no she should not stop in Savoy; that, if I chose, she would write in order to learn something of her, and that the best way was to wait the answer at Lyons. I accepted the offer; but dared not tell Miss du Châtelet a speedy answer was necessary; and that my little exhausted purse did not leave me in a condition to wait long. It was not her bad reception that withheld me. On the contrary, she shewed me much kindness, and treated me in a style of equality that disheartened me from letting her see my situation, and descending from the line of good com-

pany to that of a beggar.

I think I clearly see the agreement of all I have mentioned in this book. I, nevertheless, seem to recollect, in the fame interval, another journey to Lyons, whose place I cannot fix, and in which I was much straightened, the remembrance of the extremities to which I was reduced, does not contribute to recall it agreeably to my memory. Had I done like fome others, had I possessed the talent of borrowing and running in debt at my lodging, I had eafily got through; but in this my aptness equalled my repugnance; and to imagine the point to which I carried both one and the other, it is sufficient to know, that, having fpent almost my whole life in hardships, and often at the point of wanting bread, it never happened to me, once in my life, to be asked, by a creditor, for money, without giving it him that I never could contract initant. bawling debts, and was always fonder of suffering than owing.

To be reduced to lie in the street was certainly fuffering, and this happened to me feveral times at Lyons. I chose to employ the few halfpence that remained, in paying for bread rather than a lodging; because, after all, I run less hazard of dying for want of fleep than bread. It is furprifing, that, in this cruel fituation, I was neither uneasy nor dull. I had not the least care for future days. I waited the answers Miss du Châtelet was to receive, lodging in the open air, and fleeping stretched on the earth, or on a bench, with the fame eafe as on a bed of down. I remember to have passed even a delightful night out of the city, on a road which borders the Rhône or the Saône, I dont recollect which of the two. Gardens forming terraces bordered the road on the opposite side. It had been extremely hot that day; the evening was charming; the dew moistened the drooping grass; no wind, a still night; the air was fresh, but not cold; the sun being fet had left red vapours in the heavens, whose reflection gave to the water the colour of a rose; the trees on the terrace were covered with nightingales, who answered each other's notes. I walked about in a fort of extacy, giving up my feelings and heart to the enjoyment of the whole, and fighing a little with grief at enjoying it alone. Absorbed in delightful meditation, the night was far advanced before I perceived my lengthened walk had tired my weary limbs. I perceived it at last. I laid myself luxuriously on the step of a fort of niche or false door in the terrace walk: the canopy of my bed was formed by the tops of trees; a nightingale was precisely over my head; his music lulled me afleep: my flumbers were foft, my awaking was more fo. It was broad day: my eyes, on opening, faw water, verdure, and an admirable landscape. I got up, shook myself, hunger seized me. I made, gayly, the best of my way towards town, resolved to

fpend on a good breakfast the last two pieces I had left. I was in fo excellent a humour as to go finging along all the way, and, I also remember, I sung a cintata of Batistin I had by heart, intitled the Baths of Thomery. God bless the good Batistin and his good cantata, which brought me better breakfast than what I expected, and still a better dinner, which I did not expect at all. In the height of my walking and finging, I heard some one behind me. I look round, I fee an Antonine following me, and feeming to listen to me with pleasure. He accosts me, bids me good-morning, and asks if I know music? I answered, a little, to make it believed a great deal. He continues to question me: I tell a part of my flory. He asks me whether I ever copied music? Often, fay I, which was true; my best method of learning was by copying. Well, fays he, come with me; I can employ you a few days, during which time you shall want nothing, provided you confent to not going out of the room. I willingly acquiesced, and sollowed him.

This Antonine was named Rolichon, was fond of music, understood it, and sung in little concerts he gave his friends. There was nothing in this but innocence and decency; but this tatle degenerated, no doubt, into passion, of which he was obliged to conceal a part. He conducted me to a little room I occupied, where I found a deal of music he had copied. He gave me more to copy, particularly the cantata I sung, and which he intended to sing in a little time. I staid there

three or four days, copying the whole time I did not eat; for in my life I never was so hungry or better fed. He brought my meals himself from the kitchen; they must have had a good one, if their living was equal to mine. In my days I have not eat with fo much pleasure; and I must own these bits came in the nick of time, for I was as dry as wood. I work with nearly as good a heart as I eat, which is not faying a little. It is true I was noti o correct as diligent. Some days after, M. Rolichon, whom I met in the street, told me my parts could not be performed on account of omiffions, duplications, and transpofitions. I must own I have, in chusing that, chose the only science in the world for which I was least calculated. Not but that my notes were good, and that I copied very clean: but the tedi-oulness of a long job distracts me so much, that I spend more time in scratching out than in noting; and if I do not use the greatest attention in comparing my parts, they always cause the performance to fail. I, therefore, in endeavouring to do well, did very ill, and to get on quickly, I went cross. This did not prevent M. Rolichon from treating me well the whole time, and giving me, on leaving him, half-a-crown I little deserved, but which set me quite on foot again; for in a few days after received news from mamma, who was at Chambery, and money to carry me to her: this journey I made with transport. Since these times my finances have been very low; but never fo as to go without bread. I mention this period with a heart sensible of the

attention of Providence. It was the last time of my life I felt hunger and misery.

Some Account of the Brahmins of India; from the Author of Travels in Europe, Asia, and Africa, &c.

ALTHOUGH we are not fo well acquainted with the history of the modern Brahmins of India, as might be expected, from the enlarged knowledge, commerce, and curiofity of the prefent times; yet we know enough of this tribe, to conclude with certainty, that they have degenerated much from the purity of their ancestors. I know not whether fuch calculators as Dr. Price, might not be able, from the prefent corrupt state of the Brahmins, to compute the time of the first institution of that order. All religious fectaries, in the course of time, degenerate from the austere virtues of their first heads or leaders. Christians in general, and also the particular feets of Christianity, bear witness to the truth of this position: with these data, I doubt not but an ingenious calculator might investigate the age of the order of Brahmins, and consequently that of the Hindoo empire, with which that class of men was no doubt coeval.

I have already given a fhort sketch of what the Indian priests were near two thousand years ago. In the present times it is asserted, that European usurpers sometimes make use even of the Brahmins as tools of oppression, and as instruments of plunder. But whatever their lives be, their doctrine is on the whole yet pure and excellent:

for among feveral errors, they maintain those truths which form the harmony of the world, That there is one juprome God, and that be is delighted with charity and good works more than by all other facrifices. In general their religious tenets are very confiftent with the ideas which are entertained of the divinity in Europe. Many superstitious practices have indeed been introduced among the generality of the people. Wooden images are placed in all their temples, and on certain festivals are exhibited on the high-roads and in the streets of towns. have impressed strangers with a notion that the Gentoos are idolaeers: when in truth the homage they pay to their images, is precifely of the same kind with that which the Roman Catholics yield to the images of our Saviour and the faints, which are only meant to awaken attention, and to give livelier ideas of the objects of their devotion. This I have been repeatedly told by Gentoos, in whose judgment and veracity I repole great confidence. The images of which I speak, are various, and often monitrous in their forms. They are figures intended to adumbrate the attributes of the Deity by visible representations of their effects, which appear in the works of creation and providence. Thus far only the Gentous are idolaters, that in worshipping the great God of the universe, they place before their bodily eyes, for the information of their minds, fuch representations as are calculated to recall, in a vivid manner, to their imaginations, those attributes

which they believe that almighty Being only to possess.

The Hindoos, as well as the Persians, Tartars, and adjoining nations, who have inhabited Hindostan fince it was conquered by Tamerlane or Timurbeg, though of different nations, religious, laws, and customs, possess nevertheless, in equal degrees, hospitality, politeness, and address. In refinement and ease they are fuperior to any people to the westward of them. In politeness and address, in gracefulness of deportment, and speech, an Indian is as much superior to a Frenchman of fashion; as a French courtier is to a Dutch burgo-master of Dort *. A Frenchman is indeed by no means deficient in ease of carriage; but that ease is mixed with forward familiarity, with confidence, and felf-conceit. Hindoos, especially those of the higher Caftes, are in their demeanour easy and unconstrained, still more than even a French courtier; but their ease and freedom is referved, modest, and respectful. A Frenchman is polite because he thinks it his honour to be polite: an Indian, because he thinks it his duty. The former is polite because he regards himfelf; the latter because he respects

Their persons are straight and elegant, their limbs sinely proportioned, their singers long and tapering, their countenances open and pleasant, and their seatures exhibit the most delicate lines of beauty in the semales, and in the males a kind of manly softness. Their walk and gait, as well as their

^{*} The least civilized of all the towns in Holland.

whole deportment, is in the highest degree graceful. The dress of the men is a kind of close bodied gown, like our women's gowns, and wide trowfers, refembling petticoats, reaching down to their flippers. Such of the women as appear in public, have shawls over their heads and shoulders *, fhort close jackets, and tight drawers which come down to their ancles. Hence the dress of the men gives them in the eyes of Europeans, an appearance of effeminacy; whereas that of the women will appear rather masculine: such is the influence of habit and custom on human fentiments; an influence which extends not merely to matters of tafte, but, as the ingenious Dr. Smith, in his Theory of Moral Sentiments, observes, to objects of higher importance.

Many of the original Hindoo tribes or Castes +, most of, or all the descendants of Moors, as well as the emigrants which pour in great fwarms into India, from Perfia and the adjacent countries, are brave, intrepid, and cool in battle .- Having the same weapons, and under fimilar discipline, why should they not be a match for men of the same country and complexion with themselves, although those men are under the auspices of foreign nations?-The advantage of these autpices may doubtless be counterbalanced by superiority of numbers, and other favourable circumstances, which it is needless to enumerate. These are serious and important objects of public confideration; a neglest of which has already produced the most alarming losses in revenue, and disadvantages ni trade, and feems indeed to threaten the extinction of the present East India Company.

From the difference of Castes or classes of the people in Hindostan, I mean the original inhabitants. there arises a difference of education and dress. But even the inferior classes are taught reading, writing, and arithmetic; the youth are taught, not within doors, but in the open air; and it is a fingular, but not unpleasing spectacle. to behold, in every village, a venerable old man, reclined on a terraced plain, teaching a number of furrounding boys, who regard him with the utmost reverence and attention, like a shepherd feeding his flock. In those fimple feminaries, where the want of magnificent halls and theatres is divinely compensated by the spacious canopy of heaven, the gentle and tractable fons of the Hindoos are not only prepared for the business, but instructed in the duties of life; a profound veneration for the object or objects of religious worship; reverence of their parents; respect for their feniors; justice and humanity towards all men, but a particular affection for those of their own Caste.

The Hindoo language is beautiful, expressive, and nervous. In reading aud speaking, the Hindoos are very musical. Their speech, like that of the Italians, shows in a kind of numbers. There

^{*} Somewhat refembling the plaids of N. Britain, and the black veils of Bra-bant.

[†] Caste is a porteguese word, importing a class or tribe. Vol. XXV. D

is a dead language, understood only by the literati of the country, that is, the priests, called the Sa ferit language, in which their facred volumes are written, even as our facred scriptures are written in Greek and Hebrew. But whether that language was originally different from that of the country, or whether it has only new become unintelligible to the people, through that change which is incident to all living languages, is, I believe, not well known.

Having already observed, that the genius of the Hindoos is rather imitative than inventive, I need fearcely add, that they have less cariofity in their nature than the European nations have; that they do not vary their fashions; and that they are not fond of novelty be, and the precincts of their Harams. From the temper and tenets of this people, as well as from feveral hints in antient hiftorians, it appears more than probable, that the same kind of garments, of food, of furniture, of buildings, and of manners, which obtained among their progenitors thousands of years ago, actually prevails among the Hindoo tribes at this day. In like manner, the fame professions are adhered to by the fame families with superstitious exactness. Those professions are exceedingly numerous. This division and subdivision of employment and labour; the vast variety of Castes from the Brabmines down to the fisherman*, is one proof, among many others, of the antiquity of the Hindoo nation, and their progrets in the arts. It appears very fingular, that the different Castes are not only prohibited from intermarrying, but also from eating with one another, and even from eating of the same kind of food.

Although the Gentoo laws, relative to Castes, their education, food, drefs, marriages, and occupations, be held forth as religious tenets, yet, upon investigation, they will be found to have been very wife and falutary political institutions, intended to give authority to government; to fecure the supreme power in the hands of the priesthood; to pre-ferve to the community different races of labourers, artificers, hufbandmen, warriors, and priefts. The females are betrothed when in a flate of infancy, and marriages are confummated as foon as the parties arrive at the age of puberty: an institution which is necessary to the population of the country; which, but for this pre-caution, would be greatly diminifhed by the operation of the Gentoo religion, which admits not of converts from other religions, and eafily rejects offenfive characters from the number of its own professors, which is called the Loss of Cafte.

The Gentoos are persuaded that the waters of the three great rivers, Ganges, Kistna, and Indus, have the sacred virtue of purifying those who bathe in them, from all pollutions and sins. This religious idea feems also to be

^{*} The profession of a fisherman was, of all professions, the humblest amongst the Jews. The Son of God ex mplified his divine power in making fishermen instruments of propagating the gospel.

founded

founded on a principle of policy, and intended to reffrain the natives from migrating into distant countries: for it is remarkable, that the facred rivers I have just now mentioned, are so situated, that there is not any part of India where the inhabitants may not have an opportunity of wathing away their fins. The Ganges, which rifes in the mountains of Thibet, with its different branches, runs through the kingdoms of Bengal, Bahar, and Orixa, and the upper provinces of Oude, Rohilcund, Agra, Delhi, and La-The Kistna hore. divides the Carnatic from Golconda, runs through the Visiapore into the interior parts of the Deccan. And the Indus bounding the Guzurat provinces, separates Hindottan from the dominions Perfia.

The food of the Hindoos is simple, confifting chiefly of rice, ghee, which is a kind of imperfect butter, milk, vegetables, and oriental spices of different kinds, but chiefly what is called in the east, chilly, and in the west, green or Cayen pepper. The warrior caste, may eat of the slesh of goats, mutton, and poultry, which is dressed into carryes and pilaws *. Other fuperior Castes may eat poultry and fish; but the inferior Castes are prohibited from eating flesh or fish of any kind. Their greatest luxury confists in

the use of the richest spiceries and perfumes, of which the great people are very lavish. Their dress in point of richness, is proportioned to their stations: their pomp and equipage confist in a numerous retinue of fervants of various denominations, who attend all their visits and excursions: in the dresses of those attendants: the elegance of their palanquins; and the caparifons of their horses. camels, and elephants. It is fuperfluous to observe, that in consequence of this multiplicity of different ranks, the Hindoos have the highest ideas of subordination. and pay to their superiors the same ready deference and homage, which they expect themselves from their inferiors.

Their houses cover much ground, and have spacious galleries and accommodations of various kinds. The apartments are fmall, and the furniture not very elegant, if we except the richest Persian carpets. The grandeur of their palaces confifts in baths, perfumes, temples, gods, and harams. The harams or zenanas, that is, the refidences of the women, are removed from the front of the house, and lighted only from a square fpace in the centre of the whole building. The apparel of the women is inconceivably they have jewels on their fingers and about their necks and also in their ears and nostrils, with brace-

^{*} Carryes are a kind of fricesses of mutton, sowl, or fish; the sauce of which is composed of dried vegetables, peculiar to the east, and fine rice, boiled with very little water, introduced on a separate plate: the sauce of the fricasses is poured on the rice, and the meat laid above both. The filew is fine Patna rice dry-boiled, and fried with ghee, (described in page 46, column ad) mixed with various spices, and particularly the cardonion, brought in on a large dish, in which is concealed amidst the rice, a boiled sowl, or part of a kid, or of a lamb.

lets not only on their wrifts, but on their arms above their clows, and on their legs around their ancles.

One particular class of women are allowed to be openly proftituted: these are the famous danc-Their attitudes and ing girls. movements are very easy, and not ungraceful. Their perfons are delicately formed, gaudily decorated, and highly perfumed. the continuation of wanton attitudes, they acquire, as they grow warm in the dance, a frantic lasciviousness themselves, and communicate, by a natural contagion, the most voluptuous desires to the beholders.

Their civil institutions respecting the division and security of property, and the internal police of the country, were originally founded on principles of the foundest political wisdom, and were well calculated to promote the happiness of the whole nation, as well as that of particular Castes or tribes. But the innovations of conquerors and usurpers, in feveral instances, particularly in the tenure of immoveable property, which was originally of a feudal nature, have marred the harmony of the antient constitution, and rendered property and personal liberty more precarious, lefs defined, and more exposed to chicanery and misconstruction.

Although the Hindoos are naturally the most inossensive of all mortals, yet does their humanity consist more in abstaining from injurious, than in the performance of beneficent actions. There is a wonderful mildness in their manners, and also in their laws, which are influenced by their manners;

by which the murder of an human creature, and of a cow, are the only crimes that are punished by death. Yet with all this gentleness of disposition, they are inferior to the boisterous Europeans, with all their vices, in the virtues of compassion and generosity. They are wanting in that tenderness which is the most amiable part of our nature. They are less affected by the distresses and dangers, and even the accidental deaths of one another, than any nation I know in the old or new world. Yet they love to excess: a proof, either of the inconfistency of the human character; or that the amorous passion is not derived from the noblest part of our nature.

This insensibility of the Hindoos to the distresses and dangers of their fellow-creatures, appears to me a wonderful phænomenon. Perhaps that despotism which has long been exercifed under the Mogul tyranny, by familiarising the mind to scenes of death, has blunted a sense of its terrors. Perhaps those ideas of predestination and irrefissible fate, which pre-vail in Asia, and in all despotic governments, prepares the mind for an acquiesecnce in all events. An English gentleman was standing by a native of Hindostan, when an enormous and fierce tiger leaped from a thicket, and carried off a screaming boy, the son of one of his neighbours. The Englishman expressed symptoms of the most extreme horror, while the Hindoo remained unmoved. "What," faid the former, " are you unaffected by fo dreadful a scene?" "The great God," faid the other, " would have it fo." - Whatever may be the cause, it is certain, that death is regarded with less horror in India than in any other country in the world. The origin and the end of all things, say the philosophers of India of the present times, is a wacuum. A state of repose is the state of greatest persection: and this is the state after which a wise man aspires. It is better, say the Hindoos, to sit than to walk, and to sleep than to wake; but death is the best of all.

According to the Gentoo laws, criminals fentenced to death are not to be strangled, suffocated, or poisoned, but to be cut off by the sword; because, without an effu-fion of blood, malefactors are supposed to die with all their fins about them; but the shedding of their blood, it is thought, expiates their crimes. The unjust punishment of Nundcomar, who was hanged on a gibbet against the laws of his country, and even by an ex post fatto English law, was aggravated by that circumstance of horror, that he died without an effusion of

The Hindoos are well acquainted with the nature of simples, and apply them judiciously either in performing cures which require not amputation, or in effecting death by quick or slow poisons. They have been for ages, in the practice of inoculating for the small-pox; on which occasion, as well as on others, they have recourse to the favourable mediation of charms, or spells.

Although the practice of Hindoo women burning themselves on the funeral piles of their husbands, and embracing in the mean time their dead bodies in their arms, be not so general now as it has formerly been, yet does it still prevail among some of the wives of men of high cafte and condition: and although this effort of frantic love, courage, and ambition, be deemed an aggrandizement of the family and relations of both hufband and wife, but especially of the wife's, yet their friends and relations constantly endeavour to diffuade the women who declare their resolutions of burning, from carrying them into execution. Even the Brahmins do not encourage this practice.

The causes which inspire Hindoo women with this desperate resolution, are, I imagine, the fol-

lowing:

In the first place; as the wife has, from her earliest infancy, been betrothed in marriage to her hufband, and from that time has never been permitted to fee another man; as she is instructed to believe that he is perfectly accomplished; and taught to respect and honour him; as after consummation, she is that up from the company, converfation, and even the fight of other men, with still greater care, if possible, than before, being now debarred from feeing even the father or elder brother of her husband, the bonds of her affection must needs be inconceivably strong and indissoluble. To an European lady, the zenana naturally appears in the light of an horrible prison: but the daughters of Afia never confider confinement to the zenana as any hardship. They confider it as a condition of their existence, and they enjoy all the happiness of which they have any conception; their whole defires being D 3

concentred and fixed on their hufband, their food, jewels, and female attendants.

In the second place, if the wife survive her husband, she cannot marry again, and is treated as an inferior person, and an outcast from her family. Nay, she is obliged, in her mournful and hopeless widow-hood, to perform all the offices of a menial servant.

In the third place, she is flattered with the idea of having immortalized her name, and aggrandized her children, and her own and huf-

band's families.

Lastly, she is rendered insensible to the pairs and horrors of what fhe is to fuffer, by those intoxiperfumes and mixtures which are administered to her after fhe has declared her final and unalterable resolution—I say her final resolution, because one or two declarations, of an intention to die with her husband, is not suffi-The strength of her resocient. lution undergoes a probation. There is a certain time prescribed by the Gentoo law, during which her family and friends exert their utmost influence, in order to diffuade her from burning; and if the perfift in her resolution to the end of that period, it is not lawful to use any more persuasions with her to abandon it. If she should alter her purpose after that period, she would be punished with the loss of all Castes, and live in a state of the most complete misery and contempt. Nay, if an Eurorean or Christian does but touch her very garment with his finger, when she is going to the pile, an immediate stop is put to the ceremony, she is forced to

live an outcast from her family, and from the Gentoo religion.

You will doubtless, my friend, have curiofity to know, in what manner, after all these stimulatives to perseverance, the tender fex, among a foft and effeminate people, fustains the near approach of a scene so full of awe and hor-Amidst her weeping relations and friends, the voluntary victim to love and honour alone appears ferene and undaunted. A gentle smile is diffused over her countenance: she walks upright, with an easy but firm step; talks to those around her, of the virtues of the deceased, and of the joy with which she will be transported when her shade shall meet with his; and encourages her forrowful attendants to bear with fortitude the fight of those momentary fufferings which she herself is about to feel .- Having ascended the funeral pile, she lays herself down by the body of her hufband, which the fervently embraces. A dofe of narcotic mixtures is then adminiftered for the last time; and instantly the person, whose office it is, fers fire to the pile.

Thus the most determined resolution of which we can form any conception, is found in the weaker sex, and in the soft climes of Asia. It is to the honour of that sex and those climes, that the greatest courage they exhibit, is the effect, not of the surious impulses of rage and revenge, but conscious dignity and

love.

It might naturally be imagined by an European, that the feveral wives of one man (for polygamy is general throughout all Afia) would regard one another with mutual mutual jealoufy and aversion; and that they in reality do, has been afferted by writers of high reputation. The fact however is quite otherwise; they visit one another with great friendship and cordiality; and if they are of the same caste, will occasionally eat together.—The husband is restrained from eating with his wives, either by a regard to custom; or, as I have been informed by some of the Gentoos themselves, by a precept

of their religion.

Notwithstanding the extreme antiquity of most Indian nations, I am told that in India beyond the Ganges, on the confines of Ara-can and Pegu, there is a people (if folitary favages roaming thro' woods in quest of prey, deserve the name of people) that appear to be in the very first stage of society. They are the only people in the known world that go absolutely naked, without the smallest covering on any part of their bodies. They live on fruit, which grows fpontaneously, in the uncultivated deferts they inhabit, in great abundance; and on the flesh of animals, which they tear alive and devour raw. They fit on their hams, with their legs and arms disposed in the manner of monkeys. At the approach of men, they fly into their woods. They take care of their offspring, and live in families, but feem to have no ideas of subordination of rank, or civil government. I have never had occasion to see this race of mortals myself, but I have converfed with feveral perfons who have feen them; all of whom concur in the general account of them, which I have now given you.

I am, &c. &c.

Description of the different Nations in the Presidency of Bombay—of the Natives of the Mulabar Coalt—their Marriages—of the Manners and Customs of the Hindcos, &c. from the same Author.

KNOW not any place in the world, where there medley of different nations than there is in the prefidency of Bombay. This region being conveniently situated not only for commerce by fea with all maritime nations, but also for communication by land, with the Persian empire: part of which having been conquered by Timur-Beg, is now a part of the Mogul empire. Here, besides Europeans of all countries, you meet with Turks, Persians, Arabians, Armenians, a inixed race, the vilest of their species, descended from the Portuguese, and the outcasts from the Gentoo religion, &c. The Turks that refort to this place on account of trade, are like the rest of their countrymen, stately, grave, and referved; and honest in their dealings, though merchants. Persians are more gay, lively, and conversible: but I would trust less to their honesty in matters of trade, than I would to the faturnine Turks. The Arabians are all life and fire, and when they treat with you on any fubject, will make you a fine oration in flowing numbers, and a musical cadence: but they are the most dishonest of The Armenians are generally handsome in their features. mild in their tempers, and in their nature kind and beneficent. They are a kind of Christians, and an honour to that fect. The Turks and Persians are, for the most D 4 part,

part, flout-bodied men; but the Arabians are of a smaller stature, and flender: vet thefe last are accounted the best soldiers. I have been a witness to their agility, and I am told their courage is I faw a equal to their activity. kind of war pantomime between three Persians and three Arabs; they naturally fought in pairs. The Perfians kept their ground, and warded off the blows that were aimed at them in the best manner they could. The Arabians, on the contrary, when a stroke was aimed at them, sprung up in the air to an incredible height, and instantly made an attack on their antagonists. In the mean time, both Persians and Arabs were singing, or rather muttering, some sentences which I did not under-The Persians, I was told, stand. were finging the exploits of Shah-Nadir, and the Arabs were invoking the affiftance of their prophet.

There is a race of mortals in this country, that they call Cafres, that are flaves to every other tribe, they have black woolly hair, and came originally from Cafraya, in the fouth promontory of Africa. I converse sometimes with these poor devils,-for I think that the opinions and fentiments of all men, however abject their flate deserve attention. They tell me, that the Moor mans are better masters than the Coristian mans. They are fensible of their inferiority in education, at least, if not in nature, to Moors, Hindoos, and Christians; and feem contented with their fituation. They are so habituated to flavery, that I am persuaded they have lost all defire of freedom; and that they

are happier in the fervice of a good master, who is their protector and their God, than they would be in a state of independence: in the same manner that a dog would leave the greatest abundance of food in a defert, and joyfully perform with his owner, even though he should sometimes beat him, a long and tedious journey, subjected to the pain of hunger and of thirst.

The natives of this country are more flim, and generally of a shorter stature, than Europeans. It is a curious fight, to fee their children running about naked, and speaking by the time they are half a year old. I was aftonished to be saluted by these little figures, who, after giving me the Salam, putting their hands to their foreheads, and bowing to the very ground, would ask for something; for all the children of the lower casts are great beggars; and they go flark naked until they are nearly arrived at the age of puberty. Their mental faculties, as well as their bodily powers, arrive much fooner at maturity than those of Europeans do; yet, it is not true, as is commonly believed, that they fooner deeay. Eastern luxury, which affects novelty only the zenana, feeks for new wives, and foon discards the old: But many fine women are deferted in this manner; and in general, the women of thirty or forty in this country, are as well favoured as women of that age are in Europe. - A native of India, who confiders a woman merely as an instrument of pleasure, would be infinitely furprised at the condefcension of a good hale man of fixty, walking with a wife upwards wards of fifty, hanging on his arm.

Children are all taught reading and arithmetic in the open air. They learn to distinguish their letters, and the figures they use in their arithmetic, (which, I have been told, is a kind of Algebra) forming them with their own hands, either in the sand or on boards.

Marriages are contracted by boys and girls, and consummated as foon as they arrive at puberty; that is, when the men are thirteen years of age, and the women nine or ten. The marriage ceremony is performed three times; once when the couple are mere infants; a second time, when the gentleman may be about eight or nine years old, and the lady five or fix; and the third and last time at the age I have already specified. Between the first and second marriage ceremonies, the young couple are allowed to see one another: they run about and play together as other children do; and knowing they are destined for each other, commonly conceive, even at that early period, a mutual af-But after the second time of marriage, they are feparated from each other; the bride, especially if she be a person of condition, being that up in the women's apartment until the happy day of the third and last ceremony, when the priest sprinkles on the bride and bridegroom abundance of rice, as an emblem of fruitfulness.

These early contracts are undoubtedly well calculated to inspire the parties with a mutual and lasting affection. The earliest part of life is in every countered.

try the happiest; and every object is pleasing that recalls to the imagination that blessed period. The ductle minds of the infant lovers are easily twined into one; and the happiest time of their life is associated with the sweet remembrance of their early connection. It is not so with your brides and bridegrooms of thirty, forty, and sifty; they have had previous attachments; the best part of life is past before their union, perhaps before they ever saw each other.

I had once the honour to be present at the wedding of a Persee of good condition. Of this I shall give you a minute description. Important matters you will find in the writings of grave historians; what I shall relate, will be such trissing circumstances as are below the notice of those personages, but which, nevertheless, curiosity might wish to know.

In Hindostan, the expence of cloaths is almost nothing; and that of food, firing, and lodging, the natives 1 mean, very The Hindoos are not trifling. addicted to any expensive vices, their passions and defires being gentle and moderate. Yet they are frugal and industrious, and as eager to amass riches as any of the natives of Europe. A Jew, a Dutchman, or a Scotch pedlar, is not more attentive to profit and lois. What is the reason of this? They are lovers of splendor and magnificence in every thing, but particularly in what relates to their women. It is in their berams, but especially on occasion of their marriages, that they pour forth the collected treasures of many industrious years.

The Periee at whose wedding I

was a guest, many weeks beforehand, fent invitations to his numerous friends and acquaintance, to affemble at the fixed time, at a fpacious hall erected for the occafion in a beautiful field. It was the dry feafon, when the air was constantly mild and ferene, and the whole vegetable world breathed a delightful fragrance. The hall was formed by bamboos, connected together, as is usual in that country, and covered with cloth. It was a medium between an house and a tent, being less solid than the former, but more substantial than the latter. Here the company affembled after the heat of the day was over, to the number of feveral hundreds. After a rich repast, which was served with great regularity, we fet out to meet the bride, messengers having arrived at the hall to announce her approach. The young Perfee was mounted on a camel richly caparisoned, himself adorned with a multitude of jewels, and highly perfumed. A number of flaves walked by the fide of the camel, holding an umbrella over the head of their master, while others fanned his face. The company had, as usual, their palanquins. In the mean time we were entertained by a band of music, consisting of pipers, blowing very loud on the great pipe with their mouths, and playing with their fingers on another; trumpeters, and a kind of drummers, beating on what they call tam tams. The music was dreadfully loud, but to my ear not very pleasant. There was only one tune; nor did I ever hear another during thefe fix years I have been in India. We arrived at a village, where

we were met by the bride, attended by an infinite number of female acquaintance, her near male relations, and a crowd of fervants. A gentleman's carriage in the service of the company was borrowed for the bride. It was an open phaeton, drawn in flow procession, by four beautiful Arabian horses.—The practice of borrowing English equipages, on matrimonial occasions, is very common; and they are always lent with great good humour. - As to the rest of the ladies, some rode on camels, fome in carriages drawn by spotted buffaloes and bullocks, whose horns were tipt with filver, and their heads adorned with flowers bound by rib-The bride was a tall bands. comely young creature; her long black hair falling down over her shoulders, and then turned up in wreaths, elegantly adorned with embroidered ribbands and precious stones. It was at that moment, when her husband gave her the falam, in a modest and respectful manner, and at a small distance, when she stood up in the phaeton, veiled soly by an umbrella, that I, who had the honour of being near the bridegroom, had a full view of his lovely bride.

At the end of the village an accident happened, which interrupted, for a short time, the joy of the day, and silled the minds of hundreds with the most as a well as the women, gave a loud shriek, and ran in a distracted manner, not knowing what they did even the bride was for a moment deserted by those of her own religion and kindred, and left to the care of her European drivers.

Some

Some unlucky wag had, on purpose, set some swine adrift that were kept by Portuguese samilies; and it was the fear of being touched by these odious and unclean animals, that turned, for a few minutes, a day of joy into a day of lamentation.—It is impossible to describe the horror that both Persees and Gentoos express at the fight of a fow. The very form of that animal is offensive to them, and makes them shudder. It appears as loathfome to them as a toad does to an European: and you may imagine the horror you would feel at the approach of a toad of the fize of a fow.

The swine being beat back, (in effecting which repulse, I may justly boast that I was myself the principal hero) we proceded in joyful procession to the hall; which, spacious as it was, was now infufficient to contain our encreased numbers: wherefore, many of the company were feated on the grassy plain, lamps being hung among shrubbery on poles of bamboos, fixed without much diffi-culty in the fost and deep soil. The hall, illuminated without and within, displayed on both sides, various pictures of elephants and other animals, and also of men. The young Persee's uncle, who shewed great attention to myself and the other Europeans, informed us, that the portraits we saw were Persian emperors.—There is K_{0} rest, said he; and after naming a number of other princes, he pointed to Nadir Scha, and Kerim Khan the present emperor .- I cannot think that they could, either from tradition, painting, or statuary, have any accurate notion, if any at all, of the particular stature, shape, and countenance of Cyrus. The artist must have been

guided merely by fancy.

Various kinds of refreshments having been, after short intervals. prefented to the company, we were at last entertained with a ball which lasted all night. The ladies were placed by themfelves on one fide of the hall, and the gentlemen by themselves on the other. The women wore their veils; but these were not drawn so closely over the face, but that we could get a peep at their eyes and nofes. When their veils were drawn back. in order that they might enjoy the refreshment of being fanned, we could discover their necks and their fine hair. Indeed, on occafion of weddings, the veil, as I have been assured, sits more loosely on the ladies than at other times. There was not the least communication between the men and the women; no not a whisper. men conversed among themselves; and the women observed a prosound filence, looking straight forward with inexpressible sweetness and modefly.

But now appears a spectacle which commands filence among the gentlemen as well as the ladics, and draws the attention of every part of the hall. A company of strolling dancing girls from Surat, appear on a platform raised about two feet above the floor. Violins were now added to the band of music, and prefently the dance began. The balladieres (for that is the name by which the dancing girls are distinguished on this side of Hindostan) are dressed in the gaudiest manner that the luxuriant fancy of the east can conceive. Their long

black hair falling over their shoulders in flowing ringlets, or braided and turned up, is loaded with precious stones, and orna-mented with slowers. Their necklaces and bracelets are enriched in the same manner; even their nosejewels, which at first sight appear shocking to an European, have fomething pleafing, after custom has worn off the effect of prejudice, and by a certain fymmetry, fet off all the other ornaments. Nothing can equal the care they take to preferve their breafts, as the most striking mark of beauty. In order to prevent them from growing large or ill-shaped, they enclose them in cases made of exceedingly light wood, which are joined together, and fastened with buckles of jewels behind. Thefe cases are so smooth and pliant, that they give way to the various attitudes of the body without being flattened, and without the smallest injury to the delicacy of the skin. The outside of these cases is covered with a leaf of zold, and fludded with diamonds, They take it off and put it on again with equal facility. covering of the breast conceals not from the amorous eye, palpitations, heavings, various tender emotions, nor ought that can contribute to excite defire: while at the fame time it leaves fomething for the spectator to guess. they balladieres imagine that heighten the beauty of their complexion, and the impression of their countenances, by tracing black circles round their eyes, with a hair bodkin dipped in the powder of antimony. On their ancles, befides jewels, they wear bells, which they think have a

good effect; but which, I confess, I do not admire.

The balladieres, it must be obferved, are not all of the fame rank or condition. It is only the higher ranks among them, who, I have been told, are consecrated to the use of the Brahmins, the first caste in this fuperstitious country, that can afford to have a load of diamonds. Nor do the balladieres of this class stroll through the coun-But if the common dancing girls are not usually adorned with diamonds, they have other precious flones and ornaments that strike with equal effect. In every other respect, their dress resembles that of the balladieres of the first rank.

When these girls dance, they do not hop, cut, and skip like our actresses in Europe; they never lift their feet high. Their dances would not be suffered, it must be owned, in an affembly of Euro-They express, by pean ladies. mute action, all the raptures and extravagancies of the passion of love, when in deep retirement, concealed from every prying eye, the happy lovers, throwing afide all restraint, yield to the irresistable impulse of the most ardent defire of nature. Nor is mute action the whole of this scene. The girls accompany their wanton attitudes with lascivious songs, until, overcome by the power of imagination, and the strength of perfumes, their voices die away, and they become motionless; which is the conclusion of this opera, shall I call it, or pantomime? -The ball lasted until morning. Refreshments were presented to the company at short intervals during the night. The bride was accomaccompanied to the house of her husband only by her nearest relations. The Hindoo ladies were in like manner taken care of by their husbands or kindred. As to the balladieres, they were escorted home

by Europeans.

Moderate in every other respect, the Hindoos love to excess. I was curious to know what were the common topics of conversation among this people; for they are very fociable, meeting together frequently at each other's doors, and fmoaking all day long.— Upon inquiry, I found they were ever talking about their wives; their qualities, their numbers, and their prospects of getting new The ones, &c. &c. barbarous nations in America talk of hunting and war; in England, the people talk of politics; in Scotland, of religion; in France, of the grand monarque; in Hindoftan, the constant theme is love and marriage.-There are feveral analogies, which occur to my imagination at the moment of writing this, between the peninfula of Hindostan and that of Italy; which I shall commit to paper without examining them. The Hindoos were once a flourishing and powerful people; and their knowledge, religion, laws, spread over many countries Afia. In like manner, the knowledge, the religion, the laws of Rome, enlightened and bleffed the nations of Europe; but, in process of time, the Roman empire was over-run, and broken into many independent states, by irruptions of northern barbarians. Such was also the fate of the Hindoo empire, which was conquered and torn in pieces by the Mogul

Tartars. The states of Italy at this day are only nominal fovereignties, being dependent on the emperor, France, and Spain. In like manner, the princes of Hindostan have long depended on the protection of one or other of the powers of Europe.-The Italians of the prefent time, are an unwarlike, effeminate, and indolent people, delighting only in love and music. This is also exactly the character of the modern Hin-Other resemblances might be traced between these nations: but on the subject of resemblances. one is apt to grow fanciful; therefore I proceed not any further on this topic.

I have endeavoured, at various times, to lead the natives of this country into a free conversation on Europeans, and their tyranny; but I found them very referved. I hey often complained of the infolence of the common foldiers. The avarrior cast in Europe, they fay, must be very bad mans.-I once overheard a conversation between a Moor who kept a thop in Bombay and one of our corpo-The corporal asked the price of some cheese; the Moor demanded a rupee (half a crown) pound; the corporal, after a torrent of abusive language mixt with threatenings, Iwore that he could purchate better cheese in Europe for four-pence. " Well, maller," faid the cheefemonger, " I " fuppose very few in this coun-" try will hinder you from going " to Europe to buy it "-This was the strongest infinuation of the dislike in which Europeans are held here, that I ever heard from any of the natives of Indestan. - I overheard at another time, time, a conversation between a Moor and one of our men, on the subject of religion. After a good deal of disputation, in the course of which the christian lost his temper, and poured forth the greatest curies on Mahomet and all his to lowers; the disciple of the great prophet, with great calmneis, replied, " Mafter, why " do Christians curse Mahomet? we Mahometans never curle " Jesus Christ." The foldier, provoked beyond measure at this comparison, would certainly have knocked the Moor down, if his passion had not found vent in a very seasonable volley of imprecations.

In Bombay, where people of so many different nations are collected together, there is a kind of language, which is composed of the most common words of the languages of each nation, and of natural figns. Coversation is carried on, in a great measure, by gesticulation, pointing, and various distortions of countenance. This affords to a stranger a ludicrous spectacle. The Hindoos fpeak in a very loud tone of voice, infomuch that it appeared difagreeable to me, before custom, that reconciles us to every thing, rendered it familiar: yet their voices are not harsh, but naturally sweet and melodious. The men shave their heads, but all the women wear their hair long. The Iews and Perfees wear long beards; but the Gentoos, whose religion prescribes cleanliness of person, shave their heads, leaving only a fmall tuft on the crown, their beards, arm-pits, &c. &c. The trade of a potter is an excellent one in this country; for the Gentoos never use the same pot or plate twice; that would be pollution; but as to plates, their place is generally supplied by the broad and tough leaves of banyan trees; and they use no spoons. they have, made of the shell of the cocoa-nut, with which they ferve up their rice, which is commonly mixed with ghee, (a kind of half-made butter, which they keep fresh in leather bottles for years, without falt) and spices, which make it a very favoury and nourishing food. This they eat, not with knives and forks, but with their fingers. The carnivorous appetites of Europeans shock them; for, the warrior cast excepted, the Gentoos eat no flesh meat. Certain other casts are allowed to eat fish. Of the English, particularly, they say, shaking their heads, " Ah! Englishmans eat every thing, fight every thing."

Indeed, I must say, that I was difgusted myself at the practice, fo common among Europeans as well as Moors, of eating fnakes and frogs. The frog of this country is as large as a chicken. It makes a loud croaking noise in the tanks and fields in the evenings. This fupplies the place of the melody of European birds. The frogs are fed with great care after they are caught. I am told by the frogeaters, that they are most delicate food. I take their word for it. The late General Wedderburne was fo fond of frogs, that he kept a frogcatcher, as gentlemen in Europe

keep fowlers.

There is a kind of ferpents, capable of being tamed, which become domestics in families, and which undoubtedly have a fensibility to

the

the charms of music; for at the found of a violin, they raise their heads, and move their bodies in concord to the mufical notes. When you stroke their beautiful backs, they feem fensible of the carefs, their necks and heads moving more briskly to the music, and their eyes sparkling with encreased lustre. It was, doubtless, in allusion to this species of serpents, that Solomon stigmatized the deaf adder, that would not be charmed by the voice of the charmer, should be charm ever so wisely.

I have never yet, either by reading or conversation, obtained any fatisfactory account of the origin of those ideas of pollution, and fingular antipathies and abhorrences, which prove so great torments to the Hindoos. Different writers have attempted to trace them back to the arts of priests and politicians. But priestcraft and policy do not inspire mankind with new defires and aversions. They may fanctify and confirm prejudices already entertained; they may improve and heighten them, and use them as engines for their own purposes; but I apprehend they feldom study to create them. However the superstructure may be the effect of art, the foundation is laid in nature. It is political wildom, perhaps ", to punish unnatural crimes; and in fact they are punished; but does the punishment of fuch crimes originate in views of policy; It is a natural abhorrence that first impels men to punish them: in the fame manner that a school-boy

is urged by a natural antipathy to kili those odious reptiles that offend his eye in his wandering excursions in woods and fields .-Europeans are conscious of many antipathies, which it is impessible to trace to any fource of superstition or policy: the Affatics, in like manner, have theirs; with this difference, that they are at once more violent and more numerous. There seems to be a greater irritability in their nerves; they are more forcibly struck by every obječt.

The manner of drinking among the Gentoos is remarkable. They religiously avoid touching the veffel that contains the liquor with their lips, and pour it into their mouths, holding the bottle, or other vessel, at least at a root's distance. Their idea is, that they would be polluted by stagnating water. They will drink from a pump, or of any running stream, but not out of a pool.

The Hindoos preserve the Asiatic custom, of which we read in the bible, of threshing out their corn by the treading of oxen. A pole is fixed in the ground, in the upper end of which is fet a pivot, which ferves as an axis for a wheel, or rather a wooden frame, which is turned round by the oxen, and which confines their steps to the threshing floor. The grain is shaken from the husks and the itraw by the beating of their feet and legs. A couple of oxen will thresh two or three hundred bushels of rice a day .- There have been various attempts in Europe to

contrive

^{*} The president Montesquien is of opinion, that the punishment of unnatural crimes is by no means necessary. Nature will maintain her own rights without the intervention of the magistrate,

contrive a machine for threshing corn, the most laborious and expensive operation in husbandry. Might not our farmers for once take a hint from the Asiatics, and try the method of threshing by means of oxen? The threshing-shoor is formed, by spreading on the surface of a spot of level ground, a paste composed of water, earth, and cow-dung. This operation is performed by the women.

There is not a more precious fubstance in the eyes of the Gentoos, than cow-dung. It is not perhaps known in Europe, that cow-dung-is an infallible preservative against the destructive effects of all kinds of vermin. It is for this reason, that it is used in forming threshing-floors. for the same reason, that it is used as plaister to the houses, which are overlaid with this substance, mixed with water and a very little earth, both without and within. layer of this composition being spread on the walls, and sufficient time being allowed for it to dry, a fecond stratum is added, for the purpose of filling up any chinks that may be occasioned by excessive drought. A fmooth and folid paste being thus formed, it is white-washed with a very fine and white lime made of oyster-shells. These white walls are variegated without as well as within, by the figures of different animals, especially elephants. But I have not yet fully described the great importance of cow-dung. It is not only a necessary article both in agriculture and architecture, but also in religion. The pollution that is occasionally conveyed to their houses by the contact of Christians, the Gentoos wash away

by the precious ointment of cowdung. The pagodas in the island of Salfette, having been used by foldiers as lodging-places, during the war with the Marrattas, were confidered as defiled. and were wholly abandoned until they had undergone a purification by cow-dung. It is not a little humiliating to a professor of Christianity, that he should be confidered by the ancient and numerous fect of the Gentoos, as a piece of animated substance infinitely more loathfome and odious than the excrement of a buffalo or a bullock.

The Gentoos are undoubtedly idolaters. What are the doctrines of their priests, I know not: they worship figures of men with elephants heads, and a variety of other images. The human figures which are the objects of their devotion, have many hands, and are enormously corpulent. They also worship different animals: I have feen in their temples live bullocks. It occurred to me, that these were going to be facrificed to their god or gods; but I was foon given to understand, that they were gods themselves.

The Persians of this country, as is generally known, pay divine adoration to fire, but not in a senseless and idolatrous manner; for I have been assured by very respectable characters among the Persees, that they worship fire only as an emblem of the Divinity, and as his chief agent in the system of the universe.—They never extinguish fire. They will stand for hours by their lamps, putting up their prayers to God with solded hands, and their eyes turned towards heaven with great marks of

devo-

devotion. They utter ejaculatory prayers all day long, and constantly mix bufiness, and even common conversation, with devotion. They have a superstitious veneration for cocks and for dogs. They breed great numbers of dogs at their own houses, and feed them regularly twice every day with rice and ghee. To all dogs, whether their own or not, they are very hospitable. Whereever they see a dog, they prefently call him, and offer him food. If you walk abroad with a dog in any of the Persee villages, you presently hear jo! jo! at every turn; every body striving to be the first to entertain your deg. Dogs are also facred in all the Turkish dominions. The does on the island of Bombay, a few years ago, were many of them mad: whereupon an order was given by the governor, for killing all dogs without exception. This order being known, the Perfees were greatly alarmed, met tigether, and entered into a folemn league and covenant in defence of their dogs, and threatened to protect their lives at the risque of their own. It was therefore thought prudent, not to infift on the execution of the decree that had been issued against those faithful and affectionate domestics.

How difficult it is to diffinguish the fentiments of nature, from the prejudices of education! Most nations with whom we are acquainted, are careful to bury their dead, and confider it as a kind of misfortune to their departed friends, if by any accident their inanimate bodies should not be honcured by a decent interment. That very circumstance, Vol. XXV.

however, which, in the opinion of Homer, and those to whom he addressed the Iliad, aggravated the hard fate of those heroes who fell in the Trojan war, whose unburied limbs were devoured by hungry dogs and ravenous vultures: that very circumstance, so full of horror to a Grecian mind, would have appeared to a Perfian. matter of the greatest consolation. For the Persees expose the hodies of their dead to birds of prey, as the last good office that friendship can perform to the deceased. They erest for this purpose fabrics about ten feet high, over the walls of which they fix an iron grate, whereon they place the dead -These buildings are very like kilns, fave that they want roofs. Crows, kites, and vultures. quickly devour the flesh; and the bones, after being bleached for many years, are at last pulverised. and drop gradually into the cavity of the building, thus making way for new carcales.

I prefer to this, the manner in which the Gentoos dispose of their dead. They burn their bodies with fandal-wood and other aromatics. A very worthy gentleman of my acquaintance, Captain W-ft, is so much delighted with this practice, that he has given orders, that his body, after he is dead, shall be burnt after the Gentoo manner, with fandal-wood.

The poor Faqueirs, of whom you have heard to often, bory their dead within their very places of habitation, which are tometimes huts, and fometimes caverns. The felf-denied Faqueirs will lie whole days and nights, covered with dutt, under ban-yan trees, confelling their fins, and explaining them by repentance, supported only by a bottle of water and a little gram, or parched corn, not unlike pease, but sweeter to the taste. This mendicant order of religious, often supply our patty-maurs * with provisions on their journies, when, avoided by the superstitious Gentoos as if they were some noxious animals, they would be in great

danger of starving.

It is generally known, that the practice of inoculating for the fmall-pox is common in all Afiatic countries. But there is an art in Hindostan, not yet known in Europe, by which the women effectually prevent any traces of the fmall-pox on the faces of their little ones. This preservative is composed of a falve made of certain Indian herbs, and a certain kind of oil, which they apply as foon as the pock begins to blacken. I am surprised that none of the company's furgeons have ever enquired into the nature of this preparation: for, I prefume, if they had, they would have discovered it; and the fact, that the Hindoos know how to fave their skins from the ravages of the small-pox, is undoubted.

I shall, now I have got on the subject of Hindoo surgery, mention another operation of the chirurgical kind, which I am well assured is attended with the happiest effects. When any person happens to be bruised in any part of his body, by a fall, a blow, or otherwise, those who are nearest to him, presently strip off the greater part of his cloaths, and with the palms of their hands gently rub the assisted part, and

proceeding from that spot, rubover, with greater force, the whole of the body. This good office is generally performed by the women, who are indeed the surgeons and physicians of this country, and who handle their patients with all the easy address of the most experienced member of the faculty in Europe.

Before the Hindoos rife from their beds, they stretch themselves, darting out their legs and arms with a sudden motion several times. Then they proceed to the doors of their houses, where they sit in circles, in order to pick and to wash their teeth. They fill their mouths repeatedly with water, and holding back their heads, make a croaking noise, like so many frogs. Those of the Gentoo religion perform divers other

ablutions in secret.

Although the Hindoos are the meekeit people on earth, yet they fometimes quarrel with one another. Will you please to attend to fo trifling a description as that of an Hindoo scolding-match? Storms sometimes display the nature of the soil on which they fall. -The enraged parties begin with complaining of each other's injustice; and retail a great many moral and religious maxims, which, by that injustice, have They enumerate been violated. the acts of violence or of fraud, which their antagonists have committed against others, as well as themselves. They undervalue each other's families: - "Your fifter went on a certain day to fetch water from the well, and was embraced by a Christian soldier:" -- "Your father dying young, your mother did not shave her head, but made her elopement with a sepoy:" - " From a niggardly disposition, you violated the laws of our holy religion, by making the same earthen pot serve you a whole week;" --- And, "You got fo drunk, on one occasion, with brabtree toddy, that you not only touched the veffel with your lips, but bit it with your teeth." In this manner they kept feolding for the space of some hours: but now the contention becomes fiercer, and the opprobrious terms of Cafre and Hallachore are retorted with great fury. As the last possible insult, they pull off their shoes, spit in them, and throw them in each other's faces *. Anon, they proceed to action, tearing each other's hair, and fmiting each other, not with their fists, but the palms of their hands, like women or children. After they are fusficiently fatigued by this exercise, they part, each declaring that he would have inflicted on his adversary more severe marks of his vengeance, if he did not consider himseif as much polluted by touching him, as he would be by coming in contact with a fore or a Christian.

I never beheld fo striking a proof of the influence of food on animal constitutions, as in the battles of dogs in this country. The dogs of fuch of the natives as feed them only with rice and gher, are no more a match for the dogs that are bred by the English, though of the fame species, than one of these would be a match for a ficn. Our foldiers take great delight in promoting rights between their dogs and those of the Hindoos, which is a very cruel entertainment.

It will not surprite one, who knows the resolution of Hindoo women in burning with their hafbands, to be told, that there is at present in Bombay, a woman, a native of Mangalore +, who, affuming the habit of a man, enlisted in a company of sepoys, in order to have a chance of meeting with her fweetheart, who had enlisted in our service in the last war. After having been in one or two engagements, in which she displayed a manly courage, she found her lover, to whom she made herfelf known, and became his wife. The wives of the heymals, as well as their husbands, follow the employment of porters, and are kept to their labour as well as the men, by the terror of a scourge. The constancy and heroism of this lady, has been rewarded by an appointment to the office of overfeer of the wives of the coolies. I have feen her with a raiting in her hand, acting in the capacity of a female serjeant.

It should be observed, that when the Gentoos enter their temples, or the apartments of any great man, they pull off their shoes, and leave them at the door. As appearing in your presence without shoes, is the greatest mark of respect; so to throw one's shoe in his neighbour's face, is the very late mark of contempt.

Customary Education and Employment of the Inhabitants of Nantucket; from Letters from an American Farmer, by J. Hector St. John.

HE easiest way of becoming acquainted with the modes of thinking, the rules of conduct, and the prevailing manners of any people, is to examine what fort of education they give their children; how they treat them at home, and what they are taught in their places of public worship. home their tender minds must be early struck with the gravity, the ferious though cheerful deportment of their parents; they are inured to a principle of subordination, arifing neither from fudden passions nor inconsiderate pleafure; they are gently held by an uniform filk cord, which unites softness and strength. A perfect equanimity prevails in most of their families, and bad example hardly ever fows in their hearts the feeds of future and fimilar They are corrected with cenderness, nursed with the most affectionate care, clad with that decent plainness, from which they observe their parents never to depart: in short, by the force of example, which is superior even to the throngest instinct of nature, more than by precepts, they learn to follow the steps of their parents, to despise ostentationsness as being finful. They acquire a taste for that neatness for which their fathers are fo conspicuous; they learn to be prudent and faving; the very tone of voice with which they are always addreffed, establishes in them that softness of diction, which ever after becomes

habitual. Frugal, fober, orderly parents, attached to their business, constantly following some useful occupation, never guilty of riot, dissipation, or other irregularities, cannot fail of training up children to the same uniformity of life and manners. If they are left with fortunes, they are taught how to fave them, and how to enjoy them with moderation and decency; if they have none, they know how to venture, how to work and toil as their fathers have done before them. If they fail of success, there are always in this ifland (and wherever this fociety prevails) eftablished resources, sounded on the most benevolent principles. At their meetings they are taught the few, the fimple tenets of their fect; tenets as fit to render men fober, industrious, just, and merciful, as those delivered in the most magnisseent churches and cathedrals: they are instructed in the most essential duties of Christianity, fo as not to offend the divinity by the commission of evil deeds; to dread his wrath and the punishments he has denounced; they are taught at the same time to have a proper confidence in his mercy while they deprecate his justice. As every fect, from their different modes of worship, and their different interpretations of fome parts of the scriptures, necesfarily have various opinions and prejudices, which contribute something in forming their characteristics in society; so those of the Friends are well known: obedience to the laws, even to nonrefistance, justice, good-will to all, benevolence at home, fobriety, meekness, neatness, love of order, fondness and appetite for commerce.

commerce. They are as remarkable here for those virtues as at Philadelphia, which is their American cradle, and the boast of that society. At school they learn to read, and to write a good hand, until they are twelve years old; they are then in general put apprentices to the cooper's trade, which is the fecond effential branch of business followed here; at fourteen they are fent to fea, where' in their leifure hours their companions teach them the art of navigation, which they have an opportunity of practifing on the spot. They learn the great and useful art of working a ship in all the different situations which the sea and wind fo often require; and furely there cannot be a better or more useful school of that kind Then they go grathe world. dually through every station of rowers, steersmen, and harpooners; thus they learn to attack, to pursue, to overtake, to cut, to dress their huge game: and after having performed several such voyages, and perfected themselves in this business, they are fit either for the counting-house or the chase.

The first proprietors of this island, or rather the first founders of this town, began their career of industry with a fingle whale-boat, with which they went to fish for cod; the small distance from their shores at which they caught it, enabled them foon to increase their business, and those early successes, first led them to conceive that they might likewise catch the whales, which hitherto sported undisturbed on their banks. After many trials and several miscarriages, they succeeded; thus

they proceeded, step by step; the profits of one fuccessful enterprize helped them to purchase and prepare better materials for a more extensive one: as these were attended with little costs, their profits grew greater. The fouth fides of the island from east to west, were divided into four equal parts, and each part was assigned to a company of fix, which though thus feparated, still carried on their business in common. In the middle of this distance, they erected a mast, provided with a sufficient number of rounds, near it they built a temporary hut, where five of the affociates lived, whilst the fixth from his high station carefully looked toward the fea, in order to observe the spouting of the whales. As foon as any were discovered, the sentinel descended, the whale-boat was launched, and the company went forth in quest of their game. It may appear strange to you, that fo slender a vessel as an American whale-boat, containing fix diminutive beings, should dare to purfue and to attack, in its native element, the largest and strongest fish that nature has created. Yet by the exertions of an admirable dexterity, improved by a long practice, in which these people are become superior to any other whale-men; by knowing the temper of the whale after her first movement, and by many other useful observations; they feldom failed to harpoon it, and to bring the huge leviathan on the shores. Thus they went on until the profits they made, enabled them to purchase larger vessels, and to purfue them farther, when the whales quitted their coasts; those who E 3

tailed in their enterprizes, returned to the cod-fiftieries, which had been their felt ichool, and their first resource, they even began to visit the banks of Cape Breton, the ifle of Sable, and all the other filling places, with which this coast of America abounds. By degrees they went a whaling to Newfoundland, to the Gulph of St. Laurence, to the Straits of Belleisle, the coast of Labrador, Davis's Straits, even to Cape Desolation, in 7° of latitude; where the Danes carry on fome fisheries in spice of the perpetual severities of that inhospitable climate. In process of time they visited the western islands, the latitude of 34° famous for that fish, the Brasils, the coast of Gui-Would you believe that nea. they have already gone to the Falkland Islands, and that I have heard several of them talk of going to the South Sea! Their confidence is so great, and their knowledge of this branch of business so superior to that of any other people, that they have acquired a menopoly of this commodity. Such were their feeble beginnings, fuch the infancy and the progress of their maritime schemes; such is now the degree of boldness and activity to which they are arrived in their manhood. After their examples feveral companies have been formed in many of our capitals, where every necessary article of provisions, implements, and timber, are to be found. But the industry exerted by the people of Nantucket, hath hitherto enabled them to rival all their competitors; consequently this is the greatest market for oil, whale-bone, and spermaceti, on the continent.

It does not follow however that they are always successful; this would be an extraordinary field indeed, where the crops should never fail; many voyages do not repay the original cost of fitting out: they bear such missortunes like true merchants, and as they never venture their all like gamesters, they try their fortunes again; the latter hope to win by chance alone, the former by industry, well judged speculation, and some hazard. I was there when Mr. - had missed one of his vessels; she had been given over for lost by every body, but happily arrived before I came away, after an absence of thirteen months. She had met with a variety of disappointments on the station she was ordered to, and rather than return empty, the people steered for the coast of Guinea, where they fortunately fell in with feveral whales, and brought home upward of 600 barrels of oil, beside bone. Those returns are fometimes disposed of in the towns of the continent, where they are exchanged for fuch commodities as are wanted; but they are most commonly sent to England, where they always fell for When this is intended, a vessel larger than the rest is sitted out to be filled with oil on the fpot where it is found and made, and thence the fails immediately for London. This expedient faves time, fleight, and expence; and from that capital they bring back whatever they want. They employ also several vessels in transporting lumber to the West-Indian Islands, from whence they procure in return the various productions of the country, which they afterwards

terwards exchange wherever they can hear of an advantageous market. Being extremely acute they well know how to improve all the advantages which the combination of fo many branches of bufinels constantly affords; the spirit of commerce, which is the simple art of a reciprocal supply of wants, is well understood here by every body. They possess, like the generality of the Americans, a large share of native penetration, activity, and good fense, which lead them to a variety of other fecondary schemes too tedious to mention: they are well acquainted with the cheapest method of procuring lumber from Kennebeck river, Penobscot, &c. pitch and tar, from North Carolina; flour and biscuit, from Philadelphia; beef and pork, from Connecticut. They know how to exchange their cod fish and West-Indian produce, for those articles which they are continually either bringing to their island, or sending off to other places where they are wanted. By means of all these commercial negociations, they have greatly cheapened the fitting out of their whaling fleets, and therefore much improved their fisheries. They are indebted for all these advantages not only to their national genius but to the poverty of their foil; and as a proof of what I have so often advanced, look at the Vineyard (their neighbouring island) which is inhabited by a male issue, confining the little fet of people as keen and as sagacious as themselves. Their soil being in general extremely fertile, they have fewer navigators; though they are equally well fituated for the fishing business,

A short Narrative of the late Gilbert West, L. L. D.

The following Account of the late Dr. G. West, we have reason to assure our Readers, is perfectly authentic.

TILBERT West was the fon of the Reverend Doctor West. He had the misfortune to be deprived of his father whilst under the age of thirteen years, and just too at the time when a Mitre was expected for the doctor, through the interest of a powerful friend, Lord Orford, who had gained the royal affent to raife him to that dignity. At this early period of his life, he was left to the care of his disconsolate and distreffed mother, who had not only her own loss to deplore, but also the blasted hopes of a young family. Gilbert West was sent to Eaton, and compleated his education at Oxford. His mother was the eldest daughter of Sir Richard Temple, and fister to Lord Cobham; a woman not more distinguished for her beauty, than for her exemplary conduct through life. Her marrying a clergyman, though a man of family, of learning, and high character, was for resented by her brother Cobham, who hated (as he declared) the whole cloth, that he excluded her from his honours and estates, and fettled them on his fecond fifter's marks of his brotherly attentions for his eldest sister, to her son Gilbert West. Lord Cobham prefented Mr. West, while at Oxford, with a cornetfy in his own regiment. He was then reading di-E 4 vinity,

vinity, that being the bent of his inclination, and best adapted to his ferious turn of mind. Being thus called into the military line, he was naturally led to make frequent visits from Oxford to Stowe, to gain knowledge of his uncle in his new profession, whom he looked up to with the greated admiration; his lordship being possessed of brilliant talents, and a perfect knowledge of the world. To his lordfhip's captivating standard, many of the first genius repaired, which gave rife to animated conversations, and the display of wit on various subjects. Among other topics, revealed religion had its turn for animadversion, and was represented as a work of imposition, which a wife man must rejest; and that the whole derived its fource from priest-craft. This caught the honest mind of Mr. West; and then not being able to answer the deluding arguments brought in support of those fatal errors, he imbibed this on principle, that there was no real foundation for the great truths fet forth in the holy scriptures; but he never was brought to lofe fight of the Supreme Being in all his glorious works, to whom he ever paid the devoutest adoration. His love of virtue in its fullest extent, was fo great, that his actions throughout were confidered by those, who knew him well, to be fo upright, as never to border upon vice.

He was one of the students of Christ Church, Oxford, and from thence had his introduction into the Secretary of State's office, being nominated by that university to answer the plan of government in sending such a given number of

them to be initiated into the bufiness of the state, in order to qualify them for foreign embassies. Lord 'Townshend, then Secretary of State, received Mr. West with great marks of friendly regard, and honoured him with confidential bufiness at his own house; and when his lordship attended King George the First to Hanover, Mr. West accompanied him. This gave a fair prospect for Mr. West's advancement, and certainly it must have taken place, had not his uncle Lord Cobham become a violent opposer of the administration. Lord Townshend, in consequence of it, told Mr. West very fairly, that he could no longer give support to his acknowledged merit, as his uncle stood in the way of his promotion, and any favour done to him, would be construed as a fervile court paid to Lord Cob-Mr. Gilbert West seeing that he must fall a sacrifice to his alliance with Lord Cobham, quitted the scene of public business, foon after married, and fixed at Peckham in Kent; where his tranquil life was rendered truly pleasing, by books, and a chosen few, who frequently came there, and by their rational and unrestrained converse, enjoyed a felicity they could not find in the buly world. His near relation, and long tried valuable friend, George Lyttelton, represented Mr. West in so advantageous a light to Frederick, Prince of Wales, in whose fervice he then was, that his royal highness, on Mr. Lyttelton's recommendation, authorifed him to acquaint Mr. West, that he intended to give him the education of the young prince, his prefent

present majesty. This being communicated to Mr. West by Mr. Lyttelton, he took very deeply into confideration the importance of fuch a charge, and it led him to conclude, that no principles could be binding on the human mind, which had not religion for their basis. He therefore resolved to find out the true one, if poffible, to rest his faith upon it, give comfort to his own mind, and qualify himself for the trust expected to be reposed in him. To effect these salutary ends, he determined to read the scriptures with the utmost care, believing, if they were of divine inspiration, all feeming inconfistencies were to be reconciled. These important confiderations he offered to his worthy good friend, George Lyttelton, whose warm and excellent heart exulted on the noble and pious ideas thrown out on the occasion; and there enfued between thefe long loved and esteemed friends, the most interesting and affecting conversation, which the person who writes this had the fatisfaction to be witness to, and to their resolutions, at the same time, to undertake their observations on the Resurrection and St. Paul; which were foon after given to the public, in 1747. In the year following, the University of Oxford created Mr. West, Doctor of Laws, by diploma. The approbation given to these performances, put Mr. West upon a more extenfive plan, as the cavillers faid, all objections were still in force, except the authenticity of the scriptures were proved. He therefore begun upon that great work, but got no farther than the three

first chapters in Genesis, it pleasing the all-wife disposer, to remove him to that glorious stare, where all he had been meditating upon this imperfect one, was no doubt opened to his view. It is impossible to describe the heartfelt delight he received in studying the holy scriptures; and his mind was fo illumined with thefe facred truths, and with holding as he did a constant intercourse with the Divine Nature, that he feemed to be above the injuries of fortune, or pains of fickinels, looking forwards to a more per-His sublime manent condition. piety, virtue, amiable and cheerful disposition, made him equally beloved and respected; nor was ever any man more warmly and tenderly attached to his friends than he was. Mr. West had too much dignity of character, to admit of pride or superciliousness; never beholding with fcorn the imperfect characters, or imperfect pleasures of other men; he enjoyed with complacency, himself, the innopleasures of life, whether presented to him under the form of beautiful nature, or ingenious art.

To an early friendship with the then Duke of Devonshire's son, he owed the being appointed one of the clerks extraordinary of the privy council, the duke being president; and to Mr. Pitt, atterwards Lord Chatham, he was indebted, for his being 'Treasurer of Chessea Hospital. But as the advantages flowing from them came to him very late in life, he may be said to have passed almost through it with a narrow income. His mind however being rich with knowledge

ANNUAL REGISTER, 1782.

knowledge and content, he might be deemed, notwithstanding his claim to a high situation, a happy man until he lost his only child, a fon at man's estate, in whom he had placed much comfort and all his hopes. On receiving the fatal shock of his death, he only

emphatically faid, "My dear for is taken to a better Father;" and with that pious reflection, he calmed his own forrows, and those of his afflicted wife and sympathizing friends. He survived his son but one year, and died in 1756, aged about fifty.

NATURAL HISTORY.

On the Heat of the Water in the Gulf-stream. By Charles Blagden, M. D. Physician to the Army, F. R. S. From wel. lxxi. part ii. of the Philosophical Tranfactions.

NE of the most remarkable facts observed in navigating the occean, is that constant and rapid current which fits along the coast of North America to the northward and eastward, and is commonly known to feamen by the name of the Gulf-ilream. It feems justly attributed to the effect of the trade-winds, which blowing from the eastern quarter into the great Gulf of Mexico, cause there an accumulation of the water above the common level of the fea; in confequence of which, it is constantly running out by the channel where it finds least refistance, that is, through the Gulf of Florida, with fuch force as to continue a distinct stream to a very great distance. Since all ships going from Europe to any of the fouthern provinces of North America must cross this current, and are materially affected by it in their course, every circumstance of its motion becomes an object highly interesting to the seaman, as well as of great curiosity to the philosopher. An observation which occurred to me on the spot suggests a new method of investigating a matter that appears so worthy of attention.

During a voyage to America in the spring of the year 1776, I used frequently to examine the heat of sea-water newly drawn, in order to compare it with that of the air. We made our passage far to the fouthward. In this fituation, the greatest heat of the water which I observed was such as raised the quicksilver in Fahrenheit's thermometer to 77° 1. happened twice; the first time on the 10th of April, in latitude 21° 10' N. and longitude, by our reckoning, 52° W; and the fecond time, three days afterwards, in latitude 22° 7' and longitude 55°; but in general the heat of the sea near the tropic of Cancer about the middle of April was from 76° to 77°.

The rendezvous appointed for the flee being off Cape Fear, our course, approaching the American coast, became north-westward. On the 23d of April the heat of the sea was 74°, our lati-

^{*} From the difference between civil and nautical time, it becomes necessary to observe, that the former is always meant in this paper,

tude at noon 28° 7' N. Next day the heat was only 71°; we were then in latitude 23, 12; the heat of the water, therefore, was now lessening very fast in proportion to the change of latitude. The 25th our latitude was 31° 3'; but though we had thus gone almost 20 farther to the northward, the heat of the fea was this day rather increased, it being 72° in the morning, and $72^{\circ}\frac{7}{2}$ in the evening. Next day, the 26th of April, at half after eight in the morning, I again plunged the thermometer into fea-water, and was greatly furprised to see the quickfilver rise to 78°, higher than I had ever observed it, even within the tropic. As the difference was too great to be imputed to any accidental variation, I immediately conceived that we must have come into the Gulf-stream, the water of which still retained great part of the heat that it had acquired in the torrid zone. This idea was confirmed by the subsequent regular and quick diminution of the heat; the ship's run for a quarter of an hour had lessened it 20; the thermometer, at three quarters aster eight, being raised by scawater fiesh drawn only to 76°; by nine the heat was reduced to 73°, and in a quarter of an hour more, to 710 nearly: all this time the wind blew fresh, and we were going feven knots an hour on a north-weitern course. The water new began to lofe the fine transparent blue colour of the Ocean, and to affume fomething of a greenish ofive tinge, a well known indication of foundings. Accordingly, between four and five in the aft incon ground was struck with the lead at the depth of eighty fathom, the heat of the fea being then reduced to 69°. In the course of the following night and next day, as we came into shallower water and nearer the land, the temperature of the fea gradually sunk to 65°, which was nearly that of the air at the time.

Unfortunately bad weather on the 26th prevented us from taking an observation of the sun; but on the 27th, though it was then cloudy at noon, we calculated the latitude from two altitudes, and found it to be 33° 26' N. The difference of this latitude from that which we had observed on the 25th, being 2° 23', was fo much greater than could be deduced from the ship's run marked in the log-book, as to convince the seamen that we had been set many miles to the northward by the current.

On the 25th at noon, the longitude by our reckoning was 74° W. and I believe the computation to have been pretty just; but the foundings, together with the latitude, will determine the spot where these observations were made better than any reckoning from the eastward. The ship's run on the 26th, from nine in the forenoon to four in the afternoon, was about ten leagues on a northweil by north course; soon afterwards we hove-to in order to found, and, finding bottom, we went very flowly all night, and till noon the next day.

From these observations, I think, it may be concluded, that the Gulph-stream, about the 33d degree of north latitude, and the 76 degree of longitude west of Greenwich, is, in the month of

April,

April, at least fix degrees hotter than the water of the fea through which it runs. As the heat of the fea-water evidently began to increase in the evening of the 25th, and as the observations shew that we were getting out of the current when I first tried the heat in the morning of the 26th, it is most probable, that the ship's run during the night is nearly the breadth of the stream measured obliquely across; that, as it blew a fresh breeze, it could not be much less than twenty-five leagues in fifteen hours, the distance of time between the two observations of the heat; and hence the breadth of the stream may be estimated at twenty leagues. The breadth of the Gulf of Florida, which evidently bounds the stream at its origin, appears by the charts to be two or three miles less than this, excluding the rocks and fandbanks which furround the Bahama islands, and the shallow water that extends to a confiderable diffance from the coast of Florida; and the correspondence of these meafures is very remarkable, fince the ftream, from well-known principles of hydraulics, must gradually become wider as it gets to a greater distance from the channel

by which it issues.

If the heat of the Gulf of Mexico was known, many curious calculations might be formed by comparing it with that of the current. The mean heat of Spanish-town and Kingston in Jamaica seems not to exceed Sto *; that of St. Domingo on the fea coast may be estimated at the same from Mons. Godin's observations +; but as the coast of the continent which bounds the gulf to the westward and fouthward is probably warmer, perhaps a degree or two may be allowed for the mean temperature of the climate over the whole bay: let it be stated at 82° or 83°. Now there feems to be great probability in the supposition that the sea, at a certain comparatively fmall diftance below its furface, agrees in heat pretty nearly with the average temperature of the air during the whole year in that part; and hence it may be conjectured, that the general heat of the water, as it issues out of the bay to form the stream, is about 82° 1, the small

History of Jamaica, London, 1774, vol. III. p. 652, 653. The different observations of the heat recorded in that work do not agree together; but those adopted here are taken from that feries which appeared to me the most correct.

† Monf. Godm's experiments upon the pendulum were made at the Petit Goave. They continued from the 24th of August to the 4th of September, and the average heat during that time was fuch as is indicated by 25° of Monf. de Reaumur's thermometer (see Mem. Acad. Scienc. 1735, p. 517.) According to Monf. de Luc's calculation (see Modifications de l'Atmosphere, vol. I. p. 378.) the 25th degree of Monf. de Reaumur's true thermometer answers to about the 85th of Fahrenheit's; but the average heat in Jamaica during the months of August and September is also 85": hence we may conclude, that the mean heat for the whole year is nearly the rame on the fea-coalts in both islands.

The lowest calculation of the mean temperature of the gulf is preferred on this occasion, because of the constant influx of new water from the Atlantic Ocean produced by the trade-winds; which water not having been near any land must, I think, he sensibly cooler than that which has remained some time inclosed in the bay. On this subject the observations made by Alexander Dalrymple, Eig. relative to the heat of the sca near the Coast of Guinea, ought to

be confulted (fee Phil. Trans. vol. LXVIII. p. 391, &c.)

variations of temperature on the furface not being sufficient to affect materially that of the general At the tropic of Cancer I found the heat to be 77°; the stream, therefore, in its whole course from the Gulf of Florida, may be supposed to have been constantly running through water from 4° to 6° colder than itself, and yet it had lost only 4° of heat, though the furrounding water, where I observed it, was 10° below the supposed original temperature of the water which forms the current. From this small diminution of the heat, in a diftance, probably of 300 miles, some idea may be acquired of the vast body of fluid which fets out of the Gulf of Mexico, and of the great velocity of its motion. Numerous observations on the temperature of this stream, in every part of it, and at different seasons of the year, compared with the heat of the water in the furrounding feas, both within and without tropic, would, I apprehend, be the best means of ascertaining its nature, and determining every material circumstance of its movement, especially if the effect of the current in puthing thips to the northward is carefully attended to, at the same time with the observations upon its heat.

On the 25th of September, 1777, as the ships which had transported Sir William Howe's army up Chesepeak Bay were returning toward the Delaware, with the sick and stores, they were overtaken, between Cape Charles and Cape Hinlopen, by a violent gale of wind, which, after some variation, fixed ultimately at N. N. E. and continued five days

without intermission. It blew so hard that we were constantly losing ground, and driving to the southward: we also purposely made some easting to keep clear of the dangerous shoals which lie off Cape Hatteras.

The 28th at noon our latitude was 36° 40'.N. and the heat of the sea all day about 65°. On the 29th our latitude was 36° 2'; we had, therefore, in the course of these twenty-four hours, been driven by the wind 38 nautical miles to the fouthward: the temperature of the fea continued nearly at 65°. Next day, the 30th, our latitude at noon was 35° 44', only 18 miles farther to the fouthward, though in the opinion of the feamen aboard, as well as my own, it had blown at least as hard on this as any of the preceding days, and we had not been able to carry more fail; confequently it may be concluded, that some current had set the ship miles to the northward. To know whether this was the Gulf-stream, let us consult the thermometer. At half after nine in the forenoon of this day the heat of this water was 76°, no less than eleven degrees above the temperature of the fea before we came into the current!

Towards evening the wind fell, and we flood N. W. by N. ciofe-hauled. As the fea-fill ran very high, and the ship scarcely went above two knots an hour, we did not make less than three points of lee-way on this tack; the course we made good, therefore was W. N. W. which on the distance run by noon next day, gave us about sixteen miles of northing; but that day, the 1st

01

of October, our latitude was 36° 22', 38 miles farther to the north than we had been the day before; the difference, 22 miles, must be attributed to the Gulf-stream .-This, however, is only part of the effect which the current would have produced upon the ship if we had continued in it the whole and twenty hours; for, though we were still in the stream at five in the afternoon of the 30th, as appeared by the heat of the water being then above 75°, and at eight in the evening the heat being still 74°, yet by seven next morning we were certainly got clear of it, the heat of the sca being then reduced to its former flandard of 65°. On this occafion, therefore, we did not cross the stream, but having fallen-in with it obliquely on the western fide, we pushed out again on the fame fide as foon as the gale abated.

These observations having been made three degrees to the northward of my former ones, it is curious to observe, that the heat of the Gulf-stream was about 2° less. The feafons of the year, indeed, were very different; but, perhaps, under such circumstances that their effects were nearly balanced. the latter observations the meridian altitude of the fun was less; but then a hot fummer preceded them: whereas in the former, though the fun's power was become very great, yet the winter had been past but a short time. Calculating upon this proportion we may be led to suspect, that about the 27th degree of latitude, which is as foon as the stream has got clear of the Gulf of Florida, it begins fensibly to lose its heat

from \$2°, the supposed temperature of the Gulf of Mexico, and continues to lose it at the rate of about 2° of Fahrenheit's scale to every 3° of latitude, with some variation, probably as the surrounding sea, and the air, are warmer or colder at different seasons of the year.

ions of the year. The preceding facts had made me very defirous of observing the heat of the Gulf-stream on my passage homeward; but a violent gale of wind, which came on two days after we had failed from Sandy Hook, disabled every person aboard, who knew how to handle a thermometer, from keeping the The master of the ship, deck. however, an intelligent man, to whom I had communicated my views, affured me, that on the second day of the gale the water felt to him remarkably warm; we were then near the 70th degree of west longitude. This agrees very well with the common remark of feamen, who alledge, that they frequently fensible of the Gulf-stream off Nantucket shoals, a distance of more than 1000 miles from the Gulf of Florida! According to the calculation I have before adopted of a loss of two degrees of heat for every 3° of latitude, the temperature of the Gulf-stream here would be nearly 73°; the difference of which from 59°, the heat that I observed in the sea-water both before and after the gale, might eafily be perceived by the master of the vessel. This was in the winter feafon, at the

An opinion prevails among feamen, that there is fomething peculiar in the weather about the Gulf-stream. As far as I could

end of December.

judge,

judge, the heat of the air was confiderably increased by it, as might be expected; but whether to a degree or extent sufficient for producing any material changes in the atmosphere must be determined by suture observations.

Perhaps other currents may be found which, issuing from places warmer or colder than the surrounding sea, differ from it in their temperature so much as to be discovered by the thermometer. Should there be many such, this instrument will come to be ranked among the most valuable at sea; as the difficulty of ascertaining currents is well known to be one of the greatest defects in the present art of navigation.

In the mean time, I hope the observations which have been here related are sufficient to prove, that in croffing the Gulf-stream very essential advantages may be derived from the use of the thermometer: for if the master of a ship, bound to any of the fouthern provinces of North America, will be careful to try the heat of the fea frequently, he must discover very accurately his entrance into the Gulf-stream, by the sudden increase of the heat: and a continuance of the same experiments will fnew him, with equal exactness, how long he remains in it. Hence he will always be able to make a proper allowance for the number of miles that the ship is set to the northward, by multiplying time into the velocity of the cur-Though this velocity is hitherto very imperfectly known, for want of some method of determining how long the current acted upon the ships, yet all uncertainty arising from thence must soon ceale, as a few experiments upon

the heat of the stream, compared with the ship's run checked by obfervations of the latitude, ascertain its motion with sufficient precision. From differences in the wind, and perhaps other circumstances, it is probable, that there may be fome variations in the velocity of the current; and it will curious to observe, whether these variations may not frequently be pointed out by a difference in its temperature; as the quicker the current moves, the less heat is likely to be loft, and confequently the hotter will the water be. In this observation, however, the feafon of the year must always be confidered; partly because it may, perhaps, in some degree affest the original temperature of the water in the Gulf of Mexico; but principally, because the actual heat of the stream must be greater or less in proportion as the tract of the sea through which it has flown was warmer or colder. In winter, I should suppose, that the heat of the stream itself would be rather less than in summer; but that the difference between it and the furrounding fea would be much greater; and I can conceive that, in the middle of fummer, though the stream had lost very little of its original heat, yet the sea might, in some parts, acquire so nearly the same temperature, as to render it scarcely possible to distinguish by the thermometer when a ship entered into the current.

Besides the convenience of correcting a ship's course, by knowing how to make a proper allowance for the distance she is set to the northward by the current, a method of determining with certainty when she enters into the Gulf-stream is attended with the further

further inestimable advantage of shewing her place upon the ocean in the most critical situation: for, as the current fets along the coast of America at no great distance from foundings, the mariner, when he finds this fudden increase of heat in the fea, will be warned of his approach to the coaft, and will thus have timely notice to take the necessary precautions for the fecurity of his vessel. As the course of the Gulf-stream comes to be more accurately known, from repeated observations of the heat and latitudes, this method of determining the ship's place will be proportionably more applicable to And it derives additional importance from the peculiar circumstances of the American coast, which, from the mouth of the Delaware to the fouthernmost point of Florida, is every where low, and befet with frequent shoals, running out fo far into the fea that a vessel may be aground in many places where the shore is not to be distinguished even from the mast-head. The Gulf-stream, therefore, which has hitherto ferved only to increase the perplexities of seamen, will now, if these observations are found to be just in practice, become one of the chief means of their prefervation upon that dangerous coait.

Account of a Childwho had the Smallpox in the Womb. In a Letter from William Wright, M. D. F. R. S. to John Hunter, Efq. F. R. S. from the sume.

Southampton-buildings, Hol-SIR, born, Feb. 27, 1781. HAVE read with much pleasure and information Mrs. Ford's Vol. XXV. case, which you published in Phil, Trans. vol. LXX. p. 128. From the sacts you have adduced it amounts to a certainty, that her sectus had received the variolous insection in the womb.

This induces me to lay before you a fingular cafe, that fell under my care fome years ago. I am forry I cannot be more particular, having unfortunately lost all my books and my notes of practice of this case and several others, by the capture of the convoy on the

9th of last August.

In 1768 the fmall-pox was fo general in Jamaica, that very few people escaped the contagion. About the middle of June, Mr. Peterkin, merchant at Martha brae, in the parith of Trelawney, got about fifty new negroes out of a fhip: foon after they landed, feveral were taken ill of a fever, and the fmall-pox appeared; the others were immediately inoculated. Amongst the number of those who had the disease in the natural way, was a woman of about twenty - two years of age, and big with child. The cruptive fever was flight, and the imallpox had appeared before I faw her. They were few, distinct and large, and fine went through the disease with very little trouble, till on the fourteenth day from the cruption she was attacked with a fever, which lasted only a few hours. Slie was, however, the fame day taken in labour, and delivered of a female child with the finall-pox on her whole body, head and extremities. They were diffine and very large, fuch as they commonly appear on the eighth or ninth day in favourable cases. The child was small and weakly; fhe could fuck but little; a wet nurfe

nurse was procured, and every possible care taken of this infant, but she died the third day after she was born. The mother recovered, and is now the property of Alexander Peterkin, Esq. in St.

James's parish.

In the course of many years practice in Jamaica, I have remarked, that where pregnant women had been seized with the natural small pox, or been by mistake inoculated, that they generally miscarried in the time of, or soon after, the eruptive sever; but I never saw any signs of small-pox on any of their bodies, except on the child's above mentioned.

I am, &c.

Natural History of the Inest which produces the Gum Lacca. By Mr. James Kerr, of Patna; communicated by S.r. Joseph Banks, P. R. S. from the jame.

Coccus Lacca.

Head & HE head and trunk Trank.] form one uniform, oval, compressed, red body, of the shape and magnitude of a very small louse, consisting of twelve transverse rings. The back is carinate; the belly slat; the antennae half the length of the body, filiform, truncated, and diverging, sending off two, often three, delicate, diverging hairs, longer than the antennae. The mouth and eyes could not be seen with the naked eye.

Tail.] The tail is a little white point, fending off two horizontal

hairs as long as the body.

Feet.] It has three pair of limbs, half the length of the infect.

I have often observed the birth of these insects, but never could see any with wings; nor could I find any distinction of sexes, nor observe their connubial rites: nature and analogy seem to point out a desciency in my observations, possibly owing to the minuteness of the object, and want of proper glasses.

Change. This infect is described in that state in which it sallies forth from the womb of the parent in the months of November and December. They traverse the branches of the trees upon which they were produced for fome time, and then fix themselves upon the succulent extremities of the young branches. By the middle of January they are all fixed in their proper situations, they appear as plump as before, but fliew no other marks of life. The limbs, antennæ, and fetæ of the tail are no longer to be feen. Around their edges they are environed with a spissed subpellucid liquid, which feems to glue them to the branch: it is the gradual accumulation of this liquid, which forms a compleat cell for each infeet, and is what is called Gum Lacca. About the middle of March the cells are completely formed, and the infect is in appearance an oval, fmooth, red bag, without life, about the fize of a fmall cuchanical infect, emarginated at the obtufe end, full of a beautiful red liquid. In October and November we find about twenty or thirty oval eggs, or rather young grubs, within the red fluid of the mother. When this fluid is all expended, the young infects pierce a hole through the back of their mother, and walk off one by one; leaving their

exuviæ behind, which is that white membraneous substance found in the empty cells of the Stick Lac.

Place. The infects are the in-

habitants of four trees.

1. Ficus Religiofa, Linnæi. In Hindoftan, Pipul. Banyan Tree.

2. Ficus Indica, Linnæi. In Hindostan, Bhur. Banyan Tree.

3. Plafo Hortus Malabarici. By the natives, Prafo.

4. Rhamnus Jujuba, Linnæi.

In Hindostanick, Beyr.

The infects generally fix themfelves to close together, and in numbers, that I imagine, only one in fix can have room to compleat her cell: the others die, and are eat up by various infects. The extreme branches appear as if they were covered with a red dust, and their sap is so much exhausted, that they wither and produce no fruit, the leaves drop off, or turn to a dirty black colour. These insects are transplanted by birds: if they perch upon thefe branches, they must carry off a number of the infects upon their feet to the next tree they rest upon. It is worth observing, that these fig trees when wounded drop a milky juice, which instantly coagulates into a viscid ropy substance, which, hardened in the open air, is fimilar to the cell of the Coccus Lacca. The natives boil this milk with oils into a bird-lime, which will catch peacocks or the largest birds.

A red medicinal gum is procured by incifion from the Plafo Tree, fo fimilar to the Gum Lacca that it may readily be taken for the fame fubstance. Hence it is probable, that those infects have little trouble in animalizing the sap of these trees in the formation of their cells. The Gum Lacca is rarely feen upon the Rhamnus Jujuba; and it is inferior to what is found upon the other trees. The Gum Lacca of this country is principally found upon the uncultivated mountains on both fides the Ganges, where bountiful nature has produced it in fuch abundance, that was the confumption ten times greater, the markets might be supplied by this minute infect. The only trouble in procuring the Lac is in breaking down the branches, and carrying them to market. The present price in Dacca is about twelve shillings the hundred pounds weight, although it is brought from the diftant country of Asiam. The best Lac is of a deep red colour. If it is pale, and pierced at top, the value diminishes, because the insects have left their cells, and confequently they can be of no use as a dye or colour but probably they are better for varnishes.

This insect and its cell has gone under the various names of Gum Lacca, Lack, Loc Tree. In Bengal, La; and by the English it is diffinguished into four kinds.

1st. Stick Lac, which is the natural state from which all the

others are formed.

2d. Seed Lac is the cells feparated from the sticks.

3d. Lump Lac is Seed Lac liquified by fire, and formed into cakes.

4th. Shell Lac is the cells liquided, strained, and formed into thin transparent laminæ in the following manner. Separate the cells from the branches, break them into small pieces, throw them into a tub of water for one day, with off the red water and dry

F z the

the cells, and with them fill a cylindrical tube of cotton cloth, two feet long, and one or two inches in diameter; tie both ends, turn the bag over a charcoal fire; as the Lac liquifies twift the bag, and when a fufficient quantity has transuded the pores of the cloth, lay it upon a smooth junk of the Plantain Tree (Musa Paradisiaca, Linuxi), and with a strip of the Plantain leaf draw it into a thin lamella; take it off while flexible, for in a minute it will be hard and brittle. The value of Shell Lac is according to its transparency.

Use to the Natives.] This is one of the most useful insects yet dis-

covered.

Ornaments.] The natives confume a great quantity of Shell Lac in making ornamental rings, painted and gilded in various taftes, to decorate the arms of the ladies; and it is formed into beads, spiral and linked chains for necklaces, and other female ornaments.

Scaling Wax.] Take a flick, and heat one end of it upon a charcoal fire; put upon it a few leaves of the Shell Lac foftened above the fire; keep alternately heating and adding more Shell Lac, until you have got a mass of three or four pounds of liquished Shell Lac upon the end of your slick *. Knead this upon a wetted board with three ounces of levigated cinnabar, form it into cylindrical pieces; and, to give them a polish, rub them while hot with a cotton cloth.

Japanning.] Take a lump of Shell Lac, prepared in the manner of fealing-wax, with whatever colour you please, fix it upon the end of a stick, heat the polished wood

over a charcoal fire, and rub it over with the half-melted Lac, and polifib, by rubbing it even with a piece of folded Plantain leaf held in the hand; heating the lacquer, and adding more Lac as occasion requires. Their figures are formed by Lac, charged with various colours in the fame manner.

Varnish.] In ornamenting their images and religious houses, &c. they make use of very thin beat lead, which they cover with various varnishes, made of Lac charged with colours. The preparation of them is kept a secret. The leaf of lead is laid upon a smooth iron heated by sire below, while they

fpread the varnish upon it.

Grindstones. Take of river sand three parts, of Seed Lac washed one part, mix them over the fire in a pot, and form the mass into the shape of a grindstone, having a square hole in the center, fix it on an axis with liquified Lac, heat the ftone moderately, and by turning the axis it may eafily be formed into an exact orbicular shape. Polishing grindstones are made only of fuch fand as will pass easily through fine muslin, in the proportion of two parts fand to one of Lac. This fand is found at Ragimaul. It is composed of small angular crystalline particles, tinged red with iron, two parts to one of black magnetic sand.

The stone-cutters, instead of fand, use the powder of a very

hard granite called Corune.

These grindstones cut very fast. When they want to increase their power they throw sand upon them, or let them occasionally touch the edge of a vitrissed brick. The

^{*} In this manner Lump Lac is formed from Seed Lac.

fame composition is formed upon sticks, for cutting stones, shells, &c.

by the hand.

Painting.] Take one gallon of the red liquid from the first washing for Shell Lac, strain it through a cloath, and let it boil for a thort time, then add half an ounce of foap earth (fosfil alkali); boil an hour more, and add three ounces of powdered load (bark of a tree); boil a short time, let it stand all night, and strain next day. Evaporate three quarts of milk, without cream, to two quarts upon a flow fire, curdle it with four milk, and let it stand for a day or two; then mix it with the red liquid above mentioned; strain them through a cloth, add to the mixture one ounce and an half of allum, and the juice of eight or ten lemons: mix the whole, and throw it into a cloth-bag strainer. The blood of the infect forms a coagulum with the cafeous part of the milk, and remains in the bag, while a limpid acid water drains from it. The coagulum is dried in the shade, and is used as a red colour in painting and colouring.

Dying. Take one gallon of the red liquid prepared as before without milk, to which add three ounces of allum. Boil three or four ounces of tamarinds in a gallon of water, and strain the liquor. Mix equal parts of the red liquid and tamarind water over a brisk fire. In this mixture dip and wring the fills alternately until it has received a proper quantity of the dye. increase the colour, increase the proportion of the red liquid, and let the filk boil a few minutes in the mixture. To make the filk hold the colour, they boil a handful of the back called load in water, firain the decoction, and add cold water to it; dip the dried filk into this liquid feveral times, and then dry it. Cotton cloths are dyed in this manner; but the dye is not fo lasting as in filk.

Spanish Wool.] The Lac colour is preferved by the natives upon flakes of cotton dipped repeatedly into a strong solution of the Lac Insect in water, and then dried.

Ujè to the Europeans.] See European authors.

Account of two remarkable Cases, related by Boerhaave, of the Barry Van Wassenaer, and the Marquiys of St. Auban; from Dr. Zimmermann's Treatife on Experience in Physic; translated from the German.

HE Baron Van Wassenaer, Admiral of Holland, a man of a fober disposition, subject to attacks of the gout, in other respects healthy, robust, endued with great qualities, and with an extraordinary firmness of temper, had accustomed himself to the taking an emetic, every time he thought he had ate too much. He conceived this method to be fo very useful to him, that he continued to repeat it, as often as he fancied there was occasion for it. It was to no purpofe, that his friends and physicians distuaded bim from this practice. Nothing, in his opinion, relieved him fo much as a vomit; and he appealed, in proof of this, to his pretended experience.

A messenger came one night to Boerhaave, to tell him, the the admiral was in the agonic of death, perhaps already dead at his country house. Boerhaave flies to his affirtance, and finds him leaning forwards in his bed, and supported by three of his fervants. In any other posture, his pain became excessive. He was unable to lie down, either on his back or his fide, or his belly, and much less could he sit on a chair. Boerhaave was the more alarmed at this appearance, because he well knew, with how much fortitude the admiral had supported the most violent attacks of the gout, without once lofing his patience, or his courage, amidst the most excruciating pains. groans of this man, who on other occasions had been so patient and immoveable, alarmed him still more.

The admiral, at the fight of Boerhaave, endeavoured to raise his head a little, and to give him his hand; but, on the least motion, or the least attempt to speak, he appeared to be borne down with excess of pain. It was in vain, therefore, that he attempted to describe his state; at each attempt, the sudden increase of his pain seemed to cut off his respira-

tion.

One of the affiftants then gave the following account. Three days before this diforder, the admiral had been present at an entertainment, where he had ate a little The next day, he detoo much. termined to prevent, by abstinence, any ill effects that might refult from this intemperance. The day before the attack, he had dined, with great moderation, and had got on horseback in good spirits, and feemingly in good health, without the least suspicion of any approaching disorder.

When returned from his ride, he abstained from supper, accord-

ing to his usual custom. At half an hour after nine o'clock, he drank three cups of carduus benedistus tea, as he had often done before. He was asked, why he took the infusion that evening: " because," says he, "I feel some-" thing disagreeable in the up-" per part of my stomach, and I " have a mind to wash it away." This fenfation, he added, he had often felt before, and had always been relieved by vomiting. Soon after this, he puked, but with difficulty, and in fmall quantity: he then took four more cups of the fame infusion, but without feeling any inclination to vomit, although he had drank fo copious-He directed more of it to be got ready, thinking to bring on a vomiting by force. While he was feated, and endeavouring to puke, he fuddingly cried in a most horrible manner, and drew together all his fervants, who were alarmed by his cries. The admiral then told them that he had burft, or torn, or disordered something at the upper part of his stomach; and that the anguish he felt was so excruciating, he must certainly be near his laft hour.

He then recommended himfelf to his Creator: a cold sweat flowed from all his limbs; his face and his hands became pale, and his pulse was no longer perceptible. He ordered them, to cover his head and breast with hot cloths, moistened with some strengthening liquors. They did this; but he found no relief: on the contrary, the disorder seemed to become more violent, and they judged that his death could not be far off. The physicians who were fent for, being at fome distance, the admiral, about half an hour after after this, took, of his own accord, four ounces of olive oil, and of this he threw up a small quantity, together with some of the cardius tea. He then called for two ounces more, which he likewife drank, but without vomiting, or having the least inclination to vomit; and his diforder, all this time, went on increasing. Half an hour after this, he drank about ix ounces of warm Dantzick beer, which he likewife kept down without nausea, as he did all that he drank afterwards.

This is what had paffed, when Bye, a physician, whom Boerhaave has not left without his share of praise, arrived from the Hague. When he faw the state of the patient, he determined to give nothing of an active nature, till Boerhaave should come. Thefe two physicians began, by confidering the causes of so sudden and cruel a pain, before they proceeded to any remedies. Both of them were convinced, that unless these causes could be ascertained, no dependance could be had on medicines administered at random.

After the most careful examination, they could discover no other guide to direct them, than the feat of the pain, together with an uncommon fenfation in the breaft, of which the patient complained, but which, however, was inexplicable. In other respects, the admiral was apparently healthy. described the pain as being excefsive, continual, and beyond all imagination. It did not relax a moment. He pointed out the feat of it to be at that part, where the oesophagus terminates in the stomach; he then cried out, that the

pain spread with the same violence towards his back. Before his death, he felt this pain through every part of his breast. It appeared, that his tortures were never fo great, as when he felt an inclination to belch, and that the air, being stopped in its passage inflead of rifing, feemed to diffract all the neighbouring parts. The disorder likewise increased, whenever he endeavoured to bend himfelf backwards, or to fit upright. This was all that his two physicians could discover, after all the inquiries and care imaginable.

At this part of the narrative, Boerhaave requests the experienced reader to pause with him awhile, and to reflect on the origin, the progress, the symptoms, and figns of this disease. He requires of him the first cause of these extraordinary effects. He had himself confidered every thing, with the greatest care, and had exerted all the powers of his understanding, to find out fome fixed principle, by means of which, he might unravel this obscure cause, and thus afford some relief to a disease, which hitherto feemed to be every moment increasing. All his speculations, however, were useless, and Boerhaave candidly confesses, that he found himfelf altogether unable to imagine, what could be the species, to which this discase could be referred. It afforded no fign of inflammation. There could be no fwelling suspected, capable of producing these cruel symptoms, and fo fuddenly. The preceding circumstances afforded no grounds for fuch a fuspicion, and all the vertebræ were in their proper fituation: nor could a dif-F 4 placement

placement of the fost parts, within the thorax, be supposed capable of

causing these torments.

There remained only fome cauftic and mortal poilon to be fufpacted, as the cause of these horrid fymptoms; but no poison could be thought of, the effects of which agreed with the circumstances of the admiral's case. So that of all the known causes of pain, not one could be fixed on as applicable to what he felt. It is well known that the gout, to which he was subject, might, by changing its feat, occasion pain, anxiety, and vomiting; but it never produces pains, fo excruciating as those the admiral complained of, in patients, who are in other respects healthy. Besides, the gout exerts its effects flowly, and comes on, and goes off, by degrees.

Of all known discases, therefore, there was not found one, which could, by any affinity, throw any light on the admiral's complaint, a wielent pain that had come on suddenly. This was all that could be said with certainty. Boerhaave knew, from the experience of all ages, that the most acute pain, when not attended with inflammation, may long be supported. He was, therefore, led to conclude, that the admiral's death would not be immediate; and this was all

his prognostic.

Uncertain as was the cause of this discase, it was necessary to think of semething, which might calm the pain. All the remedies, however, that were given, though or a very mild nature, served only to add to the comments of the parameter. Such was the melancholy standing of the admiral, and of

the two able physicians, who continued with him till five o'clock in the morning; when Boerhaave's affairs required him to be abfent. At going away, he very prudently advised Bye to leave nature a little while to herfelf, by not attempting to give even the mildest and most innocent medicines; fince the best chosen ones feemed, hitherto, only to have increased the complaints. His advice was followed, but without success. The admiral remained without any relief, till eight o'clock in the morning; and then Dr. Bye faw that the vital functions began to weaken, borne down, as it were, by the pain; but still there was no new symptom, that could throw any light on the difeafe. He then wrote to Boerhaave, and in his letter proposed some new remedies: Boerhaave agreed to their being tried; but their effects were equally fruitless with the former ones.

In these circumstances, the admiral settled his affairs. Boerhaave returned to him about three o'clock in the afternoon. The admiral received him with the greatest friendship, and, at the same time, told him, how inesticacious all the remedies had been, and how certain he was of the approaches of death, which he ardently wished for, as a relief from his misery. Boerhaave perceived, indeed, that this period was at hand: and about five o'clock the admiral expired, with the utmost

composure.

The two physicians conversed together in private, and confessed to each other, that it was impossible for them to conceive the cause

cause of this disease, much less of so sudden a death. They requested leave to open the body,

and this was granted.

This diffection proved, what no man would even have suspected. Notwithstanding the great quantity of drink the patient had taken, previous to, and during the attack, and of which he had voided no part, the intestines, and abdomen, and bladder, were emp-Nothing but air made its escape, when these parts were opened. There was no appearance in either of these, which could throw any light on the nature of the difease. The stomach was almost empty, it contained no blood, or bile, and but very little remains of aliment. At this appearance, Boerhaave was fo aftonished, that he hardly knew whether he was dreaming or awake. These are his own expressions.

He then proceeded to open the thorax, with the greatest atten-The moment he had penetrated through the diaphragm, though he had taken care not to injure the lungs, a great quantity of air rushed out, and with no little noise. Boerhaave's wonder was increased by this, because this phenomenon never happens, but when the lungs, have been wounded. The lungs in this subject, appeared so small and contracted, that they feemed to have been compressed, by some very great external force. heart was perfectly healthy.

Boerhaave, on opening the breast, perceived a disagreeable smell. He said, at the time, that he should have compared it to duck, if it had proceeded from the stomach. Somebody, who stood by, and heard this, immediately observed, that the admiral had, indeed, eaten part of a duck, at his last meal. It was then, that Boerhaave began to conclude, that he was going to discover a very different cause from any, which might, till then, have been presumed.

He no fooner raifed the right lobe of the lungs, than he found it swimming in a watery fluid, which filled the whole of the right cavity of the thorax. great suprize, he found this same water, and in the fame quantity, in the left cavity. He found this liquor to be fimilar to the little that remained in the stomach. drawing it off, it appeared of the colour of Dantzick beer, when mixed with an infusion of carduus. The fmell of it, was exactly like that of duck's flesh. Upon the furface of this water was fwimming, all the oil, the admiral had swallowed. There was neither extravasated blood, nor pus, nor any corrupted matter, to be feen any where. The quantity of fluid, found in the thorax, amounted to an hundred and four

The nature of the disease, now became more and more manifest. But it still remained to be discovered, how all that the admiral had swallowed, had made its way into the breast. The lest lobe of the lungs, was, therefore, carefully elevated, that Boerhaave might have a compleat view of the parts. Every thing appeared to him, to be in a healthy state, until he came within about two inches of the diaphragm, to that

part

part of the pleura, which lies on the left fide of the oelophagus. He there faw, distinctly, a part, which was very different from the rest, by its mobility, and by its being swelled; and, at the same time, of a blackish colour. This part was round, and about three inches in diameter. In the middle of it, was an opening, of about an inch and a half long, and three tenths of an inch wide. Boerhaave pressed this part slightly with his finger, and there immediately flowed out, into the cavity of the thorax, a fluid, which retembled that which was before there. His aftonishment was extreme.

He next attempted (taking care, at the fame time, not to confuse the parts) to introduce his fore singer, through this opening of the pleura. He found it soft, turnid, and open. Here, his attention, if possible, redoubled, because he was unable to discover, in this wound, any traces of the oesophagus. After having withdrawn his singer a little, he pushed it upwards, and came, at length, to that part of the oesophagus, which was broken off.

Boerhaave could hardly believe what he faw. He called all the affifiants to him, and facwed them, with the greatest association, at thing that was so unexpected. He then with the same precaution, directed his singer downwards, and it passed easily into the stomach; and then, with a view of giving them a clear idea of the disease, he made an opening into the ocsophagus, about three inches above the wound, and then introducing his singer through it, it

passed out at the opening, which had occasioned the disease.

The cause of the admiral's death, was, therefore, very clearly afcertained to be a laceration of the oesophagus; by means of which, every thing he drank, passed into the cavity of the breatl, through the opening in the pleura, which took place at the fame time. Boerhaave has proved, that the cardia, or upper orifice of the stomach, must have been closed after the admiral had taken seven cups of the infusion of carduus benedictus, and of which he voided but little; because, the more the stomach is filled, the more difficult it is to empty it. We know, that when the florach is full, the bottom of it comes forwards, while its upper part forms an angle, more or lefs acute, with the oefophagus. the admiral's efforts to vomit, were, therefore, chiefly exerted on the diaphragm and oefophagus. It was in the midst of these efforts, that the oefophagus burfl, being unable, any longer, to refift the motions of the Homach and diaphragm; and, being the more readily disposed to rupture, by the irritation, occasioned by the admiral's finger, which he paffed down his throat, in order to force a vomiting.

It was at that instant, that the admiral cried out, and drew to him all his fervants; telling them, with so much pain, that he had torn something within him. But it does not appear, that the oesa-phagus was lacerated to this degree, at once. The wound was, probably, gradually increased, till the separation was compleat. The stomach, when loaded with fresh drink,

drink, had driven it upwards, through this opening of the oefo-phagus; and thus, the cellular texture, becoming diftended, the pleura had, at length, burft; and there was then a communication with the cavity of the thorax. The air which abounds fo much in alimentary fubstances, or which passed down the oesophagus, had likewise filled a great part of the breast.

The death of the patient, therefore, took place, when the air was fo abundant in the stomach, and cavities of the breast, that the lungs were no longer capable of being dilated; and thus, a stop was put to respiration, and, of

course, to life.

All these circumstances prove, that the admiral's difease could be distinguished by no certain signs; and, that the best curative means, would have been useless, even if the cause of the complaint had been known. It is likewife certain, that the fame disease. happening now, in any other fubject, would be equally incurable, notwithstanding Boerhaave's accurate description of the case. They must, therefore, be very unreafonable people, who will reproach a physician, amidst such difficulties, with not having known what was to happen.

There were certain furgeons, however, who were illiberal enough, to fay, that Boerhaave
ought to have made an opening
into the thorax, in order to draw
off the liquor, that had passed into it. But it was first necessary,
to find out, that such an opening
was required; and then, it must
have been performed at both sides,
which, from the admission of the
air, into each cavity, at once,
would have been, of course, sa-

tal. Supposing the possibility of fuch an operation; would it not have been impossible to have faved the life of the admiral, without finding out fome new channel for the support of life? We see, by this, that there are, on all occasions, persons who are ready to blame, and who are never open to conviction, even though the truth lies before them.

The fecond case, I shall beg leave to introduce here, has been likewise related by Boerhaase, with the same energy, and exactness, as the former one.

The Marquifs St. Aubin, was a strong, active man, well formed, and of a very lively temper. He rode often on horfeback; loved hunting; and all this, without being fensible of fatigue. drank very moderately, and ate indifferently of every thing; but preferred fat meats and butter. He had been a little ricketty, when about three years of age; but this complaint foon disappeared, as did a swelling of the abdomen, which came on two years after-When he was fix years old, he was attacked with an acute fever, of which he recovered, without any disagrecable confequence.

During feveral years, however, he had been subject to an hereditary complaint. This was a painful enlargement of the hemorrhoidal vesiels. These tamours became, at length, of a confiderable volume, and poured out, every day, a quantity of blood. The blood, by being intercepted in its course, contracted so bad a quality, that the Marquis was unable to support, any longer, the pain he selt there. The inflammation of the parts, sometimes, seemed

to threaten even gangrene. In thefe circumstances he consulted Boerhaave, who, by the regimen and the remedies he prescribed, completely cured him. The patient recovered all his strength, and remained, during eighteen months, without feeling any inconvenience. From the time that his cure took place, care was taken to attend carefully to him; that if any of the ill effects, that are fo often occasioned by a suppression of the hemorrhoids, should appear, they might, at once, be obviated. Boerhaave had advised this, because Hippocrates, and all phyficians after him, have observed, that a suppression of the hemorrhoids, often occasions other fingular, and fometimes more dangerous diseases; but, above all, from what had happened to the Marquiss's father, who, having been subject to the same complaint, and disabled by it from doing duty in the calvalry, had put a stop to it, by caustics, and incifions, and continued free from the disorder, during a year; at the end of that time, he was attacked by dyfphoea; and, foon afterwards, with hemoptyfis, of which he died, in ten days.

But the most vigilant attention, during these eighteen months, could lead to no fuspicion, that the functions of the body were, in any way, injured. Boerhaave particularly observes, as a notable circumstance, that the voice was, in no way, affected, during all this time; for the Marquis had a strong, manly voice, and often amused himself by singing. He preferred the agility of all his limbs; and his breast continued to be fo firm and well, that he

never complained of fatigue, tho' he perfevered in using a great deal of exercise. Nobody could breathe with greater ease, than he seemed to do. Such had been the situation of the marquiss, from his infancy, till the appearance of the hemorrhoids, and from their being cured, till within ten months and a half of his death.

We have placed all these preliminary particulars, nearly in the fame light that Boerhaave has done; that every penetrating phyfician, may be able to give a full fcope to his reflection, on this occasion. We are of opinion, that in given a history of this fort, it is right to relate, in a very minute, and careful manner, all that relates to the natural habit of the subject; to his preceding difeases, and their cure; together with his regimen, and mode of life; before we pass on, to defcribe the diforder, of which he died. This care has often been despised, and ridiculed, by the ignorant, and the fuperficial; but we concern ourselves but very fuch little, about incompetent judges.

It was, therefore, not till within ten months and a half of his death, that the marquis began to find his health affected. About that time, he began to feel a constant pain near the left scapu-This pain, afterwards, extended itself to the left side of the As the pain increased breaft. considerably, it was foon felt, through the whole infide of the thorax. A continual cough, rendered this pain still more acute. The patient could get no rest. When he coughed, it feemed to him, as if his fides were torn afun-

der.

der. Physicians were called in. The disorder was attributed to the gout; and remedies for the gout, were accordingly prescribed.

Their attempts, however, were to no purpose. The pains seemed to assume a new force, after the use of these medicines, and fixed themfelves, more and more, to the left side of the breast; so that it was found impossible to remove their Blood-letting, opening medicines, oil, opium, &c. were all given, without affording any relief. To these pains, after a certain time, there was added another, and infinitely more excruciating pain, which was felt immediately under the left breaft, and feemed, as the marquis expressed himself, as if the infide of his breaft was torn out by violence. Tormented himfelf, to this degree, and tormenting all about him, by his lamentable and incessant groans, he could find no place, or lituation, that afforded him the least mitigation of his mifery. He usually fat upon his bed, leaning a little forwards, and reclining his elbows on his thighs. In this fituation, he, now and then, at intervals, got a little rest, and slept a few moments; but it was only to be waked foon, and on a fudden, by a cruel exacerbation of the fame relentless pain.

Such was the fituation of the marquifs, when Boerhaave was defired to vifit him, with his phyfician in ordinary, the fame Dr. Bye,' whom we have already mentioned.

When Bye related to Boerhaave, all the particulars of the disease, and the remedies, that had been employed to no purpose, they acknowledged, to each other, that it was impossible to fay any thing. with certainty, either of the feat, or the nature of the disease. prefumed, there was an abfcefs in the lungs; because he had observed the patient expectorate a viscid Boermatter, after much agony. haave, however, differed from him, in opinion; because, excepting the fingular and urgent fymptoms of pain, the marquifs was, in other respects, healthy. He was then asked, what he thought of the nature of the difease. It was not, till after fome confiderable reflection, that he answered, that he really did not know what to think. He was inclined, however, to be of opinion, he faid, from the fymptoms, that the organs, destined to dilate the breast, were unable to fupport the contractions, effential to the action of each muscle; and the parts of the breast, which required to be dilated, refifted to this dilation, at each inspiration; and that, from this, arose the violent pain, the difficulty in breathing, and the fense of fuffocation. The patient, and his friends, were fatisfied with this reflection.

Boerhaave advised cataplasms to be frequently applied to the parts, that are the most in motion, in refpiration; as the ribs, cartilages, and sternum. He likewise preferibed emollient drinks, a sparing diet, and the frequent inspiration of the vapor of fome foften-His prescription ing decoction. was followed, and the patient found himself much relieved. His friends began to indulge hopes of his recovery. The pain never returned again, with fo much violence as before, even till his death. How blind and precarious,

1ays

favs Boerhaave, is the joy of as mortal:

At length, the cough returned, as it were, with new violence. Nothing could calm it, but opium; but this calm was not of long duration: his expectoration was exceedingly painful; and his respiration so difficult, that the patient was obliged to throw his neck backwards, to raife his breaft; and, at the fame time, to draw in his breath, with so frightful a noise, that it could be compared, only to the cry of a Bittern. Then, again, perhaps, for a few moments, the respiration would be more easy: but this relief was but trifling. He was obliged to be almost constantly feated upright, both night and day, with his neck thretched out, and his head raised. At the least change of posture, when he, by chance, slept for a moment, he felt the most horrid pain. If he attempted to lie down on his pillow, to repose himfelf for an initant, his face became black; the veins of his head, fwelled; and his eyes, feemed to be burfling from their fockets. He appeared to draw his breath, only from the bottom of his entrails. An hideous hollow found, teemed to be his only relief. If he attempted to speak, a few words usually revived all his pain.

Boerhaave remarked, with aftonishment, that in the midst of this deplerable flate, the pulse was ftill regular: nor did it begin to fall or vary, or become intermittent, till a few days before his death. The marquifs dragged on this unhappy life, till the oth of July. At the least return of the pain, his face became black. A clyffer, occasionally thrown up, was

now the only thing, that gave him any relief. The great stricture of his breaft, perfuaded him, that his difease was hypochondriacal; and that this fenfation was the effect of flatus. He was the more perfuaded of this, because his appetite was fo keen, that he would have eat to excess, if his servants had not taken care to prevent him. What he cat, ferved only to in-

crease his pain.

About eight days before his death, the hemorrhoids began to return; and this gave him great fpirits. He now began to have hopes of being cured, and even reproached his physicians, with not having attempted to bring them back iooner. On the 7th of July, he voided, by the anus, a confiderable quantity of blood, which immediately coagulated. The next morning, the flux continued, and in greater abundance. The marquiss was so enlivened at this, that he attempted to make a few steps in his chamber, leaning upon his fervants. The fame day, he had a most craving appetite, and eat of many different things, swallowing every thing, just then, without any fear of fuffocation. He likewise supped, with the same good humour; rejoiced at being able to do, what he had so long been incapable of; having, for fome time before, not even dared to take any folid nourithment, without danger of immediate fuffocation.

On the 9th of July, however, Dr. Eve found him again in bed, after passing a most painful night. He seemed to be in the agonies of His face and neck, were death. confiderably fwelled: his face was of a dark complexion, and his eyes eyes seemed as if starting from his head. He was able, however, to relate what had happened in the night. He mentioned the danger he had been in, of fusiocation; and defired to he let blood. physician refused this. You are determined then, that I shall pefaid the marquifs. would not, furely, with, faid Bye, that I should hasten your death. While he was speaking thefe words, the fuffocation increased. His face became quite black. He attempted to bid adieu to the marchionefs, who was by the bedfide; and then, yielding to his last efforts to breathe, bowed down his head, and expired.

Bye immediately informed Boerhaave of this event, to whom he had every day communicated the state of the patient. Boerhaave came to him; and they were per-

mitted to open the body.

Boerhaave, before this operation, was willing to reflect on all the circumstances of the disease; to fee whether he could not foretel, what he should discover on diffection; and thus, fay what part was difeafed. But this great man candidly owns, that he was unable to determine any thing before hand; and he requests the reader to judge, for himfelf, from the circumstances he has related, of what might be the effential causes of the Marquis's death before he goes any farther.

The body was, externally, of a very healthy appearance; and, not-withflanding the marquifs's long abflinence, and extreme fufferings, he was, by no means, emaciated. The abdomen only, was a little fwelled. This tenfion rendered Boerhaave very attentive. He even ventured to fay to the af-

fiffants, that they were going to discover the cause.

On opening the breaft, there immediately spouted out a stream of limpid, yellow, infipid water. Boerhaave reflected a moment, on what this water might be, and whether it was not a dropfy of the breatt, which had tuffocated the patient, after causing so many ills. It continued to flow, during the diffection, but in lefs quantity. The breast seemed to be filled with water, on looking into it, through this narrow opening. Boerhaave introduced his finger into it, and found the right lobe in its place, but adhering to the pleura. He went no farther on that fide, but opened the left cavity of the breaft, and found there no water: but the whole lobe, from the top to the bottom, was adhering to the pleura. He then, carefully, laid this part of the thorax open; taking care, not to disorder any part of its contents. The moment he had accomplished this, he saw, that from the neck, to the diaphragm, the whole of the cavity was filled with a white fubliance, of a found appearance, except that, in the middle of its furface, there was a little tumour, which included a fluid, of a milky colour, but not purulent. This fobitance was pretty hard and uniform, through the whole of its furface. Boerhaave was stapised, at the fight of this fingular phenomenon. This substance was much more confiderable in the left, than in the right fide of the heart; and even entirely filled it. This was the reason, why the lobe of the lungs, was prefled to clote to the pleura, on that fide, that neither air, por blood could penetrate it and longer. The first feat of the distant, had, therefore, probably, been in the left cavity, under the scapula; and hence the pain the patient com-

plained of, at the beginning.

This excrescence had, indeed, extended to the right fide of the breast; but still, it was not so confiderable there, as not to leave fome room for the admission of air, and for fome degree of action to the lobe, on that side, in respiration. The great vessels, however, and even the heart itself, with its pericardium, were pushed somewhat out of their places. The respiration could, therefore, only take place, in this lower part of the right cavity of the thorax; because, this excrescence being at the top of the breast, where it is narrowest, in the human subject, the lungs were pressed down, towards the inferior part of the cavity, where the breast becomes This, therefore, fomewhat wider. explains the extraordinary efforts, made by the patient, to draw his breath from this lower part; the bronchiæ being compressed above, by this substance. Hence, too, the hollowness of his voice. Befides all this, the right lobe was found adhering to the pleura, only at the upper part of the breaft. About the middle, it was feen attached to this tumour; so that here was another hindrance to the action of this lobe.

Boerhaave attempted to separate the whole of this fubstance, from the other parts, to which it was attached. It was impossible to take it out at once, and entire, on account of the pericardium, lungs, and great vessels. He extracted it, however, in the best manner he was able, and found the weight of it to be, fix pounds and three quarters. As it was

light, in proportion to its fize, fome idea may be formed of its excessive bulk. The wnole of this substance, was as white Here and there, appeared a milky fluid, on cutting into it. No vessels, however, were to be perceived in it, excepting those, to which it was attached. cept the fkin, that inclosed the whole, there was no appearance of any cauls, or cavities, or membrane, within. If any portion of this substance, was rubbed between the fingers, it melted like fat oil. It was, therefore, in Boerhaave's opinion, the true steatoma.

The displacement of all the thoracic viscera, was altogether fingular. This substance had pushed the diaphragm downwards; and this had occasioned the tumefaction of the lower belly, which Boerhaave noticed, at the first, as a fingular appearance. The pericardium, being united to the diaphragm, had followed it, and, of course, removed from its natural fituation. This was followed by a depression of the great vessels. We have already feen the state of

the lungs.

Here, then, was a new example of human mifery. A mild, unctuous, an innocent humour, occafioned, by its abundance, a fingular disease, and death; and this, from its fixing itself, in too great a quantity, on parts which can, in no degree, be compressed, without danger. We learn from this, therefore, that, in extraordinary difeafes, we may reafonably suppose fonce hidden and unknown cause, which anatomy alone, can be likely to explain.

It were to be wished, says Boerheave, that the experienced phyfician might be able to discover

the source of a similar complaint from his first seeing the patient; and that he might, then, be able to prevent this fat from spreading, so as to form so destructive a mass. We might then hope, to be able to prevent the disorders it occasions; because, it is impossible to resolve, or dissipate, a steatoma that is once formed, unless its situation should admit of manual

operation.

Boerhaave confesses, that he knew no medicine, that would prevent a beginning fleatoma from enlarging; and that which is not to be done externally, must be less possible within. Every time, therefore, fays he, that I hear great talkers, vaunting their remedies, for this purpole, I wish to fee them cure schirrous tumours; occult, and ulcerated cancers; meliceris; steatoma, &c. by certain means; and thus give us a proof of their art. As for my part, ${f I}$ have observed, that all prudent, and experienced physicians, allowed their infufficiency, on thefe occasions, though they did it with regret.

It would feem, as if Boerhaave might meet with fome reproaches, for his method of treating the Marquis, before this complaint.

Nothing could be more grateful, to the ignorant, and illiberal, men of little minds, and of a narrow way of thinking, than an opportunity of censuring so great a genius as Boerhaave. There are, even now, persons of this disposition, who, in reading this narrative, will perhaps be led to ascribe the disorder of the Marquis to the suppression of the hemorrhoids. But the great Boerhaave has replied to these frivolous judges, by Vol. XXV.

faying that a fleatoma cannot be derived from the cure, or the fuppression of the hemorrhoids: that be had cured them, neither by caustic, nor by any other external application, but by mild, emollient, and detersive remedies; and that no signs of plethera had been perceived, when the hemorrhoidal flux began to diminish. In short, says he, with his usual candour, and dignity of mind, let every one judge freely, and sincerely for himself; I have described the difcase, such as I saw it.

The phyfician, therefore, as well as the mathematician, has fulfilled his duty, when he has proved, that a difficulty is, in every fenfe, and point of view, inexplicable. He who proves a difease to be impenetrable, and, of course, incurable, deserves as much of our esteem, as he who points out the seat of a disease, and the method

of curing it.

Account of Mount Vesuvius in the Year 1777; from Travels into the Two Sicilies, by Henry Swinburne, Eq.

HE unavoidable hurry upon our arrival prevented me from vifiting Vefuvius while the eruption continued. As foon as I was at liberty, I hired a hackney two-wheeled chaife, called a Caleffo; which is no more than a very uneafy triangular feat, gilt and bedaubed with gaudy colours, fixed upon an axle-tree, and d.awn b; a fingle horfe. Some of thefe horfes fell very dear, and go at a prodigions rate, always in a high trot. The driver stands behind, and with the whip and voice di-

rects the horse's motion. The hirer holds the reins; but is not responsible for any mischief the carriage may do, unless he also take possession of the lash. The reins are fastened to a cavesson, without a bit, and the more the animal is pulled, the faster he goes:

a hifs flops him.

One of these chairs conveyed me about eight miles from Naples, to the place where the lava ceased to run, after filling up a road, overturning some cottages, and confuming a wide tract of vineyards. The poplars, to which the vines were tied, were burnt or crushed beneath the weight of the cooler lumps that tumbled off on each fide from the fiery mais. The furface of this black and now flagnant river is very uneven, full of points and protuberances, and broken into chasms. It answers the idea I have of a rocky mountain overturned into a valley, and fhattered to pieces by an earth-In colour, the lava requake. fembles flag, or the first clearings The intente of an iron mine. heat that still issued from it, though the flames were not visible by day-light, kept me at a dif-By night, fire may be tance. icen through the crevices of the dusky crust. It had run close to a lava of seventeen years date, which is not yet fufficiently triturated by the action of air, to afford hold to the feeds of any plant, except a long hoary moss. commonly the first settler on these cinders, which are infinitely fofter, and fooner crumbled to dust, than 3. Scierras of Ætna.

er fatisfying my curiofity of attentive examination of lights, I returned to Por-

tici, hired a guide and mule, and rode up through the vineyards to the foot of the mountain, where vegetation terminates in a long coarfe grass, the only plant that can bear the vicinity of the hot ashes and sulphureous exhalations. I ascended the steep cone of cinders in a direct line, up to the ancles at every step in purple lukewarm ashes. The heat was not very powerful till we came within a few yards of the fummit, and there smoke breaks out through many crannies. On the Portici fide there is very little lava, except a few scattered stones that ferve to rest upon. It is impoffible to give a just idea of the fatigue of this climbing. Before that day I had mounted some very exalted points of the Alps, and clambered up the highest peak of the Pyrenees, without feeling fuch oppressive weariness and exhaustion of spirits and strength as I experienced on Vesuvius. Perhaps. the mephitic effluvium, which attacked my respiration, may also have had a debilitating effect upon my nerves and muscles. I should hardly have been able to proceed, had I not held by my guide, who went before with a handkerchief tied round his waist.

I confefs I was a good deal disappointed on reaching the summit; for the descriptions I had read had raised in my imagination an expectation of every thing that could be glaring and striking in colours, pompous and tremendous in a scene of igneous phænomena; but the late eruption had, for a time, laid all the mountain's sury assect, and every thing was dull and dark. The vent, by which the lava ran out, is much below

the

the top of the mountain, and on that fide the fulphureous steams are very pungent. I was on the point of returning rather fruttrated of my hopes, when a curling column of fmoke and flame rofe flowly out of the gloomy abyfs, and brought up with it a thick white cloud, that had hitherto rendered the crater impervious to my fight. The wind quickly caught hold of this column, and whirled it round the immense caldron several times with inconceivable noise and velocity, till it forced part of the fmoke to fly off herizontally from the mountain, and dashed the remainder back into its original ca-During this conflict, on the opposite side to that where we flood, I had a peep very far into The fides feemed all the crater. lava and fcoria, with very little variety in the tints, closed at bottom by an impenetrable screen of fmoke. I have feen old ruined coalpits, that afford a tolerable idea of this volcanic kettle. foon as the smoke was driven away, the roaring below grew loud, and frequent explosions were heard with a hollow found; and at every throe, which caused a very confiderable commotion in the thin arch on which we flood, a shower of red-hot stones was shot up; but not rifing many feet above the mountain, they did not come within the fweep of the wind, and so fell back perpendicularly into the rumbling gulf.

I shall not presume to investigate minutely the origin, composition, or operations of the mountain, as we have ample information on this subject in the works of Sir William Hamilton. His knowledge of the volcano is so com-

plete, and reputation on that head fo firmly established at Naples, that more than once the court has waited to regulate its stay at Portici, or removal from thence, till he had declared, when he thought the eruption would begin, and what direction the lava was likely to follow. Many writers of ditfertations on ignivomous mountains have been led into a labyrinth of mistakes, false positions, and false consequences, by trusting folely to the relations of others, and not being at the pains of examining the phænomena with their own eyes. Whoever has not had the advantage of inspecting an active volcano, should not prefume to write upon that fubject, as he must unavoidably fall into error, in spite of all the learning, combinations, and fagacity the wit of man is susceptible of. deed, fome authors, who have had Vesuvius before their eyes for forty years, have likwise fallen into strange indefensible opinions concerning its component parts, original formation, and modes of operating. Attachment to fystem misleads us all, and frequently causes us to see things, not as they are, but as we wish to find them. Nothing but the defire of proving Vesuvius to be a primordial mountain, and not the produce of cruptions, could have brought Padre della Torre to believe, that he saw regular, oriand granite ginal, calcarious, itrata, far down in the bowels of the mountain; where, if he faw any thing, it was probably flreaks of fulphureous and mineral efflorescences adhering to the coats of the funnel. Nothing but system could have fo blinded Richard, as G 2

to prevent his finding a fingle pumice - stone, or other mark of fire, in the rocks of Pofilipo, where any trivial observer may meet with innumerable black calcined ftones, though he may not be fufficiently conversant in the subject to discover, that the whole rock owes its birth to the workings of volcanic fires. Without prejudices of this kind, could other authors have feen nothing in Monte Somma, and the hills of Naples, but primitive fubiliances, unaltered fince the deluge; when, in reality, every stone bespeaks a fiery origin?

To be convinced that Vefuvius has been raised from the level of the plains, or, more properly speaking, of the fea, by the sole action of fire contained in its bowels, requires, methinks, nothing but an eye accustomed to observe, and a found judgment unbiasted by party. I own I cannot entertain a doubt of it, after having confidered the infulated position, and apparent composition of the mountain, together with the foil of all the adjacent country; after having reflected upon the birth of Monte Nuovo thrown up to the perpendicular height of two hundred feet, in the thort space of forty-eight hours; and upon the apparition of many islands raised out of the bosom of the waters by submarine fires, of which both ancient and modern history afford examples. The island of Ascension, and many in the Archipelago, one of which rose out of the sea in 1707, compleatly prove this affertion. The origin of the ifle of Rhodes, as related in Pindar's feventh Olympic, feems to be of the fame class. This poet calls Rhodes a native of the floods, and tells us, " that ancient tales of men relate, "that when Jupiter and the Gods " divided the earth, Rhodes was "not visible amidst the marine "waves, but lay hid in the bring "deep *." Apollo, being abfent, was left out of the partition. treaty, and, on his appearance, Jupiter would have proceeded to a fresh division; but the God of day declined the offer, contenting himself with dominions that did not interfere with any god's thare: " for (fays he) I behold in the " frothy fea a fruitful land rifing " from the bottom." And ac-

cordingly,

oordingly, as he spoke, "Lo! the "island shot up out of the waters." It is easy to trace this stable to its source, the heaving up of the soil at the bottom of the sea by the vehemence of fire.

Whatever may have been the origin of Vesuvius, whether as a mountain it be coëval with the first-created protuberances of this globe, or whether it be an irregular production of ages subsequent to the creation, this we may fafely affirm, that it has been a volcano beyond the reach of kistory or tradition. Long before it laid Herculaneum waste, it was described by authors as bearing the marks of fire on its summit. Some even fay, the report of its having vomited flames went fo far back into antiquity as to border upon fable. A most ani-mated description of its ravages in 79 is left us by the younger Pliny, who was a woeful witness to all he relates. From that time, is now and then burst out, and alarmed the neighbouring country; but feemed by degrees to lofe its vigour, till, in the lower ages, it scarce gave sufficient alarm to merit a place in the chronicles of the times. In 1631, it broke out again with accumulated fury, and spread such devastation around, as almost equalled the horrors of the first year of Titus. Since that epocha, it has had its periods of turbulence and repole; and of late years it has fo redoubled its violance, as to emit fmoke continually, and every year, at least a torrent of lava. Whence it draws its immense supplies of combuttibles, and how long its present cone will be able to bear thele unremitting efforts, exceeds

the power of all human calculation. I believe, however, that with all its terrors, Vesuvius, open and active, is less hosse to Naples, than it would be, if its eruptions were to cease, and its struggles were to be confined to its bowels: then undoubtedly would ensue most fatal shocks to the unstable foundation of the Terra di Lavoro.

The day being clear, I made fome stay on the top, to obtain a just idea of the topography of this curious country. There cannot be a more advantageous station for examining Naples and its environs, as Vesuvius stands single, at a distance from all other mountains, and commands the plains of Nola, Capua, and Sarno, the chain of the Apennines, the promontory of Sorrento, the hills and gulf of Naples, with all its islands. observed, that the ridge extending westward from Poggio Reale to Monte Gauro, is entirely separated by the plains from every other eminence, and constitutes a vast detached promontory, full of lakes and hollows, the craters of extinct volcanos. On surveying those regions from this elevated pinacle, it appeared to me, that, in times of the remotest antiquity, there may have exided an enormous flaming mountain, with its centrical point between Ischia and the Camaldoli, and that Solfatara, Aftruni, Barbaro, &c. may be but the excrescences and montagnuole of one gigantic mass, which after exhausting its force, and wearing out the furface, till it grew unable to support its own weight, may have tunk, and been overwhelmed by the waves. The gulf of Baia, and the channels of Ischia and Procida.

Procida, may have been formed by this cataclysin. The fire of Ætna renders such an extent no objection to my hypothesis, and shews to what a monstrous bulk a mountain can swell itself. Monte Epomeo in Ischia, and the Camaldoli, are both abruptly broken down facing each other, and both slope off very gradually different ways, till one is lost in the Campi Leborini, and the other sinks into the sea.

S.me Account of the Mare Ficcolo of TARANTO—of its Shell-Fish—of the Nautilus—Coral—and Pinna Marina; from the fame.

DEVOTED the afternoon to one of the oldest and most intelligent of the Tarentine fishermen, to shew me the fishing and spawning places, and explain the different feafons and methods of catching fish. We took boat, and rowed up the fouthern shore of the Mare Piccolo, with an intention of meafuring the whole circumference, which Strabo fixes at one hundred stadia, or twelve English miles and an half. According to my calculation, the circuit of the western part is not more than half as great as that of the eastern one; and both together, by a rough estimate, are about fixteen miles. This increase may be accounted for by the destruction of all the parapets and walls of the old city, the wearing away of the banks, and overflowing of the low grounds. A tide is very perceptible, especially when the moon changes, and ftill more so at the folflices and equinoxes; but very

feeble in comparison of the tides in the ocean: however, it serves to keep the waters of this landlocked bay sweet, and to bring in caravans of fish, that fatten and breed in its quiet pools. When the Scirocco blows hard, the waves are driven up with great violence, and navigation becomes perilous for small vessels.

iman veneis.

The first objects of my curiofity were the beds of Cozzenere, or muscles, the greatest and most constant supply of the market. Their fpawn is dropt in the mud. About the twenty-first of March, little mufcles begin to rife up, and cling to long stakes driven by the fishermen into the water under the city wall, and in the castle ditch. There they thrive and grow in still water, while the washings of the streets supply them with rich and copious nutriment. In August they are as big as almonds, and are then drawn up with the poles, and fown on the opposite of the Mare Piccolo, among the fresh-water springs.

About the middle of October they are again dragged up, feparated, and feattered over a larger space. In spring they are brought to market, long before they arrive at their full growth. This haste proceeds from the avidity of the officers of the revenue, who receive a duty of four carlini a cantaro for them, whether old or

young.

When a long continuance of heavy rains swells the little streams that discharge themselves into this gulf, the waters become muddy, and these fish are then observed to grow distempered, rotten, and unwholesome. The cause of this malady lies in the noxious frag-

metits

ments of animals, putrid vegetables, oily, bituminous, and fulphureous particles, washed from the earth by the showers. They cut the tender fibres or fingers which the fish stretches out, mistaking them for wholesome food. The wounded parts fester, and poison the whole body. It is an observation made here, and confirmed by long experience, that all the testaceous tribe is fuller, fatter and more delicate, during the new and full moon, than in the first and last quarters. The difference is accounted for by the tides and currents, which fet in stronger in the new and full moon, and bring with them large quantities of bruised fillies, intects, fruits, and other fattening nurture. I was affured that nothing causes fish to spoil sooner than leaving them exposed to the beams of the moon; and that all prudent fishermen, when out by night, cover what they catch with an awning. If they meet with any dead fish on the strand, or in the market, they can always difcern, by its colour and flabbiness, if it be allunate, moonstruck; and, except in cases of great necessity, abstain from it as unwholesome. Not having an opportunity of verifying this affertion, I give it as doubtful; for I

know the Italians are apt to attribute to the baneful influence of the moon many strange effects, which philosophers of other nations do not ascribe to it. No Italian will lie down to sleep, where moonshine can reach him.

The Cozze Pelofe, or velvet muscle, is first dragged for in the Great Sea, and then scattered to breed on Sciaie, or heaps of stones sunk by the fishermen at every head-land of the Mare Piccolo.

Under the Piano, or eastern shore, are the oyster-beds: no coast affords a more exquisite fort. In winter, large hampers of them are sent over-land to Naples. The season is confined by law to a term between the 25th of November and Easter Sunday.

Brundusium was the great supplier of oyiters for the Roman tables. From that port, the spawn was carried to stock their public refervoirs at the Lucrene Lake, near Baiæ; and no mention is made by the ancients of the excellence of any Tarentine shell-fish except the scallop*. It is therefore not unlikely that oyster-spawn has been brought to Taranto from Brindisi, and better preserved than at the original bed, where the obthructions in the mouth of the harbour have ruined all the fisheries +. The papyraceous Nautilus is

fome-

^{*} Pestinibus patulis jastat se molle Tarentum. Hor. Sat.

[†] I received from my friend, F. Ant. Minafi, the following lift of shell-sish found in the Tarentine waters. He drew it up according to the Linuxan system from a large affortment of specimens, which he was commissioned to class, before they were presented by the Archbishop of Taranto to the Infant Don Gabriel. Had my learned correspondent had an opportunity of vinting those seas, it is more than probable that his piercing and experienced eye would have discovered other species, if not genera, of sinhes.

The places are kept a profound fecret. Marks are fet up on land, by which the Tarentines theer their course, and fink their hooks and cross-beams exactly in the middle of a coral bed, while itrangers must row about a whole day dragging, without a guide, or certainty of bringing up a fingle twig. There was, a few years ago, fuch abundance of coral near thele shores, that a boat's crew was once known to draw up in one day as much as fold for five hundred ducats (93 l. 15 s.) Large pieces may be had for about five ducats per rotolo, which at Taranto contains only thirteen onnces.

Under Cape St. Vito, once famous for an abbey of Bafilian monks, and in most parts of the Grande, the rocks ftudded with the Pinna Marina. This bivalved shell of the muscle tribe frequently exceeds two feet in length. It fastens itself to the stones by its hinge, and throws out a large tuft of filky threads, which float and play about to allure small sish: amidst these silaments is generally found, besides other infects, a small surimp, called by the ancients, Cancer Pinnotheres, by the modern Tarentines, This little crustaceous Caurella. animal was imagined to be generated with the Pinna, and appointed by nature to act as a watchman, in apprizing it of the approach of prey or enemies; and that, upon the least alarm, this guard flipt down into the shell, which was instantly closed: but more accurate observers have difcovered, that the poor shrimp is no more than a prey itself, and by no means a centinel for the muscle, which in its turn fre-

quently falls a victim to the wiles the Polypus Octopedia. very calm weather, this rapacious pirate may be feen stealing towards the yawning shells with a pebble in his claws, which he darts fo dexteroufly into the aperture, that the Pinna cannot shut itself up close enough to pinch off the feelers of its antagonist, or fave its flesh from his ravenous tooth. The Pinna is torn off the rocks with hooks, and broken for the fake of its bunch of filk cilled Lanapenna, which is fold, in its rude state, for about fifteen carlini a pound, to women that with it well with foap and fresh water. When it is perfectly cleanted of all its impurities, they dry it in the shade, straiten it with a large comb, cut of the useless root, and card the remainder; by which means they reduce a pound of coarle filaments to about three ounces of fine thread. This they knit into tłockings, gloves, caps, and waitlcoats: but they commonly mix a little filk as a strengthener. This web is of a beautiful yellow brown, resembling the burnished gold on the back of iome flies and beetles. I was told that the Lanapenna receives its gloss from being steeped in lemon juice, and being afterwards prefied down with a taylor's goofe.

Natural H.story of the Tarantula; from the same.

HE Tarantula is a fpider of the third species of Linnæus's fourth family, with eight eyes, placed four, two and two; its colour commonly a very dark grey, but varies according to age

and food. The bulk of its fore-part is almost double that of the hind part; the back of its neck raised high, and its leg short and thick. It lives in bare fields, where the lands are fallow, but not very hard; and, from its antipathy to damp and thade, chooses for its residence the rising part of the ground facing the east. Its dwelling is about four inches deep, and half an inch wide; at the bottom it is curved, and there the infect fits in wet weather, and cuts its way out, if water gains upon it. It weaves a net at the mouth of the hole. These spiders do not live quite a year. In July they shed their kin, and proceed to propagation, which, from a mutual distrust, as they frequently devour one another, is a work undertaken with great circumspection. They lay about feven hundred and thirty eggs, which are hatched in the fpring; but the parent does not live to fee her progeny, having expired early in the winter. The Ichneumon fly is their most formidable enemy.

An Account of some Experiments on Mercury and Silver, made at Guildford, in May 1782, in the Laboratory of J. Price, M. D. F. R. S.

EXPERIMENT I.

Made May the 6th, 1782, before the Rev. Mr. Anderson; Capt. Francis Grose; Mr. Russell and Mr. D. Grose, the Gentlemen mentioned in the Introduction as the most proper Witnesses of the Process, then resident in Guildford.

TALF an ounce of mercury provided by Capt. Grose

(bought at an apothecary's of the town) was placed in a finall Heffian crucible, brought by Mr. Russell, on a flux composed of borax. (also brought by him) a small piece of charcoal taken out of a scuttle (fortuitously) by Mr. D. Grose, and examined by the rest of the company; and a small piece of nitre, also taken out without felection, by the Rev. Mr. Anderfon, from a quantity in common use, in the laboratory; these being pounded together in a mortar which all the company had previously inspected, were pressed down into the crucible with a fmall pestle: on this flux the mercury was poured by Mr. Anderson, and upon it half a grain, carefully weighed out by Mr. Ruffell, of a certain powder of a deep red colour, furnished by Dr. P. was put on it by Mr. Anderson.

The crucible was then placed in a fire of a moderate red heat by Dr. P. who from his greater facility in managing the fire from long habit, was thought most eligible to conduct the experiment. He repeatedly called the attention of the company to observe the stages of the process, and to remark in every part of it that any voluntary deception on his part was impossible.

In about a quarter of an hour, from the projection of the powder, and the placing of the crucible in the fire, he observed to the company, who on inspection found his observation true, that the mercury, though in a red hot crucible, shewed no figns of evaporation, or even of boiling: the fire was then gradually raised, with attention on the part of the company, and repeated calls for that attention from Dr. P. that no un-

due

due addition might be made to the matter in the crucible; in a strong glowing red, or rather whitered, a small dip was taken on the point of a clean iron rod, and when cold, the fcoriæ fo taken being knocked off, were shewn to the company, and found replete with finall globules of a whitish coloured metal, which Dr. P. obferved to them could not be mercury, as being evidently fixed in that strong heat: but as he reprefented to them might be an intermediate substance between mercury and a more perfect metal.

Α fmall quantity of borax (brought by Mr. R.) was then injected by him, and the fire railed, but with the same precautions on the part of Dr. P. to subject every thing to the minute infpection of the persons present; and after continuing the crucibles in strong red-white heat for about a quarter of an hour, it was carefully taken out, and gradually cooled; on breaking it, a globule of yellow metal was found at bottom, and in the fcoriæ smaller ones, which, collected and placed in an accurate balance by Mr. Russell, were found to weigh fully ten grains. This metal was in the presence of the above-mentioned gentlemen sealed up in a phial, impressed with the seal of Mr. Anderson, to be submitted future examination, though every one present was persuaded that the metal was gold.

The feal being broke the next morning, in the prefence of the former company, and of Captain Austen, and the metal hydrostatically examined, the weight of the larger globule (the others being too minute for this mode of

examination) was found to be in air 9 grains and a quarter, and in distilled water of temp. Fahren. 50 plus, it lost fomething more than $\frac{3}{8}$ (but not quite an half) of a grain; the difference was not appreciable, as no fmaller weight than the eighth of a grain was at hand, but was judged by all the company to be nearly intermediate; i. e. 7 :-at half a grain the sp. gr. would be rather more than 18:1; if only 3 were lost in water, the fp. gr. would exceed 24: 1. the intermediate, would be 21. ¹/₇ nearly; but as the lofs feemed rather more than the intermediate, though apparently and decided less than half a grain, the specific gravity must have been nearly as 20: 1. and in this estimate all present acquiesced.

After this hydrostatical examination, the globule was flattened by percussion into a thin plate, and examined by Mr. Russell, in the manner of artists for commercial purposes; on finishing his scrutiny, he declared it to be as good gold as the grain gold of the refiners, and that he would readily purchase such gold as that which he had just examined at the highest price demanded for the

purest gold.

The plate being then divided, one half was before the company fealed up by Mr. A. to be submitted to a trial of its purity, which Dr. P. proposed, requesting his friend Dr. Higgins, of Greek-street, to make; the remainder being put into aq. regia of nit. acid and sal. ammon. afforded a solution sufficiently rich, before the company separated, to yield with sol. of tin. a richly coloured crimson precipitate.

Capt.

Capt. G. was accidentally abfent when the precipitate was made, but faw it next day. In about four hours the portion of metal employed was complitely diffolyed; and the next norming, before Capt. and Mr. D. Grofe, and Mr. Ruffell, (Mr. A. being prevented from coming) the folution being divided into three portions, the following experiments were made *.

To the first portion, diluted with water, was added a quantity of caustic vol. alk, and the precipitate, which was copious, being duly separated and dried, about a grain of it, placed on a tin plate, was heated and found to explode smartly, This experiment was

repeated three times.

To the fecond portion, diluted, was added a portion of fol. of tin, in aq. reg. A beautiful crimfoncoloured precipitate was immediately formed in confiderable quantity; which, when dryed, was mixed with a fufible frit, composed of flint-powder, and the fluxes proper for the ruby glass of cassius, in the proportion of 5 grains of the precipitate to Bij of the frit, and in a vitrifying heat afforded in about three hours a transparent glass, which, by heating again, affumed an elegant crimfon colour: and the remainder which continued in the fire also acquired a bright red colour.

The third portion being mixed

with vitriolic ether, imparted to it the yellow colour given to this fluid by folutions of gold; and the ether being evaporated in a shallow vessel, a thin purplish pellicle adhered to the side, spotted in several places with yellow.

Dr. Higgins foon after receiving the piece of metal, favoured the author with an answer, in which he notified that the packet came to him under the proper feal:—That he was well fatisfied of the furity of the gold he received; and that he confidered the author's experiments as exclusively sufficient to have ascertained the nature and purity of the metal.

EXPERIMENT II.

Made at Dr. Price's May 8th, 1782, before Sir Philip Clarke, Dr. Spence, the Rev. Mr. Anderfon, Cuft. Grofe, Mr. Russell, and Mr. D. Grofe.

HALF an ounce of mercury, procured from one Mr. Cunning-ham, an apothecary of the town, was placed on a flux composed of an ounce of powdered charcoal, two drachms of borax, and one scruple of nitre, and on it when a little warmed projected one grain of a white powder, furnished by Dr. Price

After the crucible had acquired a red heat, the company all faw the mercury lying quiet at the bot-

* The finall plate falling by accident on a globule of microury on the table, readily amalgamated with it. This is mentioned in confequence of an observation in the Critical Review. The Smiris Hispanica is not in the least employed in the preparation injected on the mercury.

The process is more analogous to that of Dr. Brandt, referred to by the ingenious Reviewer of this article, in his very candid and satisfactory Cri-

trique.

tom, without boiling or fmoking in the least, and it continued in this tranquil state after it had gained a full red heat. It was continued in a fire gradually augmented to a white heat, near three quarters of an hour, a fmaller crucible previoufly inspected, being inverted on it, to prevent coals from falling in : and the crucible being then withdrawn and cooled, many globules of white metal were found diffused through the whole mass of fcoria: of these globules were collected to the weight of ten grains, before the company feparated, and configned to the care of Mr. Russell, who took them away with

Part of the remaining globules being afterwards collected, by pounding the crucible and washing over the powder, the whole when melted together amounted to thir-

teen grains.

Ruffell.

Dr. Price remarked on this process, that having taken too great a quantity of charcoal, the globules were thereby dispersed over the whole mass, and the powder having been sprinkled against the sides of the crucible had not produced its greatest effect. And that some of the mercury which had escaped its action must have been volatilized by the heat; and this on inspection of the covering crucible was found to experiment was be true. The therefore the next morning repeated in presence of Mr. Anderson,

EXPERIMENT III.

Capt. and Enfign Gross, and Mr.

The remaining half ounce of mercury was employed; the charcoal and borax, both taken without felection from large quantities in the laboratory, were powdered by Mr. Grofe, and the mercury placed in the crucible as in the former experiment.

Barely half a grain of the white powder, weighed out by Mr. Ruffell, was projected on the mercury. which by some accidental delay had begun to boil in the crucible; but on the application of the powder the ebullition ceased, although the crucible and contained mercury was subjected to a much greater heat; and it continued without boiling, even when of a red The crucible was gradually heated to a white heat, and when cooled and broke, there was found in the bottom a well collected bead of fine white metal, weighing four grains.

EXPERIMENT IV.

On the fame day, and the fame perfons being prefent as at the preceding experiment, the following was made on filver.

Mr. Russell weighed out fixty grains (one drachm) of grain filver, which he had purchased of Meffrs. Floyer and Co. refiners in Love-lane, Wood-street, Cheapfide: this quantity was placed in a fmall crucible on fome of the flux made as above, before the company; and on the filver, when in fusion, was projected a bare balf grain of the red powder, used The crucible Experiment I. was then replaced in the fire, and continued there for about a quarter of an hour; a piece of borax taken at a venture, out of a jar containing a large quantity, was thrown on the metal by Mr. Grose.

Dr. Price foon after, from the appearance of the flux imagining

the

the crucible to be cracked (by the cold and moisture of the borax) took it out of the fire, and finding that what he suspected had happened, did not replace it; when cold it was broke, and the button of metal was found in the bottom, which, when weighed, appeared not to have lost any of its original weight, so that fortunately only the flux had transuded.

EXPERIMENT V.

That no doubt might arise from the failure of the crucible in the last experiment, a similar one was made in the presence of the same persons, with the addition of J. D. Garthwaite, of ______, Esq. who was also present at the latter part of Experiment IV.

Thirty grains of the abovementioned grain filver was by Mr. Russell weighed out, and put into a small Hessian crucible on a flux of charcoal and borax made before the company, with the same precautions as in Experiment I. On the filver, when fused, was projected by Mr. Anderson a bare balf grain of the red powder, and about five minutes after, some glass of borax (to avoid the moisture contained in crude borax) was thrown in by one of the company. crucible after being kept in a red-white heat for about fifteen minutes was taken out, and when cold broke: at the bottom of the scoriæ or rather flux, which in this experiment was neatly fused, lay the button of metal, which was found nearly, if not exactly, of its original aveight.

It was then tried by Mr. Russell, in the artists' manner; as was also the piece of metal obtained in Experiment IV. He found both

of them to contain gold; the latter in larger quantity, as might be expected, from the relative proportion of the powder and filver in the two experiments.

Dr. Price also examined the metal on the touchstone (basaltes) and with nitrous acid; when all the company saw the mark of gold remaining, while a mark made by a piece of the very parcel of grain filver from which the portion used in these experiments had been taken, and placed by the side of the mark from the enriched silver, totaly vanished on wetting it with the aqua fortis.

The mark from the enriched filver, remained (of a yellow colour) after repeated affusions of weak and strong aqua fortis. So that the company were entirely convinced that gold was now contained in

the fused filver.

The chemical reader will probably anticipate the author's obfervation; - that of the known metalic substances of a gold colour, fulphurated tin could not, without decomposition, have fuftained the heat employed in these experiments; and that copper, or regulus of Nickel, would have been dissolved by the nitrous acid, equally with the filver. The remark is indeed scarce necessary; for had it been possible to have fecretly introduced into the crucible any of these metals, (and none of the company would for a moment tolerate the idea of fuch an attempt having been made) the identity of weight observed was fufficient to prove that nothing but the crimfon powder had been added.

After the pieces of metal had been thus feparately examined, they

1

they were melted together, and when cool it was remarked that the furface of the culot of metal was elegantly radiated with alternate ftrice and furrows; an appearance not usual in fused filvem. Ten grains were reserved by Dr. Price for his own examination; and the other 80 grains were taken by Mr. Russell, to be assayed in the refiners' manner.

Dr. Price found the proportion of gold to be $\frac{1}{8}$ of the whole mass.

Mr. Ruffell in the course of a few days caused all the above-mentioned gold, silver, and mixture of gold and silver, to be assayed in the artists' manner, for the resiners, at the office of Mess. Pratt and Dean, assay-masters, near Cheapside.

They affayed each portion separately, and reported the gold and filver to be of the most compleat purity: and the enriched silver to contain gold in the proportion of one eighth of the joint weight: and this report he also repeated before the spectators of Experiment VII. on May 25.

It was remarkable that both the refiner and the affay-master at first affirmed the impossibility of success in the process; and prejudiced by received opinions, questioned the purity of the metals, though they owned they looked much like ordinary gold. The affay removed their doubts; and they owned, with surprize, that the metals were entirely pure, and certified their purity in their official report.

EXPERIMENT VI.

Made May 15, 1782, before Sir Philip Horton Clarke, the Rev. B. Anderson, Cast. Grose, Dr. Spence, Mr. D. Grose and Mr. Hallamby, and several times repeated before Mr. Anderson, and Dr. Spence.

TWO ounces of Mercury were by one of the company taken out of a ciftern in the laboratory, containing about two hundred weight of quickfilver (for experiments on the gaffes) and in a small Wedgewood's-ware mortar rubbed with a drop or two of vit. ether: on this mercury, which was very bright and remarkably fluid, barely a grain of the white powder was put, and afterwards rubbed up with it for about three minutes.

On pouring the mercury out of the mortar, it was observed to have become blackish and to pour fluggishly; after standing ten minutes, on being poured out of the vessel in which it had stood, it was found confiderably less fluid than before; and in a quarter of an hour's time fo increased in spiffitude as hardly to pour at all; but seemed full of lumps. Being now strained through a cleth, a fubstance like an amalgam, of a pretty folid confistence, remained behind; the unfixed mercury being expelled from this mass, by placing it on a charcoal, and directing the flame of a lamp on it with a blow-pipe, a bead of fine white metal remained fixed in a strong red heat: which by every subsequent trial appeared to be filver: the weight of the bead thus collected, weighed and examined before the company separated, was 18 grains: but much remaining in the firained mercury, this was afterwards feparated, and weighed 11 grains: the whole obtained

was therefore 29 grains, or in proportion to the powder as 28:1-

Five drachms of mercury, taken out in the fame manner as the above two ounces, were rubbed up with vit. either, and afterwards with barely a quarter of a grain of the red powder; a mass like an amalgam being obtained by straining it after it had stood about a quarter of an hour, and the mercury driven off before the blowpipe, as in the former experiment, a bead of yellow metal remained, weighing 4 grains; and after standing some time longer, gr. 2. and i more were obtained, both which refilted aqua fortis on the touch-itone: and a fmall quantity being diffolved in aqua regia, a purple precipitate was produced from the fol. by the fol. of tin, and a brownish one by sol. ferri vitriolati, bergm. (green vitriol or copperas); in this experiment therefore the quantity of gold was to the powder employed, as 24: 1. exclusive of the weight of the powder.

The former part of this experiment was repeated on Saturday the 18th day of May, before the Rev. Mr. Manning, the Rev. Mr. Fulham, the Rev. Mr. Anderson, the Rev. Mr. Robinson and Dr.

Spence.

Two ounces of mercury, treated as before mentioned, (after exhibiting phænomena fimilar to those above related) afforded a mass, one half of which only (to avoid the noxious sumes of the

whole) after having the mercury expelled from it by a white heat before the blow-pipe, yielded upwards of twelve grains of a white metal, that in every trial to which it was submitted, appeared to be filver.

The product * therefore including the filver contained in the firained mercury would have been nearly as 28:1; as in the former

experiment.

A fmall portion (about 3ij) of the above mercury being put into another vessel, and about the fixth of a grain of the red powder put on it, the mercury, after being ground up with it, and flanding fome time, was strained as the former, and the small mass so obtained, placed before the blowpipe. It yielded fomething more than a grain of metal, which examined by nit. acid on the touchflone, evidently contained gold; as was apparent to the company before their leaving the laboratory. It was intended to have been submitted to other trials, but from its minuteness and form, was accidentally loft.

EXPERIMENT VII.

Made on Saturday May 25th, 1782, in the presence of the Lords Onslow, King and Palmerston, Sir Robert Barker, Sir Philip H. Clarke, Barts. the Rew. O. Manning, G. Pollen, B. Anderson, J. Robinson, Clerks; Dr. Spence, Wm. Mann God-

fchall,

^{*} The author, by the words product, preduced, and the like, here and in other places, means only to express that a quantity of precious metal was really obtained; and neither to affirm or deny any speculative opinions relative to the mode of action of the matter projected on the mercury, or concerning the manner in which the precious metal is contained in mercury.

fehall, Wm. Smith, W. Godfchall, Jun. Efgs .- Meffers Gregory and Russel.

考ij mercury were taken from the ciftern formerly mentioned, and in a fimilar manner, and rubbed up with a few drops of vit. ether, in a fmall mortar, as in

Experiment VI.

A bare grain of the white powder was projected, and afterwards rubbed up with it. The mercury, which before the addition of the powder had been very bright and fluid, was now perceived by the company to be dull, and run heavily: it was poured out into a fmall glass vessel, and after standing for about 45 minutes was put into a cloth to be strained. It now poured fo fluggishly that the latter portions of it feemed in a flate intermediate, between fluidity and folidity, or to use a term less fcientific, but, like many other vulgar ones, very descriptive, poured grouty.

Great part of the supersuous mercury being strained off, a mass fimilar to an amalgam was left in the cloth: and the remaining mercury which could not be pref-fed out, being driven off by fire from a portion (about a fourth) of the whole mass, a globule of white metal, which had all the appearance of filver, remained, and was kept in a white heat for about two minutes, before the blow-

pipe.

On the fame day, and before the fame respectable company:—half an ounce of mercury revivified from cinnabar, brought by the Rev. Mr. Anderson, was by him placed in a fmall round English crucible, taken from among a number of

..Vol. XXV.

others in the laboratory, by Lord Palmerston, on a flux composed of a fmall piece of charcoal and a piece of borax, both taken cafually by fome of the company from large quantities, and pounded in a mortar previously inspect-

ed by those present.

This flux being preffed down in the crucible with a small pestle, also examined, the mercury was poured into the depression, by one of the spectators, and on it balf a grain, bare weight, of the red powder, was put by Lord Palmerflon. The crucible being then covered with a lid, taken in the fame manner as the crucible from among many others, and shewn round to the company, was placed in the furnace furrounded by lighted charcoal.

One or more of the company, particularly the Lords King and Palmerston, were during the whole time of the experiment close to the furnace and operator; and as requested by him gave the closest attention to every part of the pro-

cefs.

When the crucible had acquired a full red heat, the cover was removed, and feveral of the company faw the mercury in a tranquil flate, neither evaporating nor boiling: in which state it continued even when the mercury itself was completely ignited.

The cover being replaced, the fire was gradually raifed to a white heat; the crucible being continued in this heat for thirty minutes, was taken out, cooled, and

broke.

A globule of metal was found at bottom, neatly fuled, and exacily fitting the concavity of the divided feorize. This globule fell

out by the blow, among the fragments of the crucible, and was taken up and flewn round to the company by Lord Palmerston, and in their presence replaced in the hollow of the vitrified borax, to which it was accurately adapted.

Many other gloubules were diffused through the scoria attached to the sides of the crucible, fragments of which were distributed among the company at their re-

quest.

The bead which lay at the bottom weighed about ten grains, and was taken away, together with the filver, by Mr. Godfchall; and by him afterwards transmitted to Lord Palmerston, to be submitted to proper examination.

Mr. Godschall returned the gold, with the affay-master's re-

port on it and on the filver.

The affay-mafter, whom Mr. G. for greater certainty on this occasion had the precaution to have recommended by the clerk of the goldsmith's company, reported both the gold and filver to be

perfectly pure.

Dr. Price, though acquainted with the characters employed by affay-masters in making their reports (which are peculiar to them) unwilling to rely entirely on his own knowledge, and being desirous to offer collateral evidence to the public, shewed the gold and the report to Mr. Lock, an experienced goldsmith of Oxford, without informing him of any of the above particulars.

Mr. Lock affirmed the metal to be by the report pure gold: which, he added, was confirmed by its appearance: and that it confequently was fuperior to gold of the English flandard.

Two experiments, fimilar to those made on Saturday May 25th, were repeated on a larger scale, before some of the above company on the Tuesday following; with, the same attention on their part, and more on that of the author to the regulation of the fire, which he observed to them, being now less engaged, and his attention not divided, he could employ to produce a much greater effect.

By twelve grains of the white powder were obtained from thirty ounces of mercury upwards of an ounce and a quarter, or fix hundred grains, of fixed white metal *; or in the proportion of 50:1.—
And two grains of the red powder, produced from one ounce of mercury, two drachms, or 120 grains, of fixed and tinged * metal; i. e.

fixty times its own weight.

These last portions of gold and silver, as well as a part of the produce of the former experiment, have had the honour of being submitted to the inspection of his majesty; who was pleased to express his approbation.

This honour may be mentioned with the less impropriety, as it is conferred by a sovereign equally revered for his patronage of science, and beloved for his amiable conde-

fcension.

^{*} The words fixed and tinged are not used in conformity to any theoretical notions, but merely to denote the obvious properties of the merals obtained, and to avoid calling them gold and filver without the authority of an assay.

Some Account of the Snakes of North America, and of the Humming Bird: from the Letters by J. Hector St. John, an American Farmer.

HY would you prescribe this task; you know that what we take up ourselves seems always lighter than what is imposed on us by others. You infist on my faying something about our snakes; and in relating what I know concerning them, were it not for two fingularities, the one of which I faw, and the other I received from an eve-witness, I should have but very little to observe. The fouthern provinces are the countries where nature has formed the greatest variety of alligators, fnakes, ferpents; and fcorpions, from the smallest size, up to the pine barren, the largest species here. We have but two, whose flings are mortal, which deferve to be mentioned; as for the black one, it is remarkable for nothing but its industry, agility, beauty, and the art of inticing birds by the power of its eyes. I admire it much, and never kill it, though its formidable length and appearance often get the better of the philosophy of some people, particularly of Europeans. The most dangerous one is the pilot, or copperbead; for the poison of which no remedy has yet been discovered. It bears the first name because it always precedes the rattle - fnáke; that is, quits its state of torpidity in the spring a week before the other. It bears the fecond name on account of its head being adorned with many copper - coloured spots. It lurks in rocks near the water,

and is extremely active and dangerous. Let man beware of it! I have heard only of one person who was stung by a copperhead in this country. The poor wretch inflantly swelled in a most dreadful manner; a multitude of spots of different hues alternately appeared and vanished, on different parts of his body: his eyes were filled with madness and rage, he cast them on all present with the most vindictive looks: he thrust out his tongue as the fnakes do; he hissed through his teeth with inconceivable strength, and became an object of terror to all bye-standers. To the lividness of a corpfe he united the defperate force of a maniac; they hardly were able to fasten him, so as to guard themselves from his attacks; when in the space of two hours death relieved the poor wretch from his struggles, and the spectators from their apprehensions. The poison of the rattle-snake is not mortal in fo short a space, and hence there is more time to procure relief; we are acquainted with feveral antidotes with which almost every family is provided. They are extremely inactive, and if not toucked are perfectly inoffenfive. I once faw, as I was travelling, a great cliff which was full of them; I handled feveral, and they appeared to be dead; they were all entwined together, and thus they remain until the return of the fun. I found them out, by following the track of fome wild hogs which had fed on them; and even the Indians often regale on them. When they find them afleep, they put a small forked stick over their necks, which they keep immoveably fixed on H 2

the ground; giving the fnake a piece of leather to bite: and this they pull back feveral times with great force, until they observe their two poisonous fangs torn out. Then they cut off the head, skin the body, and cook it as we do eels; and their flesh is extremely sweet and white. I once faw a tamed one, as gentle as you can possibly conceive a reptile to be; it took to the water and fwam whenever it pleafed; and when the boys to whom it belonged called it back, their fummons was readily obeyed. It had been deprived of its fangs by the preceding method; they often firehed it with a foft brush, and this friction feemed to cause the most pleasing sensations, for it would turn on its back to enjoy it, as a cat does before the fire. One of this species was the cause, some years 'ago, of a most deplorable accident, which I shall relate to you, as I had it from the widow and mother of the victims. A Dutch farmer of the Minisink, went to mowing, with his negroes, in his boots, a precaution used to prevent being flung. Inadvertently he trod on a make, which immediately flew at his legs; and as it drew back in order to renew its blow, one of his negroes cut it in two with his feythe. They profecuted their work, and returned home; at night the farmer pulled off his boots and went to bed; and was foon after attacked with a strange sickness at his stomach; he fwelled, and before a physician could be sent for, died. The fudden death of this man did not cause much enquiry; the neighbourhood wondered, as is usual in such cases, and without any further examination the corple was buried. A few days after, the fon put on his father's boots, and went to the meadow; at night he pulled them off, went to bed, and was attacked with the fame fymptoms about the fame time, and died in the morning. A little before he expired the doctor came, but was not able to affign what could be the cause of so singular a disorder: however, rather than appear wholly at a lofs before the country people, he pronounced both father and fon to have been bewitched. Some weeks after, the widow fold all the moveables for the benefit of the younger children; and the farm was leafed. One of the neighbours, who bought the boots, presently put them on, and was attacked in the same manner as the other two had been; but this man's wife being alarmed by what had happened in the former family, difpatched one of her negroes for an eminent physician, who fortunately having heard fomething of the dreadful affair, gueffed at the cause, applied oil, &c. and The boots recovered the man. which had been fo fatal, were then carefully examined; and he found that the two fangs of the make had been left in the leather, after being wrenched out of their fockets by the strength with which the fnake had drawn back its head. The bladders which contained the poison, and several of the fmall nerves were still fresh, and adhered to the boot. The unfortunate father and fon had been polioned by pulling off thefe boots, in which action they im-perceptibly feratched their legs with the points of the fangs, through

through the hollow of which some of this aftonishing poison was conveyed. You have no doubt heard of their rattles, if you have not feen them; the only observation I wish to make is, that the rattling is loud and diffinct when they are angry; and on the contrary, when pleased it founds like a distant trepidation, in which nothing distinct is heard. In the thick fettlements, they are now become very fcarce; for whereever they are met with, open war is declared against them; so that in a few years there will be none left but on our mountains. The black fnake, on the contrary, always diverts me, because it excites no idea of danger. Their swiftness is astenishing; they will sometimes equal that of an horse; at other times they will climb up trees in quest of our tree toads; or glide on the ground at full length. On some occasions they present themselves half in the reptile state, half erect; their eyes and their heads in the erect pofture, appear to great advantage: the former display a fire which I have admired, and it is by these they are enabled to fascinate birds and fquirrels. When they have fixed their eyes on an animal, they become immoveable; only turning their head fometimes to the right and fometimes to the left, but still with their fight invariably directed to the object. The distracted victim, instead of flying its enemy, feems to be arrested by some invincible power; it screams; now approaches, and then recedes; and after skipping about with unaccountable agitation, finally rushes into the jaws of the fnake, and is fwallowed,

as foon as it is covered with a flime or glue to make it flide cafily down the throat of the devourer.

One anecdote 1 must relate, the circumstances of which are as true as they are fingular. One of my constant walks, when I am at leifure, is in my lowlands, where I have the pleafure of feeing my cattle, horses, and colts. Exuberant grafs replenishes all my fields, the best representative of our wealth; in the middle of that track I have a cut, a ditch eight feet wide, the banks of which nature adorns every fpring with the wild falendine, and other flowering weeds, which on these luxuriant grounds shoot up to a great height. Over this disch I have erected a bridge, capable of bearing a loaded waggon; on each fide I carefully fow every year, some grains of hemp, which rife to the height of fifteen feet, fo firong and fo full of limbs as to refemble young trees: I once afcended one of them four feet above the ground. These produce natural arbours, rendered often still more compact by the affistance of an annual creeping plant which we call a vine, that never fails to entwine itself among the branches, and always produces a very defirable shade. From this simple grove I have amused myself an hundred times in observing the great number of humming birds with which our country abounds: the wild bloffoms every where attract the attention of these birds, which like bees substift by suction. From this retreat I distinctly watch them in all their various attitudes; but their flight is fo rapid, that you cannot diffinguish the motion of their wings. On H 3 this

this little bird nature has profusely lavished her most splendid colours; the most perfect azure, the most beautiful gold, the most dazzling red, are for ever in contrast, and help to embellish the plumes of his majestic head. The richest pallet of the most luxuriant painter, could never invent any thing to be compared to the variegated tints, with which this infect bird is arrayed. Its bill is as long and as tharp as a coarfe fewing needle; like the bee, nature has taught it to find out in the calix of flowers and bloffoms, those mellifluous particles that ferve it for fufficient food; and yet it feems to leave them untouched, undeprived of any thing that our eyes can possibiy diffinguish. When it feeds, it appears as if immoveable, tho' continually on the wing; and formetimes, from what motives I know not, it will tear and lacerate flowers into a hundred pieces: for, strange to tell, they are the most irascible of the seathered tribe. Where do passions find room in fo diminutive a body? They often fight with the fury of lions, until one of the combatants falls a facrifice and dies. When fatigued, it has often perched within a few feet of me, and on fuch favourable opportunities I have furveyed it with the most minute attention. Its little eyes appear like diamonds, reflecting light on every fide: most elegant-1/ finished in all parts, it is a miniature work of our great Parent; who feems to have formed it the fmallest, and at the fame time the most beautiful of the winged spe-

As I was one day fitting folitary and penfive in my primitive ar-

bour, my attention was engaged by a strange fort of rustling noise at fome paces distance. I looked all around without affinguishing any thing, until I climbed one of my great hemp stalks; when, to my aftonithment, I beheld two fnakes of confiderable length, the one purfuing the other with great celerity through a hemp stubble field. The aggresior was of the black kind, fix feet long; the fugitive was a water-inake, nearly of equal dimensions. They soon met, and in the fury of their first encounter, they appeared in an instant firmly twisted together: and whilft their united tails beat the ground, they mutually tried with open jaws to lacerate each other. What a fell aspect did they present! their heads were compressed to a very small size, their eyes flashed fire; and after this conflict had lasted about five minutes, the second found means to disengage itself from the first, and hurried toward the ditch. Its antagonist instantly assumed a new posture, and half creeping and half erect, with a majestic mein, overtook and attacked the other again, which placed itself in the fame attitude, and prepared refift. The scene was uncommon and beautiful; for thus opposed they fought with their jaws, biting each other with the utmost but notwithstanding this rage; appearance of mutual courage and fury, the water-fnake still feemed defirous of retreating toward the ditch, its natural element. This was no fooner perceived by the keen-eyed black one, than twifting its tail twice round a stalk of hemp, and feizing its adverfary by the throat, not by means of 115

its jaws, but by twisting its own neck twice round that of the water fnake, pulled it back from the ditch. To prevent a defeat the latter took hold likewise of a stalk on the bank, and by the acquifition of that point of refiftance became a match for its fierce antagonist. Strange was this to behold; two great snakes strongly adhering to the ground, mutually fastened together by means of the writhings which lashed them to each other, and stretched at their full length, they pulled, but pulled in vain; and in the moments of greatest exertions that part of their bodies which was entwined, feemed extremely fmall, while the rest appeared inflated, and now and then convulfed with ftrong undulations, rapidly following each Their eyes feemed on fire, and ready to start out of their heads; at one time the conflict feemed decided; the water-fnake bent itself into two great folds, and by that operation rendered the other more than commonly out-stretched; the next minute the new struggles of the black one

gained an unexpected superiority, it acquired two great folds likewife, which necessarily extended the body of its adverfary in proportion as it had contracted its These efforts were alterown. nate; victory feemed doubtful, inclining fometimes to the one fide and fometimes to the other; until at last the stalk to which the black fnake fattened, fuddenly gave way, and in consequence of this aceident they both plunged The water did into the ditch. extinguish their vindictive rage; for by their agitations I could trace, though not diftinguish their mutual attacks. They foon re-appeared on the furface twifted together, as in their first onset; but the black snake seemed to retain its wonted superiority, for its head was exactly fixed above that of the other, which it incessantly pressed down under the water, until it was stissed, and funk. The victor no fooner per-ceived its enemy incapable of farther refistance, than abandoning it to the current, it returned on shore, and disappeared.

USEFUL PROJECTS.

Some Account of the Chymical and Pharmaceutical History of the Red Peruvian Bark, in order to freew its Efficacy as a Part of the Materia Medica to be suferior to that of the common Bark: extracted from Observations on the fuperior Efficacy of the Red Peruvian Earls, &c. by William Saunders, M. D. &c. &c,

O an ounce of red bark, reduced to a fee duced to a fine powder, were added fixteen ounces of distilled water; and after remaining together twenty-four hours in a Florence flask, the liquid was carefully filtered. The same experiment was made with the Peruvian bark commonly in use.

The colour of the two infusions was very different, that made with the red bark being much deeper. The tafte and flavour of the infufion of the red bark were confiderably more powerful than of the other. In the opinion of many gentleman who tafted the infufions, the cold infusion of the red bark was more fenfibly impregnated than even the ffrongell decoction of the common bark.

EXPERIMENT II.

TO two ounces of the cold in-

fusion of the red bark, were added twenty drops of the Tinctura Florum Martialium. It immediately became of a darker colour, foon loft its transparency, and after a short time precipitated black powder.

EXPERIMENT III.

TO two ounces of the cold infusion of the common bark were added taventy drops of the Tinetura Florum Martialium in the fame manner as to the other. It retained its transparency some time, and afterwards became of a dark colour, but there was no precipitation from it as from the last.

EXPERIMENT IV.

TO an ounce of red bark, reduced to a coarfe povider, were added fixteen ounces of distilled water, and after boiling until one half was evaporated, the liquid while hot was strained through a piece of linen. The fame experiment, under fimilar circumflances, was made with the common bark. The fuperior tafte and flavour of the decoction of the red bark was equally observable with that of the infusion. decoction of the red bark, in cooling, precipitated a larger quantity of refinous matter than the decoction of the common bark, The

The difference of colour was like-wife very distinguishable.

EXPERIMENT V.

TO one ounce of red bark, reduced to a coarse powder, were added eight ounces of proof spirit, and, after standing a week together, the tincure was filtered.

The fame experiment, under fimilar circumstances, was made with the common bark. The tincture of the red bark, both when tasted by itself and under precipitation by water, had more flavour and taste than that of the common bark.

The tincture from the red bark is of a much deeper colour than the other.

EXPERIMENT VI.

TO each refiduum of the above tinctures were added eight ounces of proof spirit, which were infused in a moderate sand heat for the space of twenty-four hours, and afterwards allowed to remain together a week, occasionally agitating them. The tinctures were then poured off, that of the red bark evidently appearing to be the strongest.

The tinctures both of experiments V. and VI. were by a gentle heat evaporated to the confilence of a refinous extract.

The extract from the tincture of the red bark was of a smooth, homogeneous appearance, not unlike the Balsam of Peru, when thickened: the slavour and taste of the original tincture were entirely preferved in it.

The extract from the common bank had a very different appearance. It feemed coarse and gritty, and by no means so characteristic of its original tincture.

The quantity of extract procured from the red bark was confiderably greater than from the fame quantity of common bark; but, as the *refiduum* of neither was rendered entirely inert, the abfolute quantity could not be afcertained.

EXPERIMENT VII.

A tea spoonful of each of the tinctures, prepared by experiment V. was added to two ounces of water; the refinous precipitation from the red bark was not only more copious, but fell more quickly to the bottom of the glafs than that from the other, and yet what remained still disfolved in the water, was infinitely more in the red bark than in the common bark, so far as we could judge from the taile and flavour of both.

EXPERIMENT VIII.

IN imitation of the experiments of my ingenious friend Dr. Percival, I added to reco ounces of the watery infusion of each bark a few drops of the Sp. Vitriol, ten. The acid lost its tatte more in the infusion of the red, than in the common bark; fo that there were more obvious appearances of its being neutralized.

EXPERIMENT IX.

A decoction of both red and common Peruvian bark was prepared by taking an ounce of each, and boiling them in a pint and a half of water, to one pint; the former had greatly the fuperiority in strength and power, as mentioned in a preceding experiment. A pint of fresh water was added to each decoction; the boiling still continued till that quantity was evaporated. The decoction of the

com.

common Peruvian bark feemed gradually to lofe its fentible qualities, while that of the red bark fill re-

tained its own.

The fame quantity of water was added as before to each, and the decocion repeated until a gallon of water was exhausted; at the expiration of which time, the common Peruvian bark was rendered almost tasteles; the red bark still retained nearly its former fensible qualities. This experiment proves that the common practice of boiling the bark is hurtful to its powers.

By my defire Mr. Skeete, a very ingenious and attentive young gentleman from Barbadoes, and a student of medicine in Guy's Hospital, made several experiments in order

to afcertain the comparative antifeptic power of red bark, with the common Peruvian bark; and he found that the infusion of red bark preferved animal matter much better, and for a longer time, than the infusion, or even decoction of the common bark; indeed, the decoction of common bark, after its powdery part had subsided, was less bitter, and preferved animal matter for a shorter time than the infusion of the same bark. His ex-

pital.

The conclusions to which the above experiments evidently lead,

periments were conducted with great accuracy, and the refult of them

were submitted to the examination of many gentlemen at Guy's Hof-

2=0

First, That the red bark is more soluble than the Peruvian bark,

both in water and spirit.

Secondly, That it contains a much larger proportion of active and refinous parts.

Thirdly, That its active parts, even when greatly diluted, retain their fenfible qualities in a higher degree than the most faturated solutions of common bark.

Fourthly, That it does not undergo the fame decomposition of its parts by boiling as the common Pe-

ruvian bark.

Fifthly, That the red bark is more aftringent than the common

Peruvian bark.

Sixthly, That its antifeptic powers are greater; as an additional proof of this, it may be proper to observe here, that both its cold infusion and decoction preserved entire their bitter and other medicated powers in the month of June, in the elaboratory of Guy's Hospital for five weeks, and perhaps for a much longer time, while a decoction of common bark gave evident marks of a change in a few days. In the decoction of red bark, the powder, which is feparated during cooling of it, remains intimately diffused through the liquor, which therefore continues loaded turbid when at rest. In the decoction of common bark, powder quickly subsides to the bottom; the red bark therefore contains in it a large proportion of mucilaginous parts, fuch as have been proposed by the late Dr. Fothergill, to be added to the decoction of the common Peruvian bark, in order that it may remain turbid when at reft, and thereby that its refinous parts be more perfectly suspended in the body of the liquor. It is obvious that this circumstance will favour exceedingly the action of the stomach upon it.

The advantages therefore to be expected

expected from the red bark cannot be obtained from any quantity of common bark. The best common bark, compared with the red bark, appears inert and effete.

All the above experiments were executed in the presence of several

gentlemen.

I was led more particularly to profecute this subject, from an opinion that the red bark might so impregnate cold water by infusion, as to cure intermittent severs with more certainty than could be done even by the decoction or powder of common bark. The fensible qualities which appear from the above experiments, being so much greater, in the cold infusion of the one than in the decoction of the other.

It cannot I think be denied, that the experiments above related, and which have been executed and frequently repeated with great accuracy, sufficiently prove that the red Peruvian bark exceeds the other in its sensible qualities, and that it contains a much larger preportion of those resinous and, active parts on which the power and efficacy of bark have been by all writers on the practice of medicine and Materia Medica believed to depend.

Account of Trials at large made, by Mr. TADMAN, to determine the comparative Advantages of the Drill and Broad-cast Methods of Culture of Wheat and Lucerne: and of an Experiment made by Mr. REBECCA, to discover what Increase may be obtained from a Grain of Wheat, in one Year; from repeated Transplantations; communicated to the Society for the Encou-

ragement of Arts, Manufactures, and Commerce, and inferted at their Request: from Memoirs of Agriculture, &c.

To the honourable and laudable Society for the Encouragement of Arts, Manufactures, and Commerce.

GENTLEMEN,

AVING been honoured with your premium for the culture of turneps amongst beans, for which I return yon thanks, I find you are desirous of being informed of the best method to cultivate wheat, either by drills, or broadcast, both of which I am well acquainted with: having experienced them many times upon all forts of land. But the greatest experiment was in 1752 and 1753. In the year 1752, I had twenty-two acres of bean-gratten dunged for the beans about forty loads per acre, which I managed as follows:

I first plowed it; after which I fowed my wheat in this manner. Every other rod in breadth was in the broad-cast way: the other was in drills. In the spring I horsehoed the drills, and harrowed it; as I did, also, that which was fown in the broad-cast way. Both of them feemed to make a good appearance. When harvest came, I directed the reapers to cut each rod separate; and to make the sheaves as nearly of the same size as possible. By this I found a great deficiency in the drilled wheat: not having near fo many shocks. This was tried on a fandy loam foil.

The next year I had a field of twenty-three acres, adjoining to the other, managed in the fame manner: I found the fame defi-

ciency;

108 ANNUAL REGISTER, 1782.

ciency; and I think it very cafy to be accounted for. In the spring of the year, when the wheat begins to rife from the ground, the land being very clean by the hoeing, and the ground very fine by fo doing, the showers, that are very frequent in March, cause the fine mould to rife on the tender part of the wheat: which, when it happens, prevents it from growing any farther.—It is a very good way, to fow clover in wheat in February. I never could find, that drilling any thing but beans, peafe, and tares, would produce near fo good a crop: neither will they do any way fo well, as in drills: by which means the land is kept clean; and makes a good feason for wheat.

Now, in regard to lucerne, fainfoin, &c. being put in drills, it is in a manner the fame as in the case of wheat. I have a deal of lucerne: part of it in drills; which I have endeavoured to keep clean by hand-hoeing. But, after a hard rain, feeing my horfes would not eat it, I found upon inspection, the earth was so much washed into it *, that it was a good reason for sowing the other part broad cast way. I immediately cut off that they eat upon: and I then fowed the land over in broad-caft, and raked it with a hand-rake. I have not found any thing of the same kind happen ever fince.

If this information may be of any utility, I shall be happy in having given it: as I may be supposed to know something of the farming business: having been in it near forty years. I began at first har-how-boy: from that, I went through every other part of plowing, sowing, &c. and before I was twenty-four years of age, I paid eighteen hundred pounds per year rent.

I have another thing to offer to this fociety, which I can explain. It is that three crops may grow in the fame year, with the fame culture, and expence, as one crop; and that they will not interfere with one another: but, quite otherwife, wherever one is good, the other two will be fo likewife. I hold at this time about two thousand two hundred acres of arable, meadow, and pasture land

I am, with the utmost deference

and respect,

Your honour's most obedient, and humble fervant,

Higham, WM. TADMAN.

To Mr. Shield's nurseryman, at Lambeth, Surry.

Sir,

IF the following fingle experiment, process, and product of a fingle grain of wheat, will give you any pleasure, and you shall think it worth laying before the Society for the Encouragement of Arts, and particularly Agriculture, I shall think myself amply paid for the pains I took in making the experiment. The increase appears associations to me: I have, therefore, communicated it to

^{*} This inconvenience attending drilled lucerne is peculiar to Mr. Tadman's, and fuch other very fandy land. For many inflances can be produced of drilled lucerne, now growing, which is entirely free from it.

you, though there may appear nothing wonderful in it, when read before your learned body *: and I may be smiled at, for my rural simplicity, and ignorance. As, possibly, there may be many more wonderful inflances of vegetable increase, should that be the case, you will, in a fingular manner, oblige me by communicating them to me; who am fond of fuch fubjects of admiration.

I am, with great esteem, Sir, Your most obedient, and humble fervant,

Ameriham, Bucks, WM. REBECCA. 12th Jan. 1773.

The produce of a fingle grain of wheat, propagated in the garden of the Rev. Dr. Drake, rector of Amersham, Bucks, by Wm. Rebecca, gardener.

ON the first day of August, 1771, I fowed, or rather fet, a fingle grain of the red wheat: and, in the latter end of September, when the plant had tillered, I took it up; and flipped or divided it into four fets, or flips .- Those four fets I planted; and they grew and tillered as well as the first. In the end of November I took them up a fecond time, and made thirty-fix plants, or fets. These I again planted, which grew till March, 1772: in which month, I, a third time, took up my plants, and divided them into two hundred and fifty-fix plants, or fets. For the remaining part of the fummer, till the month of August, they had nothing done to them, except hoeing the ground clean from weeds, till the corn was ripe. When it was gathered, I had the ears counted, or numbered, and they were three thoufand five hundred and eleven: a great part of which proved as good grain as ever grew out of the earth. Many of the ears meafured fix inches in length: fome were middling grain; and fome were very light and thin. This was the reason I did not number the grains: but there was better than half a bushel of corn in the whole produce of this one grain of wheat in one year.

Query, would not this practice (spring-planting) be of great use, + where the crops do mis, by va-

rious

† Mr. Rebecca is not fingular in this opinion. Though the transplanting wheat, as a general mode of culture, is not early reducible to constant practice

^{*} Mr. Millar made the fame trial at Cambridge, some years ago, and with very little difference in the manner. The refult was fimilar, as to the produce; and he communicated an account of the experiment to the Royal Society, who published it in their Memoirs. Others have repeated the experiment with a correspondent success.—The making more generally known, however, what rapid increase corn, and other herbs of the gramineous tribe, admit of by transplantation and division, from the property of the quick production of off-tets from their roots, may, at prefent, be of utility; when attempts are making to improve the culture of wheat, on that principle: to which the knowledge of this prodigious multiplication of the plants, by division of the roots, gave rife. The Society have in this view offered a premium to encourage trials of the application of transplantation, to practite in particular cases where it may be advantageous.

110 ANNUAL REGISTER, 1782.

rious accidents incident to farm-

ing?

I can prove the above facts, by the attestation of sufficient witnesses, if doubted.

Accounts of Methods of Rearing Calves without Milk, or faving it after a short Time; communicated by Mr. Budd, Mr. Forster, and Mr. Carr, to the Society for the Encouragement of Arts, Manufactures, and Commerce, and inserted at their Request: from the same.

To the Society for the Encouragement of Arts, Manufactures, and Commerce.

GENTLEMEN,

AVING observed in your book of premiums, for the year 1771, your offer of a gold medal for an account of the best method of rearing black cattle

without milk; and having made many experiments, for these four or sive years past, I am induced to become a candidate for it. I, therefore, lay before you the following method of rearing black cattle without milk *.

In two or three days after they are calved, I take the calves from the cows, and put them in a house by themselves.—I then give them a kind of water-gruel, composed of barley about one-third, and two-thirds of oats, ground toge-ther very fine. I then fift the mixture through a very fine fieve; put it into the quantity of water (mentioned below); and boil it half an hour, when I take it off the fire, and let it remain till it is milk-warm. I then give each calf about a quart in the morning, and the fame quantity in the evening; and increase it, as the calf grows requires very little trouble, to make them drink it. After the calves have had this

yet in fuch cases, as he intimates, where considerable parts of land have failed after autumn-sowing, it may be done with great convenience. Nor does there, after a very careful examination of the subject, appear any solid reason, why, in the feafons when the autumn-culture of wheat has failed much, fresh land might not be planted with off-fets of that grain, as well to private emolument, as public advantage. This practice is the more promifing, because the transplantation may be performed much later than the last made by Mr. Rebecca, even till the end of April, with the same certainty of success: and land which had borne turneps, cole-feed, or other plants for spring-food, even late in the feafon, might be made to afford a large crop of wheat the same summer with great profit, when there was a prospect of scarcity. The apprehension of the too high expence of labour has been made the great objection to this practice. But the introduction of the fetting wheat instead of sowing it, which is now done, in some places, on great quantities of land with very confiderable profit, has fet this matter in fo clear a light, from large experience, that all difficulty on this fcore must be given up, where those facts are known. For the faving in the quantity of feed, when the corn is fet, nearly pays for the difference of the expence of labour betwixt that method and fowing; and this faving is still much greater in the case of transplanting than in setting, though the expence of the labour differs but little.

* This account was deemed fully fatisfactory, and the gold medal was ac-

cordingly adjudged to Mr. Budd.

diet for about a week or ten days, I tie up a little bundle of hav; and put it in the middle of the house; which they will, by degrees, come to eat. I also put a little of the meal above mentioned in a fmall trough for them, to eat occasionally; which I find of great fervice to them. I keep them, in this manner, till they are of proper age to turn out to grass; before which, they must be at least two Therefore the sooner months old. get them in the fpring, the better.

About a quart of the above meal, mixed with three gallons of water, is fufficient for twelve calves in the morning, and the fame quantity in the evening. I increase the quantity in proportion as they grow older. By this method, I have reared between fifty and fixty beasts within these four years: forty of which I have now in my possession; having sold off the others, as they became of a proper age; and by the same method calves may be reared with a trifle of expence.

1 am, Gentlemen, Your most humble servant, WM.BUDD.

No. 2, Somerfet-house, Stable-yard, Strand, October 10, 1771. Sir.

HAVING observed, that the Society ordered a medal to be given for the rearing of black cattle without milk, I thought the Society would not be displeased with an account of seeding calves, intended for the market, and for butchers meat, without milk.—Frequently accounts of improve-

ment in husbandry are handed about, which never have been tried, and can have no fuccess when put to the proper test by ex-

perience.

The account I presume to lay before the Society is founded on an experience of feveral years .-A farmer's wife in Prussia, who had employed this method, kept it very secret: but keeping only two or three cows, and yet buying conflantly ten or twelve calves, and fattening them in a short time fo advantageously, that the butchers always preferred her calves to those they could get of other farmers, it was suspected, she had devised a new and cheap method in feeding them. of my relations afterwards learned this method from the farmer's wife; and found it answer better than the best milk for fattening calves. Because, it not only succeeded in a shorter time, and gave the veal the most delicate and favory taste; but it made the meat whiter; and was upon the whole cheaper than in the common way: as the whole milk of the dairy could be fpared for the purpole of making butter.

The infusion of malt, or fresh wort, is the substitute to milk. In summer, it may be given cold: but in winter, it must have the same degree of warmth, as the milk just coming from the cow. The quantity is the same, as the milk commonly given at once to a calf: and it must be increased in proportion as the calf grows.

I wish, that in case the Society should approve of it, a new trial may be made of this method; and

112 ANNUAL REGISTER, 1782.

if found to answer the purpose, that it may be published for the benefit of the public: as a great quantity of milk may be thus spared for the purpose of making cheese and batter, in order to reduce these two articles of our provisions to a more moderate price than they have hitherto been.

Before I leave this subject, give me leave, Sir, to communicate to the fociety another cheap method employed in Prussia for rearing black cattle. After the expression of the linfeed-oil from linfeed, the remaining hulks, or drofs, are made up into round balls, of the fize of a fift, and afterwards dried. Two or three of these balls are infused, and dissolved in hot water: and a third or fourth part of fresh milk is added in the beginning; but afterwards, when the calves are grown, the farmers employ only the fkim-milk, which they mix with the infusion. If this method should deserve the attention of the Society, it would at once spare great quantities of milk towards making cheefe and butter, and afford a good use for the dross left after the expression of the linfeed cil.

As an ardent wish to be of some fervice to mankind, by every little addition in saving husbandry, and a view to reduce the exorbitant price of provisions to the poorer, and manufacturing part of my fellow-creatures in this country, prompted me chiefly to draw up this account, I hope it will meet with approbation from the Society, if not on account of its real merit and usefulness, at least for the intention, and like endeavours

to fulfil, in fome measure, those great and noble purposes of humanity, and patriotism, which the Society itself proposes in all its transactions.

I am, with due regard,
Your most obedient,
and humble fervant,
J. R. FORSTER.

Extract of a Letter from Mr Carr, respecting the Rearing of Calves, in such a Manner as to fave the Milk.

IT is well known by fome of the old housewives of Norfolk, to this day, the manner of rearing calves is with fleeted milk and water warmed: which being too lean and thin, turns four within them, and fometimes kills them; but in general they are pot-bellied, with their hair flaring: and fometimes they turn loufy, which feldom is cured till young grafs purges the bad humours off: which effect is customary also with respect to hogs. — In large dairies they always put their fleeted milk into a ciftern, from day to day, in order to turn four, and curdle before they give it them; and even they put an equal quantity of water to it: otherwise it heats and binds wherefore they will not them; take enough to fatten them. But from the cooling quality of the water they will drink twice as much when thus mixed: and we find, from experience, they do much better in this way.

The best method I ever found of rearing calves, and which I have pursued for thirty years, is to take them off the cews in three weeks, or a month; and to give

nothing

nothing but a little fine hay till they begin, through necessity, to pick a little. I then cut some of the hay, and mix it with bran and oats in a trough, and slice some turneps about the fize of a crownpiece: which they will soon, by licking for want of liquor, learn to eat. When the work is thus done, give them but turneps enough, and they will do well. Give them no water, unless the turneps be left off.

Observations on the Damage done to Arable Land, by carrying off the Stones from the Surface; in a Letter from Mr. Price:— and an Account of a Method of preventing Blights on Fruit-trees, and esculent Plants, in two Letters from Mr. Gullet;—communicated to the Society for the Encouragement of Arts, Manufactures, and Commerce; and inserted at their Request: from the same.

Mr. Price's Observations on picking off Stones from Arable Land.

To the Honourable Society of Arts, Manufactures, and Commerce.

Thas been a thing well known, for a great while, to feveral of the most experienced farmers, in many parts of England, that taking away the small stones and slints is highly detrimental to almost all kinds of plowed land, but particularly so to thin stapled, or light lands; and likewise to all lands of a binding nature.—This I find has been long the opinion of many skilful farmers in Vol. XXV.

different parts of the kingdom; but it never did, I believe, enter the thoughts of any one till of late years, that the damage could be nearly so great as it is now found to be, fince unusual quantities of flints, and other stones, have been repeatedly gathered for the use of the turnpike-roads.-Indeed, the damage done by this practice to many kinds of land, especially to such as are mentioned above, is found to be so great, as to be almost incredible to any one, who has not particularly observed. for a number of years, the progress of this destruction. I shall, therefore, here give a few instances, out of a great many, that have come to my knowledge, from which it will appear, how exceedingly great the damage must be throughout the extent of the kingdom.

In the parish of Stevenage, in Hertfordshire, there is a field of land well known in that neighbourhood, by the name of Chalkdell Field, containing about two The land in this hundred acres. field was formerly equal, if not fuperior, to most lands in that county; in a word, it was good to a proverb. But lying conveniently for the surveyors of the roads, they have picked it fo often, and stripped it of the flints and small stones to such a degree, that it is now inferior to lands, that were formerly reckoned not worth above one half its value, acre for acre. I mean fuch lands as, lying at a good distance from the roads, have, for that reason, either not been picked at all, or not nearly fo much as this field. All the farmers, and other persons, who have known the field for a good

good number of years, and have observed the management, and produce of it, do unanimously declare, that the crops of grain from Chalkdell Field have rot, for these last fourteen years, been much, if any, above half what they were the fourteen years immediately preceding, notwithstanding the late improvements in hulbandry: and this is entirely owing, as they all agree, to stripping the land of the stones .- Nor is it Chalkdell Field alone that has materially fuffered in that county by the above mentioned practice: on the contrary, the oldest and most experienced farmers in the parishes of Gravely, Stevenage, &c. fome of whom have been well acquainted with farming for upwards of thirty or forty years, and have in general lived always on the fpot, do declare, and fay, they are ready to attest it upon oath, if called upon, that feveral thousand acres, bordering on the turnpike-road from Welwyn Baldock in Herts, have been so much impoverished by having the itones frequently taken away, that they are not now fo good as they would have been, had the stones been left upon the land, fome by one-fourth; fome by one fifth; fome more, fome less, of their whole present value. But that all, in general, have been materially damaged, fo that the lofs to the inheritance for ever, in the aforesaid lands, must be computed at a great many thousand pounds; to fay nothing of what the public has suffered in the deficiency of the crops of grain. But it may be asked, if the

But it may be asked, if the damage by taking away the stones he so great as I represent; how

comes it to pass, that the farmers, who hold the afore mentioned lands, have not either broke, thrown up their farms, or got their rents lowered? None of has generally happened. which This I grant; but then let the very high price of grain for numbers of years past, and the famine of thousands of starving poor, anfiver these questions.—I am thoroughly convinced, that the high price of grain has been the principal reason; and a dreadful reafon it is; why none of these has generally happened: and any one, who knows the progress of trade for thirty or forty years past, and the different value of money in that period, may form to himself other concurrent circumstances. What puts it beyond doubt, that this prodigious impoverishing of the land is owing to no other cause whatsoever, but picking and carrying away the stones, is, that those lands have generally been most impoverished, which have been most frequently picked; and fo on in proportion. Nay, I know a field, part of which was picked, and the other part plowed up before they had time to pick it: the part that was picked lost seven or eight parts in ten of two fucceeding crops of grain, though the whole field was manured and managed in all respects alike .-What proves incontestibly, this almost incredible damage was owing folely to picking the stones, is, it went to an inch, as far as they were picked, and no further. -I shall mention but one instance more at present.—A gentleman in the neighbourhood of Poulton, in Lancashire, who farmed a part of his estate, ordered the stones, which

which lay very thick on fome grounds, to be carefully picked up, and carried away. He did this from an imagination, that they prevented the grain from growing out of the earth. Those grounds had always before produced very good crops: but he now found, to his aftonishment, that he could hardly get any crops at all. He asked the neighbouring farmers what they thought might be the reason of it; they were of opinion, it must be his cleaning the land of the stones; and advised him to carry them back, and fpread them again all over the land; which he did at a great expence. He had excellent crops immediately; fuch as the land had produced before the stones had been cleared away.

Many persons have been ready to imagine, because nothing can grow upon a bare stone, that, therefore, it can be of no manner of service to the corn, but rather the reverse, in preventing it from growing freely out of the ground. But this conclusion is by far too precipitate; fince stones are of surprifing and manifold uses. For instance, they greatly assist the plough in working the land. They also prevent land of a binding quality from running together, and hardening like mortar in a wall. They screen the tender blade from blasts and blights. They prevent the crop, where the flaple is thin, from being fcorched up by the heat in fummer: and they prevent the exudations of the earth from evaporating; and by that means greatly promote vegetation.

Should a doubt arife, whether the turnpike-roads, which are now mended chiefly with mate-

rials gathered from plowed lands, may be kept in as good repair as they are at present, without any confiderable additional expence, if the power of gathering materials from plowed lands be taken away, let it be confidered, that the best turnpike-roads in England are those which are entirely made with round pebbles, and fuch other materials as are dug from under ground: and, on the contrary, that those which are made chiefly with materials gathered from lands, are, generally fpeaking, the very worlt. This is a circulastance any person may be fatisfied in with very little inquiry. The turnpike road from London to two or three miles beyond Hatfield, and those from thence to Hitchin, if compared together, will furnish a striking initance of the truth of this observation. Therefore, should there, in such a case, be at first an additional expence, there can be no doubt, but that it will be more than compensated for in the excellence, and duration of the roads. At the fame time I make this observation, I am not clear, that, upon the whole, there would be even at first an additional expence of any great consequence.

In fome places, I believe, the reverse would be the case. The above instances and observations are submitted, and earnessly recommended to the serious consideration of the honourable Society of Arts, &c.

by their most humble,

and most obedient servant,

Rnelworth, Herts, January 23, 1773. R. PRICE. Mr. Gullet's Letter on Blights.

SIR,

EVERY member of the community, however distant from the metropolis, or private his station, who knows any thing of your laudable institution, which not only takes under confideration, but encourages the propagation of every thing ufeful, from the Cedar of Libanus, to the Hyslop of the wall, must, if he be a friend to mankind, or a lover of his country, not only wish it well, but wish also to contribute somewhat towards the general good. It is that which occasions my giving you this trouble; and, at the fame time, makes me hope you will pardon my prefumption, in fending you the following observations on fo feemingly trivial a subject. -Viz. the preventing cabbage plants from being eat by caterpillars; together with fome reasons, why the fame means feem capable of preventing blights, and their effects on fruit trees, or others.-These thoughts I have likewife extended in idea, to the prefervation of crops of turneps from the fly; as also of crops of wheat from the yellows, and other destructive infects. If these latter experiments should succeed on trial, as I am firongly inclined to think they will, then the fame means, which produced these effects, may be extended to an almost infinite variety of cases for the preservation of the vegetable kingdom.

But risum teneatis amici, how will you think you are insulted, when I tell you, all this is to be performed with a bush of slinking cluter.—Great effects are frequently produced from seemingly trivial

causes. Why may they not in the present case?—Of the virtues of elder, in preserving cabbages from being destroyed by caterpillars, I can already fay, probatum est.—We all know how very offensive to the olfactory nerves a bush of green elder-leaves is. No body wishes to smell to it, because it is fo disagreeable; and for that reason every one avoids touching it. I confider the olfactory organs of a butterfly as much superior to ours, in delicacy and nicety, as their bodies are to ours.—If fo, why should not what is so offensive to our smell, be much more so to theirs? We often see them alight, and remain on cabbage-plants: but who ever faw them on a bush of green elder?

Laughable as this experiment feems to be, I, last year, determined to try it .- Accordingly I took some young elder bushes, the stems of which I held inclosed in a paper, that my hands might not flink of it, and whipped the cabbage-plants well with it, (but fo gently as not to hurt the plants) just as the butterslies first appeared. After this, I never faw a butterfly come on them; nor was there, I believe, a fingle caterpillar blown on any of the plants fo whipped, during the refidue of the feafon. I could often observe the butterflies fluttering and hovering round the plants. (like gnomes or fylphs) but never alight on them: although another bed of cabbage plants, in the fame garden, which had not been whipped, was infested, and eat by the caterpillars, as this had usually been. I have tried the fame experiment again this year, doubting not but to have the same success:

and

and shall be happy, if (from its fimplicity) your Society thould not think it beneath their notice, but take it under their patronage.

Reflecting on the effects of this experiment, and the cause which produced them; and thinking, that blights are chiefly and generally occasioned by small flies, and minute infects, and that their olfactory nerves are as much superior in delicacy to butterflies, as they are inferior in fize, I whipped the limbs of a wall plum-tree, when in full bloffom, as high as I could reach with a bush of young elder, whose leaves I had bruited, that the effluvia might be the stronger, and so as not to hurt the bloffom. The effects produced by this whipping, are that the leaves of these trees are very green, fresh, smooth, and flourishing: the fruit has fet very fair, thick, and thriving; and there is not the least appearance of a blight on any of the limbs fo whipped: while those not fix inches higher; and from thence to the top of the tree, are blighted, and shrivelled up as usual: and, as those of this tree had been for several years past; and not one third so much fruit set on the unwhipped part, as on the limbs whipped: though the bloffom was equal: and there is more fruit promising to ripen this summer, on the two limbs whipped, than has been on the whole tree for three years past.—I have fince endeavoured to restore one of the blighted shoots, by whipping the leaves, and tying up a twig of elder among them; which hath, in part, had the defired effect, by the offensive offluvia driving away the flies. - By this means, thole leaves have revived, which were

not abfolutely rolled up fcrowl, where the infects are out of harm's way, and the smell of the elder .- I have tried the like experiment on another tree with the like fuccess.

This has fuggested a thought, elder-plant, whether an noxious and offensive, efteemed may not be one day feen planted with, and entwining its branches among fruit-trees, in order to pre-

ferve the fruits.

I struck over a bed of young cauliflower-plants, which had been bit, and almost destroyed by infects (either fleas, or flies) with an elder-bush: since which, they do not appear to have been touched, or hurt, but are recovering a-pace: and I promise myself, they will not be infested again with any fort of insects, unless some can he discovered fond of living on elder-leaves.

This circumstance has determined me to try the following experiment on a crop of young turneps (which I am about to till.) When they come up to the height at which they are usually eat, and greatly damaged by infects of fome kind or other (either flies or fleas) l intend to let a man draw a buth or two of elder, fpread fo as to cover the breadth of a ridge at once, up and down fmoothly over the young turneps; and I have little doubt of their being effectually preferved.

Crops of wheat, I flatter myfelf, may be preserved, in like manner, from what the farmers call the yellows, and other like accidents, which they confider as a kind of mildew; but which is in fact (as I have no doubt but you well know) occasioned by a small fly, that blows in the ear of the corn; and produces a worm aimost invisible to the naked eye, but appearing through a microfcope a large yellow maggot, of the colour and gloss of amber, with eggs like a very fine yellow powder. - Was a person to draw an elder-bush lightly up and down over a ridge of corn, when the ears are first formed, and before those flies have blown, I have little or no doubt, but the parent infects would be effectually deterred, and prevented from pitching their tents in fo noxious a fituation.

As these thoughts, and the length I have extended them to, in a variety of other cases in my own imagination, have afforded some pleasure, I trust you will pardon my troubling you with them,-when I affure you, that, though the basis of this subject is only a fimple bush of stinking elder, yet the communication of it is meant as a proof of that respect, which, as a member of the community, I owe to fo truly laudable an inftitution, and is intended (however it may be received) pro bono publico.

I have the honour to be, Sir, Your most humble servant, CHEIS. GULLETT.

Tavistock, Devon, 4 June, 1771.

P. S. Since writing the foregoing account, I have observed, that the same cause is the destruction of great part of our apple-blossom; and, could the above method of whipping our appletrees take place, I have little or no doubt of its contributing essentially to the increase of our cyderbearings, For, allured by the

fragrancy of the apple-bloffom, or guided by instinct, or both, not only a small black fly produces swarms of young ones in the leaves, which contract, shrivel, and blight them: but they, or fome other flies, blow also into the blossom, which produces a white maggot, in consequence of which, the blossom is contracted, thuts ittelf close round the worm, and forms a complete covering to it, like a shell; where it continues devouring the heart of the blossom till that is effectually destroyed, and turned to a yellowish red colour, like a dried dock-

Mr. Gullett's fecond letter on Blights.

Sir,

YOUR obliging letter, of the 20th instant, in consequence of mine of the 4th ultimo, gives me pleasure, as well as confers an honour upon me, which I was apprehenfive the fimplicity of my fubject would scarcely entitle me to; and therefore demands, and you have my thanks, Sir, for the early notice you have been pleafed to take of it, and your promise of laying it before the Society.—I was, and still am doubtful, whether you meant to have an immediate answer to your queries, or at any time before your next meeting in October: but concluded upon the whole, it was better to err in shewing my over-readiness. than the least backwardness to enter on a correspondence with so worthy a Society of literati, which would do me fo much honour; more effentially, as I think with you, that the subject under consideration may be of public utility; which which I confider as the basis of your institution, and which should animate every individual to encourage it. Therefore, as the poor widow threw her mite of money into the public treasury of riches, so do I my mite of observation into your Society, the public treasury of useful arts, and the great promoter of commerce: and which has so largely contributed to that ascendancy this kingdom is gaining over the rest of Europe in these several branches.

The elder I made use of was the sambucus fructu in umbella nigro, the common hedge-elder. But then it was folely of the young shoots of this latt spring, which, at that time, fmelled much stronger, and more offensive than they do at prefent, when arrived at their blossoming season. For the rind, or outer skin of the shoots of this year, is now much thicker than when I used them; and confequently less permeable to the juices, which are now become more viscid, beginning to lose their fluidity, and to acquire an arborical quality. The large stems of elder, which are covered with a thick rough cortex, do not, I apprehend, give any strong smell: and the expressions in my former letter were meant to be confined folely to young elder twigs, or shoots of this spring only. The dwarf kind of elder, mentioned in your letter, which botanists, I apprehend, call ebulus, being more offensive than the young shoots of common elder, must undoubtedly be much preferable to it; by so much, as the smell is more offensive. Since all the virtues I attributed to elder, are derived merely from the strong, ill-slavoured, disagreeable

effluvia it emits:—of which, I apprehend, it loses considerably, the nearer it approaches to its blossoming state; as the blossom in particular scarce retains any of the genuine slavour. I do remember to have seen the ebulus.

Since my last letter, I have been informed of the following fact, which feems to corroborate my hypothesis, viz. that, when this county was infested with fuch swarms of cock-chafers, or oak-webbs, about eight or nine years ago, in many parishes, like the Egyptian locusts, they eat up every green thing, but elder; and there was fcarce a green leaf left, unless on the elder-bushes. I have been credibly affured, that they remained untouched, amidst the general devastation: which can only, I think, be accounted for from their unpalatableness, which must certainly be great, to occafion their escaping so voracious a multitude.

As the farm I keep in hand is at some distance from this town, I ordered my hind to be fure to draw an elder-bush over the wheat fields, as I mentioned in my last, as foon as the corn was eared, and before it began to bloffom: but the very dry, hot weather, bringing on the corn fooner than was expected, I was furprized, and greatly vexed, on taking a ride thither one day, to find it got, and getting into, fine bloffom .---I, however, ordered, and accordingly next morning, at day-break, two fervants went with two elder bushes on each side the ridge. from end to end, and so back again; and drew them over fuch of the fields as were not got too far in bloffom. These I examined last week, and found pretty clear

4

of the yellows, much more fo than those which were not elder-struck. And I have little doubt, but that, had the operation been performed fooner, it would have totally prevented their being at all touched. But the evening before they were ftruck, in going through the fields, and looking attentively at the ears of corn, I discovered vatt numbers of the flies, which occasion the damage, already on the corn, feven or eight flies on a fingle ear. Therefore I have no doubt, but that the eggs of the yellows, which are there now, were lodged before the corn was struck with the elder: as prevention, and not cure, is all to be expected from the operation. - I took notice of the manner of the They are about the fize of gnats, with a yellow body, and blueish wings, depositing their eggs; which they do on the outside of the husk of the ear, about the upper, or middle part of the husk: from whence, I suppose, they descend into the husk by the next showers of rain, or dews. One fly in particular I faw lay a great number of eggs, after the rate of about one egg every fecond of time, till at length I caught her by the wing; and, in carrying her across three or four ridges, I thought I perceived fomething on my thumb, which I took up, and, on viewing it through a pocket microscope, found it to be at least eight or ten eggs, of an oval form, which she had laid in that time, and which I preserved for some time, and shewed to several people. -Judge then of their fecundity .-As a further proof of which, I will inform you, that the day I received your letter, I examined fome corns of one ear, and found the following numbers of living yellow mag-

gots, or infects, in the husk of one fingle grain, viz. in the first corn fifteen, in the second nineteen, in the third twenty-nine, and in the fourth forty-one.—So large a number as forty-one insects in one single grain, feems sufficient to eat up all the corn in a whole ear: and we must fuppose, either that, like the northern nations of old, or modern Arabs, when they have consumed all their old flock, they decamp in fearch of more; or that they are flarved and perish in their citadel. This last feems the most likely; as, first, it appears difficult for them to get out; and next, should such innumerable multitudes all furvive, or did not innumerable multitudes perish, they would threaten us with an entire destruction of the next wheat harvest.

I am much obliged to you for the opportunity you have afforded me of repeating my respects for your laudable Society, and subscribing myself, as with great truth 1 am,

Your obliged,

and obedient fervant,
CHRIS. GULLETT.

Tavistock, 27 July, 1771.

Discovery of the Construction of a Machine for preventing the ill Effects of the Fumes of Mercury rifing in the Operation of Watergilding upon Silver, Copper, and other Metals; by Mr.]. Hills.

To the Prefident and Members of the Society for the Encouragement of Arts.

MY LORD AND GENTLEMEN,
THOUGHT it necessary, at
the introducing of the Model,
which

which I hope will be found a preventive against the ill effects of Mercury in Water-gilding, to endeayour to explain its use, as follows—

The injury received, is at the time the work remains out of the fire, from which arises a visible vapour impregnated with groffest part of mercury, which, for want of proper conveyance, the workman mult inevitably receive each time he breathes: to prevent those ill effects, I have contrived a pair of bellows, which immediately draw the effluvia that would otherwise disperse about him. The tin receiver, in which runs a tube from the bottom of the bellows, is to receive that part of the vapour which the valve of the bellows repels every time it goes down. This is made of tin, but would be found more efficacious if made of common copper, gilt on the infide with leaf-gold, by reason of the mercury adhering thereto. It is perhaps proper to mention, what otherwise may be thought an inconvenience, namely, the blowing of the bellows, which may be done at any time by a boy: but as it is not fo laborious as the treading of a turner, and many other ways of business, persons so inclined may work them with a stirrup, without other affittance, and will find great benefit by the moderate perspiration it will in course bring on: to which a farther precaution might that, if the workman added, chuses, he may put a piece of gold in his mouth and nothrils; but every continued obstruction to breathing in the manner that nature has ordered, must prove detrimental to the conflictation;

therefore, upon the whole, I difapprove of fuch practices. The glass, which I have made to take off and bring on, as occasion requires, will supply them. I have still added one of a different make, on a plan which I think in the largest fort of work will be found molt effectual; a draught of which I have annexed to the model, and will here briefly deferibe. It is a frame glazed to go all round the tin receiver, and come down as low as the person's lap; two holes with valves, made of leather, receive the arms, and will not be found inconvenient in working, by reason that the shirt sleeves are then always up.—Having thus far defcribed the principal parts of this model, shall leave it to your better judgment, and if approved, will give great pleafure and fatiffaction to,

Gentlemen,

Your molt obedient humble fervant

J. HILLS.

Rofamond's Row, Clerkenwell, Dec. 9th, 1773.

EXPLANATION.

To give a distinct idea of this invention, a more circumstantial description must be attempted; and the intended application being therewith likewise shewn, a better judgment of its utility may he formed. It is generally understood, that the gilder is placed before an open furnace or raifed fire-place, putting in and taking out alternately the pieces of metal The memorial that are gilding. points out, that the injury received is during the time the work is out of the fire.—The reason of that is obvious; the workman is then brushing, or laying on more amalgama, holding the piece almost under his nose; and as a fmall degree of heat raises mercury into fumes, it readily occurs, that the heat of the metal forms that noxious vapour which he receives into his lungs every time he breathes, unless it be diverted by fome current of air; and then its baneful effect may, in a less degree, spread in the room, still be felt by him and those who are obliged to be with him.-To remove all that mischief, the inventor has thought of collecting the noxious vapour together, and conveying it directly up into the chimney.-To do this he has contrived a funnel fixed against the breast of the chimney, over the fpot where the work is held during the operation, and from which the fumes must rise into it. This funnel, or receiver, as he calls it, is, as to shape, like a common, wide, flatted, tin tube, with a joint or return in the upper part, carried through the brick-work into the flue, as a channel of conveyance into the chimney: but the ascent of the vapour being flow and uncertain, without a draught of air to lead it up, he hath farther contrived a tin pipe, one end of which is fixed in the lower part of the funnel, and the other in the valve or draught-hole of a large fized bellows, resting upon the upper part or returning joint of the funnel, and having its nozel led (over the funnel) through the brick-work into the flue .- The effect of those bellows is to draw up, and force the floating fumes into the chimney; and that is obtained by the operator's working them with his foot, by means of a line fastened to the upper handle of the bellows, and carried over a pulley skrewed into the ceiling, or into a piece of wood projecting from the chimney, and thence brought down and tied to a stirrup, with which it is moved up and down like a treadle.-Another part of the invention, is a glazed frame or window-fash, placed between the operator and his work, to skreen him from the approach of the noxious fumes; it is either straight and of the breadth of the chimney, without a return, and made to slide up and down; or else, as he says, for large work, made circular, and of a fize to encompass the funnel, and close against the corners of the chimney; and then, instead of a fliding part, to have in front, two of the squares not glazed, but lined with leather fleeves for the arms to pass through to the work; which, by either of those modes of prevention, he affures, may be done without hurt to the health of the operator.

The subject of the memorial and the invention disclosed by the model, being taken into confideration, the Society refolved, That a machine of a proper fize for a common chimney should be conflructed at their expence: and Mr. Platts, a workman in the watergilding way, being found willing to make the trial, the machine was put up in his room; and a day being fixed, feveral members of the Society went to see its effect, and reported, that they had not felt any of the, fo called, fweet vapour, during the operation: after which the following letter was received by the Secretary.

To

To Mr. More.

SIR

HAVING been informed, it was necessary that I should deliver my opinion of the macnine for preventing the ill effects of mercury in water-gilding; I have the pleasure to inform you, that I have made use of it ever fince the trial, and wish I had been so happy as to have had the use of such an invention twenty years ago; I make no doubt but I should have been free from the disorder I have fo long laboured under. As the gentlemen have been fo indulgent as to favour me with the opportunity of experiencing these salutary effects, I shall from gratitude be ready to inform every person of the construction of the machine, as far as lies in my power.

I am, Sir,

your humble fervant,
M. PLATTS.

Upon the confirmed report, and the additional circumstance of cheapness and simplicity of construction, recommended in the advertisement for the preservation of the health of poor worknen, it was refolved, That the candidate, Mr. J. Hills, was justly entitled to the Premium, being twenty guineas, offered for discovering to the Society an effectual method of preventing the ill effects in Watergilding Silver, Copper, or other Matrice

N. B. Mr. Hills, originally a Seal-engraver, fince moved to No. 82, Berwick-Street, Soho, keeps a shop of Natural and Artificial Curiosities; and of Glass stained by his particular invention.

Account of the Usefulness of washing the Stems of Trees. By Mr. Robert Marsham, of Stratton, F. R. S. From the Philosophical Transactions, vol. lxxi. part 2.

THE following account is a kind of polyscript to my letter to Dr. Moss, Lord Bishop of Bath and Wells, in 1775, which the Royal Society did me the honour to publish in the Philosophical Transactions in 1777. In that I shewed how much a beech increased upon its stem being cleaned and washed; and in this I shall shew, that the benefit of cleaning the stem continues several years: for the beech which I washed in 1775 has increased in the five years fince the washing eight inches and fix-tenths, or above an inch and feven-tenths yearly; and the aggregate of nine unwashed beeches of the fame age does not amount to one inch and threetenths yearly to each tree. In 1776 I washed another beech (of the same age, viz. seed in 1741); and the increase in four years fince the washing is nine inches and two-tenths, or two inches and three-tenths yearly, when the aggregate of nine unwashed beeches amounted to but one inch and three-tenths and a half. In 1776 I washed an oak which I planted in 1720, which has increased in the four years fince washing seven inches and two-tenths, and the aggregate of three oaks planted the same year (viz. all I meafured) amounted to but one inch yearly to each tree. In 1779 I washed another beech of the same age, and the increase in 1780 was

124 ANNUAL REGISTER, 1782.

three inches, when the aggregate of fifteen unwashed beeches was not full fifteen inches and fixtenths, or not one inch and half a tenth to each tree; yet most of these trees grew on better land than that which was washed. But I apprehend the whole of the extraordinary increase in the two last experiments should not be attributed to washing: for in the autumn of 1778 I had greafy pond mud fpread round some favourite trees, as far as I supposed their roots extended; and although fome trees did not show to have received any benefit from the mud, yet others did, that is, an oak increased half an inch, and a beech three-tenths, above their ordinary growth. Now though the beech gained but three tenths, yet, perhaps, that may not be enough to allow for the mud; for the fummer of 1779 was the most ungenial to the growth of trees of any fince I have measured them; some not gaining half their ordinary growth, and the aggregate increase of all the unwashed and unmudded trees that I measured (ninety-three in number of various kinds) was in 1779 but fix feet five inches and feven-tenths, or feventy-feven inches and feven-tenths, which gives but eight-tenths and about onethird to each tree; when in 1778 (a very dry fummer in Norfolk) they increased seven feet and ninetenths, or near eighty-five inches, which gives above nine-tenths to each tree: and this fummer of 1780 being also very dry, yet the

aggregate increase was above half an inch more than in 1778. But the best increase of these three years is low, as there are but twenty of the ninety-three trees that were not planted by me, and greater increase is reasonably expected in young than old trees; yet I have an oak now two hundred years old * (1780), which is fixteen feet and five inches in circumference, or one hundred and ninety-feven inches in two hundred years. But this oak cannot properly be called old. The annual increase of very old trees is hardly measurable with a string, as the flightest change of the air will affect the string more than a year's growth. The largest trees that I have measured are so far from me, that I have had no opportunity of measuring them afecond time, except the oak near the honourable Mr. Legge's Lodge in Holt Forest, which does not In 1759 I show to be hollow. found it was, at seven feet (for a large swelling rendered it unfair to measure at five or fix feet) a trifle above thirty-four feet in circumference, and in 1778 I found it had not increased above half an inch in nineteen years. This more entire remain of longevity merits fome regard from the lovers of trees, as well as the hollow oak at Cowthorp in Yorkshire, which Dr. Hunter gives an account of in his edition of Evelyn's Silva, and calls it forty-eight feet round atthree feet. I did not measure it fo low; but in 1768 I found it, at

^{*} I cannot militake in the age of this oak, as I have the deed between my ancestor Robert Martham and the Copyhold Tenants of his Manor of Stratton, dated May 20, 1580, upon his then inclosing some of his waste; and the abuttal is clear.

four feet, forty feet and fix inches; and at five feet, thirty-fix feet and fix inches; and at fix feet, thirtytwo feet and one inch. Now, although this oak is larger near the earth than that in Hampshire, yet it diminishes much more suddenly in girt, viz. eight feet and five inches in two feet of height (I reckon by my own measures, as I took pains to be exact). pose the diminution continues about this rate (for I did not meafure so high) then at feven feet it will be about twenty-eight feet in circumference, and the bottom fourteen feet contain fix hundred and eighty-fix feet round or buyers measure, or seventeen ton and fix feet; and fourteen feet length of the Hampshire oak is one thoufand and feven feet, or twenty-five ton and feven feet, that is, three hundred and twenty-one feet more than the Yorkshire oak, though that is supposed by many people the greatest 'oak in England.

I am unwilling to conclude this account of washing the stems of trees without observing, that all the ingredients of vegetation united, which are received from the roots, item, branches, and leaves of a mosly and dirty tree, do not produce half the increase that another gains whose stem is clean to the head only, and that not ten feet in height. Is it not clear that this greater share of nourishment cannot come from rain? for the dirty stem will retain the moisture longer than when clean, and the nourishment drawn

from the roots, and imbibed by the branches and leaves, must be the fame to both trees. must not the great share of vegetative ingredients be conveyed in dew? May not the moss and dirt absorb the finest parts of the dew? and may they not act as a kind of fkreen, and deprive the tree of that share of air and sun which it requires? To develope this mysterious operation of nature would be an honour to the most ingenious, and the plain fact may afford pleasure to the owners of young trees; for if their growth may be increased by cleansing their stems once in five or fix years (and perhaps they will not require it fo often) if the increase is but half an inch yearly above the ordinary growth, it will greatly over-pay for the trouble, besides the pleafure of feeing the tree more flourishing. Although the extra increase of my first washed beech was but four-tenths of an inch, the fecond was nine-tenths and a half, and the third near two inches, fo the aggregate extra increase is above one inch and one-tenth yearly: and the increase of the oak is eight-tenths. But calling it only half an inch, then fix years will produce above five cubic feet of timber, as the oak is eight feet round, and above twenty feet long, and fixpence will pay for the washing, so there remains nine shillings and sixpence clear gain in fix years.

Stratton, Oct. 29, 1780.

ANTIQUITIES.

Some Account of Lichfield, and its Cathedral; extracted from Pennam's Journey from Chester to London.

ICHFIELD is a place of Saxon origin, and owes its rife to Ceadda, or Chad, the great faint of Mercia. I omit the legend of the thousand Christians, disciples of St. Amphibolic, that were martyred here under Dioclefian; or the three kings flain at this place in battle, as fculptured over the town-hall. I take up its history about the year 656, when Ofway, king of the country, established a bishoprick here, and made Dwina, or Dinma, the first prelate. To him fucceeded Cellach and Trumberct; and on his demise, the famous Ccadda. This pious man at first led an eremitical life, in a cell, at the place on which now stands the church of his name, and supported himself by the milk of a white hind. In this place he was discovered by Rusine, the fon of Wolphere, who was privately instructed by him till the time of his martyrdom, before-Remorfe, and conferecited. quential conversion, seized the Pagan prince. As some species of

expiation, he preferred the apostle to the vacant fee. He built himfelf a small house near the church, and, with feven or eight of his brethren, during the interval of preaching, read and prayed in private. On the approach of his death, flights of angels fang hymns Miracles at his over his cell. tomb confirmed the holinefs of his life. A lunatic, that by accident escaped from his keepers, lay a night on it, and in the morning was found restored to his senses. The very earth taken out of it, was an infallible remedy for all disorders incident to man or beast. * Ceadda was of course canonized; a shrine was erected in honour of him; great was the concourse of devotees; the place increased and flourished.

The history of our cathedrals is, in its beginning, but the history of superstition, mixed with some truth and abundance of legend; humiliating proof of the weakness of the human mind! yet all the fine arts of past times, and all the magnificent works we now so justly admire, are owing to a species of piety that every lover of the elegance of architecture must rejoice to have existed.

We are told, that in the days of Jaruman, about the year 666, the cathedral was founded.

I shall not trouble the reader with a dry list of prelates, but only mention those distinguished by some remarkable event, that befel the

fee during their days.
In those of Winfrid, successor to St. Chad, in 674, Theodore, Archbishop of Canterbury, thought fit to divide the bishoprick into two, and to establish the other at Sidnacester, in Lincolnshire, the present Stow. Winfrid difapproving this defalcation, was de-The dioprived for contumacy. cefe might well bear dividing; for at that time it contained the whole kingdom of Mercia. present, it comprehends all Staffordshire, except $\mathbf{Brom}e$...ich belong to Worcester; the rger part of Warwickshire; and about half Shropshire.

In the time of Bishop Adulf, Offa, King of the Mercians, procured liberty from the pope of erecting the fee into an archbishoprick, in 786, and to assign for suffragans Winchester, Hereford, Lagecetter (Leicester), Helmham, and Dunwick.

honour died with Adulf.

A Bishop Peter, in 1067, the year succeeding the conquest, removed the fee to St. John's, in Chester; where he died, and was

interred, in 1085.

His successor, Robert de Limefey, fmitten with the leve of the gold and filver * with which the pious Earl Leofiic had covered the walls of his new convent at Coventry, in 1095 removed the fee to that city, and at once scrap. ed from a fingle beam, that funported a shrine, 500 marks worth of filver +.

I now speak of a prelate of a different temper; to whose munificence both the church and city were highly indebted. Roger de Clinton, confecrated in 1129, took down the antient Mercian We are not informed cathedral. of the dimensions or nature of the building, any more than we are of that built by this bishop. must have been, according to the reigning mode of the times, of the fpecies of architecture usually called Saxon, with masfy pillars and round arches. There is not at present the least relique of this But I am unacquainted with the accident, or calamity, which destroyed the labours of this pious prelate; who took up the cross, and died at Antioch, on a pilgrimage to the holy fepulchre.

After a fuccession of twelve prelates, Walter de Langton, treafurer of England, was confecrated bishop of this see, in 1296. He was highly favoured by Edward L His prosperity was interrupted by the refentment of the prince, who meanly revenged on the bithop a fhort imprisonment he had suffered in the time of his father, for riotously destroying his deer. After a perfecution and confinement of above two years, he emerged from all his difficulties, and refumed his patteral charge in 2 manner that did him great honour. He may be confidered as the third architect of this cathe-

^{*} Wharton's Angl. Sacr. i. 433.

[†] William of Malmibury, as quoted by Dugdale, Hift. Warwick, i. 157. dral:

dral: to him we are indebted for the prefent elegant pile. He laid the foundation for our lady's chapel; an edifice of uncommon beauty, finished after his death with money left for that purpose. He built the cloysters, and expended 2000/. upon a shrine for St. Chad. He bestowed on the choir feveral rich vostments, a chalice, and two cups of beaten gold, to the value of zool. To the vicars choral he gave a standing cup, and an annual penfion of 20% and procured for them and the canons great immunities: in particular, there was an order from the king to the justices of Staffordshire, that, without trial, they should hang upon the next gallows divers perfons that by force kept their lands from them. This prelate also surrounded the close with a wall and ditch, made the great gate at the west end, and the postern at the fouth. He gave his own palace, at the west end of the close, to the vicars choral, and built a new one for himfelf at the east end. Le partly built, or enlarged, the castle at Eccleshal, and the manors Heywood and Shugborow, and the palace in the Strand. He finished his useful life in Nov. 1321, and was buried in the chapel of his own founding.

The cathedral continued in the flate it was left by Bishop Langton, till the time of the dissolution, when the rich shrine of St. Chad, and other objects of similar devotion, fell a prey to the rapacity of the prince. The building continued in its prissing broatty till the unhappy wars of the last century, when it suffered

greatly by three fieges. The fituation of the place on an eminence, furrounded by water and by deep ditches, and fortified with walls and bastions, rendered it unhappily a proper place for a garrifon.

In 1643, it was possessed by the royalitts of the county, under the Earl of Chesterfield; when it underwent the attack rendered memorable by the death of Lord Brook, commander of the parlementary forces. His lordship, in reconnoitring the cathedral, in a wooden porch in Dams-street, was fhot into the eye by a musket-ball, on March 2d, 1643. This happened to be the festival of St. Chad, the patron of the church. The cavaliers attributed the direction of the fatal bullet to the influence of the faint, in refentment of the facrileges this nobleman was committing on his cathedral. What share the saint had in this affair, I will not pretend to fay; but the musket was aimed, and the trigger drawn, by a neighbouring gentleman posted in the leads, known by the name of dumb Dyot. The lofs of Lord Brook gave very fliort respite to the garrifon; which was taken almost immediately after, by Sir John Gell.

In April, in the fame year, it was attacked by Prince Ruperts. At that time it was commanded by Colonel Roufwel; a fleady governor over an enthusiastic garrifon. He defended the place with vast resolution. A breach was made by the blowing up of a mine. The attack was made with great bravery, but great loss. At length the garrifon-gave up,

on the most honourable conditions *. The colonel took care to plunder the church of the communion-plate, during the time the fanatics were in possession. They used every species of profanation; hunted a cat in it with hounds, to enjoy the fine echo from the roof; and brought a calf, dreffed in linen, to the font, and fprinkled it with water, in derision of baptism +.

The prince appointed Colonel Hervey Bagot 1 the governor; who kept possession till the ruin of the king's affairs, in 1646; when the colonel, and other commanders, being fatisfied that the king had not an hundred men in any one place in the field, nor any garrifon unbefieged, furrendered on very honourable terms, on the 10th of July, to Adjutant Louthian ||.

The state of this church, after fo many fieges, may eafily be conceived. The honour of restoring it to its former splendor, was referved for John Hacket, presented to this see in 1661. On the very next day after his arrival, he fet his coach-horfes, with teams, to remove the rubbish: and in eight years time restored the ca-

thedral to its present beautiful flate, at the expence of twenty thousand pounds §; one thousand of which was the gift of the dean and chapter; the rest was done either at his own charge, or by benefactions refulting from his own solicitations. He died in 1670. A very handsome tomb was erected in the choir to his memory, with his efficies laid recumbent on it, with a mitre on his head, and in his episcopal dreis.

The west front is of great elegance, adorned with the richest sculpture, and, till of late, with rows of flatues of prophets, kings of Judah, &c. and, above all, a very bad one of Charles II. who had contributed to the repair of the church, by a liberal gift of timber. This statue was the work of a Sir William Wilson, originally a mason from Sutton Coldfield, who, after marrying a rich wife, arrived at the dignity of knighthood.

The sculptures round the doors were very elegant; but time, or violence, hath greatly impaired their beauty.

James II. when Duke of York, beflowed on this church the magnificent weil window. The fine

Articles of Surrender.

§ Br. Biogr. iv. 2457. A MS. with which Mr. Greene favoured me, makes the fum much lefs.

painted glass was given of late years, by Dean Addenbrook.

The northern door is extremely rich in sculptured moldings: three of foliage, and three of small figures in ovals. In one of the lowest is represented a monk baptizing a person kneeling before him. Probably the former is intended for St. Chad; the latter for Wulferus. It is a misfortune, that the ornaments of this cathedral are made of fuch friable stone, that what fanaticism has spared, the weather has impaired.

In the front are two fine spires, and a third in the centre, of a vast

height, and fine proportion.

The roof was till of late covered with lead, but grew fo greatly out of repair, that the dean and chapter were obliged to substitute flates instead of metal, on account of the narrow revenues left to maintain this venerable pile; and, after the strictest economy, they will be under the necessity of contributing from their own income, in order to complete their The excellent order that all the cathedrals I have vifited are in, does great credit to their members; who spare nothing from their own incomes to render them not only decent, but elegant.

The body is lofty, supported by pillars formed of numbers of flender columns, with neat foliated capitals. Along the walls of the ailes are rows of false arches, in the gothic stile, with a feat be-

neath.

The upper rows of windows, in the body, are of an uncommon form, being triangular, including three circles in each.

In each transept are two places, formerly chapels; at present confiftory courts, and the vicar's vestry-room.

The choir merits attention, on account of the elegant sculpture about the windows, and the embattled gallery that runs beneath On each side are six statues, now much mutilated, placed in beautiful gothic niches, and richly painted. The first on the left is St. Peter; the next is the Virgin; the third is Mary Magdalene, with one leg bare, to denote her legendary wantonness. The other three are St. Philip, St. James, and St. Christopher, with Christ on his shoulders.

The beauty of this choir is much impaired by the impropriety of a rich altar piece, of Grecian architecture, terminating this ele-

gant gothic building.

Behind this is St. Mary's chapel, with a stone skreen, the most elegant which can be imagined, embattled at top, and adorned with feveral rows of gothic niches, of most exquisite workmanship; each formerly containing a small Beneath them are thirteen stalls, with gothic work over In this chapel are nine windows, more narrow, lofty, and of more elegant work than any of the others; three on each side, and three at the end.

In this chapel flood the shrine of St. Chad. Here was interred Ceolred *, King of the Mercians; and in later times, here was placed the magnificent tomb (on the fite of the shrine) of the first Lord Paget, adorned with columns, with two kneeling figures of a

Ιt

man and woman between the front and back pillars. These were destroyed in the blind fury of civil war; as was another fine tomb of a Lord Baffet of Drayton, who died in 1389. Few indeed escaped. Of those are the effigies of the great Bishop Langton, with his pastoral staff in one hand, and the other hand in the action of benediction: another, of Hugh de Pateshul, who died in 1241, remarkable for having the fligmata, or marks of our Saviour's wounds on the hands and feet: a respectful fuperstition of antient times. Dean Heywood is represented in his habit, and again naked, with the emaciated change which death occasions.

Here are feveral monuments within the walls, of a most frugal nature, having no appearance of any part but the head and feet. From an intermediate bracket, it is probable some favourite saint might have been honoured with a rich image.

Some Account of the antient Verulamium, near St. Albans-of its Ruins, &c. from the same Author.

IMMEDIATELY after quitting this place, I entered the celebrated Verulamium, at a spot distinguished by a great fragment of the ancient wall, known by the name of Gorhambury-block, which probably bounded one fide of one

of the portæ, or entrances, being exactly opposite to that on the eastern part. The precinct departs from the rectangular form of the Romans, this being among those which were laid out, Prout loci qualitas aut necessitas postulave-rit*. It inclines to an oval shape; is placed on a slope, and the lower fide bounded by the river Ver, which in former times might have spread into a lake, and given greater security to the town. According to Humphry Lloyd +, it gave also the name to the place, Gwerllan, or the temple on the Ver; rightly bestowing on the Britons a pre-occupancy of it to the Romans. I shall not dispute the notions of the particular ford over which Cæfar crossed the Thames, when he penetrated into our island. It probably was at or near Coway Stakes. Cæfar leaves us no room to depart from that opinion, as he expressly tells us that he led his army to the river Thames, towards the borders of the territories of Cassivelaunus t, the golden-locked leader of the country of the Cassi: and these Cassi are reasonably supposed to have been a clan of the Cattieuchlani, and to have inhabited the hundred of this county now called Cathio, in which Verulamium stood. But I must contend, that the distance of that city is far too remote from the fordable parts of the Thames, to admit it to have been the town of the British leader destroyed by the invader.

K z

^{*} Vegetius, lib. i. c. 23.

⁺ Commentariol, 31. 1 Cæfar cognito confilio eorum ad flumen Tamafin in finos Caffivelauni exercitum duxit. Bel. Gal. lib. v.

Preceding this, he speaks of the fines Cossivelaum, as being a mari circiter millia paffuum lxxx.

It lies, in the nearest line, thirtyfeven miles from those parts of the river: a distance too great for the time given to Cafar for his fecond campaign in Britain. town, or rather post, which was forced by him, was not remote from the camp occupied by him on the fide of the river; and most likely was that which is fill very entire, in the park of her Grace the Dutchess Dowager of Portland, at Bulstrode, about fifteen miles distance from the Roman camp; whose vestiges are sill to be feen, not far from the famous ford *. Partly by length of time, partly by constant cultivation, this post has lost fome of the characters ascribed by Casar to the town of Cassivelaunus; for it wants at prefent the marshy defence it had in his days.

The town alluded to was within the territories of the British chieftain, and one of the strong holds into which the Britons were used to drive their cattle in time of danger. This, by Cæsar's account, was certainly not the most capital; for his first relation informs us, it only contained fatis numerus pecorum, a pretty confider. able number of cattle. Notwithstanding his vanity, a few lines lower, fwells his booty into magnus numerus, a vast number +. Near Shepperton, allo, near that place, in a field called War Close, are found spurs, swords, bones, and other marks of a battle. See Cambden, i. 366: but in all likelihood, the first is the nearest to the truth.

* Sylvis Paludibufque munitum.

Verulamium was the capital of this country, and the residence of its princes. I do not reckon Caffivelaunus among them; he was a chiestain of the Cassi, and, for his great abilities, elected general on the Roman invasion, if our British history is to be trusted. was a guardian to his nephews, Anarway and Tenefan ‡ (the laft) father to Cunoboline, whose coins are so frequent. Here was one of the British mints: for we find the word Ver on the coins, but no prince's name to distinguish the

reign.

After the Romans had effected their conquest, they added walls to the ordinary British defence of ramparts, and ditches. great fragments of the former still of the strength remain, proofs and manner of the Roman mafonry. On the one fide is a vast The walls fofs; on another, two. are twelve feet thick, where entire, formed of flints bedded in mortar, now grown into amazing hardness. By intervals of about three feet distance, are three, and in some places four, rows of broad and thin bricks, or tiles, which were continued the whole length of the walls, which feem defigned as foundations to fustain the layers of flints and lime, while the laft was in a moist state. were, befides, round holes, which penetrated quite through ||; but these are either filled up, or escaped my notice. According to Doctor Stukely's measurement, the area is five thousand two hundred feet in length, and the greatest

⁺ Lewis Hift. Br. 73. || See Doctor Stukely's admirable plan of this place.

¹ Stukely Itin. i. 117.

breadth about three thousand. It is at present inclosed into fields; but under the hedges, in many places, are vessiges of buildings, and, as I am told, when it is under tillage, the sites of the streets appear, by the different colour of the corn above them. The Watling-street comes to the Porta Decumana, the gate on the western side, and passes quite through the city. There is another road goes on the outside of the south side; a small military way, like that which passed from turret to turret on Severus's wall *, for the conveniency of external passengers.

This place, by its attachment to the conquerors, acquired the privileges of a free borough, a municipium, or municipal city, whose inhabitants enjoyed all the rights of the Roman citizens; for which reason such towns derive their name a muncribus capiendis, their power to bear public offices. They had their fenators, knights, and commons; magistrates and priests; censors, ediles, questors, and flamens.

The attachment of this town to its new masters, proved the cause of a heavy misfortune, which befel it under the reign of Nero, Boadicea, widow of Prasutagus, King of the Iceni, enraged at the cruel indignity offered to her and her daughters, raised an insurrection against the Romans and their friends, and repaid with the most dreadful cruelties the injuries they received. Camolodunum, Londinium, and Verolamium, fuffered from the fury of the Britons; and seventy thousand citizens and allies fell by the edge of the sword. This city was remarkable for its wealth †; which was another incentive for the Britons to attack it, added to a particular animosity against a people who had forsaken the customs and religion of their ancestors.

The place in a thort time emerged from its misfortune; and had the honour of producing Albanus, the proto-martyr of Britain, a wealthy citizen of Verulamium, and, by privilege, of Rome also. He had been a Pagan, but was converted by means of a gueit, whom he had sheltered during the great persecution of Dioclesian, as I have before related. St. Alban suffered in the year 302. Let not legend destroy the credibility of the martyrdom, by affigning attendant miracles, long after their cessation. We are told, that after he had refused to facrifice to the heathen gods, the usual test of the alledged crime of Christianity, he was, as customary, whipped with rods, and then led to execution, and beheaded on Holmliurit, where the town of St. Alban's at present stands. In his paffage, the torrent, which then divided the place from Verulamium, like the Red-sea, divided its waters, and gave dry passage to the faint and his followers: a fountain sprung up where the martyr kneeled: one of the executioners relenting, was converted, and suffered with Albanus; another, who performed the deed, lost his eyes, as a penalty for his

+ Taciti Annal,

^{*} Tour Scotl. 1772, part ii. p. 288. lib. xiv. c. 31, &c.

crueity; for they dropped out of his head in the moment in which he gave the blow *. St. Alban was interred on the spot; and his remains were miraculously discovered feveral centuries after their interment.

In 429, this place was honoured with a fynod, in which St. Germanus and Lupus, two French prelates, assisted. A chapel was erected, about the year 945, by Abbot Ulfin, in honour of the former, on the spot in which he preached; whose ruins were to be feen the beginning of this cen-

tury.

After the Saxon invasion, the name of the town was changed for that of Verlamcester and Watlincester. The British hero, Uther Pendragon, after a long siege, wrested it out of the hands of the Saxons, and held it during his life; after which they foon recovered it; but by reason of the cruel wars that raged during the contest between them and the Britons, the place became totally defolated.

Like the antient Deva+, Verulamium had its great vaults or fubterraneous retreats, strongly These are and artfully arched. fuppoied, by Sir Henry Chauncy, to have been defigned as places of retreat in time of war for the women and children, and for the concealing of the most valuable effects. In 960, they were found to give shelter to thieves and proftitutes; which caused Eldred, the eighth abbot, to fearch after thefe

fousterrains, and found feveral ways and passages; all which he caused to be destroyed, but preferved the tiles and stones for the rebuilding the church, then in rums 1.

The present St. Alban's arose from the ruins of Verulamium. Offa King of the Mercians, directed, fays legend, by a vision from heaven, discovered the reliques of St. Alban, by beams of glory springing from the grave ||. In 793, he erected on the spot the magnificent monastery, for the maintenance of a hundred Benedictine or black monks, and in a parlimentary council, which he held in the same year, bestowed on it most liberal endowments. Verulamium was now reduced to the state elegantly described by Spencer, assuming the character of the genius of the place.

I was that city which the garland wore Of Britain's pride, delivered unto me By Roman victors, which it wore of yore, Though nought at all but ruins now I be, And lie in mine own ashes, as you see. Verlame I was: what boots it that I was, Sith now I am but weeds and waiteful

grafs?

Ruines of Time.

Before I quit these ancient precincts, I must note the church of St. Michael, built within them, by the same pious abbot who founded the chapel of St. German. It became an impropriation of the abbey, and, after the dissolution, a vicarage. The church is small, fupported within by round arches. It is most distinguished by the monument of the great Lord Ve-

† Tour in Wales, p. 108. Creffy, lib. xxv. c. 6.

Some Account, and Description, of the Tomb of Humphry Duke of Glocester; from the same Author.

O N the fouth fide of the chapel of St. Alban is the magnificent tomb * of Humphry Duke of Glocester, distinguished by the name of The Good. He was uncle to Henry VI. and regent of the kingdom, under his weak nephew, during twenty-five years. His many eminent qualities gained him the love of the people; his popularity, the hatred of the queen and her favourites. life was found to be incompatible to their views. They first effected the ruin of his duchess by a ridiculous charge of witchcraft, and after that, brought as groundless a charge of treason again him-He was conveyed to St. Edmond's Bury, where a parlement was convened in 1446; before which the accusation was to be made. His enemies, fearing the public execution of so great and so beloved a character, caused him to be stifled in his bed, and then pretended that he died of vexation at his sudden fall. His body was interred in this church, the scene of his detection of the pretended miracle of the blind restored to sight at the virtuous shrine of St. Alban. Shakespear gives us the relation admirably +. Glocester had a predilection for this place: he had bestowed on it rich vestments, to the value of three thousand marks,

and the manor of Pembroke, that the monks should pray for his foul: and he also directed that his body should be deposited within these holy walls. The sees attendant on his funeral, were not of the most moderate kind: unless we may suppose, as probably was the case, that the house

was at the charge of erecting the monument to so great a benefactor. Sir Henry Chauncy expressly says*, that Abbot Whethamsted adorned Duke Humphry's tomb; which shews, that part at least of the expences were borne by the convent. The account is curious.

This beautiful tomb was once infulated, as appears by one of these items. In the middle is a pervious arch, adorned above with the coat of arms of the deceased; and others again along a freeze; with his supporters, two antelopes with collars. From the freeze arises a light elegant tabernaclework, with niches; containing on one side the effigies of our princes; the other side is despoiled of the figures.

In 1703, the vault in which reposed the remains of this illustrious personage was discovered. The body was preserved in a leaden coffin, in a strong pickle; and over that was another case, of wood, now perished. Against the wall is painted a crucifixion, with four chalices receiving the blood; a hand pointing towards it, with a label, inscribed Lord

bave mercy upon me.

The epitaph has long fince been defaced; but was as follows:

Hic jacet Umphredus dux ille Gloceftrius, olim

Henrici regis protector, fraudis ineptæ Detector; dum ficta notat miraculà cœci * Lumen erat patriæ, columen venerabile

regm:
Pacis amans musisque favens melioribus;

Gratum opus Oxonia † quæ nunc feola facra refulget.

Invida sed mulier regno, regi, sibi, nequam

Abstulit hunc, humili vix hoc dignata sepulchro. Invidia rumpente tamen post funera vivit.

On the Military Machines of the Ancients, and the Use they made of them; translated from the Italian of Count Algarrotti.

HAVE for some days delayed answering your last letter: in order to which, I found it requifite to fend a messenger to town. and to wait for his return. You question me on two particulars; on the force of the military engines of the ancients, and the use which they made of them in war. Of their force you have a very flight idea: and you imagine the only use of them was to defend the camp. You think therefore that argument will not hold good, by which I deduced the expediency of adopting the ancient method of fighting, from the ancients themselves having had machines which answered to our artillery. You think no comparison can be made between the catapultæ and balific of the Romans, and the artillery of the moderns; and that the prodigious force and efficacy of the fire-arms have effected. if not an entire, yet at least a very confiderable change in the art of To clear up your doubts, war. I confidered that I must not trust to conjecture alone, but must proceed upon certain and incontestable authority; and having formerly, in the course of my reading, made fome extracts to this purpose, fent for the collection. And now, armed with these authorities. I am ready to answer your objections.

With regard to the force of the military engines of the ancients, I shall not insist on the authority of the poets, who represent them in

[·] Alluding to the detection of the impostor.

[†] He founded the beautiful divinity-school at Oxford,

different passages to have been so dreadful. You would have good reason to decline such authority; and I myself consider the poets as the velites, or light-armed troops, who have but a fmall share in the action. But the best hittorians, and the most respectable writers among the ancients, expressly and uniformly confirm the flaughter and destruction which the catapulae and balifie brought with them. Nor can any thinking person entertain a doubt of the violence of machines conftructed to annoy troops so well protected by defensive armour, to batter walls founded by nations, who built them to Iaft The effects of their maever. chines were spoken of just in the same terms as those of our cannon and the fame complaints were made at the invention of them.

Non più la gagliardia, non più l'ardire, Per te può in campo al paragon venire, fays Ariosto, repeating what was in every one's mouth at that time. In the same manner Archidamas, the fon of Agefilaus, on feeing the catapulta just arrived from Italy, exclaimed, "By heaven! it is all over with personal valour." The truth is, that those machines made a most dreadful havock, and went off with a most terrible explosion, oftener, and with more certainty of hitting their object, than the shots of our artillery. The same may be observed with regard to the superiority of the cross-bow over the arquebuse: for which reason M. D. Langeay was of opinion, that we should still retain the crofs-bow, an arm that was not entirely out of use in the fifteenth century.

These machines threw to a confiderable distance stones of an incredible weight, infinitely beyond that of the balls even of the Turkish artillery: the only resource they had to deaden their violence, were facks of wool, which are used to this day against the can-They difmantled the large towers, and destroyed the merlons of the walls; nay, they even battered down the towers themselves, which were the principal defence of cities. Vegetius fays nothing could withfland them; like lightning they carried all before them; infomuch that there have been persons, well skilled in the art of war, who were for re-establishing the use of the balista, which they thought would answer the same dreadful purpose as the cannon, and be at the same time more easily constructed and transported from one place to another. This was the opinion of Folard, who made experiments on fome machines in miniature, after the model of the ancients; and of Count Saxe, as myself heard from his own mouth, who had dedicated the greatest part of a life crowned with glory to the fludy of his profession.

Do you think I have sufficiently proved the first part of my thesis, to speak in the usual style; and, after what you have heard, would you be above bowing to a shot from a catapulta or balista? With regard to the second part of my subject, that is, the use which the ancients made of these machines in war, we are informed by Monticucculi, a man who was no less emi-

eminent in letters than in arms, that among the Spartans and Macedonians, the machines that anfwered to our artillery were diftributed between the several divifions of the phalanx. I cannot, for my own part, recollect any other example of this kind, but that of Maccanidas, tyrant of Sparta, who, when marching towards Mantinea against Philopemen, took a large train of machines along with him; which in the engagement he placed in the intervals along the front of his army, in the same manner as our field-pieces are disposed of. But. with regard to the Roman armies, we find in Vegetius, that each cohort in the legion was provided with an onagrum, or a balista, and each century with a carrobalista, or a catapulta, as our battalions are with their fieldpieces. The carrobalista was drawn by mules; and eleven men were assigned to load and point it. He informs us, that it was not only useful in defending the camp, but also in annoying the enemy in the field. These machines were, according to the same author, placed behind the heavy-armed troops, over whose heads they made their discharge upon the enemy: their fituation was however changed, when circumstances of ground and position required it. They were fometimes placed on an eminence, whence they might command the country, and do the more execution, as was done in the battle between Vitellius and Otho, which decided their dispute for the imperial throne. On other occasions they were placed in redoubts, on the wings of the army, to protect the flanks from an enemy superior in number; of which Julius Cæfar afforded an instance in Gaul. Having taken possession of a gentle eminence, with a multitude of Gauls in front, who might easily furround him, he caused trenches to be made in an oblique direction on the right and left of his army, and a fortress to be erected, where he placed the machines: then, his flanks being fecured, he offered battle to the Gauls, who declined it. We find also the machines posted on the flanks, on two rifing grounds, by Arrian, and part of them behind the legions, which were between the two rifing grounds, when he had to defend, against a great number of the Alani, the province of Cappadocia, to the government of which he had been appointed by Adrian. The catapultæ and baliflæ were thus disposed of, in the same manner with our artillery, as the commander judged expedient, or as the fituation required it; and particularly in those parts whence they might do the most execution, and be the least liable to infult. The large stones that were discharged by them, put the enemy in diforder, swept away whole files of men, and wrought the most dreadful carnage and destruction. The only method to prevent their terrible effects, was either to close in, and not give them time to do mischief, as Philopemen did with Maccanidas, or to furround and cut them off: and, as we now often hear of the enemy's cannon being taken or spiked, so among the ancients were fallies frequently made to cut the ropes, or destroy the springs of the machines.

Not only in field engagements, but

but in all the other operations of war, the ancients made the fame ule of their machines, as we do of our cannon. With them they formed batteries, to impede and destroy the enemy's works, and to defend their own; so that they might be faid in a manner to cannonade one another. With them they battered their adversaries at a distance, harrassed their watering and foraging parties, and reduced them to the greatest misery and diffress. When they wanted to gain an eminence or a bank occupied by the enemy, they first threw a shower of stones from their slings, and their machines, which, when well pointed, carried every thing before them.

They battered likewife, on some occasions, the enemy's camp with their machines, as we do with our cannon. This method of proceeding, Pompeius Sabinus adopted against the Thracians: having surrounded them with an entrenchment, he erected a redoubt, whence he poured upon them a continual discharge of stones, darts, and stre.

Nor were the machines unemployed in the passing of rivers. On the bank of the river which was to be croffed, they raifed batteries of catapulta and balista, with which they kept the enemy at a distance, whilst they were constructing the bridge. It was in this manner that Germanicus crossed the Eder; and the same method was practifed by Alexander in Thrace. When the river was large, they launched veilels, on which they built towers, and placed the machines in them, to disorder the enemy on the other fide, who was also provided with

machines to prevent the passage. Or, having constructed part of the bridge, they raised a tower on the most advanced pier; and, under cover of the discharge of stones and darts from it, they carried on the work to the opposite bank. I shall not enlarge on the methods they took of defending a pass, or covering a retreat with their archers, or light artillery, by placing them in the most advantageous positions: such passages are obvious enough in the ancient authors.

I hope now, that I have proved to your fatisfaction, that the ancients made the very fame use of their machines of war, as we do of our artillery. If we find them seldom taken notice of in the account of field—engagements, the reason is, that it was the custom with them to draw their swords, and come quickly to a close consists: and if this was the practice in our armies, the artillery would not have so considerable a share, as it has at present, in the decision of a battle.

On the Sieges and Naval Armaments of the Ancients, and their Refemblance to those of the Moderns; from the same.

NEVER could subscribe to the universal opinion, that the discovery of gun-powder, the compass, and the art of printing, have produced an entire change, and that for the better, in the system of affairs. The compass indeed was a noble invention. It cannot be denied, but society has derived wonderful benefits from the discovery of an instrument, which

which in the darkest atmosphere points out to us the pole, guides us with fecurity, and makes us in fome measure masters of the whole extent of the ocean. It may be called the very foul of navigation. The Cynosure alone would never have conducted us to the discovery of America; and we have cause to boast, that a middling pilot in our age knows more than in the times of the ancients did Nearchus, the admiral of Alexander the Great, or Hanno, the Columbus of the Carthaginians. The art of printing has also made a great alteration in the face of affairs, by rendering that common, which formerly was a luxury which the great only could partake of. But are we to conclude. that letters have received any augmentation from an art that is fo productive of literary abortions, and by which are multiplied the means of propagating falle science, which is far worse than ignorance itself? Again, does it appear, that the invention of gun-powder introduced any univerfal changes in the military system? Our armies march at present in the same manner, and with the same precautions, as those of the ancients; our orders of battle are the same; we put in practice the fame stratagems; and we encamp, or at least we should encamp, as they did. Nothing is changed in the fundamental principles of war. Put in the place of the catapultæ and the balifte our cannon and our mortars, and all is parallel.

It gives me pleasure to find that your idea so nearly coincides with mine. With regard to the field operations, which form the most considerable branch of war, you

have no longer any doubts re-maining. But you are not fo clear on what relates to naval operations and fieges, on which you defire my opinion. I know not whether I shall be able to find, among my little collection of notes, wherewithal to fatisfy you fully in this particular. To begin with fieges: however univerfally it may be thought, that the invention of artillery has entirely changed the nature of them; yet it will be found, by those who confider the matter attentively, that the fundamental modes of the attack and defence of places are the very fame at this day as they were in the times of the ancients. The towers, with which they flanked the curtain, jutted out just like our bastions, and, according to the doctrine of Vitruvius, should be at the distance of a bow-shot from each other: this corresponds with our line of defence, which is to be equal to the range of a musket-shot. Perhaps we shall not find any great difference between these two distances; for we are informed, by a passage in Vegetius, that the arrows carried to the distance of fix hundred feet, which is about the range of a point-blank shot from a fire-lock. They also made projectures in their walls, to flank the affailants; and the streets leading to the gates were not in a direct line, but crooked. They were not without ditches. keep the enemy at a distance; nor terre-plains, nor esplanades, in the defences, to stop the enemy, in case he had got possession of any part of the rampart: and they directed, agreeable to the precepts of the best modern engineers.

neers, that the works, and the places of arms, should be made large and spacious, that there might be room for whole cohorts to draw up in them. Such was in substance their system of defence. Their mode of attack was also extremely fimilar to ours. When they pitched their camp before a town, they took care to fortify it as well from those within, as from those who might come from without, to succour the besieged; in which they shewed wonderful ingenuity. The wells, which were used at the fiege of Philipsburg, to protect the lines, and the wolf-traps that were made at the blockade of Prague, for the same purpose, were but flight imitations of what was contrived in the like circumstances by the ancients. They carried on their approaches as much as possible under cover. Some will have it, that they were carried on by trenches, just as they are at present; others deny it: but they certainly secured the communication between the camp and the front of the attack with a species of trench. The besiegers undermined the walls of the fortreffes, and the befieged likewife dug mines under the works of the befiegers; in which sharp conflicts often took place between the miners, who did all they could, with fumigations and fires, to destroy The affault was one another. usually carried on under cover of a heavy discharge from the machines, and from the velites, who fwept off with their stones and arrows all who ventured to shew themselves upon the walls; and fallies were likewise made in the same manner by the besieged, to drive the enemy from the approaches. Batteries of baliste were constructed, with which they dismounted the machines of the enemy, and made breaches in the walls, when at a distance; as they did, when close, with the battering-rams: and I mentioned in my last, that these machines had force enough to dismantle the walls, and even to level the towers, in which the principal strength of the fortresses consisted. Regulus had baliftæ in his army, even fo far back as the first Punic war. Vespasian had a prodigious number at the siege of Jotapata; and it was with these machines that Pompey battered the Temple of Jerusalem, which for solidity was not inferior to the strongest No wonder then, that citadel. the learned, after confidering the mode of attacking and defending places in past ages, should not fuffer themselves to be hurried away with the current, and should judge, that in this branch of the art of war, there is little difference between the ancient and the modern practice. Count Leonardi, a man eminent for his knowledge of military architecture, afferted, that the whole of a fortification, confishing in the curtain, the flank, the ditch, the covertway, the places of arms, and the batteries, no one, that understood any thing of modern fortification, would hold cheap the maxims of Vitruvius. And the famous Duke of Rohan affirms, that, though the invention of artillery may have produced a few changes in military architecture, yet the principles of attack and defence are at this day the same with those of ancient times; and that the siege of Alexia is the exact counterpart of the

celebrated sieges of the Prince of Orange, the Marquis of Spinola, and the Duke of Parma.

Now, if we pass from a review of the military, to that of the naval, armaments of the ancients, we shall find them more conformable than is commonly imagined to those of the present age. Their ships of war had the appearance of fortresses, as well as ours; and that not from their immense bulk alone, but from the nature of the arms with which they were furnished, which might be called great and small artillery. We read in Diodorus Siculus. Demetrius Poliorcetes had on the prows of his vessels catapultæ, that carried to a prodigious distance, which correspond with our bowchases. On the first-rate ships the ancients erected towers and castles: as proof of which we have the

Ibis Liburnis inter alta navium Amice, propugnacula

of Horace; and the

Tanta mole viri turritis puppibus instant of Virgil; and Florus tells us, speaking of those very ships of Mark Anthony, that they refembled so many floating castles; that the wind could not move them without labour; and that they made the sea groan under their These expressions might be applied with great propriety to that famous ship of two hundred guns, called the Charante, which was built by Lewis the Twelfth, or the Anna, of one hundred and fourteen large pieces of cannon, which I have myself seen in the port of Cronstat, at the mouth of the Neva, in the Baltic sea. From

the machines mounted in these towers and castles they discharged stones, darts, and other missile weapons, as we are informed by Vegetius; and likewise red-hot arrows, prepared with oil, fulphur, and other combustible materials, to fire the enemy's ships, in the same manner as at sieges. Their machines were of great service in the disembarking of troops; which was effected under cover of their discharge, like that of so many batteries of cannon. It was thus that Cæsar landed on the British shore. Bringing his ships of war close to the land, he kept so continual and heavy a discharge upon the Britons, as to diflodge them, whilst the troops landed from the transports; by which means, the Romans made good their descent on that island, which cost them afterwards so much labour to subdue.

Diodorus Siculus speaks of vesfels armed, as one might call it, with artillery at the siege of Tyre, and at that of Rhodes, which was conducted by Demetrius Poliorcetes, the most memorable siege perhaps of all antiquity, on account of the various contrivances in engineering put in practice by that ingenious prince.

I shall say nothing of the wildfires of the Greeks, which were thrown by means of pipes or pots upon the ships of the enemy; an invention of the lower empire: but the fire-ships we shall find to have been a very early invention. Their hold was filled with tow, pitch and rofin; and being fet fire to, they were carried by the wind into the midst of the enemy's fleet. It is supposed they were originally made use of at Tyre to destroy the immense dyke which Alexander threw across the harbour, in order to cut off that city from all communication with the sea; but I find Thucydides takes notice of these fire-ships in his history of the Peloponnesian war, which happened long before the siege of Tyre. And you may find a remarkable instance of their effects in the Commentaries of Julius Cæsar, where he relates, that a great part of his sleet was destroyed by them in the Sicilian seas.

But notwithstanding all these fires, and these machines, the ancients did not stand to engage, and, as it were, to cannonade one another at a distance. As in their battles on shore, after the first difcharge of their machines, and that iron shower of darts, which darken the air, as Vigil expresses it, they came to close action, hand to hand; fo did they likewife act in their naval engagements. Plutarch relates, that in the battle of Actium, the large ships of Mark Anthony being furrounded by the fmaller and lighter Liburnian veffels of Augustus, the combat had the appearance of an affault upon They usually fo many castles. endeavoured to fink one another, the Greeks in particular, by boarding with the restrum, or beak, with which the thips prows were You fortified. remember that Duillius, the first naval commander of the Romans, who obtained the rollral crown by his victory at Mylum, first thought of erecting on the prow of his ships the crow, or drawbridge; of which Polybius has given a minute description. As soon as they had approached near enough, they let fall the draw-bridge on the

bow or fide of the enemy's ship; which it grappled with a kind of iron claw, that was fixed to the extremity of it. Thus they boarded the enemy; and the foldiers having filed over the draw-bridge, the lea-fight became the fame with an engagement on shore. Without this contrivance the Romans would never have succeeded in their first battle at sea with the Carthaginians, a people so expert in maritime affairs; and this method of fighting they still retained, after they had acquired some knowledge of naval operations. Their historians often speak of their marine legions. Belides, Vegetius expressly informs us, that the common practice was to let down the draw-bridges, board the enemy, and engage hand to This was indeed, on all occasions, the favourite method of the ancients, as that by which every blow has its effect, and which gives the fullest scope to personal valour. Thus, even at sieges, the intention of all the works carried on by the affailants, was to bring them closer to the befieged. And the Spartans, who placed their whole study in war, in which they went beyond all the other states of Greece, thought their own arms the sureit defence, their own breafts the strongest ramparts of their city.

But, to conclude at once this long harangue, might we not venture to wager, that if those brave Greeks and Romans were to return into the world, they would not make any alteration, in spite of the cannon, in their manner of fighting? Considering the system of war as a machine, we may affert, that the moderns have not added

added a fingle wheel or pulley to what was constructed and provided by the ancients. All that can be said is, that one spring of the machine has acquired a greater degree of force and activity than it had formerly. I mean the firearms, which carry farther than the machines of the ancients. The expansion of air, caused by the burning of gun-powder, has certainly greater force to drive a ball from the barrel of a cannon, than the elasticity of the slender

strings, which they made use of, had to drive a stone from the balifa. But what essential difference does it make, that one arm is contrived to strike at a greater distance? No man ever took it into his head to imagine, that the principles of war in modern times are changed from those of the ancient, because the sight of the engineer, the admiral, and the general, has been so much improved, and carried so much farther, by the invention of the telescope.

MISCELLANEOUS ESSAYS.

A Discourse delivered to the Students of the Royal Academy, on the Distribution of the Prizes, December 10, 1782, by the President.

GENTLEMEN,

HE highest ambition of every artist is to be thought a man of genius. As long as this flattering quality is joined to his name, he can bear with patience the imputation of carelessness, incorrectness, or defects of whatever kind.

So far indeed is the presence of genius from implying an absence of faults, that they are confidered by many as inseparable companions. Some go such lengths as to take indications from them, and not only excuse faults on account of genius, but they presume genius from the existence of certain

It is certainly true, that a work may justly claim the character of genius though full of errors; and it is equally true, that it may be faultless, and yet not exhibit the least spark of genius. This naturally suggests an enquiry, a defire at least of enquiring, what qualizies of a work and of a workman may justly intitle a painter to that character?

I have in a former discourse * endeavoured to impress you with a fixed opinion, that a comprehenfive and critical knowledge of the works of nature is the only fource of beauty and grandeur. when we speak to painters, we must always consider this rule, and all rules, with a reference to the mechanical practice of their own particular art. It is not properly in the learning, the taste, and the dignity of the ideas, that genius appears as belonging to a painter. There is a genius particular and appropriated in his own trade, (as I may call it) diftinguished from all others. For that power, which enables the artist to conceive his fubject with dignity, may be faid to belong to general education; and is as much the genius of a poet, or the professor of any other liberal art, or even of a good critic in any of those arts, as of a painter. Whatever fublime ideas may fill his mind, he is a painter only as he can put in practice what he knows, and communicate those ideas by visible representation.

If my expression can convey my idea, I wish to distinguish excellence of this kind by calling it the genius of mechanical performance. This genius confifts, I conceive, in the power of expressing that which employs your pencil, whatever it may be, as a who'e; so as that the general effect and power of the whole may take possessing in of the mind, and for a while suspend the consideration of the subordinate and particular beauties or defect.

The advantage of this method of confidering objects, is what I wish now more particularly to enforce. At the same time I do not forget, that a painter must have the power of contracting as well as dilating his fight; because, he that does not at all express particulars, expresses nothing; yet it is certain, that a nice discrimination of minute circumstances, and a punctilious delineation of them, whatever excellence it may have, (and I do not mean to detract from it) never did confer on the artist the character of genius.

Besides those minute differences in things which are frequently not observed at all, and when they are make little impression, there are in all considerable objects great characteristic distinctions, which press strongly on the senses, and therefore six the imagination.

These are by no means, as some people think, an aggregate of all the small discriminating particulars; nor will such an accumulation of particulars ever express them. These answer to what I have heard great lawyers call the leading points in a case, or the leading cases relative to these points.

The detail of particulars, which does not affilt the expression of the main characteristic, is worse than useles, it is mischievous, as it dissipates the attention, and draws

it from the principal point. It may be remarked, that the impression which is left on our mind, even of things which are familiar to us, is seldom more than their general effect; beyond which we do not look in recognising such objects.

To express this in painting, is to express what is congenial and natural to the mind of man, and what gives him by reflection his own mode of conceiving. The other presupposes nicety and refearch, which are only the business of the curious and attentive, and therefore does not speak to the general sense of the whole species; in which common, and, as I may so call it, mother tongue, every thing grand and comprehensive must be uttered.

I do not mean to prescribe what degree of attention ought to be paid to the minute parts; this it is hard to fettle. We are fure that it is expressing the general effect of the whole which can give to objects their true and touching character; and wherever this is observed, whatever is neglected, we acknowledge the hand of a master. We may even go farther and observe, that when the general effect only is presented to us by a skilful hand, it appears to express that object in a more lively manner than the minutest resemblance would do.

These observations may lead to very deep questions, which I do not mean here to discuss; among others, it may lead to an enquiry, Why we are not always pleased with the most absolute possible refemblance of an imitation to its original object? Cases may exist in which such a resemblance may

L 2

be even disagreeable. I shall only observe, that the effect of figures in wax-work, though certainly a more exact reprefentation than can be given by painting or fculpture, is a fufficient proof that the pleafure we receive from imitation is not increased merely in proportion as it approaches to minute and detailed reality; we are pleased, on the contrary, by feeing ends anfwered by feeming inadequate means.

To express protuberance by actual relief, to express the softness of fleth by the foftness of wax, feems rude and inartificial, and creates no grateful furprife. But to express distances on a plain furface, foftness by hard bodies, and particular colouring by materials which are not fingly of that colour, produces that magic which is the

pride and triumph of art.

Carry this principle a step further. Suppose the effect of imitation to be fully compassed by means fill more inadequate; let the power of a few well-chosen strokes, which supersede labour by judgment and direction, produce a complete impression of all that the mind demands in an object; we are charmed with fuch an unexpeded happiness, and begin to be tired with the superfluous diligence, which in vain folicits an appetite already Satiated.

The properties of all objects, as far as a painter is concerned with them, are, the outline or drawing, the colour, and the light and shade. The drawing gives the form, the colour its vinible quality, and the light and shade its folidity.

Excellence in any one of these parts of ait will never be acquired

by an artifl, unless he has the habit of looking upon objects at large, and observing the effect which they have on the eye when it is dilated, and employed upon the whole, without feeing any one of the parts distinctly. It is by this that we obtain the ruling characteristic, and that we learn to imitate it by short and dexterous methods. I do not mean by dexterity a trick or mechanical habit, formed by guess, and established by custom; but that science, which, by a profound knowledge of ends and means, discovers the fliortest and furest way to its own purpefe.

It we examine with a critical view the manner of those artists whom we confider as patterns, we shall find that their great fame does not proceed from their works being more highly finished, or from a more minute attention to details, but from that enlarged comprehension which sees the whole object at once, and that energy of art which gives its characteristic effect by adequate ex-

preffica.

Raffaelle and Titian are two names which stand the highest in our art; one for drawing, the other for painting. The most confiderable and the most esteemed works of Raffaelle are the cartoons, and his fresco works in the Vatican; those, as we all know, are far from being minutely finished; his principal care and attention feems to be fixed upon the adjustment of the whole, whether it was the general composition, or the composition of each individual siguie; for every figure may be faid to be a leffer whole, though in regard to the general work to which which it belongs, it is but a part; the same may be said of the head, of the hands, or feet. Though he possessed this art of seeing and comprehending the whole, as far as form is concerned, he did not exert the fame faculty in regard to the general effect, which is prefented to the eye by colour, and light, and shade. Of this the deficiency of his oil pictures, where this excellence is more expected than in fresco, is a sufficient proof.

It is to Titian we must turn our eyes to find excellence with regard to colour, and light and shade, in the highest degree. He was both the first and the greatest master of this art. By a few strokes he knew how to mark the general image and character of whatever object he attempted, and produced, by this alone, a truer representation than his master Giam, Bellino, or any of his predecessors, who finished every hair. His great care was to express the general colour, to preserve the masses of light and fnade, and to give by opposition the idea of that folidity which is inseparable from natural objects. When those are preserved, though with nothing more, the work will have in a proper place its compleat effect; but where any of these are wanting, however minutely laboured the picture may be in the detail, the whole will have a false, and even an unfinished appearance, at whatever distance, or in whatever light, it can be shewn.

It is in vain to attend to the variation of tints, if, in that attention, the general hue of flesh is loft; or to finish ever so minutely the parts, if the masses are not observed, or the whole not well put together.

Vafari feems to have no great disposition to favour the Venetian painters, yet he every where justly commends il modo di fare, la miniere, la bella pratica; that is, the admirable mannor and practice of that school. On Titian, in particular, he bestows the epithers of giudicioso bello, e stupendo.

This manner was then new to the world, but that unshaken truth on which it is founded, has fixed it as a model to all fucceeding painters; and those who will examine into the artifice, will find it to confift in the power of generalifing, and in the shortness and fimplicity of the means.

Many artists, as Vasari likewise observes, have ignorantly imagined they are imitating the manner of Titian when they leave their colours rough and neglect the detail; but, not possessing the principles on which he wrought, they have produced what he calls goffe pitture, absurd foolish pictures; for fuch will always be the confequence of affecting dexterity without science, without selection, and without fixed principles.

Raffaelle and Titian seemed to look at nature for different purposes; they both had the power of extending their view to the whole; but one looked only for the general effect as produced by form, the

other as by colour.

We cannot entirely refuse to Titian the merit of attending to the general form of his object, as well as colour; but his deficiency lay, a deficiency at least when he is compared with Rassaelle, in not possessing the power, like him, of correcting the form of his model by

Lз

by any general idea of beauty in his own mind. Of this his St. Sebastian is a particular instance. This figure appears to be a most exact representation both of the form and of the colour of the model, which he then happened to have before him; it has all the force of nature, and the colour is flesh itself; but, unluckily, the model was of a bad form, especially the legs. Titian has with as much care preserved these desects, as he has imitated the beauty and · brilliancy of the colouring. In his colouring he was large and general, as in his defign he was minute and partial; in the one he was a genius, in the other not much above a copier. I do not, however, speak now of all his pictures; instances enough may be produced in his works, where those observations on his defects could not with any propriety be applied; but it is in the manner, or language, as it may be called, in which Titian, and others of that school, express themselves, that their chief excellence lies. This manner is in reality, in painting, what language is in poetry; we are all sensible how differently the imagination is affected by the same sentiment expressed in different words, and how mean or how grand the fame object appears when presented to us by different painters. Whether it is the human figure, an animal, or even inanimate objects, there is nothing, however unpromising in appearance, but what may be raised into dignity, convey fentiment, and produce emotion, in

the hands of a painter of genius-What was said of Virgil, that he threw even the dung about the ground with an air of dignity, may be applied to Titian. Whatever he touched, however naturally mean and habitually familiar, by a kind of magic he invested with grandeur and importance.

I must here observe, that I am not recommending a neglect of the detail; indeed it would be difficult, if not impossible, to prefcribe certain bounds, and tell how far, or when it is to be obferved or neglected; much must, at last, be left to the taste and judgment of the artist. I am well aware how a judicious detail will fometimes give the force of truth to the work, and confequently interest the spectator *. I only wish to impress on your minds the true distinction between essential and fubordinate powers, and shew what qualities in the art claim your chief attention, and what may, with the least injury to your reputation, be neglected; fomething, perhaps, always must be neglected; the leffer ought then to give way to the greater, and fince every work can have but a limited time allotted to it, for even supposing a whole life to be employed about one picture, it is still limited; it appears more reasonable to employ that time to the best advantage, in contriving various methods of composing the work; of trying different effects of light and shade; and employing the labour of correction, in heightening by a judicious adjustment of the parts the

effects of the whole, than that the time should be taken up in mi-

nutely finishing those parts.

But there is another kind of high finishing which may safely be condemned, as it seems to counteract its own purpose; that is, when the artist, to avoid that hardness which proceeds from the outline cutting against the ground, foftens and blends the colours to excess; that is what the ignorant call high finishing, but which tends to destroy the brilliancy of colour, and the true effect of representation, which confids very much in preferving the fame proportion of sharpness and bluntuess which is in natural objects. extreme foftening, inflead of producing the effect of foftness, gives the appearance of ivory, or fome other hard substance, highly po-

The portraits of Cornelius Johnfon appear to have this defect, and confequently want that suppleness which is the characteristic of slesh; whereas, in the works of Vandyke we may observe that true mixture of softness and hardness perfectly observed. The same defect is in the manner of Vanderwerf, in opposition to that of Teniers; and such we may add is the manner of Rassalle in his oil pictures, in comparison with that of Titian.

The name which Raffaelle has fo justly maintained as the first of painters, we may venture to say was not acquired by this laborious attention. His apology may be made by saying that it was the manner of his country; but if he had expressed his ideas with the facility and cloquence, as it may

be called, of Titian, his works would certainly not have been less excellent; and that praise, which ages and nations have poured out upon his works, for possessing genius in the higher attainments of art, would have been extended to them all.

Those who are not conversant in works of art, are often furprised at the high value set by connoisseurs on drawings which appear carelefs, and in every refpect unfinished; but they are truly valuable, and their value. arifes from this, that they give the idea of a whole, and this whole is often expressed by a dexterous facility which indicates the true power of a painter, even though roughly exerted; whether it confifts in the general composition, or the general form of each figure, or in the turn of the attitude which bestows grace and elegance. All this we may fee fully exemplified in the very skilful drawings of Parmegiano and Cor-On whatever account we value these drawings, it is certainly not for high finishing, or a minute attention to particulars.

Excellence in every part, and in every province of our art, from the highest slile of history down to the resemblances of still-life, will depend on this power of extending the attention at once to the whole, without which the greatest

diligence is vain.

I wish you to bear in mind, that when I speak of a whole, I do not mean simply an whole as belonging to composition, but an whole with respect to the general style of colouring; an whole with regard to the light and shade; an whole

L 4 of

of every thing which may separately become the main purpose

of a painter.

I remember a landscape-painter in Rome, who was known by the name of Studio, from his patience in high finishing, in which he thought the whole excellence of art confisted; so that he once endeavoured, as he faid, to represent every individual leaf on a tree. This picture I never faw, but I am very fure that an artist, who looked only at the general charafter of the species, the order of the branches, and the masses of the foliage, would in a few minutes produce a more true resemblance of trees, than this painter in as many months.

A landscape - painter certainly ought to fludy anatomically (if I may use the expression) all the objects which he paints; but when he is to turn his studies to use, his skill, as a man of genius, will be displayed in shewing the general effect, preserving the same degree of hardness and softness as the objects have in nature; for he applies himself to the imagination, not to the curiofity, and works not for the Virtuoso or the Naturalist, but for the common observer of life and nature. When he knows his subject, he will know not only what to describe, but what to omit; and this skill in leaving out, in all things, is a great part of knowledge and wifdom.

The fame excellence of manner which Titian displayed in history or portrait-painting, is equally conspicuous in his landscapes, whether they are professedly such, or serve only as back-grounds. One of the most eminent of this latter kind is to be found in the

picture of St. Pietro Murtire The large trees, which are here introduced, are plainly distinguished from each other by the different manner with which the branches shoot from their trunks, as well as by their different foliage; and the weeds in the foreground are varied in the fame manner, just as much as variety requires, and no more. When Algerotti, speaking of this picture, praises it for the minute difcriminations of the leaves and plants, even, as he fays, to excite the admiration of a botanist, his intention was undoubtedly to give praise even at the expence of truth; for he must have known, that this is not the character of the picture: but connoisseurs will always find in pictures what they think they ought to find; he was not aware that he was giving a description injurious to the reputation of Titian.

Such accounts may be very hurtful to young artifts, who never have had an opportunity of feeing the work deferibed; and they may possibly conclude, that this great artist acquired the name of the Divine Titian from his eminent attention to such trifling circumstances, which, in reality, would not raise him above the level of

the most ordinary painter.

We may extend these observations even to what seems to have but a single, and that an individual, object. The excellence of portrait-painting, and we may add even the likeness, the character, and countenance, as I have observed in another place, depends more upon the general effect exhibited by the painter, than the exact expression of the peculiari-

tiesa

ties, or minute discriminations of the parts. The chief attention of the artist is therefore employed in planting the features in their proper places, which fo much contributes to giving the effect and true impression of the whole. very peculiarities may be reduced to classes and general descriptions, and there are therefore large ideas to be found even in this contracted fubject. He may afterwards labour fingle features to what degree he thinks proper, but let him not forget continually to examine, whether in finishing the parts he is not destroying the general effect.

It were certainly a thing to be wished, that all excellence were applied to illustrate subjects that were interesting and worthy of being commemorated; whereas, of half the pictures that are in the world, the subject can be valued only as an occasion which sets the artist to work; and yet, the high value we set on such pictures, without considering, or perhaps without knowing the subject, snews how much our attention is engaged

by the art alone. Perhaps nothing that we can fay will fo clearly shew the advantage and excellence of this faculty, as that it confers the character of genius on works that pretend to no other merit; in which is neither expression, character, or dignity, and where none are interested in the subject. We cannot refuse the character of genius to the marriage of Paulo Veronese, without opposing the general sense of mankind, (great authorities have called it the triumph of .painting) or, to the altar of St. Augustine at Antwerp, by Rubens, which equally deferves the fame

title, and for the same reason. Neither of those pictures have any interesting story to support them. That of Paulo Veronele is only a representation of a great concourse of people at a dinner; and the subject of Rubens, if it may be called a fulject where nothing is doing, is an affembly of various faints that lived in different ages. The whole excellence of those pictures confifts in mechanical dexterity, working however under the influence of this comprehensive faculty which I have so often mentioned.

It is by this, and this alone, that the mechanical power is ennobled and raifed much above its natural rank. And it appears to me, that with propriety it acquires this character, as an inflance of that superiority with which mind predominates over matter, by contracting into one whole what nature has made many.

The great advantage of this idea of a whole is, that a greater quantity of truth may be faid to be contained and expressed in a few lines or touches, than in the most laborious finishing the parts where this is not regarded. It is upon this foundation that it stands; and the justness of the observation would be confirmed by the ignorant in art, if it were possible to take their opinions unfeduced by some false idea of what they imagine they ought to fee in a picture. As it is an art, they think they ought to be pleased in proportion as they fee that art oftentaciously displayed; they will, from this supposition, prefer neatness, highfinishing, and gaudy colouring, to the truth, fimplicity, and unity of nature. Perhaps too, the to-

tally ignorant beholder, like the ignorant artist, cannot comprehend a whole, nor even what it means. But if false notions do not anticipate their perceptions, they who are capable of observation, and who, pretending to no skill, look only strait forward, will praise and condemn in proportion as the painter has succeeded in the effest of the whole. Here general fatisfaction or general diflike, though perhaps despised by the painter as proceeding from the ignorance of the principles of art, yet may help to regulate his conduct, and bring back his attention to that which ought to be his principal object, and from which he has deviated for the fake of minuter beauties.

An inflance of this right judgment I once faw in a child, in going through a gallery where there were many portraits of the last age, which, though neatly put out of hand, were very ill put together. The child paid no attention to the neat finishing, or naturalness of any bit of drapery, but appeared to observe only the ungrace ulness of the figures, and put herself in the posture of every figure which she saw in a forced awkward attitude. The censure of nature, uninformed, fastened upon the greatest fault that could be in a picture, because it related to the character and management of the whole.

I should be forry, if what has been faid should be understood to have any tendency to encourage that carelessness which leaves works in an unfinished state. I commend nothing for the want of exactness; I mean to point to that kind of exactness which is the best,

and which is alone truly to be for effeemed.

So far is my disquisition from giving countenance to idleness, that there is nothing in our art which enforces such continual exertion and circumfpection. It requires much study and much practice; it requires the painter's whole attention; whereas the parts may be finished by nice touches, while his mind is engaged on other matters; he may even hear a play or a novel read without much difturbance. The artift, who flatters his own indolence, will continually find himfelf evading this laborious attention, and applying his thoughts to the eafe and laziness of finishing the parts.

No work can be too much finished, provided the diligence employed be directed to its proper object; but I have observed, that an excessive labour in the detail has, nine times in ten, been pernicious to the general effect, even when it has been the work of great masters. It indicates a bad choice, which is an ill setting out in any undertaking.

To give a right direction to your industry has been my principal purpose in this discourse. It is this, which I am consident often makes the difference between two students of equal capacities, and of equal industry. Whilst the one is employing his labour on minute objects of little consequence, the other is acquiring the art, and per-

in an extensive view, in its proper proportions, and its due subordination of parts.

Before I conclude, I must make

fecting the habit, of feeing nature

one observation sufficiently connected with the present subject.

The

The fame extension of mind which gives the excellence of genius to the theory and mechanical practice of the art, will direct him likewise in the method of study, and give him the superiority over those who narrowly follow a more confined track of partial imitation. Whoever, in order to finish his education, should travel to Italy, and fpend his whole time there only in copying pictures, meafuring statues or buildings, (though these things are not to be neglected) would return with little improvement. He that imitates the Iliad, fays Dr. Young, is not imitating Homer. It is not by laying up in the memory the particular details of any of the great works of art that any man becomes a great artist, if he stops without making himfelf master of the general principles on which these works are conducted. If he even hopes to rival those whom he admires, he must consider their works as the means of teaching him the true art of seeing nature. When this is acquired, he then may be faid to have appropriated their powers, or at least the foundation of their powers, to himself; the rest must depend upon his own industry and application. The great business of study is to form a mind, adapted and adequate to all times and all occasions, to which all nature is then laid open, and which may be faid to possess the key of her inexhaustible riches.

Capt. Inglefield's Narrative, concerning the loss of his Majesty's Ship the Centaur, of Seventyfour Guns; and the miraculous Preservation of the Pinnace, with the Captain, Master, and Ten of the Crew, in a Traverse of near 300 Leagues on the great Western Ocean; with the Names of the People Saved.

THE Centaur lest Jamaica in rather a leaky condition, keeping two hand-pumps going, and when it blew fresh, fometimes a spell with a chainpump was necessary. But I had no apprehension that the ship was not able to encounter a common

gale of wind.

In the evening of the 16th of September, when the fatal gale came on, the ship was prepared for the worst weather usually met with in those latitudes; the main-fail was reefed and fet, the top gallant mails struck, and the mizen-yard lowered down, though at that time it did not blow very strong. Towards midnight it blew a gale of wind, and the ship made so much water that I was obliged to turn all hands up to spell the pumps. The leak still increasing, I had thoughts to try the ship before the sea. Happy I should have been, perhaps, had I in this been determined. The impropriety of leaving the convoy, except in the last extremity, and the hopes of the weather growing moderate, weigh-* d against the opinion that it was right.

About two in the morning the wind lulled, and we flattered ourthe gale was breaking. Soon after, we had much thunder and lightning from the S. E. with rain, when it began to blow flrong in guilts of wind, which obliged me to haul the main-fail up, the ship being then under bare poles. This was scarcely done, when a

gust of wind, exceeding in violence every thing of the kind I had ever feen, or had any conception of, laid the thip upon her beam code. The water forfook the hold, and appeared between decks, so as to fill the men's hammocks to leeward: the flip lay motionleis, and, to all appearance, irrecoverably overfet. water increasing fast, forced theo? the cells of the ports, and fouttled in the ports, from the preffure of the flip. I gave immediate directions to cut away the main and mizen masts, hoping, when the ship righted, to wear her. Tue mizen-maft went first upon cutting one or two lanyards without the imallest effect on the thip; the main-mast followed, upon cutting the lanyard of one shroud; and I had the disappointment to fee the foremail and bowsprit follow. The ship upon this immediately righted, but with great violence; and the motion was fo quick, that it was difficult for the people to work the pumps. Three guns broke loofe upon the main deck, and it was some time before they were fecored. Several men being maimed in this attempt, every moveable was destroyed, either from the shot thrown loose from the lockers, or the wreck of the deck. The officers who has lest their beds (when the ship overset) naked, in the morning, had not an article of clothes to put on, nor could their friends supply them.

The mass, had not been over the side ten minutes, before I was informed the tiller had broke short in the rudder-head; and before the chocks could be placed, the rudder itself was gone.—— Thus we were as much disastered as it was possible, lying at the mercy of the wind and sea: yet I had one comfort, that the pumps, if any thing, reduced the water in the hold; and as the morning came on, (the 17th) the weather grew more moderate, the wind having shifted in the gale to N. W.

At day-light I faw two line-of-battle ships to leeward; one had lost her foremast and bowsprit, the other her mainmast. It was the general opinion on board the Centaur, that the former was the Canada, the other the Glorieux. The Ramilies was not in fight, nor more than fifteen fail of merchant-ships.

About feven in the morning I faw another line-of-battle ship ahead of us, which I foch distinguished to be the Ville de Paris, with all her masts standing. I immediately gave orders to make the figual of diffress, hoisting the enfign on the flump of the mizenmaft, union downwards, and firing one of the forecastle guns. The enfign blew away foon after it was hoisted, and it was the only one we had left remaining; but I had the satisfaction to see the Ville de Paris wear and stand towards us. Several of the merchant-ships also approached us, and those that could, hailed, and offered their affistance; but depending upon the king's ship, I only thanked them, desiring, if they joined Admiral Graves, to acquaint him of our condition. I had not the imallest doubt but the Ville de Paris was coming to us, as the appeared to us not to have fuffered in the least by the storm, and having scen her wear, ME

we knew was under government of her helm; at this time also it was fo moderate, that the merchantmen fet their top-fails, but approaching within two miles, the passed us to windward; this being observed by one of the merchant thips, the wore and came under our stern, offering to carry any message to her. I desired the master would acquaint Captain Wilkinson, that the Centaur had lost her rudder, as well as her masts, that she made a great deal of water, and that I defired he would remain with her, until the weather grew moderate. I faw this merchantman approach afterwards, near enough to fpeak to the Ville de Paris, but I am afraid that her condition was much worfe than it appeared to be, as she continued upon that tack. In the mean time all the quarter-deck guns were thrown over-board, and all but fix, which had overfet, of the main-deck. The ship lying in the trough of the sea, laboured prodigiously. I got over one of the small anchors, with a boom, and feveral gun-carriages,-veered out from the head door by a large hauser to keep the ship's bow to the fea; but this, with a top-gallant-fail upon the flump of the mizen-mast, had not the defired effect.

As the evening came on it grew hazy, and in iqualls blew ftrong. We lost fight of the Ville de Piris, but thought it a certainty that I should see her in the morning. The night was passed in constant labour at the pumps. Sometimes the wind lulled; the water diminished; when it blew strong again, the sea rising, the water again increased.

Towards the morning of 'the 18th, I was informed there was feven feet water upon the Kelfon; that one of the winches was broke; that the two spares ones would not fit, and that the hand pumps were choaked. These circumstances were sufficiently alarming; but upon opening the after-hold, to get some rum up for the people, we found our condition much more so.

It will be necessary to mention, that the Centaur's after-hold was inclosed by a bulk-head at the after part of the well; here were all the dry provisions and ship's rum flowed upon twenty chaldron of coals, which unfortunately had been started in this part of the ship, and by them the pumps were continually choaked. The chain pumps were fo much worn, as to be of little use, and the leathers, which, had the well bean clear, would have lasted twenty days or more, were all confumed in eight. At this time it was obferved, that the water had not a passage to the well, for bere there was so much, that it washed against the orlop deck. All the rum, twenty-fix puncheons; all the provisions, of which there were two mouths, in casks, were flove; having floated with violence, from fide to fide, until there was not a whole calk remaining: even the staves that were found upon clearing the hold were most of them broke in two or three pieces. In the forehold we had a prospect of perithing: should the ship swim, we had no water but what remained in the ground tier, and over this all the wet provisions and butts filled with falt-water were fleat-

ing, and with fo much motion, that no man could with fafety go into the hold. There was nothing left for us to try, but bailing with buckets at the fore-hatchway and fish room; and twelve large canvas buckets were immediately employed at each. On opening the fish-room, we were so fortunate as to discover that two puncheons of rum which belonged to me had escaped. They were immediately got up, and ferved out at times in drams; and had it not been for this relief, and fome limejuice, the people would have dropped.

We soon sound our account in bailing; the spare pump had been put down the fore-hatchway, and a pump shifted to the fish-room; but the motion of the ship had washed the coals so small, that they had reached every part of the ship, and the pumps soon choak-However, the water by noon had confiderably diminished by working the buckets; but there appeared no prospect of saving the ship if the gale continued. labour was too great to hold out without water; yet the people worked without a murmur, and indeed with chearfulness.

At this time the weather was more moderate, and a couple of spars were got ready for shears to get up a jury foremast; but as the evening came on, the gale again increased. We had seen nothing this day, but the ship who had lost her main-mast, and she appeared to be as much in want of assistance as ourselves, having fired guns of distress; and before night I was told her fore-mast was gone.

The Centaur laboured fo much,

that I had scarce a hope she could swim till morning. However, by great exertion of the chain-pumps and bailing, we held our own, but our sufferings for want of water were very great, and many of the people could not be restrained from drinking salt-water.

At day-light, the 19th, there was no vessel in fight; and flashes from guns having been feen in the night, we feared the ship we had feen the preceding day had foundered. Towards ten o'clock, forenoon, the weather grew more moderate, the water diminished in the hold, and the peeple were encouraged to redouble their efforts to get the water low enough to break a cask of fresh water out of the ground tier; and some of the most resolute of the seamen were employed in the attempt. noon we fucceeded with one calk, which, though little, was a feafonable relief. All the officers, passengers and boys, who were not of the profession of seamen, had been employed thrumming a fail which was passed under the ship's bottom, and I thought had some effect. The shears were raised for the foremast; the weather looked promising, and the sea fell; and at night we were able to relieve at the pumps and bailing, every two hours. By the morning, the 20th, the fore-hold was cleared of the water, and we had the comfortable promise of a fine day. proved fo, and I was determined to make use of it with every posible exertion. I divided the ship's company, with the officers attending them, into parties to raise the jury-foremast; to heave over-board the lower-deck guns; to clear the wrecks of the fore and after-holds;

to prepare the machine for steering the ship, and to work the pumps. By night, the after-hold was as clear as when the flip was launched; for, to our astonishment, there was not a shovel-full of coals remaining, twenty chaldron having been pumped out fince the commencement of the gale.-What I have called the wreck of the hold, was the bulkheads of the after-hold, fish-room, and spirit-rooms. The standards of the cock-pit, an immense quantity of staves and wood, and part of the lining of the ship, were thrown overboard, that if the water should again appear in the hold, we might have no impediment in bailing. All the guns were overboard, the foremast secured, and the machine, which was to be fimilar to the one with which the Ipswich was steered, was in great forwardness; so that I was in hopes, the moderate weather continuing, that I should be able to steer the ship by noon the following day, and at least save the people on some of the Western Islands. Had we had any other ship in company with us, I should have thought it my duty to have quitted the Centaur this day.

This night the people got some rest by relieving the watches; but in the morning, the 21st, we had the mortification to find, that the weather again threatened, and by noon blew a storm. The ship laboured greatly, and the water appeared in the fore and after-hold and increased. The carpenter also informed me, that the leathers were nearly confumed; and likewife that the chains of the pumps, by constant exertion, and the friction of the coals, were nearly rendered useless.

As we had now no other refource but bailing, I gave orders that scuttles should be cut through the decks, to introduce more buckets into the hold; and all the fail-makers were employed night and day in making canvas buckets: and the orlop deck having fallen in on the larboard side, I ordered the sheet-cable to be roused over-The wind at this time board. was at W. and being on the larboard tack, many schemes had been practifed to wear the ship, that we might drive into a less boitterous latitude, as well as approach the Western Islands; but none succeeded: and having a weak carpenter's crew, they were hardly fufficient to attend the pumps; fo that we could not make any progress with the steering machine. Another fail had been thrummed and got over, but we did not find its use; indeed there was no prospect but in a change of weather. A large leak had been discovered, and stopt, in the fore-hold, and another in the lady's hole, but the ship appeared so weak from her labouring, that it was clear fhe could not last long. The aftercockpit had fallen in, the forecockpit the fame, with all the store-rooms down; the stern-post was fo loofe, that as the ship rolled, the water rushed in on either fide in great streams, which we could not stop.

Night came on with the fame dreary prospect as on the preceding, and was passed in continual effort and labour. - Morning came, the 22d, without our feeing any thing, or any change of weather,

ther, and the day was spent with the same struggles to keep the ship above water, pumping and bailing at the hatchways and fouttles. Towards night another of the chain pumps was rendered quite useless, by one of the rollers being displaced at the bottom of the pump, and this was without remedy, there being too much water in the well to get to it: we alfo had but fix leathers remaining, fo that the fate of the ship was not far off. Still the labour went on without any apparent defpair, every officer taking his share of it, and the people were always chearful and obedient.

During the night, the water increased; but about seven in the morning, the 23d, I was told that an unusual quantity of water appeared all at once in the forehold, which, upon my going forward to be convinced, I found but too true; the stowage of the hold ground-tier was all in motion, so that in a short time there was not a whole cask to be seen. were convinced the thip had fprung a fresh leak. Another sail had been thrumming all night, and I was giving directions to place it over the bows, when I perceived the ship settling by the head, the lower deck bow-ports being even with the water.

At this period the carpenter acquainted me the well was stove in, destroyed by the wreck of the hold, and the chain pumps displaced, and totally useless. I here was nothing left but to redouble our efforts in bailing, but it became difficult to fill the buckets, from the quantity of staves, planks, anchor-stocks, and yard-arm pieces

which were now washed from the wings, and sloating from side to side with the motion of the ship. The people, who, till this period, had laboured as determined to conquer their difficulties without a murmur or without a tear, seeing their efforts useless, many of them burst into tears, and wept like children.

I gave orders for the anchors, of which we had two remaining, to be thrown overboard, one of which (the spare anchor) had been most surprisingly hove in upon the fore-castle and mid-ships, when the ship had been upon her beam-ends, and gone through the deck.

Every time that I visited the hatch-way I observed the water increased, and at noon it washed even with the orlop deck. carpenter affured me the ship could not fwim long, and proposed making rafts to float the ship's company, whom it was not in my power to encourage any longer with a prospect of their fasety. Some appeared perfectly refigned, went to their hammocks, and defired their messmates to lash them in; others were lashing themselves to gratings and small rasts; but the most predominant idea was, that of putting on their best and cleanest clothes.

The weather about noon had been fomething moderate, and as rafts had been mentioned by the carpenter, I thought it right to make the attempt, though I knew our booms could not float half the ship's company in fine weather, but we were in a fituation to catch at a straw; I therefore called the ship's company together, told them

my

my intention, recommending to them to remain regular and obedient to their officers. Preparations were immediately made to this purpofe; the booms were cleared: the boats, of which we had three, viz. cutter, pinnace, and five-oared yawl, were got over the fide; a bag of bread was ordered to be put in each, and any liquors that could be got at, for the purpose of supplying the rafts; I had intended myself to go into the five-oared yawl, and the coxswain was defired to get any thing from my sleward that might be useful. Two men, captains of tops, of the forecastle, or quartermasters, were placed in each of them, to prevent any man from forcing the boats, or getting into them, until an arrangement was made, While these preparations were making, the ship was gradually finking, the orlop decks having been blown up by the water in the hold, and the cables floated to the gun-deck. The men had for some time quitted their employment of bailing, and the ship was left to her fate.

In the afternoon the weather again threatened, and in squalls blew strong; the sea ran high, and one of the boats, the yawl, stove along side and sunk. As the evening approached, the ship appeared little more than suspended in water. There was no certainty that she would swim from one minute to another; and the love of life, which I believe never shewed itfelf later in the approach to death, began now to level all diflinctions. It was impossible indeed for any man to deceive himfelf with a hope of being faved upon a raft in fuch a sea; besides, that the thip in finking, it was

Vol. XXV.

probable, would carry every thing down with her in a vortex, to a certain distance.

It was near five o'clock, when coming from my cabin I observed a number of people looking very anxiously over the fide; and looking myfelf, I faw that several men had forced the pinnace, and that more were attempting to get in. I had immediate thoughts of securing this boat before the might be funk by numbers. There appeared not more than a moment for confideration; to remain and perish with the ship's company, whom I could not be any longer of use to, or seize the opportunity which feemed the only way of escaping, and leave the people who I had been so well fatisfied with on a variety of occasions, that I thought I could give my life to preferve them-This indeed was a painful conflict, and which 1 believe no man can describe, nor any man have a just idea of, who has not been in a similar situa-

The love of life prevailed .- I called to Mr. Rainy, the mader, the only officer upon deck, defired him to follow me, and immediately descended into the boat, at the after-part of the chains, but not without great difficulty got the boat clear from the ship, twice the number that the boat would carry pushing to get in, and many jumping into the water. Mr. Baylis, a young gentleman fifteen years of age, leaped from the chains after the boot had get off, The boat falland was taken in. ing aftern, became exposed to the fea, and we endeavoured to pull her bow round to keep her to the break of the fea, and to pals to windward of the fhip; but in the M attempt

attempt fine was nearly filled; the fea ran too high, and the only probability of living was keeping her before the wind.

It was then that I became fenfible how little, if any thing, better our condition was than that of these who remained in the ship; at best, it appeared to be only a prolongation of a miserable existence. We were all together twelve in number, in a leaky boat, with one of the gun-whales stove, in nearly the middle of the Western Ocean, without compass, without quadrant, without fail, without great coat or cloak; all very thinly cloathed, in a gale of wind, with a great fea running !-It was now five o'clock in the evening, and in half an hour we loft fight of the ship, Before it was dark, a blanket was discovered in the boat. This was immediately bent to one of the stretchers, and under it as a fail we foudded all night, in expectation of being fwallowed up by every wave, it being with great difficulty that we could fometimes clear the boat of the water before the return of the next great fea; all of us half drowned, and fitting, except those who bailed, at the bottom of the boat: and without having really perished, I am sure no people ever endured more. In the morning the weather grew moderate, the wind having shifted to the southward, as we discovered by the fun. Having survived the night, we began to recollect ourselves, and think of our future prefervation.

When we quitted the ship, the wind was at N. W. or N. N. W. Fryall had bore E. S. E. 250 or 260 leagues. Had the wind con-

tinued for five or fix days, there was a probability that running before the sea we might have fallen in with some one of the Western Islands. The change of wind was death to these hopes; for should it come to blow, we knew there would be no preferving life but by running before the sea, which would carry us again to the northward, where we must soon afterwards perish.

Upon examining what we had to subsist on, I found a bag of bread, a fmall ham, a fingle piece of pork, two quart bottles of water, and a few of French cordials. The wind continued to the fouthward for eight or nine days, and providentially never blew so strong but that we could keep the fide of the boat to the fea, but we were always most miferably wet and cold. We kept a fort of a reckoning, but the fun and stars being fometimes hid from us for twenty-four hours, we had no very good opinion of our navigation. We judged at this period, that we had made nearly an E. N. E. courfe, fince the first night's run (which had carried us to the S. E.) and expected to fee the island of Corvo. In this, however, we were disappointed, and we feared that the foutherly wind had driven us far to the northward. Our prayers were now for a northerly wind. Our condition began to be truly miferable, both from hunger and cold; for on the fifth day we had discovered that our bread was nearly all spoiled by falt water, and it was necessary to go to an allowance. One biscuit, divided into 12 morfels, for breakfast, and the same for dinner; the neck of

a bottle broke off, with the cork in, served for a glass, and this filled with water was the allowance for twenty-four hours for each man. This was done without any fort of partiality or diffinction: but we must have perished ere this, had we not caught fix quarts of rain water; and this we could not have been bleffed with, had we not found in the boat a pair of sheets, which by accident had been put there. These were spread when it rained, and when thoroughly wet, wrung into the kidd with which we bailed the boat, With this short allowance, which was rather tantalizing than fullaining, in our comfortless condition, we began to grow very feeble, and our clothes being continually wet, our bodies were in many places chafed into fores.

On the 13th day it fell calm, and foon after a breeze of wind sprang up from the N. N. W. and blew to a gale, fo that we ran before the fea at the rate of five or fix miles an hour under our blanket, till we judged we were to the fouthward of Favall, and to the westward 60 leagues; but blowing throng, we could not attempt to fleer for it. Our wishes were now for the wind to thift to the westward. This was the fifteenth day we had been in the boat, and we had only one day's bread, and one bottle of water remaining of a fecond supply of rain. Our sufferings were now as great as human ftrength could bear, but we were convinced that good spirits were a better fupport than great bodily strength; for on this day Thomas Matthews, quarter - mailer, the floutest man in the boat, perished

from hunger and cold: on the day before he had complained of want of strength in his throat, as he expressed it, to swallow his morfel, and in the night drank falt-water, grew delirious, and died without a groan. As it became next to a certainty that we should all perish in the same manner in a day or two, it was fomewhat comfortable to reflect, that dving of hunger was not to dreadful as our imaginations had reprefented. Others had complained of the symptoms in their throats; fome had drank their own urine: and all, but myfelf, had drank falt-water.

As yet despair and gloom had been successfully prohibited, and as the evenings closed in, the men had been encouraged by turns to fing a fong, or relate a ftory, inflead of a supper: but this evening I found it impossible to raise either. As the night came on it fell calm, and about midnight a breeze of wind fprang up, we gueffed from the westward by the fwell, but there not being a star to be feen, we were afraid of running out of our way, and waited impatiently for the riling fun to be our compass.

As foon as the dawn appeared, we found the wind to be exactly as we had wished, at W. S. W. and immediately spread our fail, running before the sea at the rate of four miles an hour. Our list breakfast had been served with the break fast had been served with the break and water remaining, when John Gregory, quarter-master, declared with much considence that he saw the land in the S. E. We had seen sog banks so often, which had the appearance of land, that

ोन ह

I did not trust myself to believe it, and cautioned the people (who were extravagantly elated) that they might not feel the effects of disappointment; 'till at length one of them broke out into a most immoderate swcaring fit of joy, which I could not restrain, and declared he had never feen land in his life if what he now faw was

We immediately shaped our course for it, though on my part with very little faith. The wind freshened; the boat went through the water at the rate of five or fix miles an hour; and in two hours time the land was plainly feen by every man in the boat, but at a very great distance; so that we did not reach it before ten at night. It must have been at least twenty leagues from us when first discovered; and I cannot help remarking, with much thankfulness, on the providential favour shewn to us in this instance.

In every part of the horizon, except where the land was discovered, there was fo thick a haze that we could not have feen any thing for more than three or four leagues. Fayall by our reckoning bore E. by N. which courfe we were steering, and in a few hours, had not the fky opened for our prefervation, we should have increased our distance from the land, got to the eastward, and of course missed all the islands. As we approached the land, our belief had strengthened that it was Fayail. The island of Pico, which might have revealed it to us, had the weather been perfectly clear, was at this time capped with clouds; and it was some time

before we were quite fatisfied, having traverfed for two hours a great part of the island, where the fleep and rocky shore refused us a This circumstance was landing. borne with much impatience, for we had flattered ourselves that we should meet with fresh water at the first part of the land we might approach; and being disappointed, the thirst of some had increased anxiety almost to a degree of madness; so that we were near making the attempt to land in fome places where the boat must have been dashed to pieces by the furf. At length we discovered a fishing canoe, which conducted us into the road of Fayall about midnight; but where the regulation of the port did not permit us to land 'till examined by the healthofficers: however I did not think much of fleeping this night in the boat, our pilot having brought us fome refreshments of bread, wine, and water. In the morning we were visited by Mr. Graham, the English consul, whose humane attention made very ample amends for the formality of the Portuguefe. Indeed I can never fufficiently express the sense I have of his kindnefs and humanity, both to myfelf and people; for I believe it was the whole of his employment for several days contriving the best means of restoring us to health and firength. It is true, I believe there never were more pitiable objects. Some of the stoutest men belonging to the Centaur were obliged to be fupported through the streets of Fayall. Mr. Rainy, the master, and myself, were, I think, in better health than the rest; but I could not walk

MISCELLANEOUS ESSAYS.

walk without being supported; and for several days, with the best and most comfortable provisions of diet and lodging, we grew rather worse than better*.

J. N. INGLEFIELD.

Fayall, 13th October, 1782.

S. Reeve.
J. Faulkner.
C. Collingwood.
Hon. J. Luttrell.

The Court, in pursuance of an order from the Commissioners for executing the office of Lord High Admiral of Great Britain and Ireland, &c. dated the 21st of the same month, for the enquiry into the cause and circumstances of the loss of his Majetty's late thip Centaur, by several very heavy gales of wind, and for the trial of Captain John Inglesseld, her commander, and the officers and company who belonged to her, at the time she was left sinking, on the 24th of September last, in lat. 48 deg. 33 min. and longitude 43 deg. 20 min. for their conduct upon that occasion, having proceeded to enquire into the cause and circumstances of his Majesty's said late ship the Centaur, and to try the field Captain Inglesseld, and the officers and people who belonged to her, at the time

M 3

166 ANNUAL REGISTER, 1782.

On Cruelty to inferior Animals: Disquisition II. from Difquifitions on feveral Subjects.

AN is that link of the chain of universal existence, by which spiritual and corporeal beings are united: as the numbers and var ety of the latter his inferiors are almost infinite, so probably are those of the former his fuperiors; and as we see that the lives and happinels of thole below us are dependent on our wills, we may reasonably conclude, that our lives, and happiness are equally dependent on the wills of those above us; accountable, like curfelves, for the use of this power, to the supreme Creator, and governor of all things. Should this analogy be well founded, how criminal will our account appear, when laid before that just and impartial judge! How will man, that sanguinary tyrant, be able to excuse himself from the charge of those innumerable cruelties inflicted on his unoffending fubjects committed to his care, formed for his benefit, and placed under his

authority by their common Father? whose mercy is over all his works, and who expects that this authority should be exercised not only with tenderness and mercy, but in conformity to the laws of justice and

gratitude.

But to what horrid deviations from these benevolent intentions are we daily witnesses! No small part of mankind derive their chief amusements from the deaths and sufferings of inferior animals; a much greater, confider them only as engines of wood, or iron, ufeful in their feveral occupations. The carman drives his horse, and the carpenter his nail, by repeated blows; and fo long as thefe produce the defired effect, and they both go, they neither reflect or care whether either of them have any sense of seeling. The butcher knocks down the stately ox with no more compassion than the blackfmith hammers a horse-shoe; and plunges his knife into the throat of the innocent lamb, with as little reluctance as the tavlor flicks his needle into the collar of a coat.

she was so left as above-mentioned, for their conduct upon that occasion accordingly; and having heard the Nariative of the said Captain Inglefield, and examined the officers and men pretent, and maturely and deliberately confidered the whole, is or opinion, that the said Captain John Inglefield acquitted himstelf as a cool, resolute, and experienced officer, and was well supported by his officers and ship's company, their united exertions appearing to have been so great and manly, as to resee the highest honour upon the whole, and to leave the deepest impression on the minds of this court, that more could not possibly have been done, to preserve his Majesty's late ship the Centaur, from her melancholy fate; the court doth therefore adjudge, that the said Captain John Inglefield, his officers, and company, be acquitted of all blame, on account of the loss of his Majesty's said late ship Centaur, and they are hereby acquitted accordingly.

W. A. Bettefworth, Judge Advocate on the occasion.

If there are some few, who, formed in a fofter mould, view with pity the fuffering, of thefe defenceless creatures, there is scarce one who entertains the least idea, that jullice or gratitude can be due to their merits, or their fervices. The focial and friendly dog is hanged without remorfe, if, by barking in defence of his mailer's person and property, he happens unknowingly to diffurb his rest: the generous horse, who has carried his ungrateful master for many years with eafe, and fafety, worn out with age and infirmities contracted in his fervice, is by him condemned to end his miserable days in a dust-cart, where the more he exerts his little remains of fpirit, the more he is whipped, to fave his stupid driver the trouble of whipping some other, less obedient to the lash. times, having been taught the practice of many unnatural and useless feats in a riding-house, he is at last turned out, and configued to the dominion of a hackneycoachman, by whom he is every day corrected for performing those tricks, which he has learned under so long and severe a discipline. The fluggish bear, in contradiction to his nature, is taught to dance, for the diversion of a malignant mob, by placing red-hot irons under his feet: and the majestic bull is tortured by every mode, which malice can invent, for no offence, but that he is gentle, and unwilling to affail his diabolical tormentors. Thefe, with innumerable other acts of cruelty, injustice, and ingratitude, are every day committed, not only with impunity, but without cenfure, and even without observa-

tion; but we may be affured, that they cannot finally pass away unnoticed, and unretaliated.

The laws of felf-defence undoubtedly jullify us in destroying those animals who would deflroy us, who injure our properties, or annoy our persons; but not even thefe, whenever their fituation incapacitates them from hurting us. I know of no right which we have to shoot a bear on an inaccessible island of ice, or an eagle on the mountain's top; whose lives cannot injure us, nor deaths procure us any benefit. We are unable to give life, and therefore ought not wantonly to take it away from the meanest insect, without sufficient reason; they all receive it from the fame benevolent hand as ourfelves, and have therefore an equal

right to enjoy it.

God has been pleased to create numberless animals intended for our sustenance; and that they are fo intended, the agreeable flavour of their flesh to our palates, and the wholesome nutriment which it administers to our stomachs, are fufficient proofs: thefe, as they are formed for our use, propagated by our culture, and fed by our care, we have certainly a right to deprive of life, because it is given and preferved to them on that condition; but this should always be performed with all the tenderness and compassion which so disagreeable an office will permit; and no circumstances ought to be omitted, which can render their executions as quick and eafy as possible. For this, Providence has wifely and benevolently provided, by forming them in fuch a manner, that their flesh becomes rancid and unpalatable by a painful and lingering

death ; M 4

death; and has thus compelled us to be merciful without compassion, and cautious of their suffering, for the sake of ourselves: but, if there are any whose tastes are so vitiated, and whose hearts are so hardened, as to delight in such inhuman facrifices, and to partake of them without remorfe, they should be looked upon as demons in human shapes, and expest a retaliation of those tortures which they have inflicted on the innocent, for the gratification of their own deprayed and unnatural appetites.

So violent are the passions of anger and revenge in the human breast, that it is not wonderful that men should prosecute their real or imaginary enemies with cruelty and malevolence; but that there should exist in nature a being who can receive pleasure from giving pain, would be totally incredible, if we were not convinced, by melancholy experience, that there are not only many, but that this unaccountable disposition is in fome manner inherent in the nature of man; for, as he cannot be taught by example, nor led to it by temptation, or prompted to it by interest, it must be derived from his native constitution; and is a remarkable confirmation of what revelation fo frequently inculcates—that he brings into the world with him an original depravity, the effects of a fallen and degenerate state; in proof of which we need only observe, that the nearer he approaches to a state of nature, the more predominant this disposition appears, and the more violently it operates. fee children laughing at the miferies which they inflict on every unfortunate animal which comes

within their power: all favages are ingenious in contriving, and happy in executing the most exquifite tortures; and the common people of all countries are delighted with nothing fo much as bull-baitings, prize-fightings, executions, and all spectacles of cruelty and horror. Though civilization may in some degree abate this native ferocity, it can never quite extirpate it; the most polished are not ashamed to be pleased with scenes of little less barbarity, and, to the difgrace of human nature, to dignify them with the name of sports. They arm cocks with artificial weapons, which nature had kindly denied to their malevolence, and with shouts of applause and triumph, see them plunge them into each other's hearts: they view with delight the trembling deer and defenceless hare, flying for hours in the utmost agonies of terror and despair, and at last, finking under fatigue, devoured by their merciless purfuers: they fee with joy the beautiful pheasant and harmless partridge drop from their flight, weltering in their blood, or perhaps perishing with wounds and hunger, under the cover of some friendly thicket to which they have in vain retreated for safety: they triumph over the unsuspecting fish, whom they have decoyed by an infidious pretence of feeding, and drag him from his native element by a hook fixed to and tearing out his entrails: and, to add to all this, they spare neither labour nor expence to preferve and propagate these innocent animals, for no other end, but to multiply the objects of their perfecution.

What name should we bestow

on a superior Being, whose whole endeavours were employed, and whose whole pleasure confided in terrifying, enfnaring, tormenting, and destroying mankind? whose fuperior faculties were exerted in fomenting animofities amongst them, in contriving engines of deftruction, and inciting them to use them in maining and murdering each other? whose power over them was employed in affilting the rapacious, deceiving the fimple, and oppressing the innocent? who without provocation or advantage should continue, from day to day, void of all pity and remorfe, thus to torment mankind for diversion, and at the fame time endeavour with his utmost care to preserve their lives, and to propagate their species, in order to increase the number of victims devoted to his malevolence, and be delighted in proportion to the miseries which he occasioned? I say, what name detestable enough could we find for such a Being? Yet, if we impartially confider the cafe, and our intermediate fituation, must acknowledge, that, with regard to inferior animals, just fuch a Being is a fportsman.

Some Account of the Rife and Defect of the Empress Catharine, Wise of Czar Peter I.; and also of the Rise of Prince Menzikoss: extracted from the Memoirs of Peter Henry Bruce, Esq. a Military Officer in the Services of Prussia, Russia, and Great-Britain.

HE was born at Runghen, a fmall village in Livonia, of very poor parents, who were only

boors, or vaffals; her father In? mother dying, left her very young in great want; the parish-derk, out of compassion, took her home to his house, where she learnt to read. Dr. Glack, minister of Marienburgh, feeing her there, onquired of the clerk who she was; and being informed fhe was a poor orphan he had taken into his house out of charity, what from a wish to relieve the poor clerk from a burthen he was not well able to fupport, and a liking to the little orphan, the doctor took her home to his house, notwithstanding he had a numerous family of his own. Here her company and opportunities for improvement were better, and her deportment fuch, that she became equally esteemed by the doctor, his wife, and children; her fleady, diligent, and careful attention to all their domestic concerns, ingratiated her fo much with the dector and his wife, that they made no distinction between her and their own chil-She ever after shewed her acknowledgment with the utmost gratitude, in richly providing for all those who could lay claim to any alliance to the doctor's family; nor did the forget her first benefactor, the clerk of Rughen. In this happy fituation she grew up to woman, when a Livonian ferjeant, in the Swedish service, fell passionately in love with her; the likewise liking him, agreed to marry him, provided it could be done with the doctor's content, who, upon enquiry into the man's character, finding it unexceptionable, readily gave it. The marriage day was appointed, and, indeed came, when a fudden order came to the ferjeant that very merning,

morning, to march directly with a detachment for Riga, who was thereby difappointed from ever enjoying his lovely bride. Soon after this, General Baur, at the head of an army, came before the town and took it, in the year 1702, when all the inhabitants were made prisoners, and among the rest this lovely bride. In the promifeuous croud, overwhelmed with grief, and bathed in tears at her unhappy fate, the general observing her, saw a je no scai quoi in her whole appearance, which attracted him so much, that he asked her feveral questions about her fituation; to which the made anfwers with more fende than is pfaal in persons of her rank; he deared her not to be afraid, for he would take care of her, and gave immediate orders for her fafety and reception into his houl, of which he gave her the whole charge with authority over ail his fervants, by whom the was very much beloved from her manner of using them; the general afterwards often faid, his house was never fo well managed as when the was with him.

Prince Menzikoff, who was his patron, feeing her one day at the general's, observed something very extraordinary in her air and manner, and enquiring who the was, and on what footing the ferved him, the general told him what has been already related, and with due encomiums on the merits of her conduct in his house: the prince faid fuch a person would be of great confequence to him, for he was then very ill ferved in that respect; to which the general replied, he was under too many obligations to his highness to have it in his power to refuse him any thing he had a mind to, and immediately calling for Catharine, told her, that was Prince Menzikoff, and that he had occasion for a fervant like herfelf, and that the prince had it much more in his power to be a friend to her than he had, adding, that he had too great a regard for her to prevent her receiving such a piece of honour and good fortune. She answered only by a prosound courtefy, which shewed, if not her confent, that it was not then in her power to refuse the offer that was made: in fhort, the prince took her home the fame day, and she lived with him till the year 1704, when the czar, one day dining with the prince, happened to fee her, and spoke to her; she made a yet stronger impression on that monarch, who would likewife have her to be his fervant; from whence the rofe to be Emprefs of Russia.

As Prince Menzikoff was also a person raised from a very low degree, I was told the following circumstances of his rise. He was born of gentle, but very poor parents; and they dying left him, very young, without any education, infomuch that he could neither read nor write, nor ever did he to the day of his death: his poverty obliged him to feek fervice in Moscow, where he was taken into the house of a pastrycoak; who employed him in crying minced-pies about the streets; and having a good voice, he also fang ballads; whereby he was fo generally known, that he had accets into all the gentlemen's houses. The czar, by invitation, was to dine one day at a boyar's, or lord's

house, and Menzikoff happening to be in the kitchen that day, obferved the boyar giving directions to his cook about a dish of meat he faid the czar was fond of, and took notice that the boyar himself put some kind of powder in it, by way of spice; taking particular notice of what meat that dish was composed, he took himself away, to fing his ballads, and kept fauntering in the street till the czar arrived, when exalting his voice, his majesty took notice of it, fent for him, and asked him if he would fell his balket with the pies: the boy replied, he had power only to fell the pies, as for the bafket he must first ask his master's leave, but as every thing belonged to his majesty, he needed only lay his commands upon him. reply pleafed the czar fo much, that he ordered Alexander to stay and attend him, which he obeyed with great joy. Menzikoff waited behind the czar's chair at dinner, and feing the before mentioned dish served up and placed before him, in a whifper begged his Majesty not to eat thereof: the czar went into another room with the boy, and asked his reason for what he had whispered to him, when he informed his majesty what he had observed in the kitchen, and the boyar's putting in the powder himself, without the cook's perceiving him, made him suspect that dish in particular; he therefore thought it his duty to put his majesty upon his guard. czar returned to table without the least discomposure in his countenance, and with his usual chearfulness; the boyar recommended this dish to him, faying, it was yery good; the czar ordered the

boyar to fit down by him, for it is a custom in Moscow for the mailer of the house to wait at table when he entertains his friends, and putting fome of it on a plate, defired him to eat and fhew him a good example. The boyar, with the utmost confusion, replied, that it did not become the fervant to eat with his matter; whereupon the plate was fet down to a dog, who icon dispatched its contents, which, in a very short time, threw him into convulfiens, and foon deprived him of life: the dog being opened, the effect of the poison was clearly discovered, and the boyar was immediately fecured, but was found next morning dead in his bed, which prevented all farther discovery.

Menzikoff's remarkable introduction foon gained him credit and confidence with his royal mafter, which, from being one of the meanest and poorest, raised him to be one of the richest subjects in the Ruffian empire; he was not only dignified with the title of a prince in Russia, but also declared a prince of the Roman empire. He was tall, well-shaped, very handsome in his person, and of great penetration: he acted as vice-czar at the imperial court, the czar himself appearing at all public meetings as a private perfon, attended by two fervants at most, and, instead of pleasing himfelf with the pomp of grandeur, his delight was the improvement of his empire, which he vifited every where in person.

Some Account of the Bay and City of Sorrento, and of the Ruins of the Surrentinum or Villa of Pol-

lius at Capo di Puolo: extracted from Travels into the Two Sicilies, by Henry Swinburne, E/q.

N doubling the next projesting rocks, we entered the fpacious bay of Sorrento, three miles wide. A femicircular chain of woody mountains incloses a rich and beautiful plain, rather floping towards the fea, full of white buildings peeping out of the This half-moon termigroves. nates in a straight line to the fea, by a bold coast of blank perpendicular rocks. It probably formed a portion of a circle, half of which broke off and funk into the waves. This I believe to have been the case, and that the whole was once the crater of a volcano. All the foil of the plain is cineritious, and its rocks a strong blue lava, except near the east end, where they are of a foster piperino kind. encircling mountains are composed of regular calcareous layers, that do not join or intermix in the leaft with the others, but are broken off abruptly all round, as if a place had been fcooped out for the reception of the heterogeneous mass, rifing fuddenly out of the bosom of the earth or waters. Many of these limestone rocks are twisted, as it were, into ropes, exactly in the fame manner as fome Vesuvian lavas: they have besides so many peculiarities, that correspond with those of the productions of burning mountains, that were it not directly repugnant to the common fustems of philosophy, which decide all calcareous fubiliances to be a sediment of the ocean, I should be tempted to believe, that fire

had a greater share in the formation of these rocks than is generally allowed. The materials of the lower grounds are beyond doubt volcanical; however, I am confident that, as yet, we are but imperfectly acquainted with the powers of fire, and the metamorphoses it is capable of producing. As we have discovered, that the fumes of fulphur and vitriol can change hard black lava into foft white clay, perhaps we may find out, that fome other operation of natural chymistry can convert substances into limestone.

I landed at Sorrento, a city placed on the very brink of the iteep rocks that overhang the bay, in a most enchanting situation. It contains fifteen thousand inhabitants, half the population of the whole plain. The streets are narrow; but this is no inconvenience in a warm climate, where carriages are not used, nor any communication with the metropolis practicable by land. Of all the places in the kingdom, this is blest with the most delightful climate. It was renowned for it in ancient times: Silius Italicus extols its foft and wholesome zephyrs *. At prefent it enjoys shady groves, excellent water, fruit, fish, milk, butter, the finest veal in the world, good wine, and almost every necessary of life at an cafy rate. Mountains screen it from the hot autumnal blafts. The temper of the inhabitants is faid to refemble the climate in mildness. A few inscriptions and refervoirs of water are all the remnants of antiquity it can shew. It derives its name from the residence

or worship of the Syrens *. In this bay, the Prince of Salerno, fon to Charles the First, was, in 1283, taken prisoner by Lauria, the admiral of Peter of Aragon: a naval victory that infured the possession of Sicily to the conquerors. Here Torquatus Tasso drew his first breath in 1544: a bard undoubtedly intitled to rank in the foremost line of modern poets, notwithstanding the farcasm of Boileau +, who, from his ignorance of the Italian language, and the coldness of his heart, was a very improper judge of the flights In 1558, the Turks of genius. facked this city, and carried off twelve thousand captives; but, preferring money to fuch a quantity of flaves, they fent to Naples Distrust, conto alk a ranfom. sternation, or insensibility, caused their offer to be rejected, and the infidels failed away with their prifoners. Soon after, by an act of generofity scarce to be paralleled in any history, the remaining Sorrentines fold their lands and goods, and redeemed their fellow citizens, Had such an effort been made by Greeks or Romans, it would have been a common-place example for school-boys, and every differtator, ancient and modern, would have enlarged with enthulialm on this

trait of heroism; but at Sorrento it is scarce remembered, and, I believe, it is entirely forgotten in

the rest of the kingdom.

On the twenty-eighth, I continued my coasting voyage to Capo di Terra, or Puolo, the point that divides the bay of Sorrento from that of Massa t. Here are the ruins of a villa mentioned in Statius's Sylvæ: it belonged to Pollius Fælix, whose name is still preferved in the modern appella-I admired the exactness with which the poet has described the spot; for however altered and disfigured the minuter features may be, the great outlines of the place are fill discernable. On the very extremity of the cape, impending over the fea, stands a row of vaulted chambers, before which appear the vestiges of a portico §, or hall. Its form is that of an obtuse angle. These rooms commanded a double view: one of Sorrento and Vesuvius; thell other, of Naples **, Puzzoli, and Ischia++. Part of the painting remains upon the walls. Behind these buildings, the promontory narrows into an ishmus, pierced in the middle with a deep round bason, into which the sea has access by a passage under the rocks. As the waves have no force left

when they enter it, and its opening is furrounded by ruins, this was no doubt the fituation of the baths *. Three arched conduits brought fresh water to them + from a large reservoir at the foot of the mountain; high rocks, covered with olive-trees, defend ? this place from the boilterous scirocco, and boats find a fafe retreat in a circular creek, which divides the cape into two peninfulas &. From hence I failed along the woody coast of Massa, a diocese without a town; for all the dwelling-houses are dispersed in small clutters along the verdant declivity. We lay upon our oars a few hours to take some refreshment, and then failed to Naples, where we arrived by moonlight. The evening was warm and mild, and the fea fmooth as glafs; the lights of the fish-markets reflected on its furface, formed a most fplendid illumination:

Some Account of the French African Islands; from Travels into Europe, Afia, and Africa.

HE island of Mauritius is fituated in the 20th degree of fouth latitude, and 56 eath longitude from London. It is of a circular figure, mountainous in the centre, and flat around the coast, containing about 100,000 English acres. The foil is light and but unkindly, of a brick colour, and in fome parts strongly impregnated with iron ore. There are some large rivers which rise at the bottom, or in the fides of the mountains. There is not above one fifth part of the country under cultivation, the remaining four being mountainous or filled with woods. There is on this island some good building timber, and a great deal of yellow, black, and party-coloured ebony. last species of ebony is reckoned to be of value, and is never burnt, as the others frequently are .-There is a smelting manusactory for the iron ore, and some powder There are in Mauritius two or three fugar-plantations, feveral coffee-plantations, and it has produced very good cotton and indigo: it is indeed to these two last-mentioned commodities that the foil feems best adapted. All the tropical fruits, plants, and roots are raifed here; but they are neither fo luxuriant nor fo highly flavoured as those of Bourbon, nor fo abundant as to ferve the inhabitants four months in the year: their fupplies for about eight

Nalioque tumultu Stagna modesta iasent. months in twelve come from Bourbon, the Cape of Good Hope,

Batavia, and Europe.

The spiceries of Ceylon, Amboyna, and Banda, promife to flourish in this island. In the parish of Pamplemonse, the king of France maintains, at a confiderable expence, and in good condition, a spacious botanical garden, divided into four parts; representing the great quarters of the earth; in which the trees, shrubs, plants, flowers, herbs, roots, &c. of each are respectively planted; pieces of wood being fixed in the ground by each, describing its name, native country and qualities. this garden cinnamon and cloves thrive amazingly. All around the island (except small inlets opposite to some bays) at a tolerable diftance from the shore, there is a reef of coral rock, which shelters the intermediate space of water, makes it quite smooth and serene, and prevents the formation of fuch heavy furges as, rolling and breaking on the shore, might render landing difficult, if not impracticable.

The fields and woods abound with deer, hares, rabbits, and flying game. The inhabitants are remarkable for their hospitality, and the ladies who are natives of

this island for their beauty.

Mauritius is the metropolis of the French African islands, the chief feat of government, the emporium of commerce, and the afylum of exiles from France. The inhabitants are not so independent in their circumstances, nor so easy in their minds as those of Bourbon, although they affect more dress and gaiety, and have better houses and furniture. Every third person you meet, of a fair complexion, wears at his button-hole the order of St. Louis.

As the polition of the town of Port Louis, and the fortifications defending the entrance of the harbour, are well known, I shall not give any particular description of them. I cannot, however, but abferve, that the practice of warping ships into that port, is merely a political stratagem, intended to impress the world with a notion that it is of the most difficult ac-The passage for thips is cefs. clear and easy, and every afternoon during the 28 days I was there, there was a constant steady and brifk gale directly into the harbour.

The island of Bourdon is fituated in the 21st degree of fouth latitude, and 54th east longitude from London. Its figure is nearly ciscular. Perhaps there is not a foot on the face of the earth fo worth of the attention of naturalists as this island. It contains three high mountains, which are often teen at the distance of 30 leagues: and are the highest land I ever fave, except the Pike of Teneriffe. the fummit of one of these mountains, which is in the fouth-east quarter of the island, there is a volcano which frequently emits fmoke, flames, and athes. volcano exhibits an awrul but beautiful prospect at night, when it vomits flames, and tills the farrounding leavens with particles of fire. Of the timee mountains of Bourbon, this alone is buren and uninbasited. The mountain which is reputed the highest, rites in the centre of the illand, and to the northward of it appears a ridge of hills, called the Falaile.

one fide of which, bold, abrupt, and fublime, forms a stupendous precipice, in perpendicular height two thousand French fathoms, overhanging a large river which fometimes glides fmoothly along, and at others falls in rough cafcades. In respect of fize, Bourbon is nearly equal to Mauritius. foil, which is in fome parts black, and in others grey, is superlatively fruitful, and improves in quality in proportion as it approaches even to the tops of eminences and mountains. windward fide, and the quarter of St. Lufan on the east side, are level lands watered by very fine rivers, particularly the great River d'Abord, which precipitates itself into a district the most beautiful of the whole island, but where the landing from the fea is difficult and full of danger.

In the latitude of 21 degrees this island produces wheat, cabbages, turneps, carrots, artichokes, peafe, beans, and garden fruits and roots equal in fize and flavour to any I ever faw in Europe. It produces also the sugar-cane, coffee, cotton, indigo, and all West-India fruits, superior to any l ever faw in any of the American islands. Its rice is not inferior to that of either Carolina; and its mangoes are equal to any in Hindoftan. The poultry are the largest I ever faw, and in every respect excel those of all other countries.

The ladies of Bourbon are remarkably tall, and elegantly formed; their complexions beautifully red and white, and their features the most delicate and handsome that can be imagined. In figure, complexion, and features the men resemble the women, only that

the former are more musculal.—
I dwell a little on the extraordinary beauty of the natives of the island of Bourbon, because it is a very singular circumstance, to find elegance of shape, delicacy of seatures, and bloom of complexion in the terrid zone.

The pasturage of this island is not well adapted to the breed of sheep, but it abounds with goats, small horned cattle, and small hardy horses, The inhabitants of Bourbon are still more hospitable than those of Mauritius. They are frank, cheerful, and polite, with more sincerity. Every repast begins with a glass of brandy, and the tables are plentiful and elegant, being surnished with butcher's meat, and a great variety of sowls, sish, and vegetables.

But the enjoyments of the gay and focial inhabitants of this enchanting ifle, are mixed with fufferings unknown in the most barren and inhospitable countries. Contented and happy in the company of one another, they might well despise that contempt in which they are held by the poor noblesse of Mauritius, because, forfooth, they are not, in general, of noble extraction: but they fuffer feverer misfortunes in that iron government under which they live; the depredations of their rebellious runaway flaves, who occupy fome of the inaccessible mountains; but above all, in those frequent hurricanes which ravage their country from January to April or May.

The distance from Bourbon to Mauritius is about 37 leagues, which is run from the latter to the former in the space of from eighteen to twenty-four hours;

but

but to return to Mauritius from Bourbon takes up a month, at the least fourteen days, unless in the hurricane feason, when the wind is more variable.

The Seychell or Mahé islands lie a few leagues north-east from the north end of Madagascar. The French took possession of them since the last war, and stationed in them a party of soldiers. They were before uninhabited. They yield some tropical provisions, and a great many turtle, with other sisks.

In the ifland of Seychell there is a very fafe and commodious deep bay, with excellent anchorage, where fhips may wood and water with great eafe and fafety.

At a very short distance, I believe less than a league from the island of Seychell, lies that of Prasline. The soil of each is reprefented as excellent; the land throughout is flat, and is faid to grow fome large timber proper for building. These islands are remarkable for producing the tree which yields a kind of cocoa-nut representing, in the most striking manner, the figure of a human breech, thighs, &c. having a feetid fmell from an aperture of the fundament, like that of human ex-The Indians, flruck crement. with this resemblance, formerly fet an enormous value upon thefe nuts; but fince the French traders furnished the market with them more plentifully, they have loft much of their estimation, together with their rarity. As these islands are capable of raising abundance of provisions, sheep, goats, and horned cattle, a settlement might be made on them, very convenient for the English East India Company, if Vol. XXV.

this passage should be clopted by their navigation at those seasons when the inner passage between Madagascar and the continent is impracticable.

Some Account of the most capital Pictures in the King of Spain's Pulace at Madrid: translated from the Spainish of Sir Anthony Raphael Mengs, Knt. first Painter to his Catholic Majesty, by John Talbot Dillon, Knt. and Baron of the facred Roman Empire.

COULD wish that all the fine pictures dispersed in the different royal feats were united, and formed into one grand collection, in the palace at Madrid, and that they were properly arranged in a gallery, worthy of the magnificence of the monarch, in order to address to you on this subject, an effay on the art, from the remote times, down to the present, in which every artist we know of, worthy of notice, might be more or less commented upon, for the information of those who have any curiofity or tafte for these matters and that they might be made fenfible of the offential difference existing between them, by which, I should be able to render my own ideas more clear; but the court having never formed any intentions of such a collection, I shall speak unconnectedly of the great masters of different ages, attaching myfelf principally to the Spanish painters, whose works are conspicuous in the principal apartments of the palace.

Some of the most distinguished of these performances are in the king's dressing room, particularly N by

by the hand of Velasquez, Spagnolet and Murillo. But howgreatly they differ from each other! What joilness, what true distribution of char obscure, in the works of Velifquez. How well he understood the effects of light in thewing the diffances of objects one from another, and what a feheel for an aitift to improve himtelf in fludying the works of this great man, to be icen in this falloon, done at three different times, and by confidering the happy manner in which he attained tech an excellent imitation of nature. The picture of the Seville water-feiler displays his early imitation of nature, and with what spirit he exerted himself in exhibiting the different effects on objects that receive light or findow, infomuch, as to occasion rather a dryncis and harshness of pencil.

In the picture of the feigned Bacchus crowning a few drunkards, his flyle is more loofe and free, copying nature, not as fine is, but as the appears to the eye. He is still more bold and animaed in his Fulcan's Furge, where fome of the figures of the workmen are a perfect imitation of nature. But he has given the most perfect copy of nature in the picture of a woman ipinning, which is of his last flyle and manner, and fo well executed, that the labour of the hand feems not to have been employed, but that the mind alone conveyed the pencil, in which its merit is lingular. Some of his portraits have likewife this excellence, and form the most perfect model of his school.

Epagnolet was admirable in his imitation of nature, strength of

clair objeure, freedom of pencil, and in describing peculiar circum-flances of the human frame, such as wrinkles, hair, &c. His manner is bold, but he did not equal Vela-fquez in his distribution of light and shade, not understanding its proper degradations, and the effects of air, though his colouring is more lively, as may be seen by his pictures over the doors.

In the same apartment, there are pictures of Murillo, in two different manners: his sirit, in those, of the Incarnation, and the birth of our Saviour; which, particularly the second, are painted with great boldness in regard to nature, tho performed before he had attained that softness which characterises his second manner, as may be perceived in other pictures in this apartment; particularly in the small one of the nuptials of our lady, and a fine half length of St. James, in the adjacent room,

In the king's drawing room, there is an excellent picture of Velasquez, representing the Infanta Denna Margarita Maria of Austria, whose portrait Velasquez is drawing; but this capital piece being so well known, I have nothing to add only that it is a convincing proof of the effect of imitation from nature, and of the general satisfaction it yields, particularly when the beautiful is not the primary consideration.

I pass over at present many finepaintings of Titian's dispersed in various apartments of the palace; to speak to you of that most noble picture of Velasquez representing Philip IV. on horseback; where every thing is admirable, as well the horse, as the figure of the monarch, even the landscape is ma-

nage

naged with taste; but above all, the graceful ease of the sovereign's head is singular, as the very skin seems to shine, and the hair is beautiful, and touched with great lightness. Contiguous to this capital performance, there is another of the Conde Duke of Olivares, in nothing inferior to that of the

king's.

Let us now turn our attention to another picture, by the same hand, representing a stege, which was before in that saloon of the Retiro, called, De los Reynos, and is now in the dining-room of the most Screne Prince of Asturias, This picture comprehends every perfection the subject would admit of, and there is no part, if we except the foldiers lances, which is not represented with the utmost fkill. In the same apartment, there is a portrait of the Infanta Donna Margarita Maria, and an Infante on horfeback, both by Velasquez in his best manner, as well as some other portraits of his, in the fame room.

In the Prince of Asturias's dreffing-room, there are three fine pictures by Spagnolet, two of them represent a St. Jerom, and a St. Benedict, companions, executed in his brightest manner, in which a perfect command of the pencil may be observed, as well as the most accurate copy from nature, with an uncommon expression in the countenance of St. Benedict. The third is the martyrdom of a saint, equally excellent, though with more force.

It would be fuperfluous to speak to you of Rubens, or of his school, of which, there are many pieces in the palace. But one, above others, is remarkable, representing the adoration of the kings, one of his most capital pieces, done by him in Flanders, after his best manner, and afterwards, when he came to Spain, he made an addition to the canvass, to enlarge the picture, and increase the number of figures; amongst which, he has added his own portrait. This picture contains every perfection the artist was capable of in the historical line, and the design is not the most incorrect.

Amongst many fine pieces of Vandyke, there is one representing the apprehending of Christ in the garden, executed with a fine taste and colouring, as far as a night-piece would admit of; a half length portrait of the Cardinal Infante, brother of Philip IV. is also infinitely excellent from the justness of its execution, and the graceful ease that attends it, as well as colouring, and fallowness of com-

plexion.

The works of Luca Jordano are innumerable, of whom it may be faid, he never did any thing amis, as a good tafte is every where perceptible in his works, though in an embryo form, compared to the excellent productions of other great men of the Italian schools. On the other hand, he never arrived at perfection, so that his manner will admit of no falling off, without a total debasement of painting, which was the fate of his copiers. The works of Jordan may be classed in two different manners, though he often painted indiferiminately, copying from different painters. Some of his pieces have an harfhness, like those of Spagnolet, from whom Jordan learned his art, and copied in his early days; but his general manner, and N =the

the most universal, and suited to his taste, as may be seen in his best pieces, was after Pictro de Cortona. In this ftyle, he executed that admirable fresco painting in the Retiro, and many pictures in the palace; but in other pieces done afterwards in Madrid, he varied from this style, and in his drapery, copied Paul Veronese, though with less correctness of tints and clair obscure; fo that his manner became dry, as may be observed in the historical pieces of Solomon, in the palace, done after he had finished painting in the Escurial.

Amongst others in the same palace, there is an half length of our lady with the child, and St. John, thought by fome to be a Raphael; it is true, the child is perfectly in his manner; the carnation is rather too high, the back ground has a blueish cast, the tunick of our lady is of light carmine, the veil of a deep blue, all in the character of Raphael, which makes those who do not understand the true merit of his excellence, consider it as an imitation of his manner; there are others in the palace, by Luca Jordano, after the Venetian school, but not fo well finished as some would suppose.

Much merit is due to some paintings of Tintoret, Old Palm, and Jacoso Basan, but they are all eclipsed, in my opinion, by those of Paul Veronese, and more particularly by those of Titian, after his bet manner; as this great man was never equalled, or surpassed by any one, in the beauty and perfection of his colouring; it is ferery excellent in all his works, that the eye never perceives the

labour and ingenuity of the artist, but the whole seems, as if nature herself presented the form on the canvass. The pencil of Titian always moved with freedom, yet, without negligence; every accidental stroke shews accurate design; the force and effect of his clair obscure, does not so much depend on the darkness of shadow, or the display of light, as in the proper ordinance of his colouring.

All these circumstances may be observed in the picture of Bacchanalians, the figures of which are one third of the natural fize: this picture is at prefent in a closet of the Princels of Afturias; every part of the picture, and the whole of it conjunctly, is so beautiful, that it would be an endless toil to delineate its merit; I can only tell you, I never pass by it without flopping, from the admiration it always causes, in seeing the figure of the woman afleep, which exhibits a matter of wonder and novelty every time I behold it. The colouring is after Titian's brightest manner, the degradation of tints are marvellous, beyond what I ever faw any where; every part appears nature individually, yet requires great attention to examine the different objects, and still the great variety accords in one general tone: the local tints of the flesh, in every part, are admirably diverfified, and the drapery is equally well disposed, with rich colouring : to speak of its accessory parts the fine sky, the light clouds, the various hues of verdure, the shades of trees, the ground strewed with plants, all together is spirited, while it is in the justest line of beauty.

Another picture about the fame fize.

fize, representing a festival of sportive cupids, gathering apples on the trees, is of the greatest beauty, in a perfect style, and seems to have been done at the same time as the other. The great variety of little cupids is surprising, as well as the diversity of their hair, in ringlets and curls; above all, the admirable degradation of tints, high sinishing, and the sweetness of the back grounds, in proportion as the objects are more or less distant.

These two pictures were in the Lodovisi palace at Rome, and were presented to the King of Spain. They served, according to Sandrart, for a study to Domenchino, Pouffin, and It Fiamingo, to represent beautiful children. bani has also introduced a group of these children dancing, in one of his pictures: there are two copies of these pictures, by Rubens, in the palace, but they are only to be confidered, as a book tranflated into Flemish, which preferves the thoughts, but where the fpirit and force of the original is evaporated.

There are many other pictures of Titian, but all of them in his latter time, and fome in his old age, when his fight failing, his pencil was not fo accurate; though he always preferved the greatest justness of tints. Notwithstanding, the number of these pictures so negligently sinished has been prejudicial to the art; as many scholars have imitated that manner, without reslecting, that Titian had, in his time, been very correct, and made accuracy and the rule of the art his principal study, while he attained to a great superiority in point of co-

louring, in which he exceeded all others.

We have few pistures to speak of by Correggio; but as every piece of this accomplished matter of the art includes the most enchanting part of it, though we posses but two of them, they may ferve to give a perfect notion of his powers. The Madonna dreffing the child, and St. Joseph at a distance, seems rather a rough draft, from the striking alterations, perceptible in the position of the child and the Madonna. It is furprifing to behold the wonderful effect of a figure less than two palms, feen at a diftance, appearing confiderable, and to swell on the eye; but this does not arise from the harmony of the clair obfeure, so much as the imperceptible middle-tints, which counteract the light with the shadow, and the masterly management of each, by which he fo justly expressed the relief and roundness, almost to make one forget, that the superfice was a plane.

If Titian was happy in his tints, and the local colour of his objects. Correggio, on the other hand, though less perfect in this respect, exceeded him greatly in the fine relief which he gave to his figures, and to every part of the body, well as his artful disposition of aerial perspective, not only by the gradations of clair obscure, with respect to intermediate distances, but also by a peculiar conception of the true nature of the atmosphere, which being more or less diaphanous, receives the rays of light, and penetrating into different bodies, communicates it in those parts where the principal ray of light does not reach, and thus N_3 forms forms a kind of ambient, which makes us perceive objects, even in fome degree of darkness, and enables us to diffinguish their diftances from each other. This was perfectly understood by the Greek artills, as may be observed by the paintings dug out of Herculaneum, even the most common ones, infomuch, that it appears to have been a fyitem of their school, Amongst the moderns the most accomplified, in this line, were Correggio, Velasquez, and Rembrandt.

To return to our picture, the child is most perfect, not only by the disposition of clair objeure, but alfo in colouring, defign, and gracefulnels. Correggio perfectly understood the justness of outlines in his sketches, and to give the contours a true proportion, with that of the body, a most difficult task, and only understood, in an equal degree, by Michael Angelo and Raphael. The Greeks confidered this part of painting as the most difficult, as may be seen in Pliny, book xxxv. chap. 10.

"To delineate the body and " give force to the central parts, " is certainly an arduous talk, but " in which many artists have ac-" quired great fame. To exhi-" bit the extremities, and preserve " the outline judiciously, is what " few have succeeded in; even " the contour thould be support-" ed, so as to give an idea of " what was beyond it, and feem-"ingly to shew what it hides "from our fight "."

The other picture, representing our Saviour at prayer in the garden, is also small, but accurate and well finished. At first fight we only perceive. Christ and the angel in a full light, all the rest being obscured by the darkness of night; but when we examine it more closely, the gradations are happily exhibited according to the effect of nature when, in a faint light, where we just perceive objects near us, and cannot distinguish the more distant ones. Those that went to feize our Saviour are not perceived, nor are there any fine touches of the pencil till that part where the apostles are, then the eye begins to distinguish the leaves and branches; even the plants under foot, as well as the crown of thorns, and the cross on the ground, become conspicuous in proportion as they are nearer to the light or the eye. The resplendency on the countenance of our Saviour, gives spirit to the whole, but it comes from the fky, and reverberates on the angel.

This idea, which is noble, and with propriety is most happily executed by the great master, who alone was able to do it justice.

At present, these pictures are in the Princess's closet, with those by Titian. mentioned before There are in the fame place fome -by Leonardo da Vinci; one of them in his best manner, reprefenting two children playing with a lamb; this latter none of the best performed; another with a head of St. John, when young. In

Extrema corporum facere, et dennentis picturæ modum includere, rarum in fuccessu artis invenitur. Ambire enim debet se extremitas infa. & fic definere, ut promittat alia post se: oftendatque etiam quæ occultat. - C. Plinii Secundi Nat. Bill. Lib. xxxv. cap. x. theft

these pictures we find the great judgment of the artist respecting light and shade, and its gradations from its sollest splendour, till darkness, accompanied with peculiar easy and pleasing attitudes, which seem to have paved the way for Correggio to attain to that graceful manner, which distinguishes his works.

There are pieces in this closet attributed to Raphael. Of his invention, there is a holy family with figures, about half natural fize, and feem to be of those performances, which, with his drawings, formed his best scholars. There is another picture of a Madonna, holding the child, in the fame style of composition as that famous one in the gallery of Florence, known by the name of Madonna de la Seggiola, with this difference, that, in this I am speaking of, St John is wanting; it is square, and that of Florence is oval, and the figures as large as nature. This picture in the palace seems to have been re-touched by Raphael, but more in the nature of a rough draft than a finished piece. The head of the Madonna, in particular, is his, and has equal merit with any of his works, being full of life and spi-

But how shall I explain to you that beautiful picture, in a manner it so highly deserves, known in Sicily, by the name of our lady dello Spassimo: you know, that Raphael painted it for a church in Sicily of that name; the ship, according to Vasari, was lost, but the picture was recovered without damage, from the wreck. In all times it has been highly valued by true judges; and Agustin the

Venetian engraved it, though without giving the least glimple of its beauty. The Count Malvalia freaks of it with flight; but of this author we may judge from his own writings, which thew tittie knowledge in the profession; and it he relied on the opinions of fome painters, they were fuch, and their distance to great, from the divine Riphall, that they were unqualified to procounce on the merit of that great man, or much less, to understand, the principles on which we are to prize the works of this illustrious artist.

It appears beyond contradiction, that the mest noble part of the profession, is not that, which confills in giving pleafare to the eye, or affording a nere entertainment to the ignorant observer, but in the more liberal effusions it causes on the mind, routing the generous passions, and assessing the very foul: this being admitted, as I suppose it will, we must undoubtedly class Raphael at the head of those, whose works are preserved down to the present time. The fertility of his genius, and the display of his ideas, shew themfelves on the first view; thus, the tumultuous, the tranquil, the amorous, the serious, or the cheerfull, have nothing but what are adapted to the fentiment by which our fensibility is moved in the fame feeling manner, as by the eloquence of the orator, or the numbers of the poet.

Moreover, he has infinuated, in every figure, the preceding teene as well as the immediate action, and we feem to understand what is to follow. The determinate action never appears conclusive,

N 4 but

but rather just beginning, which gives such a spirit, from this happy manner, that every thing scems, as it were, in motion. In effect, if we examine the picture of the Spasmo, in all its parts, we are sensible, that if Raphael was not always great in each of his works, we might reckon this performance as an unique from its

furprifing beauty.

You know, that the subject of this picture is taken from scripture, when the women wept on feeing our Saviour bearing the cross to mount Calvary; and he faid to them, foretelling the de-Aruction of Jerusalem, Daughters of Jerufalem, weep not for me, but every for yourjelves, and for your children! To give more grace to his composition, Raphael has added a distant view of Mount Calvary, winding to the right, where it is thought our Lord fell the first time, when a ruffian pulls him by a rope, tied round his waift. It is to be supposed, that this picture being intended for the church before mentioned, the friars, who were to have it, were defirous, that the bleffed virgin should be represented; or it might have been the choice of the painter; be that as it may, Ray 1 well knew how to give every figure its utmost grace and dignity, and to treat his subject with infinite majefty.

Having to represent on this occasion, the figure of a mother of one going to the place of execution, and treated impiously by the people, he chose the unhappy state of an affiliced mother, obliged to intercede with an infamous mob, to have compassion on the sufferer. In this distress, Raphael has paint-

ed cur lady kneeling, not looking towards her fon, to whom the could give no relief, but in the act of the mone efficacious supplication, representing, that having fallen, he is in need of the pity of him, who is pulling him by the rope, in order to rice. To this humble posture he gives a relief, by placing near her Mary Mugdalen, St. John, and the other Marys, who condole with her, and give succour to the mother of their lord, supporting her in their arms.

There figures are highly expreffive of the deepell concern for the fufferings of our Saviour, particularly Mary Magdalen, who feems, as it were, speaking to Jefus Christ, while St. John is giving aid to our lady. Jefus Chrift, though fallen, is not dejected, nor faint: on the contrary, feems to threaten, by what he utters, just as it is expressed in holy writ, his countenance, besides being in this piece of an excellence and beauty almost incomprehensible, appears inflamed with a prophetic spirit, perfectly adapted to the subject, not only as the Son of God, though in sufferance, but also suitable to the genius of Raphael, who never painted any feature indifferently, when the character could possibly be represented with dignity.

The whole action of the figure is notice and animated; the left arm, with a fine hand, leaning on a stone, is quite extended; but the irregular folds of the sleeve, shew the suddenness of the fall, and seem as it were yet in motion, as if they had not recovered from the pressure ensuing from the weight. With the right hand, Jesus Christ holds the cross fast, as if unwilling

to yield it to the figure that seems aiming to ease him of it; a thought most worthy of the great Raphael, who, in an action, which to many would appear indifferent, recollected that Jesus Christ suffered for our fins, because he chese to do so.

The variety is no less admirable, which he has diffused in the countenances of the executioners, exhibiting even in these, the different stages of wickedness. That figure with his shoulders towards us, pul-

ling Jesus Christ by the rope, shews his only passion to be, a brutal desire of hurrying on, to the place of execution; the other, who lays hold of the cross, seems touched with some degree of compassion, and willing to relieve the sufferer: near him a foldier, placing the cross with his hand on the shoulders of our lord, and lifting his lance with a threatening gesture, expresses the utmost investeracy, and desire to oppress the lord still more after his fall.

POETRY.

ODE for the New Year, Jan. 1, 1782. Written by W. Whitehead,

Efq. Poet Laureat.

Wondreus power of inborn worth, When danger calls its spirit forth, And strong necessity compels The fecret springs to buril their narrow cells! Tho' foes unnumber'd gird her round, Though not one friend is faithful found, Tho' impious fcorn derides; Yet still unmov'd amidst the band, Like her own rocks, does Britain stand, And braves th' infulting tides! A world in arms affaults her reign, A world in arms affaults in vain! 'Tis Britain calls: ye nations hear! Unbrace the corfelet, drop the spear, No more th' infidious toil pursue, Nor strive to weaken what you can't subdue! "I's Britain calls: " with fatal speed You urge, by headlong fury led, Your own impending fate: Too late you'll weep, too late you'll find 'Tis for the glory of mankind, That Britain should be great! In Britain's voice 'tis Freedom calls, For Freedom dies if Britain falls! She cannot fall ;—the same Almighty hand. That rais'd her white rocks from the main, Does still her arduous cause maintain, Still grasps the shield that guards her favour'd land: Obedient to his word, Not to defiroy, but to reclaim, Th' avenging angel waves the flaming fword: Revere his awful name! Repentant in the duft, Confess his judgments just; Th' avenging fword shall cease to wave, And, whom his mercy spares his power shall save!

ODE for the King's Birth Day, June 4, 1782. Written by W. Whitehead, Efq. Poet Laureat.

STILL does reluctant Peace refuse
Though courted by each generous mind,
To shed her Panacean dews,
And heal the madness of mankind!

Must this auspicious day again

Be clouded with one anxious care,

And powers malignant render vain,

'The monarch's fondest wish the people's general prayer!

O no! in yonder pregnant sky,
Whence all our hopes and blessings spring,
New bursting scenes of glory lie,
And suture joys are on the wing;
The lingering morn, that coyly sheds
On broken clouds and mountain-heads
At first a glimmering ray,
Now brighter, and now brighter glows,
Wide, and more wide the lustre flows,
Till all is suture day;
And Earth, rejoicing in ethereal light,

Forgets the dreary damps, and live-long shades of night.

Satiate of war, whose mad excess No bound, no kind restriction knows, But marks its progress with distress, The willing world shall feek repose; And Belgia, waking from her dreams Of Gallie frauds, illusive schemes, Shall add new strength to Concord's chain, And know her ancient friends again. While those, whom nearer ties unite, Whom all the charities combine, Shall backward turn their trembling fight, And deprecate the wrath divine: 'Midit bleeding heaps of brothers flain, 'Midst Desolation's horrid reign, And all its complicated woes, With wild affright in every face, Shall strain more close the strict embrace, And wonder they could e'er be foes.

O pleasing hope! O blest presage Of joys to last from age to age! For what Heaven's self commands, must Heav'n approve, Returning amity, and mutual love!

188 ANNUAL REGISTER, 1782.

And hark on yonder Western Main,
Imperious France is taught to know,
That Britain re-assumes her reign,
Her thunders only slept to strike the deeper blow,

Ye nations, hear the Gallic star,
Shorn of its beams, th' horizon leaves;
That fatal sirebrand of the war
No longer dazzles and deceives.
Record it in the fairest light
Of faithful history's future page,
"They only triumph'd whilst they shunn'd the fight,
"We, when we forc'd them to engage."

Address to Poetry, an Extract from An Essay on Epic Poetry by William Hayley, Esq.

HOU first and fairest of the social arts! Sovereign of liberal fouls, and feeling hearts, If, in devotion to thy heavenly charms, I clasp'd thy altar with my infant arms, For thee neglected the wide field of wealth, The toils of int'rest, and the sports of health, Enchanting Poefy! that zeal repay With powers to fing thy universal sway! To trace thy progress from thy distant birth, Heaven's pure descendant! dear delight of earth! Charm of all regions! to no age confin'd! The prime ennobler of th' aspiring mind! Nor will thy dignity, sweet power! disdain What Fiction utters in her idle strain, Thy sportive friend! who, mocking solemn truth, Tells her fond tales of thy untutor'd youth. As wrong'd Latona (so her tale begins) To Delphos travell'd with her youthful twins; The envenom'd Python, with terrific fway, Cross'd the fair Goddess in her destin'd way: The heavenly parent, in the wild alarm, Her little Dian in her anxious arm, High on a stone, which she in terror trod, Cried to her filial guard, the Archer God, Bidding with force, that spoke the mother's heart, Her young Apollo launch his ready dart; In measur'd sounds her rapid mandate flow'd, The first foundation of the future ode!

Ţs

Thus, at their banquets, fabling Greeks rehearfe * The fancied origin of facred verse: And though cold reason may with scorn assail, Or turn contemptuous from their simple tale, Yet, Poefy! thy fifter art may stoop From this weak sketch to paint th' impassion'd group, Though taste refin'd to modern verse deny The hacknied pageants of the Pagan sky, Their finking radiance still the canvass warms, Painting still glories in their graceful forms; Nor canst thou envy, if the world agree To grant thy fifter claims denied to thee; For thee, the happier art! the elder-born! Superior rights and dearer charms adorn: Confin'd she catches, with observance keen, Her fingle moment of the changeful scene; But thou, endu'd with energy fublime, Unquestion'd arbiter of space and time! Canst join the distant, the unknown create, And, while existence yields thee all her state, On the astonish'd mind profusely pour Myriads of forms, that fancy must adore. Yet of thy boundless power the dearest part Is firm possession of the feeling heart: No progeny of chance, by labour taught, No flow-form'd creature of scholastic thought, The child of passion thou! thy lyre she strung, To her parental notes she turn'd thy torgue; Gave thee her boldest swell, her softest tone, And made the compass of her voice thy own. To Admiration, fource of joy refin'd!

Chaste lovely mover of the simple mind! To her though sceptics, in their pride, declaim, With many an insult, on her injur'd name: To her, sweet Poesy! we owe thy birth, Thou sirst encomiast of the fruitful earth! By her inspir'd, the earliest mortal found The ear-delighting charm of measur'd sound; He hail'd the maker of a world so fair, And the first accent of his song was prayer. O, most attractive of those airy powers, Who most illuminate man's chequered hours!

^{*} Thus, at their banquets, fabling Greeks rehearse

The funcied origin of facred werse.] For this fable, such as it is, I am indebted to a passage in Athenaeus, which the curious reader may find in the close of that funciful and entertaining compiler, page 701 of Casaubon's edition.

190 ANNUAL REGISTER, 1782.

Is there an art, in all the group divine, Whole dawn of bring must not yield to thine? Religion's felf, whole provident controll Take from herce man his anarchy of foul, She o'er thy youth with foud affection hung, And borrow'd music from thy infant tongue. Law, sterner Law, whose potent voice imprest Severeit terror on the human breaft. With thy tresh slowers her awful sigure crown'd, And spoke her mandate in thy fofter found. E'en cold Philosophy, whom later days Saw thine mean rival, envious of thy praise; Who clos'd against thee her ungrateful arms, And urg'd her Plato to defame thy charms; She from thy childhood gain'd no fruitless aid, From thee she learnt her talent to persuade. Gay Nature view'd thee with a smiling glance. The Graces round thee fram'd the frolic dance: And well might festive joy thy favour court; Thy fong turn'd strife to peace, and toil to sport. Exhausted Vigour at thy voice reviv'd, And Mirth from thee her dearest charm deriv'd. Triumphant Love, in thy alliance bleft, Enlarg'd his empire o'er the gentle breaft; His torch affuni'd new luftre from thy breath, And his clear flame defied the clouds of death. But of the splendid train, who felt thy sway, Or drew existence from thy vital ray, Glory, with fondest zeal, proclaim'd thy might, And hail'd thee victor of oblivious night. Her martial trumpet to thy hand she gave, At once to quicken, and reward the brave: It founds-his blood the kindling hero pays, A cheap and ready price for thy eternal praise! Tho' felfish Fear th' immortal strain deride, And mock the warrior's wish as frantic pride!

Skitches of the mest distinguished Exic Poets of England; taken from the same Poem.

OW, graver Britain, amiably severe,
To thee, with native zeal, to thee I steer;
My vent'rous bark in sorieign circuit o'er,
Exulting springs to thy parental shore.
Thou gorgeous queen, who on thy filvery coast,
Sittest encircled by a filial bost,

And feest thy sons, the jewels of thy crown, Blaze with each varying ray of rich renown; If with just love I hold their genius dear, Lament their hardships, and their same revere, O bid thy Epic Muse, with honour due, Range her departed champions in my view!

See, on a party-colour'd steed of fire, With Humour at his side, his trusty squire, Gay Chaucer leads—in form a knight of old, And his strong armour is of steel and gold; But o'er it age a cruel rust has spread, And made the brilliant metals dark as lead.

Now gentle Spenser, Fancy's fav'rite bard, 'Awake my wonder and my fond regard; Encircling fairies bear, in sportive dance, His adamantine shield and magic lance; While Allegory, drest with mystic art, Appears his guide; but, promising to dart A lambent glory round her list'ning son, She hides him in the web herself has spun.

Ingenuous Cowley, the fond dupe of wit, Seems like a vapour o'er the field to flit; In David's praise he strikes some epic notes, But soon down Lethe's stream their dying murmur soats,

While COWLEY vanish'd in an amorous riddle, Up rose the frolic Bard of Bear and Fiddle; His smiles exhilarate the sullen earth, Adorning satire in the mask of mirth: Taught by his song, fanatics cease their jars, And wise astrologers renounce the stars. Unrivall'd BUTLER! blest with happy skill To heal by comic verse each serious ill, By wit's strong stashes reason's light dispense, And laugh a frantic nation into sense!

Apart, and on a facred hill retir'd,
Beyond all mortal infpiration fir'd,
The mighty MILTON fits—an host around
Of list'ning angels guard the holy ground;
Amaz'd they see a human form aspire
To grasp with daring hand a feraph's lyre,
Inly irradiate with celestial beams,
Attempt those high, those soul-subduing themes,
(Which humbler denizens of heaven decline)
And celebrate, with fancity divine,
The starry field from warring angels won,
And God triumphant in his Victor Son.
Nor less the wonder, and the sweet delight,
His milder scenes and softer notes excite,

192 ANNUAL REGISTER, 1782.

When at his bidding Eden's blooming grove Breathes the rich fweets of innocence and love. With fuch pure joy as our fore father knew When Raphael, heavenly guest, first met his view. And our glad fire, within his blissful bower, Drank the pure converse of th' ætherial power, Round the blest bard his raptur'd audience throng, And feel their souls imparadis'd in song.

Of humbler mien, but not of mortal race,
Ill-fated DRYDEN, with imperial grace,
Gives to th' obedient lyre his rapid laws;
Tones yet unheard, with touch divine, he draws;
The melting fall, the rifing fwell fublime,
And all the magic of melodious rhyme.
See with proud joy imagination fpread
A wreath of honour round his aged head!
But two base spectres, tho' of different hue,
The bard unhappy in his march pursue;
Two vile disgraceful siends, of race accurst,
Conceiv'd by Spleen, by meagre Famine nurst,
Malignant Satire, mercenary Praise,
Shed their dark spots on his immortal bays.

Poor DAVENANT march'd before, with nobler aim, His keen eye fixt upon the palm of fame; But cruel fortune doom'd him to rehearfe A theme ill-chosen, in ill-chosen verse.

Next came Sir Richard, but in woeful plight, Dryden's led-horse first threw the luckless knight. He rode advent'rous still — O who may count How oft he tried a different steed to mount! Each angry steed his awkward rider slung; Undaunted still he fell, and falling sung.

But Æsculapius, who, with grief distrest, Beheld his offspring made a public jest, Soon bade a livelier son with mirth efface. The shame he suffer'd from Sir Richard's case. Swift at the word his sprightly Garth began. To make an * helmet of a close-stool pan; An urinal he for his trumpet takes, And at each blast he blows see Laughter shakes.

Yet peace — new music floats on æther's wings; Say, is it harmony herself who sings; No, while enraptur'd sylphs the song inspire, 'Tis Pope who sweetly wakes the filver lyre To melting notes, more musically clear Than Ariel whisper'd in Belinda's ear.

^{*} And his high helmet was a close-stool pan.

Too foon he quits them for a sharper tone; See him, tho' form'd to fill the egal throne, Decline the sceptre of that wide domain, To bear a Lictor's rod in Satire's train; And, shrounded in a mist of moral spleen, Behold him close the visionary scene!

VERSES on Sir Joshua Reynolds's Painted Window at New College, Oxford.

> H stay thy treacherous hand, forbear to trace Those faultiess forms of elegance and grace! Ah, cease to spread the bright transparent mais, With Titian's pen.il, o'er the speaking glass! Nor fleal, by strokes of art with truth combin'd, The fond illusions of my wasward mind! For long, enamour'd of a barbarous age, A faithless truant to the classic page; Long have I lov'd to catch the simple chime Of minutel harps, and spell the sholing rhyme; To view the fethive rites, the knightly play, That deck'd heroic Albion's elder day; To mark the mouldering halls of barons bold, And the rough castle, cast in giant-mould; With Gothic manners Gothic arts explore, And mule on the magnificence of yore.

But chief, enraptur'd have I lov'd to roam, A lingering votary, the vaulted dome, Where the tall shafts, that mount in mastly pride, Their mingling branches shoot from fide to fide; Where elfin sculptors, with fantastic clew, O'er the long roof their wild embroidery drew; Where Superstition, with capricious hand, In many a maze the wreathed window plann'd, With hues romantic ting'd the gorgeous pane, To fill with holy light the wonderous fane; To aid the builder's model, richly rude, By no Vitruvian symmetry subdued; To fuit the genius of the mystic pile: Whilst as around the far-retiring isle, And fretted thrines with houry or phies hung, Her dark illumination wide the fung, With new folemnity, the nooks profound, The caves of death, and the dim arches frown'd. From blifs long felt unwilling'y we part: Ah, spare the weakness of a lover's heart!

194 ANNUAL REGISTER, 1782.

Chase not the phantoms of my fairy dream, Phantoms that shrink at Reason's painful gleam! That foster touch, insidious artist, stay, Nor to new joys my struggling breast betray! Such was a penfive bard's mistaken strain.-But, oh, of ravish'd pleasures why complain? No more the matchless skill I call unkind That strives to disenchant my cheated mind. For when again I view thy chaste design, The just proportion, and the genuine line; Those native pourtraitures of attic art, That from the lucid furface feem to flart; Those tints, that steal no glories from the day, Nor ask the sun to lend his streaming ray; The doubtful radiance of contending dies, That faintly mingle, yet distinctly rise; 'Twixt light and shade the transitory strife; The feature blooming with immortal life: The stole in casual foldings taught to flow, Not with ambitious ornaments to glow; The tread majestic, and the beaming eye That lifted speaks its commerce with the sky: Sudden, the fombrous imagery is fled, Which late my visionary rapture sed: Thy powerful hand has broke the Gothic chain, And brought my bosom back to truth again: To truth, by no peculiar tafte confin'd, Whose universal pattern strikes mankind; To truth, whose bold and unresisted aim Checks frail Caprice, and Fashion's sickle claim; To truth, whose charms Deception's magic quell, And bind coy Fancy in a stronger spell. Ye brawny prophets, that in robes fo rich, At distance due, possess the crisped niche; Ye rows of patriarchs, that fublimely rear'd,

Ye rows of patriarchs, that sublimely rear'd,
Diffuse a proud primeval length of beard:
Ye saints, who clad in crimson's bright array,
More pride than humble poverty display:
Ye virgins meek, that wear the palmy crown
Of patient faith, and yet so fiercely frown:
Ye angels, that from golden clouds recline,
But boast no semblance to a race divine:
Ye tragic tales of legendary lore,
That draw devotion's ready tear no more:
Ye martyrdoms of unenlighten'd days,
Ye miracles, that now no wonder raise:
Shapes, that with one broad glare the gazer strike,
Kings, bishops, nuns, apostles, all alike!

Ye colours, that th' unwary fight amaze, And only dazzle in the noontide blaze! No more the facred window's round difgrace, But yield to Grecian groupes the shining space. Lo, from the canvas Beauty shifts her throne, Lo, Picture's powers a new formation own! Behold she prints upon the crystal plain, With her own energy, th' expressive stain! The mighty master spreads his mimic toil More wide, nor only blends the breathing oil; But calls the lineaments of life compleat From genial alchymy's creative heat; Obedient forms to the bright fusion gives, While in the warm enamel Nature lives. Artist, 'tis thine, from the broad window's height, To add new lustre to religious light: Not of its pomp to strip this antient shrine, But bid that pomp with purer radiance shine: With arts unknown before, to reconcile The willing Graces to the Gothic pile.

ODE to the Honourable WILLIAM PITT. By WILLIAM MASON, M. A.

Μή νὺν, οτι φθονεςαὶ Θνατῶν φρένας ἀμφικείμανται έλπίδες, Μήτ' ἀρετών ποτε σιγάτω πατεμάν, Μηδὲ τέσδ ὕμνες. ΡΙΝΒΑΚ. Ifthm. Ode 2.

I.

I S May's meridian reign; yet Eurus cold Forbids each shrinking thorn its leaves unfold, Or hang with silver buds her rural throne:

No primrose shower from her green lap she throws *,

No daify, violet, or cowssip blows,

And Flora weeps her fragrant offspring gone.

Hoar frost arrests the genial dew;
To wake, to warble, and to woo
No Linnet calls his drooping love:
Shall then the poet strike the lyre,
When mute are all the feather'd quire,
And Nature sails to warm the Syrens of the grove?

H.

He shall; for what the sullen Spring denies The orient beam of virtuous youth supplies;

This expression is taken from Milton's fong on May Morning, to which this stanza in general alludes, and the 4th verte in the next.

O 2

That

196 ANNUAL REGISTER, 1782.

That moral dawn be his inspiring slame.
Beyond the dancing radiance of the east
Thy glory, son of Chatham! fires his breast,
And, proud to celebrate thy vernal same,
Hark, from his lyre the strain ascends,
Which but to Freedom's fav'rite friends
That lyre distains to sound.
Hark and approve, as did thy fire*
The lays which once with kindred fire
His muse in Attic mood made Mona's oaks rebound.

III.

Long filent fince, fave when, in Keppel's name,
Detraction, murd'ring Britain's naval fame,
Rous'd into founds of fcorn th' indignant string †.
But now, replenish'd with a richer theme,
The vase of harmony shall pour its stream,
Fan'd by free Fancy's rainbow-tinctur'd wing.
Thy country too shall hail the song,
Her echoing heart the notes prolong;
While they alone with ‡ envy sigh,
Whose rancour to thy parent dead
Aim'd, ere his funcral rites were paid,
With vain vindictive rage to starve his progeny.

IV.

From earth and these the muse averts her view,
To meet in yonder sea of ether blue

A beam to which the blaze of noon is pale;
In purpling circles now the glory spreads,
Λ host of angels now unveil their heads,
While heav'n's own music triumphs on the gale.
Ah see, two white-rob'd feraphs lead

Thy father's venerable shade;

He bends from yonder cloud of gold,

While they, the ministers of light,

Bear from his breast a mantle bright,

And with the heav'n-wove robe thy youthful limbs enfold.

V

- "Receive this mystic gift, my son!" he cries,
 And, for so wills the Sov'reign of the skies,
- The poem of Caractacus was read in MS. by the late Earl of Chatham, who honoured it with an approbation which the author is here proud to record.
 - + See Ode to the Naval Officers of Great Britain, written 1779.
 - I See the motto from Pindar.

- "With this receive, at Albion's anxious hour,
- " A double portion of my patriot zeal,
- " Active to spread the fire it dar'd to feel
 - "'Thro' raptur'd senates, and with awful power
 - From the full fountain of the tongue
 - " To roll the rapid tide along
 - " Till a whole nation caught the flame.
 - " So on thy fire shall heav'n beslow
 - " A bleffing Tully fail'd to know,
- " And redolent in thee diffuse thy father's same.

VI.

- " Nor thou, ingenuous boy! that fame despise
- "Which lives and foreads abroad in heav'n's pure eyes,
 - "The last best energy of noble mind *;
- " Revere thy father's shade; like him disdain
- "The tame, the timid, temporizing train,
 - " Awake to felf, to focial interest blind:
 - " Young as thou art, Occasion calls,
 - "Thy country's scale or mounts or falls
 "As thou and thy compatriots strive;
 - " Scarce is the fatal moment pad
 - " That trembling Albion deem'd her last,
- " O knit the union firm, and bid an empire live.

VH

- " Proceed, and vindicate fair Freedom's claim,
- " Give life, give strength, give substance to her name;
 - " The native rights of man with Fraud contest;
- "Yes, fnatch them from Corruption's baleful power,
- "Who dares, in day's broad eye, those rights devour,
 - "While prelates bow, and blefs the harpy feaft.
 "If foil'd at first, resume thy course,
 - " If for d at arit, returne thy course, "Rife strengthen'd with Antwan force,
 - "So full thy toll in conquest end.
 - " Let others court the tisfel things
 - " That hang upon the inile of kings,
- " Be thine the mule's wreath; be thou the people's friend."

PROLOGUE ficken at the opening of the Lyceum at Madrass, 1782.

O Grecia's fons while Freedom fpread her charms.

And rouz'd each lingering votary trarms.

The host of Asia o'er the Euxine strait,

Broke like a flowd, and pour'd resistless fate.

No force could check it, and no bur withstand:

Down sunk Thermopy see's devoted bane—

In allufion to a fine and well-linewn partige in Mile all Lycides.

The fack of Athens spoke the Grecian doom, And art and science fear'd a common tomb.

Heaven interpos'd. Soon blew the tempest o'er, And lest the wreck of Grandeur on the shore. At Freedom's call returns the power of taste, Resumes her labours, and repairs the waste; On Pindus' top descend th' awarding nine, And chaplets fresh for favour'd heroes twine; Its umbrage brown Lyceum's shade regains, And breathes the majesty of Attic strains; His just reward there meets the conscious brave, On land who triumph'd, or who rul d the wave; Thence takes the palm at Salamis he won, Or lives, immortal lives! by Marathon.

How like the picture to the present time! The age tho' distant, tho' oppos'd the clime. With barbarous rage fell Hyder leads his bands, And empties kingdoms on our groaning lands. His strength to wither, Britain s standards sty; Her navy triumphs o'er his * Greek ally: And Hughes and Coote have snatch'd a splendid praise, But known to Spartan and Athenian days.

O! give it root, kind heaven! wide let it spread, 'Till ruin crush this modern Xerxes' head.

Amid this strife on what shall Wit rely?
Where Taste resort, or Sentiment apply?
No stage is left to feed the poet's stame,
From Fancy's mines to spring the actor's same;
The muses' hills the ruthless awe invades,
And leaves no music where it leaves no shades:
No lips the fount of Aganippe taste,
Save those, inhuman, that frequent the waste:
In groves and vallies, pregnant once with song,
Silence presides, or owls discordant throng.
War, Gothic war! the glimmering light denies,
That learning scatter'd strongh our orient skies.

Should then some bolder minds their view proclaim, To blow the dying embers into stame; With wit's remains to make one glorious stand, And from unletter'd darkness shield the land; In this retreat a new Lyceum found, And court each muse to tread the stabled ground; Tho' vain the vision, tho' remote the end, The wise shall hail it, and the sair befriend:

To Beauty's sun some Roscius homage pay, And Shakespeare shoot beneath the softering ray.

^{*} France,

Nor Ben nor Congreve from the scene refrain, Nor old Anacreon, with his Chian strain. Mirth mix'd with wisdom, shall affert her rule, And love enlighten Aristotle's school.

PROLOGUE to the New Comedy of VARIETY. Spoken by Mr. Kieg. Written by R. Tickell, E/q.

MID the rivals of contending trade, A That court Variety's successive aid, Two neighbouring houses most exert their carcs, To deck with novelty their patent wares; Both in their turns your generous custom gain, For both a powerful company maintain, In Covent-garden, and at Drury-lane. What emulation fires this rival pair! Variety, their everlasting care-What choice affortments each prefents to view! New furbish'd remnants, now whole pieces new. And now old patterns, by the scissars skill, Slic'd into fafety like a cut bank-bill. Here all the fattin of Circassia shines, Or homespun stuff with Scottish plaid combines. There chequer'd Harlequins fair Virtue calls To Negro nymphs, in linfey woods francis; Chictaws and Tictaws all the town entice-True Eaftern splendour !- 'nothing but full price,' 'Tis good old Lun rebukes the haughty boaft, Stalks from his tomb, and finks a half-price ghost.

What then to justly win this precious name,
What true Variety now sues for same?
Let your own judgment fix our author's plea—
To that we trust to-night's Variety.
No soft'ring paragraph our muse can boast,
To slip young laurels in the Morning Post;
Or call the seedling pusses, at random set,
To thrive transplanted in the Noon Gazette.
Such bankrupt tricks let salse ambition play,
And live on paper-credit—day by day;
Variety disdains to trust her cause
To selsish statt'ry, or to bought applause.

What fays the town?—do more—reform—enough—That Bruffelles Gazette flop the prompter's puff.
The prompter's eye, in a fine phrenzy fit,
Glances from pit to box, from box to pit;
And as his fancy bodies forth whole rows.
Of abfent belles, and visionary beaux,

200 ANNUAL REGISTER, 1782.

EPILOGUE to Lady CRAVEN'S ARCADIAN PASTORAL. Spoken by Mis Faulkener, in the Character of the Fairy.

HINK not, good folks, because our play is done-That all my power of Canaration's gone! No mertal pow'r a fairy can difarm, And females ne'er give up their right to charm. Echold the proof! I wave this wand thrice round:-Now you're all ftruck like statues—all spell-bound! Ladies, you feel it, dor't you! And you, Sirs? There's no one answers; not a creature stirs. Well now, no grumbling! or, as I'm a sprite, Not one amongst you shall go home to-night. We praternatural things, bout whom, of old, Your prating nurses have such wonders told, Are strangely falsify'd! - With them our trade's, To pop thro' key-holes, and to pinch old maids; To meet, in troops, by moon light on the green, And dance, in mystic circles, round our queen! This, and a great deal more, as wife as true, Some good believing Christians think we do. But know, a mission nobler far is ours, And we to greater ends direct our pow'rs.

Is there a meid, to whom some thoughtless youth Talks, and means nothing, about love and truth? Instant a fairy slies to point the snare, And whisper in her ear, Bowere! Beware! Is there a fenator in all your land, Who for a bribe holds cut his venal hand? To twitch his sleeve, our winged squadrons fly, And whisper in his ear, Oh, fie! Oh, fie! Is there a downger, at cases grown grey, Who, when she loses, can forget to pay?

She must not think to 'scape the fairy's blame; We thunder in her ear, For shame! For shame!

But, chief of all your race, the young and fair
We make with pleasure our peculiar care:
Ev'n in their least concerns we take a part,
And deign to guide the friseur's toilsome art.
Whene'er Durinda dresses for the ball,
We hover o'er in clouds of Mareschal;
Attend her there—there watch her eyes and lips,
And check, with sage advice, whene'er she trips.
Such are our tasks—farewell! remember me!
The charm is broke, and now again you're free.
[Going, returns.]

Good heav'ns, I'd nigh forgot:—But I was sent To ask, it with our play you're all content. My little trembling friends impatient wait, To hear from me your judgment, and their fate. One too there is, to whom your kind applause, As doubly flatt'ring, double joy will cause: And she to merit most concern appears, Who to an author's joins a mother's fears.

EPILOGUE to the Walloons, by the Author.

YOW men are scarce, and these wide-wasting wars Make dreadful havock of our gallant tars, Heroines, how fay you? shall the white slag fly? Turn out the female volunteers, fay I. My galley, man'd and officer'd by you, Shall challenge Cleopatra's and her crew: And doubt not, gentle warriers, you shall find All foft accommodations to your mind: O'er the white waves your painted bark shall rife, With enfign colour'd from the emperor's eyes; Your ropes of filk, your decks with carpets speed, And filver tiffue awning over head; Your fifter Sea-Nymphs, wherefoe'er you fail, With Persia's odours shall persume the gale; Neptune in state upon your stein shall ride, And powder'd Tritons ogle by your fide. Then, French monfieurs, keep off at length of cable, If once we grapple, girls, they'll find us able; Nay, let their boafted Paris dames advance, The blood of Britain 'gainst the rouge of trance. We'll fairly fettle the account between us. And triumph on the element of Venus.

2002 ANNUAL REGISTER, 1782.

For Spain, our friend at heart, in arms our foe, Our eyes shall conquer them without a blow; By love and music their soft souls are won, We'll sight them with guitar, and not with gun; Their generous lives, tho' not their hearts we'll spare; The brave, tho' vanquish'd, still deserve the fair.

But for those slovenly mynheers, the Dutch, Let not their trowsers come within my touch; Oh, we've a rod, dear countrymen, to tickle Those herring mongers, sous'd in their own pickle.

But you, Americans, who spurn the breast To which your helpless infancy was prest, Ye unreturning prodigals, who feed On empty husks, and press the broken reed Of Gallic promises, oh come and prove A mother's pardon and a sister's love.

Account of Books for 1782.

Prefaces, biographical and critical, to the Works of the English Peets, by Samuel Johnson. 10 vol. 12mo.

HOUGH the merits of this learned performance have been long fince the subject of discursion, and its reputation be established on the most universal applause, yet the uniformity of our plan, and the respect due to a name so justly celebrated, require that we should connect with our former remarks some observations on the last fix volumes of this valuable work.

Perhaps no age or country has ever produced a fpecies of criticism more perfect in its kind, or better calculated for general instruction, than the publication before us: for whether we consider it in a literary, philosophical, or a moral view, we are at a loss whether to admire most the author's variety and copiousness of learning, the soundness of his judgement, or the purity and excellence of his character as a man.

It is furely of importance to the rifing generation to be supplied in the most elegant walk of literature with a guide, who points out what is beautiful in writing as well as in action, who uniformly blends instruction with amusement, who informs the understanding,

and rectifies the judgement, while he mends the heart.

But notwithstanding the general popularity of this performance, and an uncommon degree of decifion in its favour, it was not to be expected that a work of this nature, indeed that any work, should pass totally without exception, or without censure. In some inflances it has divided the opinions of the learned, in a few it has provoked the severity of criticism; with what propriety the public have judged from the pamphlets that have appeared, particularly in defence of Gray. That the doctor was not over zealous to allow him the degree of praise that the public voice had pretty univerfally assigned him, is, we think, sufficiently apparent. Partiality to his beautiful elegy, had perhaps allotted him a rank above his general merits: that justice was the object of the biographer. we cannot doubt; but in combating opinions we suppose to be erroneous, we are extremely fubject to fall ourselves into the opposite extreme, and to this we are inclined to attribute whatever deviations from the general accuracy of the author may be met with in the course of this work. In this opinion we are confirmed by instances on the other side, where the dector feems to give hyperbolical praise to names, which had perhaps been futiered to lie under too much neglect and oblivion. Whether the Origin of I mething like an ortachinent to a particular fet of notions, or a fet of men, may be explained upon this principle, we leave our readers to dete mine. That our learned aut or's judgement has been warped on tome tubjects, where party has an influence, is the opinion of probab'v the greater number of his admirers; and if it be true, it is a decifive argument to shew the prevalence of prejudice, and that the strongest understanding is not always proof against its inroads.

After a very copious and minute narrative of the life and writings of Addison, who slands next in the arrangement of this edition, he sums up the literary and moral character of that celebrated author by a conclusion, out of which we shall lay before our readers the

following extracts.

" Additon, in his life, and for fome time afterwards, was confidered by the greater part of readers as supremely excelling both poetry and criticism. Part of his reputation may be probably ascribed to the advancement of his fortune; when, as Swift observes, he became a statesman, and saw poets waiting at his levee, it is no wonder that praise was accumula.ed upon him. Much likewife may be more honourably ascribed to his personal character: he who, if he had claimed it, might have obtained the diadem, was not likely to be denied the laurel.

"His poetry is first to be confidered; of which it is to be con-

fested that it has not often those felicities of diction which give luttre to fentiments, or that vigour of fentiment that animates diction: there is little of ardor, vehemence, or transport: there is very rarely the awfulness of grandeur, and not very often the ipiendor of elegance. He thinks jaftly, but he thinks faintly. This is his general character; to which, doubtless, many single passages will furnish exceptions; yet if he feldom reaches supreme excellence, he rarely finks into dulnels, and is fill more rarely entangled in absurding. He did not trust his powers enough to be negligent. There is in most of his compositions a calinness and equability, deliberate and cautious, fometimes with little that deligh s, but seldom with any thing that offends.

" As a describer of life and manners, he must be allowed to stand perhaps the first of the first rank. His humour, which, Steele observes, is peculiar himself, is so happily diffused as to give the grace of novelty to doniestic scenes and daily occurrences. He never outsters the modesty of nature, nor raises merriment or wonder by the violation of truth. His figures neither divert by differtion, nor amaze by aggravation. He copies life with fo much fidelity, that he can be hardly faid to invent: yet his exhibitions have an air to much original, that it is difficult to Juppose them not merely the product of imagination.

"As a teacher of wifdom, he may be confidently followed. His religion has nothing in it entiufialtic or superstitious; he appears

neither

meither weakly credulous, nor wantonly feepical; his morality is neither dangerously lax, nor impracticably rigid. All the enchantment of fancy, and all the cogency of argument, are employed to recommend to the reader his real interest, the care of pleasing the author of his being.

"Truth is shewn some imes as the plantom of a vision, sometimes appears half veiled in an allegory; sometimes attracts regard in the robes of fancy, and sometimes steps torth in the confidence of reason. She wears a thousand dresses, and in all is pleasing.

Mille habet ornatus, mille decenter habet.

"His profe is the model of the middle style; on grave subjects not formal, on light occasions not groveling; pure wi hout scrupulosity, and exact without apparent elaboration; always equable, and always easy, without clowing words or pointed sentences. Addison never devia as from his track to snatch a grace; he seeks no ambitious ornaments, and tries no hazardous innovations. His page is always luminous, but never blazes in unexpected splendor.

"It feems to have been his principal endeavour to avoid all hardness and severity of diction; he is therefore sometimes verbote in his transitions and connections, and sometimes descends too much to the language of conversation; yet if his language had been less idiomatical, it might have lost somewhat of its genuine anglicism. What he attempted, he performed; he is never seeble, and he did not wish to be energetic; he is never rapid, and he

never flagnates. His fentences have neither fludied amplitude, nor affected brevny; his priods, though not diligently rounded, are voluble and eafy. Whoever withes to attain an English flyle, familiar but not coarse, and elegant but not oftentatious, must give his days and nights to the volumes of Addion."

We could not reful the temptation of transcribing so large a portion, as it exhibits, with a p culiar happiness, the character of a masterly writer, drawn by a masterly hand.

The fixth volume contains the lives of G anville, Rowe, T.ckell, Congre e, Fenton, and Prior.

Granville is described as an amiable and accomplished character, but an induferent poet; and his fame is with justice attribed rather to the elevation of his rank, than to the intrudic merit of his works.

"Granville was a man illustrious by his birth, and therefore attracted notice: since he is by Pope Riled the julks, he must be supposed elegant in his manners, and generally lotted. He was in times of contest and turbulence stead; to his party, and obtained that offerm which is always conferred upon surmers and consistency. With those advantages, having learned the art of ventying, he declared himself a Poet, and his claim to the laurel was allowed."

After a minute and ingenious investigation of the merits and faults of his dramatic works, the character of Rowe as a writer is summed up in the following

words: "Whence then has Rowe his reputation? from the reasonableness and propriety of some of his feenes, from the elegance of his diction, and the suavity of his verse. He seldom moves either pity or terror, but he often elevates the sentiments; he seldom pierces the breast, but he always delights the ear, and often improves the understanding."

He adds,

"The version of Lucan is one of the greatest productions of English poetry; for there is perhaps none that fo completely exhibits the genius and spirit of the original. Lucan is distinguished by a kind of dictatorial or philosophic dignity, rather, as Quintilian observes, declamatory than poetical; full of ambitious morality and pointed sentences, comprifed in vigorous and animated lines. This character Rowe has very diligently and fuccefsfully preserved. --- His versification, which is fuch as his contemporaries practifed, without any attempt at innovation or improvement, feldom wants either melody or force: his author's fense is fometimes a little diluted by additional infufions, and fometimes weakened by too much expansion. But fuch faults are to be expected in all translations, from the constraint of measures and dissimilitude of languages. The Pharfalia of Rowe deferves more notice than it obtains, and as it is more read, will be more esteemed."

To Tickell, Congreve, and Prior, is affigned a portion of this work suitable to their rank, and their respective merits are characterised with great truth and accuracy;—but the life of Pope stands eminently distinguished by the minuteness with which it has been traced, by the variety of information it contains, and the valuable criticism it abounds with. The curiosity of the biographer has followed him through the shade of retirement, through the pleasantry of convival society, and the tunult of his literary warfare; and the whole is interspersed with reslections peculiarly interesting to the scholar and the moralist.

The following extracts cannot be unacceptable to the reader.

"Of his intellectual character, the confishent and fundamental principle was good sense, a prompt and intuitive perception of consonance and propriety. He saw immediately, of his own conceptions, what was to be chosen, and what to be rejected; and in the works of others, what was to be shunned, and what was to be copied.

"But good fense alone is a sedate and quiescent quality, which manages its passions well, but does not increase them; it collects few materials for its own operations, and preserves safety, but never gains supremacy. Pope had likewife genius; a mind active, ambitious, and adventurous, always investigating, always aspiring; in its wildest searches still longing to go forward, in its highest slights ffill wishing to be higher; always imagining something greater than it knows, always endeavouring more than it can do.

"To affift these powers, he is said to have had great strength and exactness of memory. That which he had heard or read was not easily lost, and he had before him not

only what his own meditation suggested, but what he had sound in other writers that might be accommodated to his present purpose.

"These benefits of nature he improved by incessant and unwearied diligence; he had recourse to every source of intelligence, and lost no opportunity of information; he consulted the living as well as the dead; he read his compositions to his friends, and was never content with mediocrity when excellence could be attained. He confidered poetry as the business of his life, and however he might feem to lament his occupation, he followed it with constancy: to make verses was his first labour, and to mend them was his latt.

"He was one of those few whose labour is their pleasure; he was never elevated to negligence, nor wearied to impatience: he never passed a fault unamended by indifference, nor quitted it by despair: he laboured his works first to gain reputation, and afterwards to keep it.

"He professed to have learned his poetry from Dryden, whom, whenever an opportunity was presented, he praised through his whole life with unwearied liberality; and perhaps his character may receive some illustration, if he be compared with his master.

"Integrity of understanding and nicety of discernment were not allotted in a less proportion to Dryden than to Pope. The rectitude of Dryden's mind was sufficiently shewn by the dismission of his poetical prejudices, and the rejection of unnatural thoughts and ragged numbers. But Dry-

den never defired to apply all the judgement that he had. He wrote, and professed to write, merely for the people; and when he pleased others, he contented himself. He spent no time in struggles to rouse latent powers; he never attempted to make that better which was already good, nor often to mend what he must have known to be He wrote, as he tells faulty. us, with very little confideration: when necessity or occasion called upon him, he poured out what the present moment happened to fupply; and when once it had passed the press, ejected it from his mind; for when he had no pecuniary interest, he had no further solicitude.

"Pope was not content to fatisfy; he defired to excel, and therefore always endeavoured to do his best; he did not court the candour, but dared the judgement of his reader; and expecting no indulgence from others, he shewed none to himself. He examined lines and words with minute and punctilious observation, and retouched every part with indefatigable diligence, till he had left nothing to be forgiven.

"In acquired knowledge the superiority must be allowed to Dryden, whose education more scholastic, and who, before he became an author, had been allowed more time for fludy, with better means of information. mind has a larger range, and he collects his images and illustrations from a more extensive circumference of science. Dryden knew more of man in his general nature, and Pope in his local manners. The notions of Dryden

den were formed by comprehenfive speculation, and those of Pope by minute attention. There is more dignity in the knowledge of Dryden, and more certainty in

that of Pope.

"Of genius, that power which constitutes a poet; that quality, without which judgement is cold and knowledge is inert; that energy which collects, combines, amplifies, and animates; the fuperiority must, with some hesitation, be allowed to Dryden. It is not to be inferred, that of this postical vigour Pope had only a little, because Dryden had more; for every other writer fince Milton must give place to Pope; and even of Dryden it must be said, that if he has brighter paragraphs, he has not better poems.

" Dryden's performances were always hasty, either excited by some external occasion, or extorted by domestic necessity; he composed without consideration, and published without correction: what his mind could supply at call, or gather in one excursion, was all that he fought, and all that he gave. The dilatory caution of Pope enabled him to condense his sen iments, to multiply his images, and to accumulate all that fludy might produce, or chance might supply. Ιf flights of Dryden therefore are higher, Pope continues longer on the wing, If of Dryden's hire the blaze is brigher, of Pope's the heat is more regular and conflant. Dryden often furpaffes expectation, and Pope never falls below it. Dryden is read with frequent aftonishment, and Pope with perpetual delight."

The life of the unfortunate Savage exhibits a melancholy instance of uncommon ability united with uncommon distress, and what is still more remarkable, and more to be lamented, of a mother most unnaturally anxious to accomplish the mitery of her own child. would be difficult to mention a narrative throughout the whole compals of English biography, calculated fo powerfully to awaken the reader's feelings, to excite his compassion on the one side, and his detestation on the other. The flory is here told in a manner strikingly pathetic, and interwoven with reflections that do honour to the writer.

It concludes with the following

extract.

" This relation will not be wholly without its use, if those, who languish under any part of his sufferings, shall be enabled to fortify their patience, by reflecting that they reel only those afflictions from which the abilities of Savage did not exempt him; or those, who, in confidence of superior capacities or attainments, diffegard the common maxims of life, shall be reminded, that nothing will fupply the want of prudence; and that negligence and irregularity, long continued, will make knowledge useless, wit ridiculous, and genius contemp- . tible."

Of the intermediate and subsequent lives the most eminent are those of Swist and Young. In the former, though well executed, little new was to be expected; and the latter was written by a friend of the author, and in no indifferent sile of imitation.

Ax

An Essay on the Genius and Writings of Pope.

HE performance before us is the fequel of a work published some years ago, the avowed intention of which was to decide upon the merits of Pope, to determine in what class of our English poets he should be ranked, or at least to shew, that he is not entitled to a place amongst the The plan adopted by the author to prove his polition is candid and judicious. The whole of the poet's works being diffinctly examined, and the particular beauties and defects of each in general accurately remarked. But we cannot help thinking that the object of this publication would have been more fuccefsfully answered, had the learned critic less frequently indulged his peculiar turn for digressions; which, though they are often ingenious, and generally entertaining, ferve only to divert the reader from his main purpose, by incumbering the memory, and dissipating the atten-It is not meant to infinuate, that the passages we allude to have upon the whole, a natural connection with the subject in confideration; but we think they are often pursued too far; and it even happens fometimes, that a train of unexpected reflections is fo introduced, that we are furprifed at length to resume the thread of the Dr. Warton diforiginal work. covers an extensive knowledge of Italian literature, and an elegant tafte for the fine arts:-but remarks on Ariosto and Petrarch, are not remarks upon Pope; and the most accurate disquisition on architecture or painting, is at belt Vol. XXV.

but unfeafonable, if it has no relation to, or is but flightly connected with, the proper object of our attention. Among the remarks on the Temple of Fame, are the following.

High on his car Sefostris struck my view, Whom seeptred slaves in golden harness drew;

His hands a bow and pointed jav'lin hold; His giant limbs are arm'd in fcales of gold.

"This colossal statue of the celebrated eastern tyrant is not very strongly imagined. As Pnidias is faid to have received his ideas of majesty in his famous Jupiter, from a passage in Homer, so it is to be withed, that our author's imagination had been inflamed and enlarged, by studying Milton's magnificent Picture of Satan. The word bold in the third line is particularly feeble and flat.-It is well known that the Egyptians, in all their productions of art, miftook the gigantic for the fublime, and greatness of bulk for greatness of manner."

Of what we have here quoted, fome part is apposite enough, and the rest is without doubt true;—but the application of the following extract is not quite so obvious.

Of Gothic structure was the northern fide, O'erwrought with ornaments of barb'rous pride.—

"Those who have considered the theory of architecture, says a writer who had throughly studied it, tell us, the proportions of the three Grecian orders were taken from the human body, as the most beautiful and perfect production of nature.—Hence were derived those graceful ideas of column, which P

had a character of strength without clumfinefs, and of delicacy with-Those beautiful weakness. proportions were, I a, taken originally from nature, which, in her creatures, as hath been already observed, referreth to some use, end, or design. The Gonfiezza alfo, or fwelling, and the diminution of a pillar, is it not in fuch proportion as to make it appear strong and light at the same time? in the same manner, must not the whole entablature, with its projections, be fo proportioned, as to feem great, but not heavy; light, but not little; inafmuch as a deviation into either extreme, would thwart that reason and use of things, wherein their beauty is founded, and to which it is fubordinate?

" The entablature and all its parts and ornaments, architrave, freeze, cornice, triglyphs, metopes, modiglions, and the rest, have each an use, in giving firmnefs and union to the building, in protecting it from the weather, in casting off the rain, in representing the ends of the beams with their internals, the production of the rafters, and fo forth. if we confider the graceful angles in frontispieces, the spaces between the columns, or the ornaments of the capitals, shall we not find that their beauty arifeth from the appearance of use, or the imitation of natural things, whose beauty is originally founded on the same principle? Which is indeed the grand diffinction between Græcian and Gothic architecture, the latter being fantastical, and for the most part founded neither in nature nor reason, in necessity nor use, the appearance of which

accounts for all the beauties, graces, and ornaments of the other.—Alciphron, vol. 1. dial. 3."

So far as this extract is intended to shew the propriety of the poet's expression, in applying the epithet of barbarous to the ornaments of Gothic architecture, it is not totally foreign to the purpose:—the distinction between Gracian and Gothic architecture is accurately marked, and the superiority of the former established on its proper basis.

However, it is obvious to felect passages, where the author, not contended with this desultory species of criticism, enters into a more minute investigation of the works, and characterizes its merits with penetration and ability.

"There fat Zamolxis with erected eyes, And Odin here in mimic trances dies; There on rude iron columns, fmear'd with blood,

The horrid forms of Scythian heroes flood,

Druids and bards (their once loud harps unstrung)

And youths that died to be by poets fung."

" In these beautiful verses we must admire the postures of Zamolxis and Odin, which exactly point out the characters of these famous legislators, and instructors of the northern nations. --- As expressive, and as much in character, are the figures of old heroes, druids and bards, which are represented as standing on iron pillars of barbarous workmanship; they remind one of that groupe of personages, which Virgil, a lover of antiquity, as every real poet must be, has judiciously placed before the palace of Lati-

Quinetiam

Quinetiam veterum effigies ex ordine avo-

Antiqua e cedro, Italufq; paterq; Sabinus Vitifator, curvam fervans fub imagine falcem;

Saturnusq; senex, Janiq; bifrontis imago, Vestibulo astabant."—

He concludes his examination of this poem with the following remarks.

" In finishing this section, we may observe, that Pope's alterations of Chaucer, are introduced with judgment and art; that these alterations are more in number, and more important in conduct, than any Dryden has made of the author. This piece was communicated to Steele, who entertained a high opinion of its beauties, and who conveyed it to Addison. Pope had ornamented the poem with the machinery of guardian angels, which he afterwards omitted. He speaks of his work with a diffidence uncommon in a young poet, and which does him credit. No errors, says he to Steele, are so trivial, but they deserve to be mended. I could point to you several, but it is my business to be informed of those faults I do not know; and as for those I do, not to talk of them, but mend them. I am afraid of nothing fo much as to impose any thing upon the world which is unworthy of its acceptance."

His observations on the poem of January and May, the Wife of Bath, and Translations of Statius and Owid, are thus introduced.

"The first dawnings of polite literature in Italy, appeared in tale writing and fables. Boccace gave a currency and vogue to this species of composition. He collected many of the common tales

of his country, and delivered them in the purest stile, enlivened with interesting circumstances. Sacchetti published tales before him, in which are many anecdotes of Dante and his cotemporaries. Boccace was faintly imitated by several Italians, Poggio, Bandello, Cinthio, Firenzuola, Malespini, and others. Machiavel himself did honour to this species of writing by his Palphoror.

ing by his Belphegor. "To produce and carry on with probability and decorum a feries of events, is the most difficult work of invention; and if we were minutely to examine the popular stories of every nation, we should be amazed to find how few circumstances have been ever invented. Facts and events have been varied and modified, but totally new facts have not been The writers of the old romances, from whom Ariofto and Spenser have borrowed so largely, are supposed to have had copious imaginations; but may they not be indebted, for their invulnerable heroes, their monsters, their their gardens of enchantments pleasure, their winged steeds, and the like, to the Echidna, to the Circe, to the Medea, to the Achilles, to the Syrens, to the Harpies, to the Phryxus, and the Bellerophon of the ancients? The cave of Polypheme might furnish out the ideas of their giants, and Andromeda might give occasion for flories of diffressed damsels on the point of being devoured by dragons, and delivered at such a critical feafon by their favourite knights. Some faint traditions of the ancients might have been kept glimmering and alive during the whole barbarous ages, as they

P 2

are called; and it is not impossible, but these have been the parents of the Genii in the eaftern, and the Fairies in the western To say that Amadis and Sir Tristan have a classical soundation, may at first fight appear paradoxical; but if the subject were examined to the bottom, I am inclined to think, that the wildest chimeras in those books of chivalry, with which Don Quixote's library was furnished, would be found to have a close connection with ancient mythology.

" We of this nation have been remarkably barren in our inventions of facts; we have been chiefly borrowers in this species of composition; as the plots of our most applauded plays, both in tragedy and comedy, may witness, which have generally been taken from the novels of the Italians and

Spaniards.

" The story of January and May, now before us, is of the comic kind, and the character of a fond old dotard betrayed into difgrace by an unfuitable match, is supported in a lively manner. Pope has endeavoured, suitably to familiarize the stateliness of our heroic measure, in this ludicrous narrative; but after all his pains, this measure is not adapted to fuch subjects, so well as the lines of four feet, or the French numbers of Fontaine.

" Fontaine is, in truth, the capital and unrivalled writer of conic tales. He generally took his subjects from Boccace, Poggius, and Ariotto; but adorned them with fo many natural strokes, with fuch quaintness in his reslections, and fuch a dryness and

archness of humour, as cannot fail

to excite laughter.

" Our Prior has happily caught his manner, in many of his lighter tales; particularly in Hans Carvel, the invention of which, if its genealogy be worth tracing, is first due to Poggius. It is found in the hundred and thirty third of his Facetia, where it is entitled 'Visio Francisci Philelphi;' from hence Rabelais inferted it, under another title, in his third book and twenty-eighth chapter; it was afterwards related in a book called 'The Hundred Novels;' Ariofto finishes the fifth of his incomparable fatires with it ; Malespini also made use of it; Fontaine, who imagined Rabelais to be the inventor of it, was the fixth author who delivered it, as our Prior was the last; and perhaps not the least spirited."

Though we were principally induced to infert this quotation, on account of the uleful information it contains, yet we must observe, that it abundantly proves the justness of what has been advanced respecting the author's digressive

mode of writing.

His observations on the Esay on Man, are a specimen of just and

elegant criticism.

" The Enay on Man is as close a piece of argument, admitting its principles, as perhaps can be found in verse. Pope informs us in his first preface, that he chose this epitholary way of writing, notwithstanding his subject was high, and of dignity, because of its being mixed with argument, which of its nature approacheth to profe. He has not wandered into any useless digressions, has employed

ployed no fictions, no tale or flory, and has relied chiefly on the poetry of his stile, for the purpose of interesting his readers.—His stile is concife and figurative, forcible and elegant. He has many metaphors and images, artfully interspersed in the driest passages, which stood most in need of such ornaments. Nevertheless there are too many lines, in this performance, plain and profaic. The meaner the subject is of a preceptive poem, the more striking appears the art of the poet; it is even of use perhaps to chuse a low fubject. In this respect Virgil had the advantage over Lucretius; the latter, with all his vigour and fublimity of genius, could hardly fatisfy and come up to the grandeur of his theme. Pope labours under the fame difficulty. If any beauty in this effay be uncommonly transcendent and peculiar, it is Brevity of Diction; which in a few inflances, and those pardonable, has occasioned obscurity. It is hardly to be imagined how much fenfe, how much thinking, how much observation on human life, is condensed together in a finall compais. He was so accustomed to confine his thoughts in rhyme, that he tells us, he could express them more shortly this way, than in profe itself. On its first publication, Pope did not own it, and it was given by the public to Lord Paget, Dr. Young, Dr. Desaguliers, and others. Even Swift seems to have been deceived; there is a remarkable paffage in one of his letters! 'I confels I did never imagine you were fo deep in morals, or that fo many new and excellent rules could be produced fo advanta-

geously and agreeably in that science, from any one head. I confess in some places I was forced to read twice; I believe I told you before what the Duke of D---- faid to me on that occasion; how a judge here who knows you, told him, that on the first reading those essays, he was much pleased, but found some lines a little dark; on the fecond, most of them cleared up, and his pleasure increased; on the third, he had no doubt remaining, and then he admired the whole.'

"The subject of this essay is a vindication of Providence, in which the poet proposes to prove, that of all possible systems, infinite wildom has formed the best; that in such a system, coherence, union, fubordination, are necessary; and if fo, that appearances of evil, both moral and natural, are also necessary and unavoidable; that the feeming defects and blemishes in the universe, conspire to its general beauty; that as all parts in an animal are not eyes, and as in a city, comedy, or picture, all ranks, characters, and colours, are not equal or alike; even fo excesses, and contrary qualities, contribute to the proportion and harmony of the universal system; that it is not strange, that we finould not be able to discover perfection and order in every instance; because in an infinity of things mutually relative, a mind which fees not infinitely, can fee nothing fully.

"This doctrine was inculcated by Plato and the Stoics, but more amply and particularly by the later Platonials, and by Antoninus and Simplicius. In illus-

P 3 trating

trating his subject, Pope has been much more deeply indebted to the Theodicée of Leibnitz, to Archbishop King's Origin of Evil, and to the Moralists of Lord Shaftesbury, than to the philosophers above-mentioned. The late Lord Bathurst repeatedly assured that he had read the whole scheme of the Essay on Man, in the hand writing of Bolingbroke, and drawn up in a feries of propositions, which Pope was to verfify and illustrate: in doing which, our poet, it must be confessed, left several passages so expressed, as to be favourable to fatalism and necessity, notwithstanding all the pains that can be taken, and the turns that can be given to those passages, to place them on the fide of religion, and make them coincide with the fundamental doctrines of revelation.

Awake, my St. John, leave all meaner things

To low ambition, and the pride of kings; Let us, fince life can little more supply Than just to look about us, and to die, Expanate free o'er all this scene of man; A mighty maze! but not without 'plan. E. jik. 1.

"This opening is awful, and commands the attention of the reader. The word awake has peculiar force, and obliquely alludes to his noble friend's leaving his political, for philosophical pursuits."

The whole of this excellent poem, and of the moral essays, are examined with a critical minuteness; and Dr. Warton's determinate judgment, respecting the merits of his author, is best collected from the conclusion of this enquiry.

"Thus have I endeavoured to give a critical account, with freedom, but it is hoped with impartiality, of each of Pope's works; by which review it will appear, that the largest portion of them is of the didactic, moral, and fatyric kind; and confequently, not of the most poetic species of poetry; whence it is manifest, that good fense and judgment were his characteristical excellencies, rather than fancy and invention; that the author of the Rape of the Lock, and Eloisa, can be thought to want imagination, but because his imagination was not his predominant talent, because he indulged it not, and because he gave not so many proofs of this talent as of the other. This turn of mind led him to admire French models; he studied Boileau attentively; formed himself upon him, as Milton formed himself upon the Græcian and Italian Sons of Fancy. He fluck to describing modern manners; but those manners, because they are familiar, uniform, artificial, and polished, are, in their very nature, unfit for any lofty effort of the muse. He gradually became one of the most correct, even, and exact poets that ever wrote; polishing his pieces with a care and assiduity, that no business or avocation ever interrupted: fo that if he does not frequently ravish and transport his reader, yet he does not difgust him with unexpected inequalities, and abfurd impro-Whatever poetical enprieties. thusiasm he actually possessed, he withheld and stifled. The perusal of him affects not our minds with fuch strong emotions as we feel from Homer and Milton; so that

no man of a true poetical spirit, is master of himself while he reads them. Hence, he is a writer fit for universal perusal; adapted to all ages and stations; for the old and for the young; the man of business and the scholar. He who would think the Faery Queen, Palamon and Arcite, the Tempest or Comus, childish and romantic, might relish Pope. Surely it is no narrow and niggardly encomium to fay he is the great poet of reason, the first of ethical authors in verse. And this species of writing is, after all, the furest road to an extensive reputation. It lies more level to the general capacities of men, than the higher flights of more genuine poetry.—

"Where then, according to the question proposed at the beginning of this essay, shall we with justice be authorised to place our admired Pope? Not, assuredly, in the same rank with Spenser, Shakespeare, and Milton; however justly we may applaud the Eloisa and Rape of the Lock; but, considering the correctness, elegance, and utility of his works, the weight of sentiment, and the knowledge of man they contain, we may venture to assign him a place, next to Milton, and just above Dryden. Yet, to bring our minds steadily to make this decision, we must forget, for a moment, the divine music ode of Dryden; and may perhaps then be compelled to consess, that though Dryden be the greater genius, yet Pope is the better artist.

"The preference here given to Pope, above other modern English poets, it must be remembered, is founded on the excellencies of his works in general, and taken all together; for there are parts and passages in other modern authors, in Young and in Thomson, for instance, equal to any of Pope; and he has written nothing in a strain so truly sublime, as the Bard of Gray."

THE

CONTENTS.

The History of EUROPE.

C H A P. I.

Retrospective view of affairs in the East, which led to the late alarming and dangerous situation of the British empire in India. State of the native powers, with respect to each other, and to the East India Company. Greatness of the Maratta empire; and nature of its power, resources, and government. Infant Ram-Rajah deposed, and a government of ministers, called the Paishwaship, substituted in his place. Ragonaut Row, being obliged to abandon Poonah and his country, for the affassination of his nephew, the young Paishwa, flies for refuge to Bombay. testion afforded to Ragonaut, lays the foundation of all the Jubsequent wars with the Marattas. Treaty of friendship and alliance between the East India Company and Hyder Ally, concluded at Madras in the year 1769. Refusal to furnish Hyder with the succours stipulated by treaty, in his subjequent rainous war with the Marattas, estranges that prince from the company, and occasions his embracing French connections. Treaty concluded at Bombay with Ragonaut Row. War entered into with the Marattas for his restoration to power. Island of Salsette, Baroack, and other places conquered. Treaty of Poonah; by which Ragonaut is to be given up, and the new conquests are confirmed to the company. New systems of policy adopted. Ragonaut Row is still protected, and various intrigues entered into for a revolution in the Maratta government in his favour. New demands to be made upon the Court of Peonah, the rejection of which are to be deemed violations of the late treaty. Strong military force under Colonel Leflie, fent acres the continent from Bengal. ${\it Proceedings}$ of that detachment; Leflie dies, and is fucceeded by Cotonel Goddard. Proposals for a treaty with Moodajee Boosla, the Rajab of

Berar, for placing him at the head of the Maratta empire. The Court of Poonah refufing to comply with the new demands, the British resident is withdrawn, and the Bombay army landed on the continent, in order to accompany Ragonaut Kew to that capital. Army being surrounded, and all means of retreat cut of, a capitalation takes place. Moderate terms imposed by the Marattas in the treaty of Worgaum. Ragonaut Row is given up, and the army conducted by a body of Maratta horse to the sea coust, where it embarks for Bombay.

C H A P. 11.

Situation and conduct of Moodajce Booffa, the Rajah of Berar. Gen. Goddard passes the Nerbudda with the army, who are liberally supplied with provisions and necessaries in the dominions of Berar. Negociation with the Rejah, who refuses to accede to the conditions held out by the proposed treaty. Goddard jets out on his march for Poonah; receives contradictory instructions on the way, from the committee appointed to superintend the Bombay army; is met by a minister from the court of Poonah, who defires his return with the army to Bengal, in pursuance of the treaty of Worgaum: Goddard refuses to comply, and directs his course to Surat. Prefidency of Bombay difavor the treaty of Wergaum, and thereby expose the hostages to great apparent danger. New schemes adopted for a revolution in the Maratta government. Supreme council confirm the conduct of Bombay in disavowing the convention of Worgaum; but empower Goddard to negociate a treaty upon other terms with the Marattas. Great preparations at the same time made for war, and a reneval of the negociation with Moodajer Boofla determined. Strong complaints made by the court of Poenah, of the faithless conduct of the company. Ragobah escapes from the custody of the Marattas, and slies for refuge to Goddard's camp; which increases the aifficulties of the negociation with the former. Various caufes which led to the confederacy of the great princes of India for the extermination of the English. Marattas break off the negociation with Goddard, and conclude a peace and alliance with Hyder Ally. Treaty of alliance concluded by the supreme council with the Ranna of Ghod. Gen. Goddard concludes a treaty with Futty Sing; takes Ahmedabad, the capital of the Guzerat, by storm, and reduces the whole province. Sindia and Holkar arrive with a Maratta army. Sindia restores the gentlemen who were given as hostages at Worgaum. Proposals by Sindia for an accommodation rejected. Gen. Goddard attacks and defeuts the Maratta army. Capt. Campbel repulses Sindia, and preserves his convoy. Lieut. Walfh surprizes and defeats a large body of Marattas. Another large body defeated by Major Forbes. Major Popham's successes on the side of Bengal; drives the Marattas out of the country of Ghod; and surprises the fortress of Gualier, which had always been deemed impregnable. State of affairs in the Carnatic. Treaty with Bazalet Jung for the Guntoor Circar, with other transactions, which led to great jealoufy, diflike, and ill-will, on the fide of the Nizam of the Decan, and of Hyder Ally.

CHAP.

C H A P. III.

State of affairs on the coast of Coromandel. Mahie taken. Nabob of Arcot. Strong indications of Hyder Ally's indisposition to the government of Madras, and of his defigns upon the Carnatic. Neglect of preparation. Diffentions in council. Hyder invades the Carnatic with a great army. Country ravaged; Conjeweram burnt. Arcot kesteged. Gen. Sir Hestor Monro marches with the army from the Mount, in order to form a junction with Col. Baillie, and to relieve Arcot. Hyder raifes the fiege, and places his army in a position to provent the junction. Baillie defeats Meer and Tippoo Saib, but Hyder's whole army being in his way, is unable to proceed on his march. Col. Fletcher fent with a chosen detachment to reinsorce Baillie. Desperate action between Hyder's army and the united detachment. Singular gallantry displayed by that small body of men. Accidental blowing up of their powder, changes the fortune of the day, and occasions the lojs of the whole corps. Great slaughter; Col. Fletcher killed, and Baillie, with a small number of Europeans, taken prifoners. Gen. Sir H. Monro refreats to Chingleput, and from thence to Madras. Deplorable state of the country, and of the company's affairs. Guntoor Circar restored to Bazalet Jung; and a conciliatory letter Jent to the Nizam. Hyder renews the floge of Arcot. Takes the city, and afterwards the fort or citadel. Figorous measures taken by the Supreme Council, for the relief of the Carnatic. Sir Eyre Coote arrives at Madras, with a large fum of money, and a reinforcement of Europeans, from Bengal: takes the command of the army. Mr. Whitehill suffended from his office of president and governor.

C H A P. IV.

Sir Eyre Coote's design of relieving the besieged fortresses confirmed by the opinion of the council of war, and the approbation of the select committee. Hyder raises the stege of Wandewash, and retires with precipitation, on the approach of the British army. The other beleaguered staces reliewed and jupplied. Dangers arifing from the perfidy of the French at Pondicherry obviated, by the General's differming the inhabitants, destroying their boats, and removing their magazines from Carangelly. Hyder's shipping destroyed in his own ports by Sir Edward Hughes. Sir Eyre Coote marches to Porto Novo, to frustrate the enemy's design on Tritchinapoli. Hyder's immense force. Numberless difficulties which the English General had to surmount. Grand battle on the 1st of July. Hyder's wast host, after a very long and obstinate engagement, descared. retreats towards Arcot, and Tippoo Saib raifes the fiege of Wandewift. English General marches to the northward, and forms a junction with the forces from Bengal. Takes Trepassore, defeats Hyder, in a bard and difficult conflict, on the 27th of August. Defeats him a third time on the 27th of September. Succeeding actions, in which the English army is conflantly

constantly victorious. Dutch settlements on the island of Sumatra subdued. Sir Edward Hughes, and Gen. Sir Hector Monro, besiege Negapatam by sea and land. Place surrendered, upon conditions. The Admiral proceeds to the island of Ceylon, and takes the Dutch forts and settlement of Trincamale.

C H A P. V.

Retrospective View of affairs in Europe to the close of the year 1781. Second attempt of France upon the island of Jersey. Beron de Rullecourt lands his troops in the night, and surprizes St. Fielier the capital. Compels the lieutenant-governor to fign a catitulation. Summons Elizabeth Capile. Is gallantly attacked in the town by Major Pierson. French commander falls, and his remaining troops furrender prisoners of war. Major Pierson unfortunately slain in the instant of wistory. Necessities of the inhabitants and garrifon of Gibraltar. Extraordinary prices of provisions and necessaries. Admiral Darby Sails with the grand sleet and a large convoy to its relief. Spanish flect retires into Cadiz at his approach. Gun-boots. Dreadful cannonade and bombardment of the town and garrison from the Spanish camp. Town destroyed, and many of the inhabitants perish. Convoy from St. Eustatius taken by M. de la Motte Piquet. Secret expedition, under Commodore Johnstone, and Gen. Meadowes. Fleet attacked in Port Praya Bay by M. de Suffrein. French repulsed. M. de Suffrein's timely arrival at the Cape of Good Hope, frustrates the design upon that place. Dutch ships taken by Mr. Johnstone in Saldanha Bay. General Elliot's grand Jally from Gibraltar, by which he defirors the enemy's batteries and works. Invasion of the island of Minorca. Combined fleets return from that fervice, to cruize at the mouth of the Channel. Proposal for attacking Admiral Darby at Torbay, overruled in a council of war. Enemy, frustrated in all their views, retire to their respective ports. State of the war with Holland, in Europe. Admiral Hyde Parker fails with a small squadron for the protestion of the Baltic trade. Upon his return, falls in with Admiral Zoutman, with a great Dutch convoy, and a superior force. Desperate engagement on the Dogger-Bank. Dutch Fleet and convoy return in great diferder to their own couffs. Hollandia of 68 guns funk. Confequences of the action. Royal wifit to Admiral Parker at the Nore. Admiral Kempenfeldt fails to intercept a great convoy fitted out at Brest, with troops, stores and supplies, for the French fleets and armies in the East and West Indies. Falls in with and takes several of the convoy; but discovers the enemy to be so greatly superior in force, that he could not projecute the design farther. [96

C H A P. VI.

State of parties at the meeting of parliament. Debates on the speech from the throne. Addresses moved in both Houses, and amendments proposed and rejected. Debate resumed on the report of the address from the committee.

committee. Motion for granting a fupply to his majefly opposed by Mr. T. Pitt, and after a warm debate carried, on a division, in the affirmative. Mr. Burke's motion for a committee of the whole House to inquire into the confiscation and sale of the effects and merchandize taken on the island of St. Eustaius, rejected. Motion by Mr. H. str for adding 10,000 scamen to the number moved for by government for the struine of the year 1782. Sir James Lowther's motion for putting an end to the American war rejected, after a long debate, by a majority of only 41. Debate on the army estimates. Conversation relative to the exchange of prisoners with America. Debate on the motion for adjournment. Petition from Mr. Laurens presented by Mr. Burke. Recess.

C H A P. VII.

Motion of Ar. Fox, for a committee of the whole house, to enquire into the causes of the want of success of his Majesty's naval forces during the war, and more particularly in the y ar 1781. Debate on the ordnance estimates. Motions by Mr. Barré and Mr. Burke. Motion for the re-commitment of the report negatived. Motion and debate in the House of Lords relative to the execution of Colonel Haynes. Committee on naval affairs. Resolution of censure rejected by a small majority. Motion and debate in the House of Lords on the intended advancement of lord George Sackville Germaine to the peerage. Motion on the same subject, after his creation. An address to the king, to put an end to the American war, moved by General Conway, and rejected by a majority of one. Committee of the lords, on the loss of the army at York Tozon. Resolution against the American war carried in the House of Commons. Address to the king. The king's answer, and address of thanks. Second resolution against the American war. Resolutions of consure on his majesty's ministers moved by Lord John Cavendish, and rejected by a majority of Motion by Sir John Rous, for withdrawing the confidence of parliament from his majesty's minister, lost by a majority of nine. Intimation, by Lord North, to the house, of his majesty's intentions to change his ministers. [151

C H A P. VIII.

New Administration formed under the Marquis of Rockingham. Public measures stipulated for. Recess of parliament during the Easter holidays. Debate on the affairs of Ireland. Message from the king, and address. Address from the Parliament of Ireland. Repeal of the act of the 6th of Geo. I. Address of thanks from the Irish House of Commons, and vote of seamen. Reward voted for Mr. Grattan. Farther proceedings in the English parliament. Revenue Officers and Contrastors Bills pass both houses. Bill of regulating the office of Paymaster-General of the Forces. Motion for regulating the resolution relative to the Middless election carried. Motion by Mr. William

William Pitt, for a committee to enquire into the state of the representation in parliament, rejected, upon a division. Resolutions respecting Exchequer, and other offices. Death of the Marquis of Rockingham. Changes in the ministry. Debates on the subject, in both houses. Short state of the proceedings on the Reports of the India Committee. King's speech.

C H A P. 1X.

Retrospective view of affairs in North America and the West-Indies, in the year 1781. South Carolina. Battle at the Eutaru Springs. Col. Stuart, with the British forces, retires to Charles Town. Island of St. Eustatius surprized and taken by the Marquis de Bouille. Dutch fettlements of Demerary and Effequibo recovered by France. Marquis de Bouille invades the Island of St. Christopher's, with 8,000 men, in the beginning of the year 1782, and is supported by the Count de Grasse, with a great flect. Gen. Fraser and the Governor, with the few troops on the island, retire to Brimstone Hill. Gallant attempt made by Admiral Sir Samuel Hood, with a very inferior force, to fave the island: draws the enemy out to sea, and then seizes the anchorage ground in Basseterre Road, which they had just quitted. French sleet repeatedly attack the English squadron, and are repulsed with loss. Works on Brimstone Hill in no degree answerable to the strength of the situation. Gallant defence made by the garrison. All the attempts made by the Admiral, and by Gen. Prescot, for the relief of the place, prove ineffectual. The works and buildings on the top of the hill being almost entirely destroyed, Gen. Frager and Gov. Shirley are obliged to capitulate, and obtain conditions highly honourable to the garrifon, and advantageous to the island. English squadron slip their cables, and return to Barbadoes. Newis and Montserrat follow the sortune of St. Christopher's. Formidable preparations by France and Spain for the invasion of Jamaica. Admiral Sir George Rodney arrives with a strong reinforcement from England, and takes the command of the flect. Fails in his defign of intercepting the French convoy from Breft. Puts into St. Lucia to refit, and to watch the motions of the enemy. Objects, and respective force, of the commanders on both sides. Perilous state of the English affairs in the West-Indies. M. de Grasse proceeds with his sleet and a great convoy from Fort-Royal, in order to form a junction with the French and Spanish forces at Hispaniola. Is immediately pursued by Sir George Rodney. Partial engagement between the French steet and the van of the English, on the 9th of April. Great sca-sight on the 12th, which lasts from sun-rise to sun-set. Gallantry displayed on both sides. French sleet entirely routed. The Count de Graffe taken in the Ville de Paris. Four other ships of the line taken, and one sunk. Various particulars of the action. Cefar, one of the French prizes, blown up on the night of the battle. Admiral Sir Samuel Hood detached with a squadron, in purfuit of the enemy. Takes two French ships of the line, and two frigates, in the Mona paffage. Sir George Roaney proceeds with the Count de Graffe

Graffe and the prizes to Jamaica. Confequences of the late victory. Honours to the fuccessful commanders. Lord Rodney returns to England, and is succeeded by Admiral Pigot. Inactivity of the opposite armies in North-America, confirmed by the resolutions of Parliament, and by the subsequent negociations for peace.

C H A P. X.

Minorea. Siege of Fort St. Philip. Fatal progress of the scurry and other disorders in the garrison. Weakness in point of number. Successful attack on the Duke de Crillon's head-quarters at Cape Mola. Powder magazine blown up, bomb battery destroyed, and a ship sunk, by the sire from the fortress. Garrison being reduced by sickness, General Murray submits to the necessity of a capitulation. Humanity and tenderness of the enemy to the fick. Coasts of these kingdoms threatened by the enemy. Admiral Barrington fails with a squadron to the Bay, and falls in with a French convoy. Captain Jarvis takes the Pegale of 74 guns. Mest of the convoy taken. L'Actionaire, of 64 guns, taken by Capt. Maitland. Lord Howe fails to the coast of Holland. Datch fleet returns to the Texel upon his approach. Combined fleets, in their way from Cadiz, full in with the Newfoundland and Quebec convoy, and take several wessels. Combined fleets approach the channel. Lord Howe fails, with a very inferior force, to protect the great Jamaica convoy. Enemy return to port, without effecting a junction with the Dutch, or being able to intercept the convoy. Preparations for the relief of Gibraltar, Royal George man of war lost at Portsmouth; Admiral Kempenfeldt, several officers, with a great number of people, unfortunately perish. Lord Howe sails for the relief of Gibraltar. State of that fortress. Vast preparations, by sea and land, for its attack, by the combined sleets and armies of France and Spain. Confidence placed in the new constructed battering ships contrived by the Chevalier de Arcon. Some account of those formidable machines. Arrival of the French Princes of the blood in the camp before Gibraltar. Letters between the Duke de Crillon and General Elliot. Unexpected and violent cannonade and bombardment from the garrifon, by which the enemy's works fuffer greatly. Violent fire on the fortress. Combined flects arrive at Algeziras. Grand attack. Dreadful cannonade and bombardment, from the lines, the battering ships, and the garrijon. Admiral's ship and another, at length jet on fire, and blow up in the night. General conflagration. Extraordinary exertions of gullantry and bumanity, displayed by Captain Curtis, and his seamen in the gun-boots, in faving the enemy from the flames. Battering ships entirely destroyed. Storm in the Bay of Gibraltar. Spanish ship of the line driven under the batteries, and taken by the garrison. British fleet arrives in the Straits. Most of the store ships miss the Bay, and pass with the fleet into the Mediterranean. Combined fleets follow, but awoid action. Lord Howe having landed the troops, and juccefsfully relieved Gibraltan, repasses the Straits. Followed by the combined fleets. Diffant cannonade, and partiel action in the Atlantic. [215]
